AMERICAN ENGLISH BEAGLE CLUB.

FOLLOWING is the report of the committee of the American English Beagle Club upon the standard to be adopted by the club:

Mr. President and Members of the American English Beagle Club:

GENTLEMEN—Your committee appointed to draft a standard for the beagle, very respectfully report that they have entered upon their duties with a full realization of the difficulties and importance of the subject before them.

The necessity for a descriptive scale of points for this breed is very apparent. Bench show judges having no authorized type on which to base their decisions, differ widely in their estimates as to the breed marks of the race. At one show, dogs of harrier size and style, win the highest recognition, at another, the smallest specimens are favored. Diminutive size being seemingly the only passport to preferment, quality being overlooked or ignored.

Thus opinions clash, and breeders and fanciers hesitate to submit their dogs for exhibitions in the present see-saw condition of affairs.

With an accepted standard the judge will have a guide to lead him through the difficulties of his position, and the breeder, if a novice, will be enabled with its assistance to discard those animals that are deficient in quality, and recognize merit where it exists, thus elevating the status of his kennel.

With this preface, your committee respectfully submit the accompanying standard for the English beagle, the result of a careful and painstaking analysis.

DR. L. H. TWADDELL,
GEN'L R. ROWETT,
N. ELMORE.

STANDARD AND SCALE OF POINTS FOR THE ENGLISH BEAGLE.

Head.—The skull should be moderately domed at the occiput, with the cranium broad and full. The ears set on low, long and fine in texture, the forward or front edge closely framing and inturned to the cheek, rather broad and rounded at the tips, with an almost entire absence of erectile power at their origin. The eyes full and prominent, rather wide apart, soft and lustrous, brown or hazel in color. The orvital processes well developed. The expression gentle, subdued and pleading. The muzzle of medium length, squarely cut, the stop well defined. The jaws should be level. Lips either free from or with moderate flews. Nostrils large, moist and open. DEFECTS—A flat skull narrow across the head, absence of dome, ears short, set on too high, or when the dog is excited rising above the line of the skull at their points of origin due to an excess of erectile power. Ears pointed at the tips, thick or boardy in substance or carried out from cheek showing a space between. Eyes of a light or yellow color. Muzzle long and snipey. Pig-jaws or the reverse known as under-shot. Lips showing deep pendulous flews. DISQUALIFICATIONS—Eyes close together, small, beady and terrier-like.

Neck and Throat.—Neck rising free and light from the shoulders, strong in substance, yet not loaded, of medium length. The throat clean and free from folds of skin, a slight wrinkle below the angle of the jaw, however, may be allowable. DEFECTS—A thick, short, cloddy neck, carried on a line with the top of the shoulder. Throat showing dewlap and folds of skin to a degree termed "throatiness."

Shoulders and Chest.—Shoulders somewhat declining, muscular, but not loaded, conveying the idea of freedom of action, with lightness, activity and strength. Chest moderately broad and full. DEFECTS—Upright shoulders and a disproportionally wide chest.

Back, Loin and Ribs.—Back short, muscular and strong. Loin broad and slightly arched, and the ribs well sprung, giving abundant lung room. DEFECTS—A long or swayed back, a flat narrow loin, or a flat constricted rib.

Forelegs and Feet.—Forelegs straight with plenty of bone. Feet close, firm, and either round or hairlike in form. DEFECTS—Out elbows. Knees knuckled over or forward, or bent backward. Feet open and spreading.

Hips, Thighs, Hindlegs and Feet.—Hips strongly muscled, giving abundant propelling power. Stifles strong and well let down. Hocks firm, symmetrically and moderately bent, Feet close and firm. DEFECTS—Cow hocks and open feet.

Tail.—The tail should be carried gaily, well up and with medium curve, rather short as compared with size of the dog, and clothed with a decided brush. DEFECTS—A long tail with a tea-pot curve. DISQUALIFICATIONS—A thinly haired rattish tail, with entire absence of brush.

Coat.—Moderately coarse in texture, and of good length. DISQUALIFICATIONS—A short, close, and nappy coat.

Height.—The meaning of the term "Beagle," a word of Celtic origin, and in old English *Begele*, is small, little. The dog was so named from his diminutive size. Your committee therefore, for the sake of consistency, and that the beagle shall be in fact what his name implies, strongly recommends that the height line be sharply drawn at fifteen inches, and that all dogs exceeding that height shall be disqualified as over-grown, and outside the pale of recognition.

Color.—All hound colors are admissible. Perhaps the most popular is black, white and tan. Next in order is the lemon and white, then blue and lemon mottles, then follow the solid colors, such as black and tan, tan, lemon, fawn, etc. This arrangement is of course arbitrary, the question being one governed entirely by fancy. The colors first named form the most lively contrast and blend better in the pack, the solid colors being sombre and monotonous to the eye. It is not intended to give a point value to color in the scale for judging, as before said all true hound colors being correct. The foregoing remarks on the subject are therefore simply suggestive.

General Appearance.—A miniature fox-hound, solid and big for his inches, with the wear and tear look of the dog that can last in the chase and follow his quarry to the death.

NOTE—Dogs possessing such serious faults as are enumerated under the head of "Disqualifications" are under the grave suspicion of being of impure blood. Under the heading of "Defects" objectionable features are indicated; such departures from the standard not, however, impugning the purity of the breeding.

SCALE OF POINTS.

Summary.	Value.		
Skull	5		
Ears	15		
Eyes	10		
Muzzle, Jaws and Lips	5	Value of head	35
Neck	5		
Shoulders and Chest	10		
Back and Loins	15		
Ribs	5	Value of body	35
Forelegs and Feet	10		
Hips, Thighs and Hind Legs	10	Value of running gear	20
Tail	5		
Coat	5	Value coat and stern	10
Total	100		100

MASTIFFS AT TORONTO.—Our correspondent desires us to correct an error which slipped into his report on the mastiffs at Toronto. Speaking of Lion he is made to say he is "a good little dog." This was not our correspondent's meaning, as Lion is of good size. "Well built dog," he thinks was the expression he made use of.

RECENT IMPORTATIONS.—Mr. John Gellatly, of New York, has received from England the Scotch deerhound bitch Lufra II. She is not quite a year old. She is well bred and gives promise of good form when mature. She will be exhibited at the New York show next month.

CORRECTION.—In our report of awards at Toronto show the dog Chief II., in Class 9, red Irish setters, is spoken of as Max Wenzel's. Mr. Wenzel bred Chief II. (A.K.R. 252) who is now owned by Mr. H. B. Goetschius, Hoboken, N. J.

PERSONAL.—Mr. James Watson has accepted a position on the editorial staff of the Philadelphia *Press*, and he requests us to find room for the information that his postal address is P. O. Box 770, Philadelphia, Pa.

CHICAGO DOG SHOW.—There will be a dog show at Chicago, Ill., the last of May or early in June. Mr. Chas. Lincoln will superintend.

THE POINTER BRAVO.—Mr. J. Norbury Appold, Baltimore, Md., requests us to say that the pointer Bravo, who won vhc. at New Haven, is not related to his champion Bravo.

MEN IN "SAFE EMPLOYMENTS" were paid a quarter of a million dollars last year by the Travelers, of Hartford, Conn., for accidental death and injuries.—*Adv.*

Rifle and Tray Shooting.

FIXTURES.

First International Clay-Pigeon Tournament, at Chicago, Ill., May 26 to 31. Managers, Ligowsky Clay-Pigeon Co., P. O. Box 1292, Cincinnati, Ohio.

RANGE AND GALLERY.

BOSTON, April 3.—The Fast-day shoot at Walnut Hill was well attended notwithstanding the storm. The scores stood: Creedmoor Practice Match, 200yds., possible 50: A. Law 45, P. B. Smith 44 W. Fisher 44, C. B. Edwards 44, S. Morse 42, M. Williams 42, W. H. Norton 40, S. Edgar 40, G. L. Haynes 38, W. H. Oler 38, R. A. Lappen 38, H. A. Dennison 37, M. H. Crockett 37, A. J. Look 37, C. H. Best 36, A. Darling 36.

Creedmoor Prize Match, possible 50: J. B. Thomas 48, O. M Jewell 48, G. H. Wentworth 47, J. A. Frye 47, W. H. Oler 46, B. A. Lappen 46, W. Fisher 46, C. E. Berry 45, J. B. Fellows 45, J. P. Bates 43.

The names and records of the prize winners in the various matches which have been running since January are appended. "C." "D." and "R." at the head of the combination match signifies Creedmoor, decimal and rest:

Creedmoor Prize Match.

J B Thomas	48	48	48	47—191+ 8=199
C E Berry	48	47	47	46—187—12=199

J P Bates	45	45	64	61 85 61+38=389

April 5.—As is usual after a holiday the attendance at Walnut Hill to-day was quite slim, and the practice match was the only one shot in. The day was exceedingly bad for shooting, the wind blowing hard from 11 o'clock. J. A. Frye was able early in the day to make a fine 47, but this was the only one made. F. W. Perkins attempted military shooting with a Springfield rifle for the first time, and made a fine 42. Saturday next a match will be commenced which will be shot on every alternate Saturday and close each day. It will be on a Creedmoor target, three scores to win, re entry permitted, and the prizes will be 15, 12, 10, 8, 7, 5 and 3 per cent. of the total entries. Following are the best scores to-day. Creedmoor practice match: J. A. Frye 47, W. Charles 45, A. C Adams 45. B. A. Lappen 45, F. W. Perkins 42, J. Payson 41, F. W. Fowle 41, A. L. Brackett 40, W. H. Morton 39, W. H. Slocum 36, W. Meadows 36, L. E. Green 34.

THE ZETTLER DEFEAT.—The challenge of the Zettler Rifle Club, of New York, after their first defeat by the Frelinghuysen Rifle Association, of Newark, N. J., on March 17, was promptly accepted by the latter club with the proviso that they would not shoot for prizes already won, but that a new set of individual badges should be provided and paid for by the losers of the match. A disinterested referee, not a member of either club, to decide all doubtful shots. The match was shot on the Frelinghuysen range, No. 167 Market street, Newark, Wednesday evening, April 2, and resulted as follows, the men shooting alternately in the following order and with the appended scores:

Zettler—J. H. Brown 111, G. Joiner 113, D. Muller 106, C. Zettler 102, M. Engel 111, B. Zettler 105, P. Fenning 116, A. Lober 111, C. Judson 111, M. Dorrler 109. Total, 1,095.

Frelinghuysen—W. F. Lynn 113, J. H. Shackleford 110, G. D. Weigmann 111, George Zimmer 102, William Hayes 112, E. O. Chase 111, W. P. McLeod 113, J. L. Tobin 110, J. K. Walsh 114, A. C. Neumann 114. Total, 1,110.

It will be noticed that the Frelinghuysens have raised the score and record one point above that of the last match, defeating the Zettler team by 15 points and making the high average of 111 points per man throughout the team.

SARATOGA SPRINGS, N. Y., March 31.—Following are the best scores of members in attendance at the Glen Mitchell Range, of the Saratoga Rifle Club, during Wednesday and Saturday, March 26 and 29. On the first day very little shooting was done because of the fog prevailing, which at times was so dense that the target was invisible. The second day the light and wind was about as near perfection as we can get at this season of the year. Condition 200yds., off-hand, Massachusetts target:

I Davis	12	12	10	12	12	10	12	10	11	9—	110
F S Wheeler	10	12	10	12	10	9	10	10	12	11—	106
W H Gibbs	11	10	12	11	8	12	11	10	11	10—	106

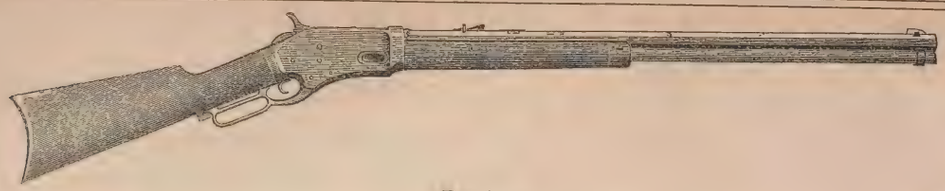

FIG. 1.

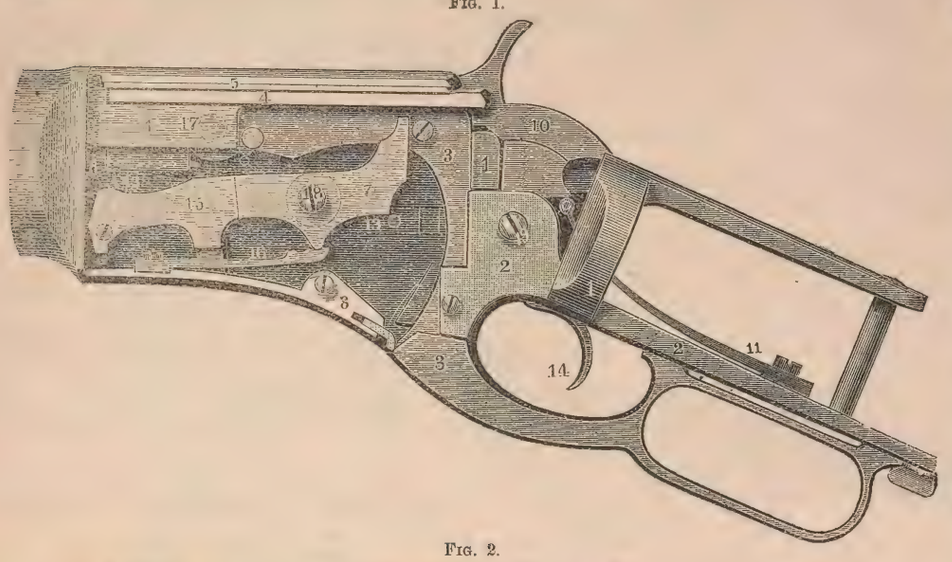

FIG. 2.

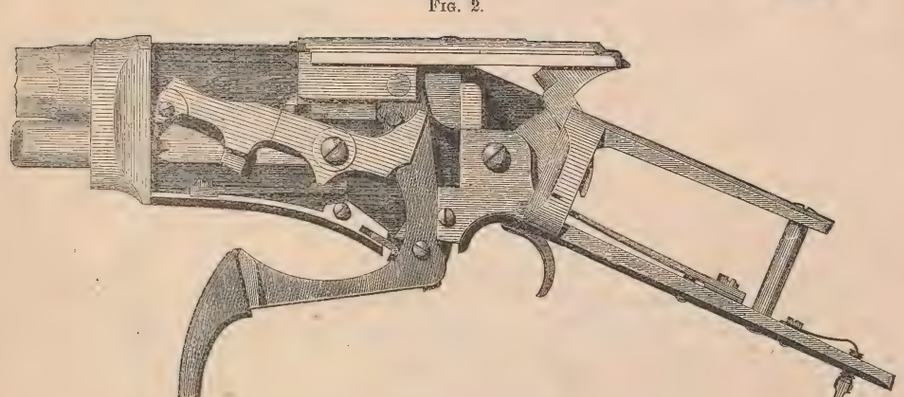

FIG. 3.

RIFLES OF TO-DAY.

THE KENNEDY REPEATING RIFLE.

THE Kennedy arm, or as the manufacturers now prefer to name it, the Whitney-Kennedy repeating rifle, belongs to that class of repeaters where the magazine is arranged in a tube below the barrel and the action is operated by a lever, the motion of which downward and forward performs all the work of cocking the hammer, opening the breech, throwing out the empty shell and bringing a new cartridge into the chamber of the arm ready for the next discharge. The rifle is manufactured by the Whitney Arms Company, of Whitneyville, near New Haven, Conn., U. S. A. Something was said of this company and its history in the notice of the Whitney single-loader last week. The Kennedy rifle dates back to 1872 and 1875, when it was invented by Andrew Burgess, that prolific concocter of small arms, who has had so much to do with bringing about the art of small-arm shooting as it is known to-day. His devices were taken up by the Whitney Arms Company in 1877, and further improvements were made in 1879 by S. V. Kennedy, superintendent of the works. Eli Whitney, Jr., during 1882, made other changes and improvements, and the arm grew gradually to bear some resemblance to its present form. Among the patents which cover the arm may be mentioned:

No. 134,589. Dated Jan. 7, 1883, A. Burgess.—This patent covers the shape of the lever and method of locking the breech-block.

No. 213,865 and No. 213,868. April 1, 1879, A. Burgess.—These patents cover minor points.

No. 215,227. May 13, 1879, S. V. Kennedy.—This patent is for the carrier block, including the clamp for holding the cartridge in place when the block is raised. The carrier is quite different from that used in any other repeater, and contributes as much as any other one part to the perfection of the same.

No. 218,426. Aug. 12, 1879, to F. W. Tiesing and S. V. Kennedy.—This patent is for the ejector, which throws the empty shell out of the way when the breech is opened after discharge.

After patenting his invention in 1873, and yet further in 1875, Mr. Andrew Burgess made a few rifles by hand and exhibited them at the Centennial Exhibition in 1876. It was not until 1879 that the tools were completed and the rifles placed on the market. At that time it was called the Burgess rifle, and the model first made was adapted to the government service cartridge, .45-70-405. The rifle as then made turned out to be a very unsatisfactory weapon, and it was evident that other changes were necessary to make the arm both safe and handy. This led to the Kennedy improvements, and the rechristening of the arm. At the same time the .45-70 government cartridge was discarded as being unsafe on account of its rounded bullet which, in a repeating rifle, where the magazine is in the form of a tube, renders an explosion possible by the bullet of one cartridge impinging forcibly upon the primer of another shell. Since 1880, when the Kennedy arm was put before the public, other improvements were made, the curved handle of the lever has been replaced by a loop, and in the large calibers, .45-60, .45-75 and .50-95 express, the carrier block has been so arranged that the cartridge does not jump its whole length from the magazine, but instead enters gradually as the breech block is moved back in opening the system.

The arm is now turned out in large numbers, and thousands have gone into use. During the year 1883 about twelve thousand were made to supply the retail demand. It has been adopted as a military arm, and several foreign governments have sent orders for supplies of this repeater. Upon its merits as a sporting arm for use against game, readers of the FOREST AND STREAM have been given the opinion of hunters from time to time. The communication of "S. E. B." in the issue of Jan. 17 last tells what the arm will do under hard usage, and the correspondent, "Big Injin," has also given the arm a very thorough comparative test. The manipulation of the Kennedy is very simple, and scores have been made where rapidity of fire was important without taking the rifle from the shoulder. The magazine is charged while the breech is open by pressing the cartridges, one at a time, through the spring cover, which is placed on the right hand side of the receiver. Accidents from premature discharge are rendered impossible, as far as may be, as the hammer cannot reach the firing-pin until the breech is fully closed and locked. The resistance to the discharge is in direct line with the bore of the barrel. Its present builders claim that the qualities essential to a first-class rifle of safety, accuracy, durability, strength, simplicity, rapidity and ease of manipulation are all united in the Whitney-Kennedy.

The tests applied at various times to the Kennedy action have been very severe.

It has been tested at the armory, by firing many hundreds of rounds successively, by excessive charges, by defective cartridges, etc., and has stood every test. The parts are of such size and form that they are not extra liable to break or get out of order. Only the best materials are used. The system is made of steel throughout. The construction is simple, and the parts are few as in any other magazine rifle operated by a lever. The mechanism can readily be understood by any person who is at all familiar with fire arms, and no difficulty should be experienced in taking apart and assembling the system if the directions given below are followed.

Ten shots have been fired from the Kennedy in two seconds, and it can be fired as a single-loader (the charged magazine being held in reserve) as rapidly as any gun in the market.

The rifle has a general record of some fine shooting by selected experts. Captain E. E. Stubbs thinks much of the arm, and at Gainesville, Ark., on Nov. 25 last, shooting at 1,000 glass balls thrown from screened Bogardus traps, at a distance of 15yds., broke 993, and during the feat made a run of 700 without a break. Speaking in September last, Captain Stubbs said: "I tried the Kennedy at Coney Island, 200yds. range, and made 47 consecutive bullseyes." Again, on Dec. 31, Captain Stubbs writes: "I subjected the Whitney-Kennedy rifles on Christmas Day, just past, to a wonderful test of endurance, making a total of 500 shots in a fraction less than five minutes. I used six guns, and all worked well."

Mr. C. Wilkins, at Franklin, Pa., on May 4, 1880, broke 479 out of 500 balls thrown from a trap. This feat was witnessed by the Franklin Sportsman's Club and many hundred visitors.

The directions for taking apart the weapon should be closely followed, and may then be employed without the necessity of a professional gunsmith.

To take apart, the breech being closed with the muzzle of the barrel to the front:

Take out the two side screws, on the left side of the receiver, that are nearest the barrel. In the 45-caliber rifle take out also the largest screw (carrier-block screw) on the right side of the receiver. Remove the bottom plate and carrier-block through the bottom of the receiver. Full cock the hammer and take out the extractor screw from the top cover, then depress the lever sufficiently to let the cover pass over it, pull back the hammer as far as possible and slide the cover out over it. Remove the breech-block and lever together through the top of the receiver. To disengage the lever from the breech-block: Take out first the firing pin screw; second, the firing pin; third, the ejector from the bottom of the breech-block; fourth, the large pin from either side.

To assemble: Put the parts together in the reverse order from which they were taken out.

If, from long use, the main spring should lose its force and the gun miss fire, it may be stiffened by turning up the set screw, placed under it in the bottom tang.

The accompanying cuts show the arm in its completed state, and by the cross section display the mechanism of the action with the breech closed and again when the breech is open. The parts in Fig. 2 correspond with the numbers as follows: 1, Receiver; 2, bottom tang; 3, lever; 4, breech-block; 5, top cover, 6, ejector; 7, carrier-block; 8, bottom plate; 10, hammer; 11, main spring; 13, sideloading spring cover as seen from back; 14, trigger; 15, carrier-block clamps 16, carrier-block spring; 17, breech-block pin; 18, carrier-block screw; 19, hammer screw; 20, extractor; 21, ejector catch; 22, bottom-plate snap; 23, long firing pin; 24, short firing pin; 25, carrier block clamp spring; 26, ejector spring; 27, bottom-plate snap spring; 28, long firing pin spring; 20, short firing pin spring.

There are now five different calibers or sizes made: .38-40, .44-40, .45-60, .45-75 and .50-95, while a rifle is now under preparation to take a .32-20 cartridge. The .38-40-160 arm, 24-inch octagon barrel, 13-shot magazine costs $27, while the same with a round barrel costs $25. The .44-40-200, 24-inch octagon barrel, 13-shot cartridge, also costs $27, with a round barrel at $25. The .45-60-300 rifle, 28-inch octagon barrel, 11 shots, weighing 9½lbs., costs $29, while the round barrel comes at $27. The .45-75-350, otherwise similar to the last named, comes at the same prices. The .50-95-300 express rifle has a 26-inch barrel, carries 10 shots and costs $38 in octagon barrel, while with round barrel the cost is $35. All of these prices are for sporting rifles, fitted with open buckhorn or clover-leaf sights.

SHORT-RANGE SHOOTING.—Ilion, N. Y., April 3.—*Editor Forest and Stream:* I take the liberty of forwarding you diagram and electros of targets made on our range. The weather conditions were light breeze, cold, cloudy and poor light.—A. ARMSTRONG, Sec. Ilion Rifle Club.

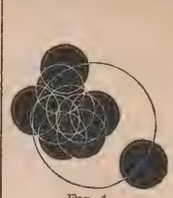

FIG. 1.

FIG. 2.

Fig. 1.—Ten consecutive shots, made from rest, by L. N. Walker, Ilion, N. Y., March 3, 1884; distance, 100yds.; Remington rifle, 32 caliber, 35 grains powder, 150 grains lead. The above diagram is actual size. Shot at lower right hand was the ninth fired.

Fig. 2.—Ten consecutive shots, made from rest; 100yds. distance; by L. N. Walker, Ilion, N. Y., March 20, 1884, with Remington special M. B. L., military sights; without cleaning; 80 grains powder, 550 grains bullet, Remington waterproof patch. Used Dolan's breathing tube. Diagram, actual size.

GARDNER, Mass., April 3.—To-day members of the Gardner Rifle Club kept open house at Hackmatack Range and entertained a few members of the Worcester Rifle Association, and a right good time was the result. The American decimal target was used, shooting off-hand at 200yds., with a possible score of 100. The best results were as follows, in the face of one of the severest snow-storms: G. F. Ellsworth 92, G. E. Fordyce 89, A. C. White 89, G. C. Goodale 88, I. N. Dodge 87, G. F. Emerson 87, Stedman Clark 82, A. Mathews 79, B. Williams 76, H. C. Knowlton 64, A. Williams 59, P. George 57, J. L. Thomas 57.

At the last regular meet of the Garden Rifle Club the following scores were made on the same target:

W C Loveland	9	10	10	6	9	8	10	9	9	9—89
A Mathews	10	9	9	9	9	10	9	9	10	8—87
L W Clark	8	10	8	10	6	9	10	9	6	10—86
M Atherton	9	6	9	7	8	10	9	8	10	9—84
G F Ellsworth	8	8	9	6	8	9	8	8	10	9—83
G C Goodale	5	10	9	9	9	6	10	9	6	9—82
S Hildreth	8	9	9	9	9	5	9	4	9	7—80
B Williams	7	6	8	9	6	6	7	10	10	9—78
J W Dickinson	4	10	7	7	6	7	6	8	9	9—73

At the annual meeting, held this week, the club elected officers as follows: President, I. N. Dodge; Vice-President, H. C. Kowlton; Secretary and Treasurer, G. C. Goodale; Executive Committee—F. E. Nichols and W. C. Loveland.

NEW YORK.—Regular weekly shooting of the Bulls head Rifle Club Thursday, March 27, 12-ring target, possible 120: M. Dorrier 118, A. Lober 118, E. Holzman 117, C. Rein 115, V. Steinbach 114, H. Gunther 113, J. F. Schrorder 109, A. Stolzenberger 109, J. Schneider 110, H. A. Wasmuth 108, G. Wendelken 106, D. Holland 101, J. F. Campbell 93, S. F. C. Weber 94, H. Zubiller 95, D. Louitzki 86.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

BOSTON GUN CLUB TOURNAMENT.—A dull, wintry day at Wellington opened, and greeted a large number of shooters at the above tournament on the 2d inst., nearly all of the surrounding clubs being represented; later on the snow seemed likely to interfere with the day's sport. In spite of all such difficulties, however, the comfortable quarters enabled the shooters to stand to their guns and exterminate some 2,000 birds, with the results tabulated below. Leading scores were as follows:

First sweep, 5 birds, 18yds. rise:

J Williams	01111—4	C F M Stark	11111—5
J S Hart	10111—4		

Second sweep, 5 single birds, 18yds. rise, 5 traps:

Sampson	10111—4	Eager	11111—5
Jenkins	11111—5		

Third sweep, 2 pair double birds, from 5 traps, 16yds. rise:

Perry	11 11—4	Hart	11 11—4
Jenkins	10 11—3	Stark	11 10—3
Evans	11 01—3	Cooper	10 11—3

Fourth match, 7 single birds, 18yds. rise:

Williams	1011111—6	Jenkins	1110011—5
Eager	1111101—6	Hart	1111111—7
Cooper	1111111—7	Sampson	1011111—6
Perry	1111111—6	Johnson	1111101—6
Gerrish	0111101—5	Sawyer	0110111—5

Fifth sweep, 5 single birds, 18yds. rise:

Sawyer	01111—4	Cooper	11111—5
Law	11110—4	Gerrish	01111—4
Jenkins	11111—5	Johnson	11011—4

Sixth sweep, 5 pair double birds, 16yds. rise:

Jenkins	11 11 01—5	Eager	11 10 10—4
Hart	11 11 00—4	Perry	11 10 11—5
Law	11 10 10—4	Gerrish	11 10 10—4
Sawyer	00 11 11—4	Johnson	01 10 11—4
Braley	11 11 11—6		

Seventh sweep, 7 single birds, 18yds. rise:

Field	1111111—7	Sawyer	1011011—5
Stark	1011111—6	Gerrish	0111111—6
Williams	0111111—6	Cooper	1111111—7
Johnson	0111111—6	Perry	1111111—7
Kirkwood	1111101—6	Eager	1111110—6
Law	1100111—5	Jenkins	1111001—5
Gilman	1011111—6		

Eighth sweep, 7 single, 18yds. rise:

De Rochmont	1111010—5	Field	0101111—5
Perry	0111110—5	Eager	1111110—6
Stark	0111011—5	Kirkwood	0011111—5

Ninth sweep, 7 single birds, 18yds.:

Sawyer	1111111—7	Nichols	0111110—5
Jenkins	1011111—6	Field	1100111—5
Sampson	1101101—5	Williams	1011111—6
Law	1110101—5	Johnson	0111101—5
Eager	1101111—6	Gerrish	1011101—5
Cooper	1111011—6	Parker	1111011—6

Tenth sweep, 7 single birds, 18yds. rise, 5 traps:

Jenkins	1011110—5	Parker	1011011—5
Cooper	1101011—5	Stark	1001111—5
Perry	1101101—5	Kirkwood	1111101—6
Johnson	0111011—5		

Eleventh sweep, 3 pair doubles:

Perry	10 11 11—5	Houghton	10 10 11—4
Law	11 11 01—5	Parker	10 01 11—4
Sampson	10 11 11—5	Kirkwood	10 10 11—4
Cooper	10 10 11—4		

Twelfth sweep, 7 single birds:

Jenkins	1011111—6	Gerrish	1111111—7
Eager	1111001—5	Sawyer	1111100—5
Cooper	1101110—5	Field	1111011—6
Sampson	1111100—5	Williams	1111010—5
Perry	1111011—6		

Thirteenth sweep, 5 single birds:

Eager	11111—5	Kirkwood	11110—4
De Rochmont	01111—4	Gerrish	11111—5
Sampson	10111—4	Field	01111—4
Perry	01111—4		

Fourteenth sweep, 5 single birds:

Perry	11101—4	Law	11111—5
Johnson	01111—4	De Rochmont	01111—4
Stark	11110—4		

THE LIGOWSKY SHOOT—Cincinnati, April 3.—The following additional clubs have remitted $1 initial entrance fee, championship match, first international clay-pigeon tournament, May 26, 1884. The numbers indicate the respective order of choice as to time in being called to the score:

14. Feb. 23—Knoxville Gun Club, Knoxville, Tenn.
15. March 6—Kirtland Gun Club, Cleveland, Ohio.
16. March 6—Evanston Gun Club, Evanston, Ill.
17. March 10—Algona Sportsmen's Association, Algona, Iowa.
18. March 14—Chippewa Falls Gun Club, Chippewa Falls, Wis.
19. March 16—Farmington Sporting Club, Farmington, Ill.
20. March 19—Bradford Sporting Club, Bradford, Pa.
21. March 20—Boston Gun Club, Boston, Mass.
22. March 21—Franklin Gun Club, Benton, Ill.

LIGOWSKY CLAY-PIGEON CO.

IOWA SHOOT.—The first annual tournament of the Winnesheik Gun Club will be held at Decorah, Ia., on May 13, 14 and 15. Glass balls, clay and live pigeon matches are provided in abundance.

GENEVA, N. Y., April 2.—The second annual shoot of the Lake side Gun Club took place this afternoon. It being a stormy day, the attendance was not large. The following is the score:

Contest No. 1, 10 glass balls, Card trap:			
Stapleton	8	Crawford	8
Fish	9	Dey	8
Stacey	7	Stacey, Jr.	6
Geo Hutchinson	5	Shot	8
Grant Hutchinson	4	Maunder	5
Contest No. 2, 10 glass balls, Card trap:			
Grant Hutchinson	3	Fish	7
Shot	8	Stacey	7
Stapleton	9	Geo Hutchinson	7
Dey	7	Stacey, Jr.	7
Crawford	4	Maunder	3
Contest No. 3, 10 glass balls, Card trap:			
Grant Hutchinson	8	Fish	7
Dey	9	Geo. Hutchinson	6
Stapleton	9	Crawford (21yds.)	8
Stacey, Jr.	6	Stacey (21yds.)	8
Maunder	7		

The club held its annual meeting in the evening. The treasurer's report showed the club in a flourishing condition financially, and the following officers were elected for the ensuing year: President, S. Coursey; Vice-President, J. S. Crawford; Secretary and Treasurer, J. Geo. Stacey.

TORONTO, April 1.—The pigeon match between A. Humphrey, of Toronto, and J. Bell, of Limaroux, for $100 a side, came off at John Oulcott's shooting grounds, Eglinton, to-day. The weather was rather cold for this time of year, still it did not mar the gathering of sportsmen, who were numerous. The wind was favorable to the birds. Betting on the start was 2 to 1 on Bell. Bell won by 6 birds, as follows: Match at 40 birds each, $100 a side, 21yds. rise; Dominion rules:

J Bell	1101110111111101111111111000001101—26
Humphrey	1101101010001100110111101110111101000—20

Mr. J. Wilson acted as referee and Mr. Oulcott trapped.

MUNCY, Pa., April 5.—Our new club, the Keystone, of Muncy, had its first shoot to-day; out of thirteen members seven shot, and below is the score. Weather awful.

C Guyer	20	S D Renn	18
B McMichael	19	H Corson	17
J P Guyer	19	Levi Hill	16
W Crawford	19

FIXTURES.

May 18.—Eclipse Y. C., Opening Cruise.
May 24.—Oswego Y. C., Opening Cruise.
May 24.—Boston Y. C., Opening Cruise.
May 30.—Knickerbocker Y. C., Spring Matches.
May 30.—Atlantic Y. C., Opening Cruise.
May 30.—Newark Y. C., Spring Match.
May 30.—South Boston Y. C., Spring Match.
May 30.—City Point Mosquito Fleet, 13 and 15ft. boats.
May 31.—Boston Y.C., First Match, Connor and Commodore's cups.
June 9.—Portland Y. C., Challenge Cup.
June 10.—Atlantic Y. C., Annual Match.
June 11.—Hudson River Y. C., Annual Match.
June 12.—New York Y. C., Annual Matches.
June 14.—Hull Y. C., Club Meet.
June 14.—Seawanhaka Corinthian Y. C., Annual Matches.
June 16.—East River Y. C., Annual Matches.
June 16.—Newark Y. C., Open Match.
June 19.—New Jersey Y. C., Annual Match.
June 23.—Newark Y. C., Open Matches.
June 28.—Boston Y. C., Ladies' Day.
June 30.—Manhattan Y. C., Annual Cruise.
June 30.—Eclipse Y. C., Spring Match.
July 4.—Larchmont Y. C., Annual Open Matches.
July 9.—Beverly Y. C., Marblehead, First Championship.
July 12.—Hull Y. C., Club Meet.
July 12.—Boston Y. C., Second Club Match.
July 26.—Beverly Y. C., Nahaut, Second Championship.
Aug. 9.—Hull Y. C., Club Meet.
Aug. 9.—Boston Y. C., Open Matches, all clubs.
Aug. 16.—Beverly Y. C., Swampscott, Third Championship.
Aug. 23.—Beverly Y. C., Marblehead, Open Matches.
Aug. 23.—Boston Y. C., Third Club Match.
Sept. 6.—Beverly Y. C., Marblehead, Special Matches.
Sept. 13.—Hull Y. C., Club Meet.
Sept. 13.—Boston Y. C., Second Ladies' Day.

THE LAKE Y. R. A. AND MEASUREMENT.

A FULL report of the proceedings at the recent meeting at Toronto is printed in this issue. It will be seen that the lake clubs, both Canadian and American, have, after investigation, decided upon a length and sail area rule. This conclusion is in harmony with the general feeling prevailing in yachting circles on both sides of the Atlantic. The fallacy of measuring by simple length, and the evil tendencies of that rule, are fast becoming appreciated. The sail area rule is making rapid strides, for the good reason that under it various types can be raced with some approach to equity. But the chief recommendation of the rule lies in the fact that small, economical boats, reasonably sparred and of convenient draft, will not be driven to the wall as under the comparison by simple length. The modern Boston keel sloops and Itchen cutters, which are the direct outcome of the latter custom, are the largest and most expensive boats to build and sail, and draw more water than others of less extravagant size on the length. Witness, for example, the keel sloop Cricket, of Boston, which, on a loadline of 32ft., draws no less than 7½ft., or as much as the cutter Muriel on 40ft.; 2½ft. more than the cutter Merlin on 25ft., 2ft. more than the cutter Yolande on 26½ft., as much as the cutter Madge on 33½ft., and within 6in. as much as the cutter Maggie on 45ft.

A rule which forces the construction of an unhandy and expensive type cannot long survive, and as fast as yachtsmen appreciate the tendency to great expense and oversparring with no commensurate returns for the outlay, there can be little doubt that simple length rules will gradually give way to more intelligent modifications which will allow all to build as they please, from the widest to the narrowest, the shoalest to the deepest, and so through competition promote the survival of the fittest. Already, with one exception, the principal clubs in New York have given in adhesion to the sail area rule. In the East the recently formed Y. R. A. have not as yet arrived at any conclusion, and it is possible they will decree the same method. Should this not be done, experience to come will show up the false and pernicious workings of simple length, that at future convocations of the powers the desired perfection will be brought about through the force of public opinion. In England the sail area rule will be tried this year by several prominent clubs, and it has already supplemented length in Itchen classes and Southampton waters generally.

There is a firm conviction abroad that the time has come for abolishing the old and prejudicial beam and length rule all around the British coast and the substitution of the new system. As fast as "vested interests" can be set aside, the sail area rule is being accepted, and we think that in another season or two it will become universal throughout the yachting world as the best and most practicable substitute by which the difficulties in the way of obtaining the actual bulk of vessels will be overcome.

The Lake clubs are to be congratulated for being in on the new tide. The Toronto and Kingston clubs had already given the Seawanhaka rule a season's trial with great satisfaction, and at the recent meeting the whole matter was thoroughly canvassed and examined through application to actual boats whose relative performance is known. Hence future prosperity under the sail area rule can be considered assured. The Chicago Y. C. is also debating in an informal manner a similar measure, and we learn that Colin Archer is working among Swedish organizations to the same purpose. So the coast seems clear at last to a universal rule in which all interest s will acquiesce. Nearer home, old prejudices still have some influence and strength, but that the errors of length measurement are fully understood by intelligent observers elsewhere appears from the following, taken from *Le Yacht*, of Paris:

"To sum up: The English Y. R. A. has decreed three classes of boats, of certain defined lengths, and applies to these classes time allowance based upon sail area and length. * * * It appears, then, that the division of boats in classes by length maintains the principles of measurement by length, but at the bottom the allowance upon sail area and length has, as a direct consequence, the abandonment of measurement by length. * * * Experience has demonstrated the fallacy of simple length; for among boats of same length it gives the advantage to the largest and most powerful, and as between boats of different type it hinders all fair comparison. The introduction of sail area offers more equitable conditions for comparison, because the beam and depth [Here appears the intuitive desire to measure actual bulks for fair comparison.—EDITOR FOREST AND STREAM] are the sources of sail carrying, and the new rule takes them into account. This must give results in racing at least fairer, if not perfectly fair, because of the accounting for the bulk on the length. * * * This rule, practically put to test in America under various forms, will be from the present, through the Y. R. A., or perhaps in spite of it, engrafted upon English rules for the racing of yachts and for small boats."

Twaddle about "patriotism" and the slushy scribbling of "penny-a-liners" with no higher aim than pocketing their pay for the filling of a certain amount of space, may find it easier to get along without any exertion of their brain, but wherever critics of experience venture an expression, it is in strong condemnation of simple length. It remains to be seen whether the New England Y. R. A. will have the insight to deal courageously with this question or whether it proposes to shirk by shouldering the vices of a bad rule which chokes off all further experiment and progress in its crass prejudice for the largest displacement and greatest expense in yacht building to the exclusion of all fresh ideas and the rapid development of the sport. A rule which forbids anything but the largest on the length cannot be fair, and that is not the worst of it. The expense of large boats frightens the public from building. The New England Y. R. A. must not look to the past only, but to the future. What may have been good enough in the old days, when all yachts were shoal draft traps, is not necessarily good enough for an enlightened policy applicable to the future, which should give all a fair show and favor none in particular. We are aware of the powerful prestige of old customs, and that the snares of "simplicity" are bound to exert great influence upon the coming deliberations. But we believe the New England Y. R. A. may be trusted to commit no hasty blunder, and that it will face the music without regard to vested interests, and permit no narrow local issues or provincial prejudice to sheer it off the path of duty. That duty demands a rule free from favor to any type, in the light of experience abroad and at home, where there has been sufficient opportunity to observe the workings of rules adhered to for a long time.

The two leading clubs in the country, the N. Y. Y. C. and Seawanhaka Corinthian Y. C., in view of the constantly widening divergence in the type of the vessels composing their fleet, have, after deliberate consideration, resisted the pleadings of vested interests, and to their credit, refused to formulate a ukase against those whose experience or choice leads to deviation from the ancient typical trap. The sail area rule as a correction to the notorious unfairness of measuring by simple length has been introduced with good effect and satisfaction in New York, whatever this or that growler with an oversparred trap may have to the contrary. It is received with increasing favor abroad and indeed is destined to take precedence of all other methods. The Y. R. A. council of Great Britain has positively declared length an inequitable gauge. The Lake Y. R. A., in full possession of all that has been said and reported upon the subject, has seen fit to reject simple length. Those journals making a specialty of yachting from a technical standpoint, are unanimous in the condemnation of simple length. It is not our purpose to further or force any selected rule. But we wish the issue to be put before the New England Y. R. A. in its true light. Are we to have in the East the liberty to build and rig as we like, or is the future to be rammed into a straight-jacket at the outset, only to have all hands wake up again some day and find our cousins abroad have stolen another long march on our practices and experiences? Will the New England Y. R. A. bear in mind that the evils of length measurement were only just beginning to show themselves, because builders are slow to recognize the loophole in the rule? That, if a sloop on 29ft. draws 7½ft. and has 30ft. hoist to-day, the future, forced by the artificial stimulant of prejudicial measurement, will develop vessels drawing 10ft. on the length with 35ft. hoist, displacement and cost corresponding?

Can the association overlook the boat with 5ft. draft and 22ft. hoist, supplied at half the cost and equally as well fitted to the general objects of yachting? Is reason to be dumped overboard and riot in size the consummation to be sought? Are we to see all the troubles and tribulations of racing abroad transplanted to our own shores, only augmented in their interference with sport and the erection of false standards?

This is the sequence length measurement is bound to bring about should the New England Y. R. A. perpetuate its follies and emphasize them by official indorsement. The largest and most expensive and most undesirable type will raise its head and tower above others, a fright to the pockets of all but a small number of rich people, and of a draft and general unwieldiness wholly unsuited to the promotion of yachting interests. We will see on this side of the Atlantic the same harrassing and regretable split between racers and cruisers, and years will not efface the evil wrought. The past is not a sufficient criterion, as the sport was in a general state of chaos. Now that piling up records is becoming the fashion, measurement rules will be swindled to the most possible.

Already the influence of length can be detected in the huge Eastern sloops as the first step in the direction we fear. Let every one desiring a boat ask himself whether he cares for 8ft. draft, 10 tons weight on the keel and 32ft. hoist for general yachting purposes on 30ft. loadline? Yet precisely such a boat was planned three years ago and made her appearance in last year's matches about Boston. She is the product of length measurement, and not a boat representing the most advantageous or economical disposition of size. But for the fact that length refuses to consider size and permits it to race untaxed, such monsters would never enter any one's head. The length rule quashes the delicate play of reason and sets up as a fetish the brute force of bigness. Cruisers will refuse to bow to such a false idol, and as fast as they discover it a losing game to pit small boats on a length against large ones they will retire from the line and relapse in public estimate to the lower order composed "only of cruisers." The most excellent and talented designs will be spoken of slightingly as "cruisers," and that only because a false standard has warped just comparison.

The danger lies herein. If the New England Y. R. A. seeks its guide by the past, it will fail to receive the true course for the future, because the past has scarcely afforded a chance for the poison to appear on the surface. Wise counsel peers ahead and a warning against official indorsement looking to the perpetuation of a proscriptive rule, simply because its vices have lain dormant in the past, cannot go unheeded, unless at serious sacrifices in the future and the complete miscarriage of the chief purpose for which yachting associations are instituted. Once vested interests are permitted to grow strong under a malacious rule, then neither reason nor example may be able to put affairs round again on the other tack.

LOG OF THE WATERSNAKE.

[*From "Cruises in Small Yachts," by H. Fiennes Speed.*]

NOW for the little ship which was to be our home for three months on salt water and fresh, and which usually lay either at anchor or at her moorings a little below Erith Pier, in what is very commonly called the "London River." She was a small cutter of about seven tons, built at Portsmouth in 1873, but redecked, sparred, canvassed and thoroughly overhauled and refitted by McWhirter at Erith in 1878, of pretty smart appearance and not overdone with sail. Dimensions as follows: Length over all 34ft. 6 in., beam 8ft., draft of water 5ft. She had iron ballast inside and a small lead keel of half a ton. Of course carvel built and with considerable rise of floor. Sternpost not much raked, and clew of mainsail plumb with taffrail. Main cabin 10ft. 3in. long, a good forecastle with room in it for a bed bunk, with which, however, it never was fitted. Her fittings below were mostly of teak and maple French polished, which looked very well. The little after cabin was entered by a ladder through the cabin top on starboard side, and had a washstand on starboard side and a 6ft. berth on port side, which was carried along under the deck and passed along one side of the steering well. The latter was 3ft. 7in. long, and completely shut off from the main cabin by a bulkhead which had fitted on it a small shelf to take the binnacle in a handy position. In most small yachts one enters the cabin through foldings or sliding doors, and the question is usually, Where on earth is the binnacle to go?

The whole crew of the Watersnake numbered three. We were therefore an amateur crew. No hand, no boy, no dog, not even a cat to curl up in front of the forecastle stove and make things look homelike when the kettle was on the boil and sang merrily over the red hot coke.

Provisioning for three months required some consideration, but of course we were to get fresh things when and where we could. But that pile, a second great pyramid of tins from Hugh Wood & Co., heaped up on the cabin carpet. How are we going to stow all that lot in the lockers.

Before we warp off, a word about one's toggery on board a small craft. What is best to wear? Now, we all had pilot cloth, and blue jerseys, and flannel shirts, and fine worsted caps, and India rubber soled shoes. All of which sounds professional, of course, but still there are drawbacks even to professional costume, *e. g.*, a thick pilot cloth pair of trousers are not nice to go aloft in to cast off the topsail lacing in a hurry, and get the fid out of the topmast, till they grow pliant with sheer old age. They are too stiff and thick. Whereas flannels are charming and allow perfect freedom of action; but these again are not warm enough on many a summer night, and get to look dreadful after a little brasswork cleaning has been got through, and they have a plentiful modicum of brickdust and oil daubed upon their soft surface. In one short week their pristine beauty is gone forever, and we all know the washerwoman's hands don't improve them.

The question lies between pilot cloth, white flannel and blue serge no doubt. The first is heavy and stiff, and when wet won't dry. The second in easily wet through, but dries easily and is supple, but spoils in appearance with the least thing. The third is a kind of go between and perhaps is best of all, as it dries soon, and allows one to bend one's knees, and yet is fairly warm. It should be of good substauce, otherwise it soon perishes.

But now we warp off at last and drop down to moorings below the pier to wait for next day and get things squared below, wash the decks down and feel we have done with Erith Hard for a time. That night, having done a fair day's work on board, we sat up late and made merry; but I made my crew clearly understand that it was only for a treat, and that the Watersnake always kept good hours as a general rule. My brother slept in the forecastle, I had the after cabin to myself, where I could pop up and down the ladder at pleasure and at a moment's notice while at anchor, and not interfere with anybody; though my apartment was, I must confess, somewhat limited in area. Pen slept in the berth on port side of main cabin and F. in the starboard.

Next day, August 10, there was a nice breeze from S. W. (the usual quarter). Slipped moorings about mid-day and reaching down a little beyond Herne Bay, brought up somewhere in the neighborhood of the Pudding Pan. We had a good sail, but nothing of much interest happened.

August 11.—During the night the wind freshened a good deal on the flood tide, and the old Snake rolled dreadfully, rolled in fact so much that each rail dipped, first on side then the other, and it takes a very heavy roll indeed to effect this, in fact, I never have had it happen in any craft. Breakfast while at anchor was impossible. Only two of us were left sound, and a hard job it was for us to get the anchor, as the motion was so extremely violent with the fresh W. wind. When we had succeeded, and it was only a question of time and patience, and steering and holding on, and when the foresail was run up she was quieter, and we ran comfortably under a reefed mainsail past the Pan Sand Red Buoy and Tougne Light, taking this channel instead of the favorite old Gore channel by way of a change. After a bit it was "Gybe O!" for the North Foreland, and with a good breeze we ran into Ramsgate Outer Harbor till 10 P. M.; then warped into dock and slept peacefully.

THE GLEAM'S RECORD.

THE amount of ballast at present carried by this sloop amounts to 6,200lbs., something over 1,700lbs. of which has recently been put on the keel. Considering the boat is only 23ft. loadline, these figures patently illustrate the tendency toward an expensive and unwieldy type which length measurement fosters. What has been done in the Gleam on a small scale is only the forerunner to what we may expect in large vessels as soon as the weak side of that rule is taken advantage of. Indeed, the new compromise, Thetis, building in Boston, gives a gauge of the tendencies of the times toward the enormous. The record of the Gleam for last year, put in tabular form, is as follows:

June 9—Larchmont Y. C. First Pennant Match, sloops. third class. 2 starters, Gleam	1
June 19—Atlantic Y. C. Regatta, sloops, Class G, 3 starters, Gleam	1
June 23—Seawanhaka Y. C. Corinthian Matches, fourth class, 5 starters, Gleam	1
July 4—Larchmont Y. C. Regatta, third class, 3 starters, Amazon	1
July 14—Larchmont Y. C. Pennant Race, third class, 2 starters, Gleam	1

From the list of races in our issue of Nov. 22, 1883, it appears that for the past season the Gleam's record of four firsts is the best among the sloops, which started five times, with the exception of Dr. Bryant's Shadow.

Editor Forest and Stream:

I notice an error in to-day's paper in your account of the performance of the Gleam last season. In the A. Y. C. race, Gleam won very handily, with several minutes to spare, from the Lois, and Amazon was third that day. While I am at it, it is as well to say, that Amazon carried away the throat halliard block hook within two minutes after crossing the line, and although damages were repaired quickly, yet Amazon could not in the light and baffling wind regain the distance lost. I pride myself upon never carrying away anything on my boat; but this accident was caused by bad ironwork well hidden by the galvanizing, something no one can guard against.

In the Seawanhaka Corinthian race I tried an experiment on the silly rule of measurement now in vogue, viz.: sailed without a topmast, and thus gained about six minutes in time. Of course, I had to take my chances on the weather, and this time got left. I had the satisfaction of beating the whole class down to the S.W. Spit buoy, but there the wind died out entirely.

I also had the satisfaction of showing there was a hole in that system of measurement, and the result is, I understand, that yachts will hereafter be measured for topmasts about the length of the gaff, whether they carry them or not.

At Larchmont we had the only racing day of the season; a good topsail breeze, true and steady as a clock. Gleam and Amazon crossed the line side by side, Amazon beat Gleam, in round numbers, fourteen minutes, or nine minutes with her time deducted.

Amazon is 2ft. 4in. longer on the water line than Gleam.

Regarding the Lois, she is one of Mr. Ellsworth's boats, formerly the Kangaroo. Although she is not now in racing hands, and is under-rigged, so as to be a comfortable boat in which a gentleman can and does safely take his wife and family with him, yet if there is any cutter or any sloop, carrying fixed weight, of her length, that thinks Lois can't go, I will try to convince them of the error for a $100 cup, A. Y. C. course and rules. FRANKLIN BEAMES.

[We gladly make the correction mentioned in the record of Gleam published last week, and regret that a misprint in the times of finish on our page 433 of Volume XX., should have led to the error. In reference to the Lois, we confounded that boat with another of the same name. The Lois, ex-Kangaroo, is no doubt a fast boat on length measurement in light weather with enough rig, but like all of her kind, not to be depended upon in rough water.]

CRUISING IN A SLOOP.

Editor Forest and Stream:

I do not know if I am at all singular in my experiences on the water, but I do know I have had some nasty ones. The scene of the following was the harbor of Halifax, N. S., some fifteen years ago. I had just returned there from Lake Ainslie, Cape Breton, where I had been sent on business, expecting to find certain letters, one of which I thought sure would direct me back again to Lake Ainslie for a six month's visit. In order to prepare for such a mandate when it came, I looked up certain yachtsmen and fishermen to find a staunch, fairly fast, seagoing, 25 or 30ft. keel boat to take with me. Among many I saw was one in particular that took my fancy. Her size, build and price just suited me. She had no nice fixings below, so that I could fit her out to my fancy and pocket. The bargain I made was, that I should pay a forfeit in two weeks of a stipulated sum, in case I did not want to purchase. After closing the agreement it did not take me long to throw aboard some bread and cheese, and prepare for a short cruise into the Atlantic. A fine breeze and tide tempted my haste, and soon I had mainsail on her, with the only jib she carried. I made my dingey fast to the anchor buoy, and slipped my moorings. Off we bounded, my heart and joy keeping pace with the occasion. About one-half of the mainsheet was aboard, and the jibsheet was belayed in my hand. I handled and felt her as I would a colt just out of the stable, and soon gained great confidence in her abilities and qualities. This did not last long. I found I had been greatly mistaken in the wind, and that it was merely luck that had attended me thus far, as squalls of great fierceness became the order of the day. My yacht suddenly righted, her mainboom came aboard just as if I were passing under the lee of some great elevator, then down came the wind again with awful force and so quickly that my determination to reef had no time to be put into effect. I tried to bring her to, but another burst of aerial passion so buried her that I had to bring her helm up again and await a more peaceful moment. All this time the city was fast being shut out and the Atlantic opening. The quiet moments I waited did not come. Aeolus, on the contrary, appeared determined to make the most of his opportunity and hurled his imprecations at my audacity in attempting alone to gain the mastery over one element in spite of the other. I forget just now who wrote "*Tempora mutantur, et nos mutamur in illis*," but I do not forget how forcibly those words came to me. The time was changed and I must change with it. So here goes. Down with the helm in spite of everything. I did some lively handling of that mainsheet, and if the jib whips into ribbons I cannot help it. It was an awful moment. My sloop of that date was a very different article to the cutter of to-day. There was no grip to her, she sat on the water like John Gilpin in the saddle. When a puff came she went, when a sea rolled under her she rolled off, and here she was on her beam ends. A regular Minnie-ha-ha in the cockpit, having it all its own way. We carried no boarding nettings, and thus the briny enemy found no difficulty in coming aboard. I thought nothing could save me. The strong tide and wind prevented our coming up any more, and although the time seemed very long to me it could only have been a few seconds. I took my bearings for a swim, I might just as well have done so for a fly, or a walk, when crash went something. It was the jaw of the boom giving way with the weight of the water and wind. Then some of the masthoop seizing parted, and the yacht actually lifted her lee rail out of the water. Doubtless a lull helped her. Now was my chance. I manned the downhaul and stowed the jib. Then for the main halliards. But oh! no, not yet. I must first fight and conquer that wild maniac of a boom or be struck down with it. Pat never wielded his shillalah more

dexterously, nor the Roman legionary its battering ram more fiercely than the God of the misty element hurled that boom about. I knew the spar could not long stand it, so I must be quick. I seized a line, and making two canal hitch loops I went for that boom. I waited, I dodged, I jumped, I lassoed it, and sprang round the mast, hauled in, taking a turn or two round something, and then let go the halliards. The gaskets soon had that sail in their embrace, and I breathed once again.

I was as strong as a lion up to this, now I was weak as a cat. I trembled now when I was comparatively safe, whereas before I did not even tear anything. Then I could think quite readily, now not at all. I was imbecile or next thing to it. I carried no colors to telegraph a word of distress. I did not think any one saw me, therefore I must act for myself.

The tide was by this time nearly neap; the wind as fresh, but steadier. A gale was commencing. It had hauled a point or so, and more off shore. All this encouraged me, for I should have smoother water. I began operations by pumping, but had not done much when something told me that my mainsail was split into ribbons and useless. I trembled like a leaf, and cold sweat bedewed my whole system while I examined and found it just so, and yet this fact so showed me my position that I found my nerves and mind strengthening every minute. My determination was to sail back under jib in a head wind. Could it be done? I had done so before in another yacht by trimming stup. I will try this one. I slashed the mainsail free and stowed it away right in the eyes. I then found a bar of pig iron that had not gone out with the rest, and placed that there too. The water then put her down by the head, even though I went aft to the helm. She sailed well, but not fast. I had at times to give her a weather helm, when the wind freshed more than usual. The tide, of course, after it commenced to flow, helped me along. The great drawback now was my inability to find either bread or cheese or pipe. A boat's crew from H. M. S. Royal Alfred had put off to assist me, but seeing me fast picking up my anchorage, they returned. As I neared the wharves I saw a dark line, which turned out to be nautical Halifax, *en masse*, who cheered and cheered again as I luffed up, seized my anchor-buoy, and made fast. VERAX.

[A yawl or cutter rig would have prevented the discomfiture described, and a deeper boat would have made better weather.]

THE LAKE YACHT RACING ASSOCIATION.

[*From the Toronto Mail.*]

AT the annual general meeting of the Toronto Y. C. held on Saturday, Jan. 5, the feasibility of forming a yacht racing association was discussed, and a committee consisting of Messrs. G. H. Duggan, W. H. Parsons, Wm. Dickson and George E. Evans were appointed, with instructions to put themselves in communication with the other yacht clubs around the lakes with a view to the formation of such an association. After considerable correspondence on the part of the secretary of the T. Y. C. with other yacht clubs on the lakes, it was found that they were all very much in favor of having such an association formed. A circular was then sent to each of the clubs calling on them to appoint three delegates; these delegates to form a committee and draw up a constitution and rules to govern such an association.

The outcome of this preliminary skirmishing resulted in a meeting of the delegates so appointed at the Queen's Hotel on Saturday afternoon. The Royal Canadian Y. C. sent Col. Grasett and Messrs. John Leys and Robert Cochrane, and the Oswego Y. C., Messrs. Mott, Chelps, and McMurrich. The Bay of Quinte Y. C. was unfortunately unable to send delegates, but authorized the secretary of the Toronto Y. C. to vote on the vital points which came up for discussion. Mr. Leys took the chair, and the delegates immediately proceeded to tackle the most important subject which came up for their discussion, viz., the measurement rule, for it was believed that if unanimity could be secured on this subject, other less important details could easily be settled, and the Association might be considered as formed.

Mr. Evans read a long and exhaustive letter upon the subject addressed to him by Mr. Kuhhardt, of FOREST AND STREAM, which entered with great exactness into the principle underlying the different rules for measurement of the Seawanhaka, New York, Yacht Club and English Yacht Racing Association, and after the matter had been fully discussed, and its effect upon typical yachts round the State examined, it was decided to adopt the Seawanhaka rule as a happy mean between the two others. The Toronto Y. C. have already adopted this rule, and sailed their last regatta under it. The Oswego delegates came armed with full authority to bind their club and also declared in its favor. The Bay of Quinte Y. C., in their letter to the secretary of the Toronto Y. C., gave him full power to cast their vote in its favor, and the Royal Canadian delegates decided to recommend its adoption at a special general meeting of their club, which will shortly be held.

Kingston, although unfortunately unable to send delegates, had written to the secretary of the Toronto Y. C. stating that they had already adopted the Seawanhaka rule, so that the co-operation of their club may be looked upon as assured.

A constitution was forthwith drafted by the meeting, which is appended, by which it will be seen that any of the yacht clubs round the lake of good standing may become a member of the association by adopting the constitution and by-laws.

The officers for the ensuing year were next appointed, as follows:

President, Mr. John Leys, R. C. Y. C.
Vice-President, Mr. John T. Mott, Oswego Y. C.
Second Vice President, Mr. Hugh C. Dennis, Toronto Y. C.
Secretary and Treasurer, Mr. George E. Evans, Toronto Y. C.

After the labors of the meeting the delegates adjourned to dinner, which was served in the Queen's best style, the Mayor presiding, with Mr. Leys in the vice-chair. After the dinner cigars were in order, and the delegates spent a very pleasant evening over the subject nearest to their hearts, and separated with great regret, but feeling satisfied that they had accomplished, or almost accomplished, a good work. Appended is the constitution. A copy of it and the sailing rules will be sent to each club upon the lakes, and upon their signifying their acceptance of them they may become members of the Association.

LAKE YACHT RACING ASSOCIATION.

CONSTITUTION.

Article I.—Name.—The Association shall be known as the "Lake Yacht Racing Association."

Article II.—Objects.—The objects of the Association shall be to encourage yacht building and yacht racing and to establish and enforce uniform rules for the government of all races in which the yachts of two or more clubs compete.

Article III.—Officers.—The officers of the Association shall be president, vice-president, second vice-president, secretary (who shall also be treasurer), and an executive committee, consisting of eleven members, of which the officers shall be members *ex officiis*. The officers and members of the executive committee to be called the council. The officers shall be elected at each annual meeting, and shall hold office for one year, or until their successors have been duly elected. Vacancies may be filled at any regular or special meeting, of which the secretary shall give at least ten days' notice in writing to each member of the council, and no member of the council shall vote upon any question in which he is personally interested. A majority of the votes of the members of the council present shall be necessary to pass any rule or regulation. Voting shall be by ballot. One member of the council from each club belonging to the Association or his proxy shall be necessary to form a quorum.

Article IV.—Duties of Officers.—President.—The President shall preside at all meetings and enforce all regulations of the Association.

Vice-President—The vice-president shall assist the president in the discharge of his duties and in his absence officiate in his stead.

Second Vice-President—The second vice-president shall assist the vice-president in the discharge of his duties and in his absence officiate in his stead.

Secretary—The secretary shall keep a true record of the proceedings of all the meetings of the Association in a book provided for that purpose; shall keep a correct roll of all the clubs and delegates; shall notify each club of its election to membership, and shall notify each delegate of every meeting and of the purpose for which it is called.

Treasurer—The treasurer shall collect all money due the Association and pay all bills contracted by it, keeping a correct account of the same in a book provided for that purpose. He shall make a report at each annual meeting of all receipts and expenditures, and of the amount of money remaining in his hands.

Executive Committee—The executive committee shall act as a membership committee, shall establish and enforce penalties for the infringement of the racing rules of the Association, and shall settle any dispute arising out of the construction of racing rules which shall be referred to the Association.

Article V.—Membership.—The following yacht clubs may become members of the Association by accepting the by-laws: Bay of Quinte, Kingston, Royal Canadian and Toronto. Any other yacht club on the lakes in good standing having fifty members and five yachts of 16ft. loadline or upward, shall be eligible for membership. Application for membership must be made in writing to the secretary of the Association, must be signed by the commodore or secretary of the club applying for membership, and must contain a correct list of the members and yachts of the club so applying. The executive committee shall act upon said application, and shall admit all clubs eligible under this article; their decision shall be final.

Article VI.—Representation.—Any club becoming a member of the Association under Article V., shall be entitled to an equal numerical representation in the council with the other clubs belonging to the Association.

Article VII.—Meetings.—There shall be an annual meeting on the second Saturday in May of each year, at which the reports of the secretary and treasurer shall be read, and officers for the ensuing year elected. The first annual meeting, as aforesaid, to be held in Toronto, in the year 1885, at which meeting it shall be settled where the next meeting shall be held, and so on; the place where each subsequent meeting is to be held to be settled at the preceding one. Special Meetings.—Any club belonging to the Association shall be at liberty to call a special meeting by giving one month's notice in writing, stating the object for which such meeting is called, and signed by the commodore or vice-commodore of the club, giving such notice to the secretary of the Association, who shall thereupon notify the members of the council of such special meeting and its date, giving them at least fourteen days' notice.

Article VIII.—Assessments.—Funds for defraying the current expenses of the Association shall be raised by an annual assessment on each club of ten dollars, which shall be due and payable in advance, and the financial year shall begin at the date of the annual meeting, and an additional assessment to cover the expenses of publishing a book containing the constitution, rules and regulations, code of signals, etc., of the Association to be borne by the clubs proportionally to the number of their members. No other assessment shall be levied except by a two-thirds vote of all the members of the council present at a meeting called for that purpose.

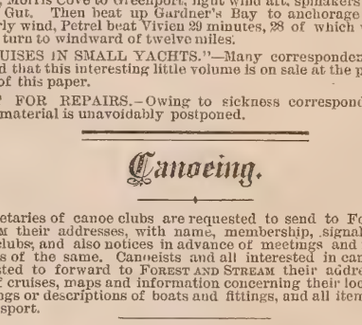
Article IX.—Resignations and Expulsions.—The membership of any club in the Association shall be forfeited by voluntary withdrawal, by disbandment, or by a unanimous vote of all the clubs of the Association at a meeting specially called, at which said club shall have an opportunity of being heard in its own defence.

Article X.—That each club shall be furnished with a copy of the constitution and by-laws and be bound thereby, and that in case of infringement of such laws by any club, such club shall be liable to expulsion from the Association in the manner provided in Article IX.

Article XI.—Delegates to the annual general meeting to have power to appoint proxies to vote in their stead.

Article XII.—Amendments.—These by-laws may be amended by a two-thirds vote at any meeting of the Association, provided, however, that the notice of such meeting shall have contained the proposed amendment in full.

PETREL.—From a letter in last week's paper it might be inferred that the sloop Vivien had been shown a match for the Petrel. We have overhauled the records and find as follows: In 1880, second day of cruise, when Vivien was said to have beaten Petrel into New London, the day was too fluky for any real test, and Vivien's gain was owing altogether to leaving the channel and cutting off inside the Bartlett's lightship, Petrel passing to southward thereof. Leaving New London, Petrel was bound direct for New Bedford by prearranged plan, and gave the Vivien a thought one way or the other. Vivien was then a light, open boat, and generally considered reasonably smart and quite up to the average. Both yachts met again during the cruise of 1882. First day's run from Larchmont to Morris Cove, good leading wind, 44 miles in 7 hours, Vivien with spinaker and Petrel with jibtopsail, latter beat Vivien 16 minutes. Same cruise, Morris Cove to Greenport, light wind aft, spinakers carried to Plum Gut. Then beat up Gardner's Bay to anchorage in strong westerly wind, Petrel beat Vivien 29 minutes, 28 of which was made in the turn to windward of twelve miles.



"CRUISES IN SMALL YACHTS."—Many correspondents are informed that this interesting little volume is on sale at the publication office of this paper.

OUT FOR REPAIRS.—Owing to sickness correspondence and other material is unavoidably postponed.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

CANOE VS. SNEAKBOX.

Editor Forest and Stream:

The question at issue is not as regards speed, but simply stability under press of wind and weather, and ability to go where you want to in open water. As regards the first point I can corroborate the statement of your correspondent from Tom's River. I 1880 I made a trip to Barnegat. On leaving the cars at the village I was met by the boatman, whom I had engaged to take me over to the beach. He said that there had been a storm, and that all the boats at the landing were beached, but that he guessed he could take me over in the morning. The following day I went down to the landing, and found my boatman, who refused to cross the bay. There were a dozen or more others there with boats from twenty to thirty feet in length, but none of them were willing to beat across. After a time a boat was seen approaching from the beach. She came free with four reefs. The skipper of this boat, though offered extra pay, declined to recross the bay. Just then a small boy, thirteen or fourteen years old, came down to the landing, jumped into a sneakbox, and started out. On inquiry I was told that he was the mail-carrier, and went over to the lighthouse every day. On expressing surprise that he should venture out in such a cockle-shell, was told that "them things will go anywhere, even when we dassent take out our yachts." (The boatmen down there all call their catboats yachts.) This it seems to me should settle the question of the stability of sneakboxes. Perhaps canoes are superior in this respect, but I doubt it. I have never known a sneakbox refuse to go where her head was pointed; but cannot say as much for canoes. A few years ago the Puck, Rosalie and Psyche attempted to go down the Hudson from Spuyten Duyvil, but could not do it under either sail or paddle. We then crossed the river, hoping for better luck on the other side. On arriving at the west shore found that we were no better off, and that there was nothing left for us to do but to run back to Spuyten Duyvil under sail, and return to the city from there by rail. The present correspondent answers also the name of "Snark," and will only say that the little 12½ft. box is no longer in his possession. The Bojum passed one summer on the South Bay in company with the canoe Queen Mab, and found no reason to be ashamed of the former's performances.

If Commodore Whitlock is anxious for a trial of canoe vs. sneakbox, I make him the following offer: To sail in July or August next, from Rocky Point, Greenwich, around the west end of Captain's Island, thence around the island to starting point. The match to be sailed in a southwest reefing breeze, with an ebb tide. This, I think, will give a better open-water test than can be had in the Hudson, near Newburgh. If speed is to be taken into account, will give or take allowance under measurement rules of any yacht club the Commodore may select. Otherwise the race to be "go as you please." If If Mr. Whitlock finds it inconvenient to accept, this offer is open to any other single or double canoe. For the sneakbox I claim the following points of superiority, as compared with the canoe: It will sail closer to the wind; it will live longer in a blow; it is altogether a more comfortable boat in open water or for an all-day cruise. BOJUM.

[No doubt Mr. Whitlock will be ready to race, but it is asking a good deal of the canoe to go from Staten Island to Greenwich, and wait there for a strong southwest breeze and an ebb tide. It would be fairer to name a fixed date for the race, as the canoe has to go so far. The question of time allowance is also a difficult one, as the boats, while of about the same length and depth, differ by 100 per cent, in beam.]

Editor Forest and Stream:

I have read with much interest the letters in FOREST AND STREAM concerning the sneakbox and canoe, and as I favor the sneakbox I think that I must put in my oar.

Three years ago I was stopping with a friend at Barnegat, and as the weakfish were running well, we made arrangements with a bayman to go out on the bay and try them in his box. I think the length of the box was about 16 or 17ft. Anyway, when we three were on board there was not much room to spare. I and my friend weighed about 125 pounds apiece, and the skipper was a short, thick-set man of twenty-eight years. We started down Forked River seven o'clock next morning, and after a run of a few minutes found ourselves on the bay, and half an hour later on the grounds.

After the skipper satisfied himself that he had the right ranges, he hove over the grapnel and made everything snug, as the wind was beginning to blow pretty fresh from the "eastard." Anybody knows that has been to Barnegat, that a stiff breeze will kick up a pretty lively sea there, and so it was that day. There were five boats within a half mile of us, and they were jumping around lively. Two miles "to windard" of us there was a forty-foot fishing smack, and she was pitching considerably. By this time we had eighty-four weakfish in the boat, averaging three-quarters of a pound, while the other boats had all left excepting the smack. It began to get so rough that we thought we would leave too, so we tripped anchor and got under way, but had not gone more than a mile when the step gave way.

The sticks were cleared off the deck and the skipper was on his knees heading the box before old Boreas. He hailed the smack which was near by, and when she overtook us and we threw our painter we had not shipped over a pail of water. One of the young fellows on board the smack was seasick.

If anybody thinks that a canoe can do any better than that let him write, I am ready to hear. SEAGULL.

Editor Forest and Stream:

In reply to the Commodore's challenge to sail his canoe against my heavy sneakbox, built expressly for ducking, I must say I cannot accept. Should I race with a canoe I should get Rushton to build me a sneak of the most approved pattern and rigged to compete with a canoe. GEO. H. WILD.

A FEW HINTS ON CAMPING.

A FUNGUS SMUDGE.

Editor Forest and Stream:

In your canoe columns of Feb. 28, I noticed an article by "Sis," entitled, "Smoke 'em Out." As a further suggestion for the accomplishment of so desirable an end, and for the benefit of my fellow-sportsmen who lie away to the woods and trout streams, I will give you the substance used here as a "smudge" to repel the attacks of gnats and mosquitoes.

It is the fungus growth frequently seen on the trunks of dead trees in the forest, old fallen timber, etc., and commonly goes by the name of "gnatwood" by many, also called "toad stools." I have frequently seen them as large in circumference as an ordinary half bushel measure. They grow pretty much all shapes and sizes, however. When old and dry, if cut into, they present a sort of spongy texture, both color and texture somewhat resembling cork.

This substance burns quite slowly, will not go out when once lit, and emits a light wreath of smoke of a pungency and odor quite peculiar to itself, possessing a repulsive power against a swarm of gnats that can scarcely be obtained in any other way, and particularly efficacious in driving off those infinitesimally small pests by some called "can't see 'em's."

I have frequently carried a piece of one suspended by a string around my neck, watch-guard fashion, and so secured in front as to keep the fire end outward while fishing on the head streams of Cheat. It burns invariably from the end ignited until entirely consumed. Placed in a position where it will do the most good, it keeps the "enemy" at a respectable distance.

I have also known it used by our 'coon and 'possum hunters as a ready means of conveying fire along with the hunt; in the absence of matches or other means for the purpose, a chunk the size of a quart cup being sufficient to hold fire during eight or ten hours, so slowly does it smoulder away.

In fishing from a canoe or boat, sharpen a stick and thrust into one end, it can then be secured in any suitable position, and the fire kept from danger of contact with either the boat or contents.

When freshly procured, it frequently happens they are so saturated with moisture as not to ignite readily; expose them in a hot place before your camp-fire and roast until the superabundant moisture is driven off; then proceed and you will find it works satisfactorily. If not required for immediate use it can be laid up in some dry nook of the camp or house and a few days will suffice to dry it out, cutting or breaking into the inner part facilitating the drying process.

To those who object to smearing themselves with any of the various compounds of tar and the essential oils, the above suggestion will prove beneficial. Converting oneself into a huge smelling bottle, with your skin exhibiting sensations as of a patent plaster or sheet of flypaper, is certainly not one of the pleasures of camping out.

BEVERLY, W. Va. BACKWOODS.

AIR-TIGHT COMPARTMENTS.

Editor Forest and Stream:

I write once more to your valuable paper to be enlightened as to the proper size of air-tight compartments for a canoe 16ft. long (tandem). I propose having metallic ones, or can you suggest anything that is better? Is there not a rule by which I can ascertain the number of pounds a cubic foot of air will keep afloat? R. P.

[A cubic foot of air will support 62½lbs. in fresh water and 65lbs. in salt. A metal box, 1ft. in each dimension, will float a weight of 62½ or 65lbs., less the weight of the box, the weight being *out of water*; and a proportionately greater weight, according to the density of the material, *when the weight is immersed.*]

THE LOG BOOK.

VI.—AMONG THE THOUSAND ISLANDS.

APROPOS of the meeting of the A. C. A. at the Thousand Islands next summer I send you the log of the Sadie N., on one of the short cruises made during a fortnight's sojourn in that charming region last August.

Our headquarters were established on a beautifully wooded island known as Tidd's, directly opposite to the town of Gananoque, and from this point we sallied forth from day to day as our fancy led us.

My fellow canoeist, the "Doctor," having only a few days at his disposal, was anxious to make the most of the time, and readily accepted my proposal to make a tour of the islands. He is a worthy representative of the single-blade, and had with him a beautiful little Rice Laker of Herald's build.

The morning of our start was unusually warm, with not a breath of wind, and our tiny craft floated so quietly that, though the current was in our favor, our motion was scarcely perceptible. However, with an occasional dip of the paddle we slipped along at the rate of a mile or two an hour, which was quite fast enough amid such picturesque surroundings; we were not tourists.

Our course lay at first over a considerable stretch of open water, passing the Gananoque lighthouse in mid-stream with its *vis-a-vis*, the beacon, known as Jack Straw. Thence through Halstead's Bay, when, no outlet being visible, a pocket map was consulted, which revealed a narrow channel to the right, and presently we were threading our way through a cluster of small islands which, notwithstanding our pocket-map, compass, dead reckoning, etc., quite perplexed us as to our exact bearings. Emerging from this maze, another vista of a mile or two opened directly ahead. Well's Island was now on our right, and the Canadian mainland on our left, with islands dotting the river here and there, though less thickly.

Passing another lighthouse we entered a narrow gap between Ash and Wallace islands, and the canoes began to glide along at a lively pace with the quickening current. An important question with the Doctor at this juncture was, where are we to have dinner, and catching sight of the little cottage of the light keeper on the bank to our right, he suggested that we halt for lunch.

With a cooling draught of milk from the kindly keeper's dairy and a sandwich from our lunch basket, we were soon afloat again "like giants refreshed." A glance at the map showed that we were now approaching the notable Fiddler's Elbow and Lost Channel; but we were placed in the embarrassing position of having two or three channels presented to us, and, as the rushing current hurried us along, a momentary doubt was felt as to whether the canoeists might not find themselves in the same predicament as the channel aforesaid. But like the historical Indian who vainly sought his wigwam, we did not allow the misgiving to be more than momentary, and full confidence as to our *locus in quo* was immediately restored.

On reaching the open river again a large camp was seen on La Rue Island, over our starboard bow, and getting within hailing distance we saluted the party, but as the afternoon was waning we denied

ourselves the pleasure of stopping to fraternize. The Canadian shore was again to be seen on our left, rising abruptly from the water, and at this point quite a remarkable echo may be produced, as was demonstrated by the stentorian hallooing of the Doctor.

Our course was now to the right, between La Rue and Club islands; thence by way of a small canal cut through the lower extremity of Wells Island, and we soon found ourselves in the vicinity of Alexandria Bay, the fashionable headquarters of summer life among the islands.

The large hotels at the Bay and the splendid villas dotting the surrounding islands give the place quite a civilized appearance, in striking contrast with the romantic wildness of the scenery of the Canadian channel through which we had just been passing, where nature has as yet been little disturbed.

As it was now time for supper, a point with a commanding view was selected and our little pyramid tent pitched in short order. Supper over, the demoralizing effect produced upon the provision basket profoundly impressed us. Fortunately, the village at the Bay was only a short paddle from camp, and we concluded to go in quest of fresh supplies at once. In our camp toggery, though, we felt we were hardly presentable in that quarter, so clean boiled shirts were donned, toilettes hastily adjusted and we were off. As we passed the hotels the Doctor's eyes glanced wistfully in the direction of the fair promenaders on the piazzas. We strolled through the main street, replenished our larder and were ready to return, when, chancing to meet with an acquaintance, the way opened for an introduction to some of those fair ones just mentioned. As we stepped up to the Thousand Island House the sound of music from the parlors announced that the nightly hop was in progress, and presently, when the whirling couples again took the floor our medical friend might have been seen with countenance serenely happy and—a charming young lady upon his arm.

When we got back to camp no lullaby was needed to bring sleep to our pillow after the long day of sunshine and fresh air and activity.

I must not omit to mention here the very pretty effect produced at night by the festoons of colored lights displayed about the hotels. Viewed from the river, with the shimmering reflections in its smooth surface, the effect is quite imposing.

Next morning we started on the return to Tidds, by way of the American Channel. A gentle east wind was ruffling the placid waters of the river as we got under way, and hoisting all sail fair headway was made against the current by "hugging" the shore and taking advantage of the eddies. The Doctor's craft having a smaller area of canvas than the Sadie N., it afforded him the diversion of "doubling up" to the front with the paddle semi-occasionally, as he was left in the lurch.

When passing a point bearing the high-sounding title of Central Park, about three miles up from the Bay, the well-known "toot" of a fish horn from the hotel verandah greeted our ears. Presuming the salute was from a knight of the paddle, we put in to the dock, and had the pleasure of shaking hands with the genial secretary of the N.Y.C.C., who was staying here with his family. As the wind was falling light we took our leave, after a very enjoyable half-hour's chat. The next three miles were covered at a snail's pace, but even that was preferable to paddling under a hot sun. By the time the Thousand Island Park was reached the wind had deserted us entirely, and there was nothing for it but to paddle the remainder of the distance to camp.

For a short cut we went through what is known as the "Gut," between Hemlock and Wells islands, and entered Eel Bay, an expanse of water some two miles in diameter, with only a few low islands within its area; then steered a pretty straight course for Gananoque, skirting the northerly point of Grindstone Island, on whose gentle slope the white tents of the A. C. A. are to be planted next August. This is one of the largest of the Thousand Islands, being about five miles long, by two miles wide, and is in every respect a most desirable location for the meet of 1884. Eel Bay, at its foot, which is almost inclosed by the islands, will also be a capital place for the regatta.

When within a mile or two of camp a squall struck us and a lively race ensued as we went scudding before it. It was "neck and neck" for some time, when the Doctor, gradually increasing sail, shot ahead; the Sadie N. followed suit by shaking out reefs, but too late, and my friend had the satisfaction of leading the way to our moorings amid the plaudits of our party, a satisfaction I did not begrudge him after his long stern chase.

The pocket map referred to will prove useful to the members of the A. C. A. who intend cruising among the islands next summer. It is published by George Rockwell, Fulton, Oswego county, N. Y.

SADIE N.

THE GALLEY FIRE.

SIMPLE DISHES.

OATMEAL is a staple and should always be carried by the cruising canoeist. The best oatmeal is the "A B C brand of steam-cooked cereals," to be obtained at any grocery store; price twenty cents. This oatmeal is simply cooked by boiling in a pot or can for twenty minutes, or until it becomes as thick as the canoeist likes it, some men preferring it thick, others thin. The more water used, the longer it takes to cook. It should be boiled at least twenty minutes. Salt to be added when first put on the fire. Eat it with milk and sugar, sugar and butter, or butter and syrup, or any of the foregoing alone. Now if you happen to cook two or three times as much as you want for one meal, don't throw what is left away; keep it, cut it up in slices, and fry it; eat it with butter and sugar. N. B.—When boiling oatmeal be careful to stir at short intervals to prevent from sticking to the bottom of the pot and burning.

Breakfast bacon is good for a change. Cut up in thin slices, place in a frying pan (without any butter, lard, salt, etc.) and let it fry until brown, or, if you like it well done, dark brown.

One way to fry potatoes is to peel them, slice them into thin, flat pieces, wash in cold water, have the grease in the frying-pan deep enough to cover the slices and boiling, then take the slices directly from the cold water, drop them into the boiling grease and salt them. They won't require much turning over if submerged when dropped into the grease. Eat while hot.

To boil potatoes: Wash them clean or peel them, put into water with a little salt, and boil until soft. Test their softness with a fork or pointed piece of wood.

An excellent way to cook eggs is to break two or three on a plate. Heat some butter until it turns black, pour the melted butter over the eggs, add a little salt, and if you like your eggs very well done, place the plate near the fire for a few moments.

To boil eggs soft, place them in boiling water for three minutes; hard, not less than six minutes.

A quick way of cooking eggs is to heat a frying-pan hot, take it off the fire, break half a dozen eggs in it, add a little salt, place the frying-pan on the fire again, prevent the eggs from sticking to the bottom of the pan by the continued use of a knife.

Never fry a beefsteak; broil it. When broiling a beefsteak never cut it to see if it is done. A piece of onion on each side of a steak when broiling gives it a pleasant odor.

A word of advice. My friend, don't attempt to go on a real canoe cruise unless you are in company with a man who can cook, or have had a little practice in the culinary art. A small fire to cook by is better than a large one.

FRIDAY.

THE WINTER CAMP-FIRE.

THE last of this series of meetings was held on April 2, at the Kit Kat Club room on Fourteenth street. The subject for the evening's discussion was "Tents." We omit a report here as the subject will appear shortly in the papers on "Canoe Building" in our columns. Mr. Norton described a new camp stove, made of four pieces of sheet iron, each about 10x18in., joined along the longer sides by hinge joints, so that it will fold flat, or may be opened to form a box, 18in. long, 10in. square, and open at top and bottom. About three inches from the lower end a piece of each side is turned in, forming a lug on which a small grate is supported, while a cover, also of sheet iron, fits on top. The entire arrangement fits into a package 18x10x1½in., and is carried in a canvas bag. These meetings have been a help to canoeing in keeping alive an interest in the sport during the six months when it is usually neglected, and the example of New York canoeists has encouraged similar meetings elsewhere, and they will in the future become an established feature with all canoe clubs.

CLUB NOTES.

A. C. A.—Dr. Neidé has forwarded the draft of the association book to Commodore Nickerson for his approval, and it will be published shortly.

NEWBURG.—Messrs. Oliver, of the Mohican C. C., and Stephens, of the N. Y. C. C., will visit Newburg on April 10 to select a site for the local meet on Decoration Day.

BIRCH BARK CANOES.—A meeting will be held in Boston on April 16 to organize a club of birch bark canoes. About fifteen gentlemen are interested in its formation, seven of them being canoe owners.

PERSONAL.—Mr. W. H. Bishop, of the Lake George C. C., was in New York last week and paid us a visit. Mr. Bishop has been spending some time among the sneakboxes on the Jersey coast, and speaks very highly of them.

SPRING CRUISE.—A number of Lowell canoeists think of shipping canoes to Franklin, N. H., at the source of the Merrimac proper, and making a two days' run home (distance, about 75 miles) on the high water in the early spring. The ice has just gone out of the river and the water is now extremely high. Fast Day will open the canoeing season.

TOLEDO C. C.—The canoe club organized on March 27 with thirteen members. Officers were elected as follows: Commodore, Joseph Hepburn; Vice-Commodore, Chas. Phelps; Secretary and Treasurer, Gus. G. Kelp. Messrs. Webb and Lynn were elected members of the executive committee. There are now eight canoes in the fleet, but this number will be increased.

AMSTERDAM C. C.—A meeting of the Amsterdam C. C. was held on the evening of March 20, at which the following officers were elected: C. H. Warring (canoe La Polka), Commodore; Dr. D. McMartin (Canoe Gypsie), Purser. Four new members were admitted, who will have canoes in commission before the 1st of May, and more are looked for early in the season. The club expects to send a delegation to the Newburg meet, and hopes to be at the Thousand Islands *en masse*.—CHARLES E. BELL, Secretary *pro tem.*

ROYAL C. C.—At the spring meeting, held last month, the following programme of races was drawn up and decided upon: Saturday, May 3, four paddling races at Kingston; Saturday, May 10, sailing race at Hendon: Saturday, May 17, sailing race at Hendon; Saturday, May 24, sailing race at Hendon; Saturday, May 31, sailing race at Hendon for challenge cup; Saturday, June 7, long paddling race, Teddington to Putney; Saturday, June 14, sailing race at Teddington; Saturday, June 21, paddling and sailing race at Teddington; Saturday, June 28, annual regatta at Teddington. A resolution "That in future all life subscription be invested, instead of being treated as revenue," was brought forward by E. B. Tredwen and E. A. Leach, and carried unanimously. A discussion was carried on for some time as to the best means of bringing country members into communication with one another, with a view to arranging cruises under the club flag, and it was suggested that a fortnight's cruise in August next on the rivers and broads of Norfolk would meet with such support. No more delightful spot for canoeing purposes could be found, and members who want companionship in their autumn holiday should make a note of this. It is proposed, if sufficient numbers attend, to fit up one of the Norfolk wherries to act as tender to the fleet, with sleeping accommodations for those who have not the necessary appliances fitted to their canoes. H. Evans and the secretary have volunteered to make the necessary arrangements, and canoeists from other clubs who would like to join the cruise are invited to write for further particulars to the Secretary R.C.C., 11 Buckingham street, Strand, W. C.

Answers to Correspondents.

J. D., Hoboken, N. J.—Yes, a partridge is a game bird.

C. H. C., Glencoe, Fla.—Mr. Hallock is now in Minnesota we believe.

A. C., Moira, N. Y.—Grounds of the Carteret Club, Bergen Point, N. J.

G. B. H.—It is to be a straight shell, we believe, but is not yet on the market.

J. B. H.—We shall publish drawings of canvas canoe and sneakbox in "Canoe Building."

O. T., Lennox, Mass.—It will not hurt shooting to have rifle rechambered to shoot 2½ inch shell.

A. H., St. Cloud, Minn.—We know of no way to trap crows, except by netting them as with wild pigeons.

W. H. D., Dubuque, Iowa.—See our advertising columns for best boat and canoe builders. Most of them show lines. Write for catalogues.

W. M., New York.—1. Do you think I could get any snipe on four or five acres of salt meadows a few miles below Nyack, on the Hudson? 2. Do you think it would be worth trying? Ans. No. to both.

F. P., Port Washington.—Would you please inform me when the Game Laws of 1884 of the United States, by Suydam, is published. Also where I could get them? Ans. They have not yet been issued, we believe.

W. T. D., Norwich, Conn.—1. What months do black bass rise to the fly? 2. Will dace rise to a fly, and if so, in what months? Ans. 1. June and July are the best months, later they do not rise as well. 2. We have had rises from dace all through the trout season, but most numerous in June.

W. H. B., Michigan.—Is there a law prohibiting the spearing of Mackinaw trout in Lakes Huron, Michigan, or Superior, or at the Straits of Mackinaw in the months of February and March? Ans. None that we know of.

P. P., Shickshinny, Pa.—Can you give me directions how to polish a gunstock (walnut)? Had a gunsmith undertake to do it, but he only varnished it, and that will come off in blotches and make it look worse than before. Ans. Use oil and furniture polish.

M. M. M., Girard Manor, Pa.—1. We are unable to give you any information on the wood powder. You must use it at your own risk. 2. Plug should fill brass shell pretty comfortably. 3. Yes, cheaper grades are practically as good as the more expensive.

J. R. S., Dewitt, Arkansas.—The feathers which you send belong to the cedar bird (*Ampelis cedrorum*). This is a common bird of Eastern North America, often wintering in New England. Its nearest relatives among North American birds are the swallows on the one hand and the vireos on the other.

E. L. R., Smithville Flats, N. Y.—1. Where can I obtain an ordinary sized aquarium, say 18x30 inches base and 18 inches high? 2. Where can I obtain materials for making an aquarium myself? Ans. 1. Write Hugo Mulertt, Cincinnati, O. 2. We know of no one who deals in the materials. You can make patterns and have them cast if you have time and inclination, but can buy cheaper than you can make one. Wooden ones are not satisfactory.

F. H. D., Somerville, Mass.—What size of buckshot should I use for deer shooting in a single barrel chokebore gun, and would it be perfectly safe to use it? What size shot should I use for duck shooting? What kind of a gun would you advise me to get, anywhere between $50 and $100? Ans. Use a size which will chamber in the smallest diameter of the barrel, then you can do it safely. 2. Any size from eights for teal to threes for coots. 3. Impossible to advise you. There are plenty of good guns to be had between the prices you name. Consult an honest gun dealer.

PIN HOOK, Elyria, O.—1. What kind of fish would be best to restock a public lake 1½ miles long by ½ mile wide, gravel bottom, moss and grass in places, neither inlet nor outlet, water clear and of moderate temperature. There are now in the lake black bass, pike, perch, dogfish (Indiana name), bullheads, and several varieties of sunfish. 2. Would the whitefish thrive there? 3. Can they be taken with hook and line? 4. Where can black bass be obtained? Ans. 1. We cannot suggest any other fish. The black bass now there should increase and take care of the sunfish. 2. If the lake is deep with cold springs the whitefish might thrive. 3. No. 4. No one appears to have them for sale. Apply to your Fish Commission.

A. C. S.—The colored drawings sent are easily recognizable. The fish is the "cowfish" *Ostracium quadricorne*, Linn. Its range is St. Helena, Guinea, Cape of Good Hope and Charleston, S. C. It is plentiful in Bermuda. It is encased in an inflexible triangular shell forming a ridge on the back and a flat surface underneath. The common name comes from its cow-like horns. The dorsal vertebræ are not movable and are only flexible in the caudal peduncle. The fins are inserted through holes in the armor much as the heads and legs of toy animals are. Your drawings show plates on the caudal peduncle, but these are only occasionally present, and may relate to sex. Some specimens have them and others are without these plates. The drawings are at your service.

HUMPHREYS' HOMEOPATHIC VETERINARY SPECIFICS

FOR THE CURE OF ALL DISEASES OF HORSES, CATTLE, SHEEP, DOGS, HOGS, and POULTRY.

FOR TWENTY YEARS Humphreys' Homeopathic Veterinary Specifics have been used by Farmers, Stock Breeders, Livery Stable and Turfmen, Horse Railroads, Manufacturers, Coal Mine Companies, Tray'g Menageries and Menageries, and others handling stock, with perfect success.

Humphreys' Veterinary Manual, (399 pp.) sent free by mail on receipt of price, 50 cents.

NERVOUS DEBILITY

HUMPHREYS' Vital Weakness and Prostration from over-work or indiscretion, HOMEOPATHIC is radically and promptly cured by it. Been in use 20 years, SPECIFIC No. 28, —is the most successful remedy known. Price $1 per vial, or 5 vials and large vial of powder for $5, sent post-free on receipt of price. Humphreys' Homeo. Med. Co., Illust. Catalogue free.) 109 Fulton St., N. Y.

ABBEY & IMBRIE,

Manufacturers of Fine Fishing Tackle

48 and 50 Maiden Lane, New York City.

We beg to call attention to our new 120-page folio Illustrated Catalogue. We have spared neither labor nor expense in our effort to make this the most complete work of its kind. We will send a copy, postpaid, on receipt of 50 cents, which price does not nearly reimburse us for its cost.

FOREST AND STREAM: "The list is surprising, even to one familiar with such matters. The great merit of this catalogue is its accuracy."

AMERICAN ANGLER: "It is, without doubt, one of the most complete and elaborately illustrated catalogues that has ever been issued in the interest of a private firm. This catalogue may be classed as a *text book*, owing to its practical value to the general angler."

NEW YORK EVENING POST: "The amount of ingenuity exercised in devising means to capture fish becomes apparent only upon study of such a catalogue of fishing tackle as Abbey & Imbrie, of New York, have just published."

SCIENTIFIC AMERICAN: "The book has 92 large plates, covering almost every conceivable appliance in this line, and in such profusion of styles as would probably delight even our most expert of fishermen, President Arthur."

MAIL AND EXPRESS: "*To the practical angler the work is indispensable, as it shows him just what to get.*"

SILK WORM GUT.

F. LATASA, 35 Broadway, N. Y.,

Hail to all Riflemen.

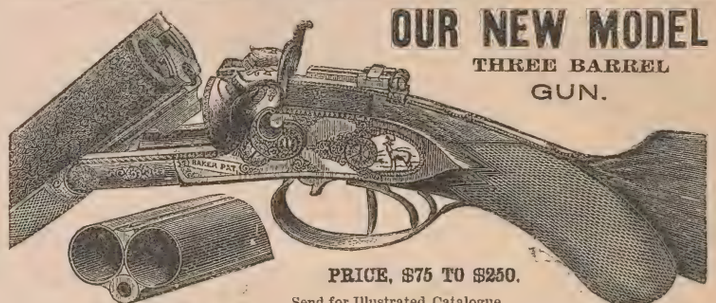
The East Boston Schuetzen Corps will hold an Inter-State Shooting Festival in August next, at its finely equipped range, Oak Island Grove, on the Atlantic Ocean, six miles from Boston, easily accessible by railroad and horse cars, and fine drives over beautiful roads. All sister societies in the U.S. and Canada are invited. Correspondence solicited. Address S. WOLFFSOHN, Secretary, 47 Court st., Boston, Mass.

KYNOCH'S

Patent "Perfect" Brass Shells,

MANUFACTURED BY

KYNOCH & CO., Birmingham, Eng.



These shells are made of extra fine thin pliable metal, with reinforced base; are adapted to either Winchester or Wesson No. 2 primers. Can be reloaded as often as any of the thicker makes. **Cost only about half as much.** Weight less than paper shells. They shoot stronger and closer, and admit of a heavier charge, as owing to the thin metal, inside diameter is nearly two gauges larger. Load same as any brass shells, using wads say two sizes larger than gauge of shells. Or can be effectually crimped with tool and straighten out to original shape when discharged. **The crimping tool also acts as a reducer,** an advantage which will be appreciated by all experienced sportsmen. Sample shells will be mailed (without charge) to any sportsmen's club or dealer, and prices quoted to the trade only. For sale in any quantity by gun dealers generally, or shells in case lots only, (2,000), and crimpers not less than one dozen, by

HERMANN BOKER & CO., Sole American Agents,

101 & 103 Duane Street, New York.

NEW OFF-HAND TARGET RIFLE, MODEL OF 1881.

PRICES REDUCED.

WITH PISTOL GRIP STOCK, TIP STOCK, AND SWISS BUTT PLATE.

For **Hunting** and **Target Practice** at all ranges, the **"MAYNARD" more completely supplies the wants of Hunters and Sportsmen generally, than any other Rifle in the world,** as many barrels can be used on one stock; and for accuracy, convenience, durability and safety, is not excelled. Send for Illustrated Catalogue describing the **new attachment for using rim and centre-fire ammunition.**

MASS. ARMS COMPANY, Chicopee Falls, Mass.

Antelope and Deer of America.

—BY—

JOHN DEAN CATON, LL.D.

This work is the most important publication ever printed on the subject.

The subject is a capital one. These animals are the most interesting of all our American game.

It takes a deer hunter to write of deer; and he must bring to the work the same enthusiasm that prompts him to carry the rifle day in and day out in pursuit of the game. There is no need of Judge Caton's telling us in the preface that deer hunting has always been his favorite diversion, for the reading of his book shows us that.

The characteristic of the book is that it is, all the way through, a statement of facts which have been learned by the most patient and industrious study of these animals. Judge Caton has for many years kept in domestication the American antelope and all of the American deer, save the moose and the two species of the caribou. The chapters are devoted to the following: The Antelope, Moose, Elk, Woodland Caribou, Reindeer, Mule Deer, Columbia Black-tailed Deer, Virginia Deer, Barren-ground Caribou, Reindeer, Acapulco Deer.

"The Antelope and Deer of America" is a large volume of 426 pages, illustrated with more than fifty illustrations (most of them from photographs), bound in cloth. The former publishers sold the book for $4.00.

We have reduced the price from $4 to $2.50.

Forest and Stream Publishing Co., 39 Park Row, New York.

ANSWERS TO CORRESPONDENTS.

With its compact type and in its permanently enlarged form of twenty-eight pages this journal furnishes each week a larger amount of first-class matter relating to angling, shooting, the kennel, and kindred subjects, than is contained in all other American publications put together.

HOW THE WATER GOES.

THE lessened water supply of many of our streams and their periodical floods are occupying the public attention more and more.

Last week there was a large and enthusiastic public meeting in New York, attended by our best citizens, at which both subjects were discussed, and resolutions calling for legislation to preserve the Adirondack forests were adopted. In the speeches, made by the Mayor and other citizens, the old story of the diminished water supply was told again. It is familiar enough to almost every one, and whoever spends a little time in the woods each year has seen the work going on under his own eyes.

The trout fisherman, who in spring follows down his favorite brook from its source among the hills, through the woods and out into the grass lots and cultivated fields, notices each year that more and more of the alders that once fringed the stream are cut away, and that the waters, that were formerly almost everywhere shaded, are now exposed to the glare of the sun's rays. Each year the woodcock shooter finds favorite bits of cover, spots where in former days he was always sure to start a bird or two, cut off, so that nothing but a *chevaux de frise* of stubs remains; so it is everywhere. The swamps to which the quail, when started, once fled for refuge, the hard wood forests in which the partridges used to wander, the very hedge rows along the old fences and stone walls, are being cut away. All this is, in one sense, an improvement; it gives to the farmer land once useless, and enables him to cultivate the whole of his tract. But the improvement is one which will carry with it its own punishment. A land without woods is no country for the farmer. At once it lacks water, for this runs off as soon as it falls. It will soon lack soil, for the spring torrents carry this away and deposit it in the rivers, where it still further blocks up the ever shoaling channels.

Within the past two or three years we have been amazed and alarmed at the rapidity with which forest destruction is being carried on in New England. There is a place to which we go for a day or two every autumn for a little ruffed grouse shooting. Three years ago the rough and sterile hills were most of them well wooded with oak, hickory, chestnut and beech, and it was as good a locality for ruffed grouse as could be found in the State. The farmers and land owners seemed to cut only such wood as they needed for fuel or for fence rails. Since that time, some one has brought into this town two or three portable sawmills. The result is that all the timber has been cut off. Heaps of sawdust and great piles of tough, dry boughs and twigs cumber, but do not protect, the earth. Brooks that were once full and flowing, in which one could see the trout dart, and along whose borders the woodcock fed, and the grouse stalked with deliberate tread, have disappeared. Their former channels are now dry gullies, which may serve to carry off the superfluous waters of the spring time, but have no permanent supply.

The shooting and the fishing have gone with the brooks, but that is not all. The manufacturers, whose mills are on streams which these former brooks fed, complain bitterly that they no longer have water enough for their purposes, and say that during certain months of the year they will have to shut down unless some measures are taken to increase the supply. In fact, a very large proportion of the mills in many of the most thriving manufacturing towns of New York State have already put in steam power, finding that water power was no longer to be relied on. This is the case near Watertown, near Stuyvesant, near Claverack, near Chatham, and near half a hundred other towns that we could mention. There is need of speedy action if anything is to be done toward preserving the Adirondacks. It is said that the lumbermen, alarmed at the general interest manifested in the subject, are cutting timber there right and left. They merely fell it, not trimming at all, their object being to get as much on the ground as possible before any law interfering with them shall be passed.

The whole story of our wasted water supply has an application broad enough to cover our whole country. Local legislation is necessary, it is true, but some general and wise measures must be taken by the Federal Government.

We cannot think that the time will be long before some steps are taken in the right direction. The matter is one which touches, or soon will touch, the pockets of merchants, manufacturers, ship owners and farmers, and the pocket, among the well-to-do, is a very sensitive organ.

THE ICHTHYOPHAGOUS CLUB.

THE time approaches for the annual dinner of the fish eaters with the sesquipedalian name. We have not heard from them this spring, and do not know how they have hibernated, but as the "peepers" are out on the marshes, and one turtle has been seen to emerge from the New Jersey mud, we presume that the Ichthyophagoi are thinking of taking a slight "feed" in order to get their stomachs in shape for the summer campaign. The organization of this club is incomplete. There are not officers enough. At present there is only a president, treasurer, surgeon, head taster, naturalist and poet, and the last three positions are held by one individual. This came about because it was deemed desirable to kill the poet, and he was appointed head taster in the vain hope that some of the dishes suggested for him to experiment on might "lay him out." This has not happened, and the club is in yearly danger of having some new verses inflicted upon it, which may cause death to some of the members who have withstood the assaults of hell-benders, water snakes, and other *outré* viands on their digestions.

As the poet declines to die by natural means, we suggest that the club kill and eat him. We shall not carry the suggestion so far as to counsel them to imitate the Ancient Mariner, who survived the protracted cannibalism of his castaway comrades until he sang:

> "O, I am the cook and the captain bold,
> And the mate of the Nancy brig;
> The bo'sen tight and the midship mite,
> And the crew of the captain's gig."

Still, the obnoxious officer should be disposed of, as he shows no intention of resigning; and there should be appointed a corps of nurses, an undertaker, two grave diggers, and a sexton. It is certain that this indigestion-breeding and dyspepsia-encouraging club cannot go on forever eating horrible marine monsters without coming to grief some time, and the officers which we have recommended to be appointed should not be allowed to eat with the club, but may safely be permitted to drink with them, in order that they may live to attend to their duties. It makes no difference whether the surgeon eats or not, he can be spared with the poet; but the undertaker and his assistants should not be subjected to risks.

Instead of drawing their nets in distant waters for rare and curious forms of aquatic animals, which are abhorrent even to those who are familiar with them, we suggest that they tempt fate by eating the products of the waters near the city. Among these we would name: Oysters and shad from Newark Bay with their flavor of petroleum, crabs from Staten Island with sludge acid sauce, eels from Newtown Creek served in Standard oil, and flounders from the Swash Channel garnished with city refuse. Such a menu, with other additions, which will readily occur to their caterer, will put to the test the reputed bravery of this club, which has based its reputation for courage upon eating perfectly wholesome articles which happen to be refused by popular prejudice. The members who might die from the effects of this dinner would depart in the proud consciousness of having done good by calling attention to the pollution of our waters, as would certainly be done by the daily press, and on their tombstones might be written: "Died that our waters might be purified."

COMPULSORY PILOTAGE.

THE bill before Congress relating to compulsory pilotage makes no especial exception of steam yachts. Of course this is only due to an oversight, as no reasonable person the least acquainted with the state of affairs will attempt to push through a measure which would be an odious and uncalled for hardship to owners of steam yachts; which would, in fact, kill the sport at one stroke. We believe it only necessary that the committees recently appointed by the N. Y. Y. C. and A. Y. C. should call the attention of those having the pilotage bill in charge to the absurdity of the proposed infliction in order to bring about the required modifying clause exempting steam yachts. Such vessels are nearly all small, drawing but few feet, can disregard channels, and have superior intelligence on board at all times capable of conducting with safety in and out of port. Moreover, being private property only, carrying neither passengers nor freight, steam yachts manifestly ought not to be dealt with in the summary manner the public safety may demand in the case of vessels plying for profit. It is too clearly to the interest of owners of steam yachts to navigate with due care to require the meddlesome interference of red tape. Besides, in the event of casualty, the loss would be upon a private owner and the responsibility upon persons who voluntarily take the risks in accompanying him in his vessel. Steam yachting, and especially steam launching, is already overburdened with wanton legislative complications. What is needed for the prosperity of the sport is a relief from official fuss and humbug and not a further dose like the pilotage bill. There ought to be no hesitation in granting the request of the delegation of yachtsmen charged with seeking exemption from the proposed compulsory pilotage bill. To refuse assent to immunity would be to return to barbarous limitations about a sport which should receive the most liberal encouragement from legislation in behalf of the interests of the country at large. Yachting, as a school of the sea, deserves not only leniency but direct promotion at the hands of national, State and municipal administrations.

A TENNESSEE ASSOCIATION is to be organized at a convention of sportsmen in Knoxville, May 20. The call is issued by the Knoxville Gun Club, and all individuals who are desirous of uniting for game protection in that State are invited to be present. Tennessee is greatly in need of such an association, and it is to be hoped that the Knoxville convention may be well attended. Nashville should send a large delegation, and if Chattanooga and Memphis are at all adequately represented, this initial meeting will have enough influence to arouse public opinion on the subject.

MARYLAND DUCKING LAW.—We have been told recently of attempts made to enforce the Maryland law, that boxes shall not be put on the ducking flats before daylight. The Chesapeake gunners are going to work the right way to utterly ruin what was once the finest ground for fowl on this continent.

OUR READERS *will confer a favor by sending us the names of such of their friends as are not now among the subscribers of the* FOREST AND STREAM, *but who would presumably be interested in the paper.*

FISHING FOR BASS.

A BRIEF DISCOURSE, BY MICROPTERUS SALMOIDES.

SCENE—A clear stream overhung by water maples and willows. M. S., a veteran of not less than five pounds weight by scale, of two pounds more by the better method of guessing, is surrounded by a school of his younger fellows, too big to be swallowed, but not too big to be taught by him.

MY young friends, the pleasure of fishing is not for men alone, nor yet for them and fish-hawks and kingfishers, otters and mink only. There is sport in it for fish, and do not understand me as meaning now in the taking of fish by fish, which is the greatest sport that a great fish can enjoy or a little one minister to (and if one of you were of a size to fit my throat and maw, I would be most happy to show you how to do it artistically); but I mean the sport of being fished for. Not by fish-hawks and otters, which are to be dreaded and avoided by us, nor by kingfishers and minks, which are too insignificant to be our foes after we have got beyond childhood, but by men. And not by men when they use their various deadly and insidious traps for our capture, nor try to impale us with mangling spears, sharper and crueler than the heron's, but only when they endeavor to take us with a show of fair play, by means of a lure, concealing or attached to a sharp-pointed bent and baited bit of steel, fastened to a long, slender thread. The lure is sometimes an earth worm, such as we occasionally vary our fare with; sometimes one of those small minnows which were wisely created for our sport and food; sometimes the delicate frog, or the ugly, but appetizing helgramite, the cricket, the grasshopper, and any of the winged and creeping things which we feed upon. Our ingenious enemy contrives cunning imitations of most of these, many of them so perfect that they would deceive the oldest and wisest Bass that ever swam until he had closely examined them, or tested them by touch or taste. Besides these he offers us wonderful combinations of feathers and gaudy colored silk, probably expecting us to use them as playthings, for they look like no living insect that ever flitted over the water, or else to lead us to destruction by exciting our curiosity concerning such strange objects.

Now, my young friends, attend to this rule, and hold always to it. Never attempt to lay hold of worm, minnow, insect, or any other article of food, or anything of unusual appearance which you may see in or upon the water, until you have examined it closely, and then if you discover that it is attached to a thread, no matter of what color, or though it appears to be only the slender stem of a water plant, be assured that it is one of the mischievous devices of man, and let your actions be governed accordingly. If you see nothing of this nature in conjunction with such an object, you need not hesitate to take it, and if you find it to your taste, to swallow it. Having satisfied yourself that a minnow fastened to one of these threads is a real and living one—if a sham never attempt to meddle with it, for the barbed steel will be in the tail, which you would first seize—you have presented to you an opportunity for sport. Cast your eyes upward and you will be likely to see the man, plainly distinguishable, though perhaps somewhat distorted by the ripple and swirl of the water, standing upon the bank or in a boat, or wading in the stream, and if the water is clear enough you will observe that he holds in his long pectoral fins a slim wand of wood, to the end of which is attached the thread or cord that tethers the minnow. Now, approach cautiously, and taking hold of the tip of the minnow's tail, give it a slight pull. Then after a few twitches, you may alter your hold to one a little above the tail, and begin to swim slowly away, when you will find the minnow given you for a little without resistance. But presently it will be jerked so smartly that it will be taken from you if the grip of your jaws is not firm. Hold fast and, swim which way you will, there will be a steady strain kept on the minnow by the man, but not yet will he attempt to draw you to him if he is skillful, but will let you rush whither you will, so it be not to weeds, roots or driftwood, while his wand bends as you have seen a bullrush with a marsh wren on its top. If the minnow is tough and hangs well to the bent steel, and you have been careful not to bite it in two, you may now add to your sport by making an impetuous rush and at the end of it leaping your whole length above the surface, when you may get a good look at the man, and be greatly amused to see the mingled exultation and anxiety displayed in his visage. The first expression will grow more intense if you keep your hold upon the minnow after the leap is made, which he thinks a desperate endeavor to free yourself, and having failed in it, he feels almost sure of your speedy capture. You may repeat this maneuver several times, being careful to put less force into each leap than in the one before it for the sake of keeping the minnow whole and to increase the confidence of your adversary, whom you will see grinning with delight, and hear him addressing you when your ears are above water, something in this wise: "Ah hah! My fine fellow! You are a brave fighter, but you'll have to give in! It's dangerous fooling with my minnows! Don't you wish you hadn't?" When he says: "Ah! you jolly old six-pounder!" you may think he is not talking to you, but he is, and is not flattering you, but himself. When you have had enough of this fun, you may pretend to be exhausted and ready to give up, and allow the enemy to draw you toward him while you lie upon your side and gently fan the water with your fins. When he has got you near to him, if you see him poking slyly toward and under you a web of threads stretched upon a hoop at the end of a stick, at once tear the minnow off the hooked steel as most likely you can easily do now. If you cannot do this, bite off your mouthful without delay and get to a safe distance with it. If the man does not use this instrument, but attempts to seize you with his five-rayed long pectoral fin, you may flirt his face full of water with your tail, take the whole or part of the minnow as you can, and be off with it. In either case, if you will just afterward put your ear to the air, you may hear a storm of words that need not frighten you, and if it does not shock you, will make you grin to your gills.

Very likely he will continue to offer you minnows as long as his stock holds out, and you may have sport till you tire of it, and your belly filled till it aches, and the same when he uses little frogs or helgramites to bait you. But if he offers you worms, crickets and the like you will be obliged to exercise more caution and will have but little pleasure of it, for you must bite gingerly, and only at legs, wings and fag ends, which have but little strength to endure his and your pulling.

As for the shams with which men seek to allure you, you would best shun all such as resemble minnows, frogs and helgramites, for in them is more danger than sport or profit for you. Those which have something of the appearance of flies and other insects, you are by no means to touch with your mouth, but may rush at them with a great show of eagerness and then strike with your tail, whereupon you shall see your angler in a fine state of excitement, and he will continue to toss and skitter and drag about his feathers and silk till you and he are both tired of it.

There be wretches so murderously inclined that they hesitate not to take our wives during the interesting and trying period of spawning, which they do by dropping upon the bed one of their steel instruments, sheathed in a worm. When such an object is seen intruding thereon, let it lie till the monster, grown tired of waiting for his intended victim to remove it, does it himself and departs. Men cannot live longer in the water than can we in the air; if we had but the power to draw such wretches as these and the netters into our element and then hold them till the miserable life had departed out of them, how worthy and glorious an act it would be, and one for which it would seem the better men must rise up and call us blessed.

If by any mischance you should get in your jaws this barbed instrument of which I have so often spoken, you must rid yourself of it at any cost of pain, and strength, and trouble, or else part with your life. Try your utmost pulling on the line, running up on it, rubbing out the steel on the bottom, getting the line wound about a root, sunken limb or log, when you may exert all your strength on the line, the hook and your own flesh, without the everlasting giving and bending of the pliant wand to thwart you. Spring from the water and shake the deadly torment loose at the instant the strain is slackened. If the man is in a boat, run under it. Get into the weeds if any are at hand. If all these fail, resort to feigning yourself fagged out and beaten before you are really so, and then when your would-be captor thinks he has you safe, and is off his guard, strike with all the strength of every fin for liberty and life.

I will not detain you longer to-day. When next you come to listen to my words of advice and instruction, bring with you two or three of your younger brothers, say of four inches length, and I will show you how to catch a Bass.

The Sportsman Tourist.

DOWN THE MADAWASCA.

"DID you take your usual trip to the Rangeley Lakes this season?" inquired a friend of me last fall, knowing that my habitat in late August and early September had been for several years in that region. "No," I answered, "I took a canoe trip down the Madawasca." "Down the what?" "Down the Madawasca," I repeated; and upon his professing in words what he had acknowledged in manner, viz., that he was entirely ignorant of the *locus* of the aforesaid river, I gave him information something like the following, which (presuming that some even of the readers of the FOREST AND STREAM may be equally uninformed) I insert here as briefly as I can.

The Madawasca is situated in the province of Canada and flows into the river St. John at Edmundston, the northern terminus of the New Brunswick Railway. It has this somewhat remarkable peculiarity: About twenty miles from Edmundston is its source in Mud Lake, and, passing through several lakes and receiving several tributaries, it takes a circuitous course of over one hundred miles, and finally empties into the St. John, having in one place, about fifteen miles above Edmundston (at Griffin's), run within four miles of its starting point.

To swing around this circle of piscatorial pleasures and primeval forests and pass over the waters, some of them exceedingly rapid, of this lovely stream, requires for easy work and no hurry in order to enjoy the ever changing scenery, about two weeks at the least, though some parties will make it hurriedly in a much shorter time. It is down stream all the way, of course, and there is no danger of getting lost, which is one consolation. One needs, however, the best of guides when on the river; *i. e.*, a good strong person with the canoe pole in the rapids, such as the Toledi Falls (pronounced "Toolady"), and the twelve-mile rapids in the river between Squattuck Lakes, Nos. 3 and 2. There are seven or eight beautiful lakes on this trip, where some paddling has to be done. The lakes vary from one to ten miles in length. The last lake, the Tamisconata (variously spelled) is about twenty-two miles long, but we enter it at the middle, nearly, on the left hand shore, and are thus saved from paddling its entire length. Guides are paid $1.50 and $2.00 per day. We had a good one, Peter Theriault, of Caribou, Maine, the most skillful man in the rapids I ever saw, and it was entirely owing to his skill that we were saved from being submerged in the swollen rapids and from having our craft dashed to pieces on the projecting rocks.

Now as to the fishing qualities of this stream. From the moment you strike the outlet of Mud Lake, the fishing begins. Trout by the hundred may be caught going the twelve-mile outlet of the first lake. This is called Beardsley (or Bazley) brook. These fish are not large, however, but as you pass down near to the next lake, Squattuck Lake No. 3, the trout become larger, and rise to the fly in a way to suit the most ardent fisherman. Frequently did I catch two at a cast, having only two flies. The color most attractive was red, or reddish; brown hackle with red body, Sloan fly, and dark winged Montreal never failed to do excellently. Throughout our whole trip the trout rose most readily. At the foot of Squattuck Lake No. 3, a rod or two from shore, I found my beau ideal of trout fishing. When the ripple came just right, trout of one, two and even three pounds could be hooked in rapid succession. In fact this place is enough to spoil almost any fisherman for ordinary fishing. It is a grand place for camping out, and but for its difficulty of access would be camped to death. We were the first party that went through last year, and because of this had to cut away seven jams of logs. Dr. Griggs, of Brooklyn, was my companion. Dugouts are generally used. We went with one guide, and all our baggage in a cedar boat hired from Mr. T. S. Richards, of Edmundston. Indians can be got for guides at Tobique. Mr. H. C. Collins, of Fort Fairfield, Me., did us much service. Mr. Richards was also of great assistance. He keeps store at Edmundston, and will fit one out almost completely. Black flies and mosquitoes were quite troublesome, and one must take along plenty of antidotes. We had a small tent, grocery box, etc., etc., and got along splendidly; our whole load weighed about 1,000 pounds. The nights were generally very cool, even in August.

Take it altogether, it was one of the finest trips I ever had; full of excitement and variety all the way, with fishing to satisfy, and even satiate, the fondest lover of angling. As for expenses, you can go from Boston to Edmundston for $20, the rest of the trip will cost one from $50 to $100, according to tastes and economy used therein. It is on one of these trips that one is near to Nature's heart, and from communion with her amid her grandest shrines one gains strength to go forth and labor more heartily in the sphere to which he may be called.

C. JACOBUS.

MATAWAN, N. J.

DOWN THE YUKON ON A RAFT.

BY LIEUT. FRED'K SCHWATKA, U. S. ARMY.

Ninth Paper.

AFTER redecking the raft, which was completed one afternoon, I thought I would take a stroll far into the backwoods, for it had been reported that a number of fresh moose tracks had been seen the night before near a fresh lake where an over-zealous nimrod of the party, having no apparent fear of the many mosquitoes, had tramped around trying to get a shot at a band of mallards. My trip was a complete failure, owing to the mosquitoes, that were so thick that had any game been seen I doubt very much if a person could have gotten a fair clear sight through the dense cloud that continually hovered in front of the face, let alone the other reasons which made it impossible owing to their presence.

Early on the morning of the 5th of July we again got under way, our hearts much lighter for the fact that we believed, according to our Indians with us, that the worst of all the rapids and all other obstructions on the river were behind us, and nothing ahead but "plain sailing" (and only one lake of that some thirty or forty miles long) and plain floating, subject to the annoyances that I have already depicted. For the first few miles, after leaving the cascades, the waters of the river are still very swift in a number of places, probably six or seven miles an hour, and occasionally where huge boulders in the river bed protruded could still be called rapids.

The Tahk-hcen-a was flowing very muddy water, and this in a way confirmed the Indian reports that there were no lakes along its course, for it had been noticed that however muddy the inflowing stream of the head of the lake might be, its emerging or draining river was always clear, and remained so until it received the muddy waters of some stream sufficiently large to tinge it, which was flowing directly from the mountains, where the glaciers seemed to be the great originators of this murkiness. Thus the lakes were the great receptacles of this transported material, and of course it was a mere matter of time, in a geological sense, when they would be filled up by it, and become mere "bottom lands," covered with willow, birch, poplar and other riparian trees; and this very filling up in fact seemed to have been done in several places where ancient lakes, I believe, could be traced. From the White River (the Sand River of the Chilkats), a large tributary of the Yukon ninety miles below the site of Selkirk, no lake interposes its current-less waters to allow the sediment to be deposited, and as this swift stream literally flows liquid mud, the Yukon from its mouth to the sea is "muddy," very muddy. As we had expected, this muddy water from the Tahk River spoiled our splendid grayling fishing that we had other reasons to suppose—as gravelly bottoms and swift current—would continue for some time, and although they did not wholly desert us until White River was reached, we never again saw them in that abundance that made a couple of rods sure of a good meal of fish for the whole party after camping. Pretty well along in the afternoon we saw the widening valley of the last lake on the river open out before us.

That evening, flock after flock of the large black ducks with red heads, known in Puget Sound as "whistlers," went scudding overhead, most of them flying southward. Not far from our camp at the head of the new lake was a totem pole that was visited and found to be of the very roughest construction, not comparing in carving with those of the Indians of the tide-water strip of Alaska. No house was anywhere near, and it seemed to be cut from a tall stump of a tree directly on the spot. The lake on which we found ourselves was called by my Chilkat Indians Kluk-tas'-si, and although they said that this was the local Indian name, I could not help having my doubt, knowing full well the tribal tendency of this great family to consider their own names as conclusive against every other tribe, even that of the country in which they are traveling, a mild sort of egotism that I have often come in conflict with personally, and

could fill a Webster's dictionary-sized book with in enumerating the mistakes of travelers founded on it. The shores of Lake Kluk-tas'-si are of the same general nature as those of Lake Marsh, in being nearly filled to the water's level with mud. Looking at a map (to which I have already referred) the first lake above old Fort Selkirk, a Hudson Bay trading post, burnt by the Chilkats in 1851, has been named Labarge, and I should have been inclined to retain it instead of Kluk-tas'-si, had not so many other gross errors of geography made it untenable, and really impossible to identify it beyond the one fact mentioned. Along the whole length of Kluk-tas'-si not a single Tahk-heesh Indian was to be seen. When we had started it was with a good spanking breeze that, coupled with the current (which was quite evident in certain localities during "dead calms" on the water), sent us along quite merrily, considering our rough craft, and we were induced to put out a trolling spoon, but caught nothing. Trolling on a raft under sail would make a fine picture for the professional anglers at home we all thought, but it must also be remembered that we were not altogether free from "pot-hunting" proclivities to vary our stale fare of Government field rations.

The right bank of Lake Kluk-tas'-si is overtopped by high rolling hills of gray limestone, the gullies between being picturesquely wooded with dark green conifers that formed a singularly pretty network and bright contrast to the hills themselves as viewed from the lake. The hills I called the Hancock Hills, after General Hancock of the army. They sloped back from the lake at an angle of about 45°, although in some places much steeper in escarpement, and were from 2,000 to 2,500 feet high. On the western bank the hills were not so high, but the banks were more abrupt and broken, and often of a conspicuous red color, until about fifteen miles from its head this formation culminates in a very picturesque pile of red rocks that looked to us from the lake as if they were on an island, but our Indians swore by every log in the raft that it was a part of the mainland, and that a considerable sized river came in just beyond which we were unable to make out from any position we viewed it, but no doubt it exists, as our inspection could not be critical. My Indians also said that the whole length of this river in the same pretty effects of broken red rock were to be seen, in fact, the Indian name of this stream was the Red River, from the abundance of this red rock. Not desiring to add another Red River to the geography of the world, and not having seen any river at all, I simply named the rocks, which I considered of sufficient prominence, certainly so if this route should ever be traveled, after an eminent German geographer, Von Richthofen. When we went into camp the evening of the 17th, there was not a breath of wind blowing, and the lake looked like a mirror cutting two perfectly symmetrical and picturesque landscapes into twain at the water line. The clouds hung lazily in the air, not a sign of aquatic life was on the lake or in the air, and one might have thought himself in the lonely land of the dead if it had not been for the busy hum of the omnipresent mosquito. Trout lines were gotten out and one good-sized fellow was hauled in in time for supper, and another one weighing over eight pounds, the limit of the Doctor's fish scales, was had for breakfast. Many fish were noticed feeding and jumping in the lake near by camp, but beyond the salmon trout mentioned as caught on the trout lines, nothing was captured, although the most tempting flies and baits were offered.

Not a breath of wind blowing in the morning, we were delayed until past noon, and made the time useful in determining the place astronomically. Thousands of small graylings about an inch long were seen in the clear, shallow water on the beaches of fine gravel, in schools of fifty to a hundred each, and, using a mosquito bar as a net, we captured enough to use as bait for our salmon fishing, with increasing prospects of success. At 1:30 P. M. a favorable breeze sprang up, and by 2 was raging as a gale, blowing over the tent, filling the coffee and eatables with flying gravel and sand—for it caught us at our midday meal—and we rapidly packed up. But while we were getting away the wind died down to an almost dead calm. After vainly waiting for a renewal of its vigorous midday energy, we went into camp at the base of the Hancock Hills, at a place so steep and rocky that a tent could not be pitched, and, of course, during the night it had to rain just hard enough to scare every one half out of their wits for fear it would rain harder. This constant drizzling through the night, with one's face exposed, does less harm in the way of wetting than it does in the loss of sleep.

The next morning we got a very early start, for in bivouac as soon as the rain ceased the mosquitoes made sleep more than impossible, and between the two on one side of the scale and a good fresh wind on the other, we turned out quite early. We were so near the end of the lake, about thirty-five or forty miles long, that the fates seemed to give it up, and the wind, instead of dying out, as usual, surprised us by steadily freshening until we entered the river at 10:30 A. M., and I think as the old tent went down forever from its clumsy mast, no besiegers ever saw the flag of a fortress go down with such heartfelt thanks. We had seen enough of rafting on a river to know that, as far as physical work was concerned, it was much harder than on the lakes; but the uncertainty of navigation at all on the latter, and constant worry and anxiety as we went crawling along even under favorable winds, when before us stretched some 2,000 miles that must be made by early fall or a lonesome wintering in this dreary country was the alternative, makes me safe in stating that my happiest day on the trip was the 9th of July, when we left behind us nearly one hundred and fifty miles of lake water never to be repeated in whole or in part. Our trip ahead might be hard work, but it was assured at the least. There was still one rapid to be met in three or four days, so our Indians said, but as it was in no wise to be compared with those of Miles's Cañon, we feared it very little. A raft in a rapid was an explorer's delight compared with one on a lake, the very maximum of helplessness. The old tent was carefully rolled up, and we worked with more relish at the pries when the bulky thing ground on the gravel bars.

The high clay banks that had extended along the river from Lake Marsh, and especially conspicuous below Miles's Cañon, and had terminated with its junction with the Tahk River, again commenced after we left Kluk-tas'-si, and were higher and more conspicuous than ever. Far back on the hills the forest fires had made great winrows through the timber and as this had fallen and decayed, a peculiar plant of the country had sprung up in these burnt and open districts, which, from its denseness and cappings of red flowers, gave a reddish tinge to the whole area, even though many miles distant. For a number of days we thought it to be due to a distinct color of the soil, but at last a nearer inspection revealed its true character. One butte, in fact, was so conspicuous in its red covering that I named it Red Butte. All through these burnt districts could be seen stumps and fallen timber in all grades of dissolution, from the recently burnt trunk "as black as the ace of spades" to the almost whitened ones bleached by the beating rains of many years. Dull brown ones falling in great piles of rotten punk were freely distributed everywhere, and had there been a black or brown bear in these "burns" all he would have had to do to save his carcass was to keep quiet and the keenest eyes would never have detected him. About half past five on the afternoon of the 9th, while drifting down through one of these burnt districts, the resemblance of one of these brown rotten stumps to a grizzly bear was remarked by one of the party, referring to an object on the crest of a series of clay bluffs, and his opinion was readily assented to by the others who took enough interest to notice it. As the raft floated down about 500 to 600 yards of the object, it came waddling down the crest of the bluff directly toward us, and we all scrambled around after our rifles in a way more amusing than effective. I do not know why it is that if a man puts his trust in fate for a quiet time, and his rifle in its case for preservation from the wet, all the grizzlies and shootable game in the country pick that time for putting in an appearance; but so it really seems, and the present was, in a brilliant manner, no exception to the rule. Mr. Grizzly stood so "end on" that he was hardly a fair shot at such a distance, and just as the rifles were out he caught one good sight of the raft, and quicker than one could think that a thousand pounds of bear meat could do so, he whirled around and tumbled into the wooded ravine between two clay bluffs, and then scampered off faster than it takes to chronicle it, only one more flashing sight being caught of his grizzly sides as he took up a gait that had a good deal of the appearance of a week's hard run in it. We sadly rolled up our gun cases and put them away, leaving our rifles so convenient that we could massacre a whole herd of grizzlies in a few seconds; and all wondered why we hadn't fired at the beast anyway, but no one told the story of the man that invested a portion of his wealth in a padlock after the departure of a favorite charger. The well-known bad quality and even offensive nature of the meat of the grizzly and the perfect worthlessness of their robes, and the general "cussedness" of the creature in general as a topic of conversation, helped us to bring our feelings down to that point that when we pried the raft off of the next bar it washed them away almost entirely.

About 6 in the evening, having been on the raft over twelve hours, and feeling satisfied with the day's work, I determined on going into camp at the first favorable spot, and we commenced surveying the shores with that idea in view, but so uniformly wide was the swift river, with no eddy to deaden our headway or spot clear from willows, that it was not until after 8 that we found a place where we managed to get ashore, and then it was not very prepossessing. What was our great surprise, shortly after camping, to see three of the most forlorn human beings on the face of the earth put in an appearance. They were miners and belonged to an equal party still beyond, and these three were returning with barely enough "grub" to pack them back to Chilkat in order to leave the remainder enough provisions to continue prospecting throughout the country. They had expected to find an abundance of game in their prospecting tour for gold, and had they done so their "grub" would have been sufficient to have lasted them all for the summer, but the mosquitoes had driven the game from the creek and river bottoms, where their labors were confined, according to their stories, and their return was the result. They had found plenty of tracks everywhere, and as this was the only part of the animal that could hold its own with the mosquitoes, however innutritious, they had to content themselves with it. They had been living on nothing but flour for some time, with such meat and fish as they could procure from the country, and of course were about half starved. I stuffed them full of the bulky bean of Boston and the crisp corn beef of Chicago, until they must have been grateful beyond measure, for when I returned to civilization I found they had made quite a hero of me by proclaiming that I alone had shot all the rapids on the raft, and even my Indian allies had walked around. Had I filled them with ice cream and mince pie I suppose they would have found me sleeping under a robe of Indian scalps that I had personally collected, while for another plug of tobacco I could have slain a grizzly with a bowie knife—in the newspapers.

MR. O'BRIEN PROTESTS.

To the Foresht and Strayme:

MISTHER EDDYTOR—*Sorr:* Me attintion has bin called to a late noomber of your payriodical, in which that omadhoun of a "H. P. U." has preshoomed to relate, for the divartisement of your rayders, a certain nocthurnal adventure which occurred to mesilf.

In that article, sorr, he has endivored to hould up to ridicule, an Oirish gintleman, who boasts his proud descint from Brian Boru, and I can lick any bloody Sassenach that dares to thread on the tail av me coat.

Ye have lassyrated me faylings, sorr, and have violated the sacred confidince which shood subsist betune man and man. That the corcumstanshiality av the incidince are correct, sorr, I do not deny, but no rifrince is had to the motives which impilled me upon that occaysion. Are ye not aware, sorr, that me burro, Mickey, reposhed in me that confidince and thrust which wan gintilman fayls in another, and that me proud boast is, that that confidince was nivir abused, and that thrust nivir bethrayed. Consequintly, av he desired to deludher me by playin' bear, was it for me to lassyrate his tinder faylins by descinding from me three, and thereby litting him know that I saw through his disguisement? That dilicacy of sintiment, which is the pervaylin charactheristic of an Oirish gintilman, wad not allow me, sorr, to revayle to him the fact that I had penethrated his incognitow. The chakes av me wad have burnt wid shame for the rest av me life, had I committed the ongintayle procedin' av saying to um, "Shure, 'tis not a bear ye are, at all, at all, but only a burro, Mickey alanna!" Such, sorr, were me motives, and be thim shood me procaydins be joodged.

But, sorr, I have another and a shtronger rayson for conshiderin my faylins hurted, and mesilf insoolted be that same artickle. I could forgive the mishconsthruing av me motives, but the houlding av me up to ridicule as a man possessed av no eddication, and puttin' such worruds into me mouth as there is in that same pace av nonsense—'tis that, sorr, that touches me sinsibilities most dapely. Av I cudn't talk nor shpell betther nor that, sorr, I would look upon mesilf wid the most abject scorn, sorr. I will lave it to yourself, sorr, as an honest man, and a gintleman, if this letther, which I am writin' to ye wid me own hand (barrin' that it's Misther Howard that's thrimmin up the ideays, and Tim Dooley is writin' um down) isn't after proovin that me ideays are as illigant, me sintiments as choice, me language as illigant, and me shpellin as correct as "H.P.U.'s," or any other divil's buckie that makes foon av a dacint man. Av you would do me the kindness to print the same, verbattim et littyrattim, as the poet says, your rayders will see the imposhibility av me usin' that onraysonable kind av talk which he puts into me mouth.

And foinally, an in conclusion, sorr, I wud say—av I have, in anny way, hurt your faylins, or those of "H. P. U.," be anny thing I may have said, onbeknownst to mesilf, or av the warrumth av an Oirish heart has timptid me into anny extravagance of expreshion, or anny sintimint onbecoming a gintilmin, then, sorr, in that case I freely forgive you both, and have the honor to be, sorr,

Wid sintiminta av the highist regayrd, and faylins av the most dishtinguished conshideration,

Your most obayjient
An respictful
Well wisher,
PATRICK O'BRIEN.

DIVIL'S FLAT, Collyraddo, March the 6th, 1884.

[It affords us much pleasure to give place to Mr. O'Brien's explanations of the occurrences recounted in "H. P. U.'s" account of his adventure with the bear. We cannot, however, believe that the narrator of the chronicle understood the circumstances as we do now, for had he realized the motives which actuated the owner of Mickey, we feel confident that he would have set the matter forth in its true light. We need scarcely say that we reciprocate in the heartiest manner the kindly expressions of our Colorado friend, and should we ever be obliged to pass a night among the rough, cold mountains of the San Juan, we hope that it may be our good fortune to stumble on his camp.]

Natural History.

STEARNS'S NATURAL HISTORY OF LABRADOR.

Editor Forest and Stream:

In your last issue, April 3, I notice with pleasure a somewhat lengthy criticism of my Lists of Natural History of Labrador, as contained in the Proceedings of the U. S. National Museum, soon to appear. I notice it, I say, with pleasure, as I believe that there is no true naturalist or author but who, while deploring his own errors, will not only invite criticism, but will thank his critic.

Mr. Merriam has often visited the north shores of the St. Lawrence, and his name was quite familiar with Mr. Napoleon Comeau, of Godbout River; Mr. Scott, of the Hudson's Bay Company's post at Mingan, and also Mr. Cante, of Whale Head. Let me ask Mr. Merriam, however, did he follow down the shores of the river and gulf and extend his researches in Labrador, since all this region west of Blanc Sablon belongs to the Province of Quebec? I doubt if he has. Let me say, therefore, that I defy him, or any other person, to collect of the flora of Labrador, eighty species of plants, including every specimen of both phenerogams and ferns that he can procure, in three weeks' time anywhere on the coast of Labrador proper, which is bleak and barren land compared to the vicinity of Mingan and its surrounding Province of Quebec.

My lists are intended as aid to future investigation, and are presumably imperfect to start with. That they contain errors is apparent to anybody. I am glad that Mr. Merriam points out some of them. It is well to say, however, that I visited the region both times more for my health than otherwise, and gave more attention to the sports of fishing and shooting (and their accompanying pleasures of feasting) than to collecting. My last voyage was given to collecting invertebrates, and its results sent to Profs. Verrill and Baird. These results appear in the same volume.

Further. I do not wish to hold anybody responsible for my errors but myself, yet the lists Mr. Merriam criticises so sharply were all prepared under Mr. Robert Ridgway's personal supervision, who had authority to change any names that he wished or suppress any information contained therein at his own option.

Be facts and errors what they may, I consider that an inaccuracy in transcribing the title and place of any scientific paper is greater than all the errors of the paper combined, and when Mr. Merriam starts his article by saying that the before mentioned lists are contained in the fifth volume of the Proc. U. S. Nat. Mus., I feel bound to say, for the benefit of any who may desire to refer to them, that it is the sixth volume of said Proceedings, and that they have not yet appeared in book form, but that a few can be supplied to those desiring them as extras without charge.

Now for the errors in question. The estimate of young seals or "whitecoats" should read, and was so intended by the author, as the catch of Labrador vessels, and as such I believe the statement is correct.

The silver and black fox are "accorded [a] varietal distinction," I believe justly. Of the ringed seal I have two specimens at Bonne Esperance "salted down" with others, and when these are secured, as I expect they will be this summer, both Mr. Allen and Mr. Merriam shall have the pleasure of examining them. I now believe that they will be found eventually more common than is generally believed upon the coast.

I still doubt the *Halichœrus grypus* is found, rarely at any rate, on the coast of Labrador proper. My remarks upon the elk and moose, given provisionally, are true as far as the statement goes. While there, specimens of deer were brought in fresh killed from large herds, which differed so much in size, color and shape, that one would easily believe them distinct species without the statement of the natives that their habits "were not the same." The white whale doubtless occurs as Mr. Merriam states. As to the gray squirrel, I saw two skins, said to be taken on the coast, but I suppressed further mention of them for want of more positive evidence. The brown bat is still somewhere in my collections and shall be "hunted up" at once.

With the birds, the records of wood thrush was a mistake, the bird being, doubtless, as Mr. Ridgway remarks, *H. aliciæ*. The record of king eider breeding off Mingan was doubtless misleading. It should have read, "The first record south of Hudson's Straits." None of Mr. Merriam's other remarks need commenting upon, as they amount to little more than a review of the author's own words by quoting the same without any material remarks. The "glaring inconsistency," if such it in reality be, is contained in the "extraordinary announcement" respecting *Somateria v-nigra*.

Of that a few words, and I submit lists, errors and reply to the public. The author confesses that, to use a slang phrase, he may be "way off" in this announcement; he still believes that he can sustain his position. Too much credit must not be given to the "natives" in cases of scientific accuracy, yet everywhere in spring the "natives" recognize three kinds of "passing ducks." One kind stay and breed—the eider proper. Two kinds, they say, remain each only a few weeks and then disappear. Of these, if there be two, one is the king eider, *S. spectabilis*. I have shot these by the dozen from flocks of as many thousands, while the native gunners kept saying, "Wait, and you'll get the other kind;" and then again, "There's another kind yet that you haven't got." One day, while shooting, several of the gunners pounced upon a duck I had just shot and exclaimed, "There's the other kind." I hastily examined the bird, but could find little or no difference between it and the king eider, a pile of which latter birds lay near us on the rocks. Now, one thing I know, in one of the so-called "kinds" the black mark of the chin was rounded at its apex; in the other it was as clean cut a V-point as it was possible to make it. I laid the bird aside to stuff, and the not too scrupulous cook consigned it to the oven in my absence as the fattest one in the mess. I heard occasionally from other parties along the coast who had "shot the other kind of passing ducks," but did not secure a specimen. I still believe I can procure suitable specimens of *S. v-nigra* from Labrador. Of this kind, if it so be, the gunners say, "It only stays here a week or ten days," and is not found like "the other passing duck," all the spring. W. A. STEARNS.

AMHERST, April 4.

SOUTHERN LIMIT OF QUAIL AND GROUSE.

HAS the extreme southern limit of the Bob White and the ruffed grouse ever been definitely ascertained? Several years ago I crossed on horse back, or rather on mule back, from the Pacific to the Atlantic, through the Republic of Costa Rica, C. A. For forty or forty-five miles after leaving the west coast the road constantly ascended until we reached an altitude of 7,000 or 8,000 feet, from which point we looked down upon the beautiful Catargo Valley, where lie the coffee plantations and the towns of San Jose, Catargo Alajuela, etc. On the coast grew the banana, plantain, cocoa palm, and many other species of purely tropical vegetation, but as we reached the higher altitudes this gradually changed until near the summit we found the range covered with deciduous trees and a general landscape that strongly reminded me of New England. Here we found several flocks of ruffed grouse which were feeding and dusting themselves at the side of the road; they were comparatively tame and gave us ample opportunity to observe them, the cocks strutting about with expanding tails in the manner so familiar to every one who has ever had the pleasure of hunting this splendid bird, while over their heads high in the air flew the great, gorgeous scarlet macaws, screaming like calliopes.

A few miles west of the summit was the little village of San Mateo, situated at too great an altitude for the banana and plantain, but not too high for the orange, and on the stone walls that surrounded the small fields in the suburbs of the town sat our old friend Bob White, whistling as loud and clear as we ever heard him in an old whortleberry pasture. We saw neither quail nor grouse after entering the valley, nor did we see or hear either in the hundred miles of tropical forest that closed in upon both sides of the narrow trail leading from Catargo to the Atlantic. But there is no mistake about their being there, and I am a little curious to know where the southern limit of their range is found.

SAN FRANCISCO, March 24. FORKED DEER.

A ZOOGENIC PARADOX.

THERE is nothing which so perplexes one in charge of zoological collections, as the peculiar habits and actions of animals in confinement. He is so constantly brought face to face with occurrences which completely upset all preconceived ideas of animal economy, that he finally becomes so case-hardened as to cease to look for what are supposed to be natural actions from any of his charges. The following recent occurrence will serve to show the last stumbling block in my perplexing calling.

On the 31st of last December the female axis deer (*Cervus axis*) in the Society's collection gave birth to a fully developed male fawn, which has grown apace and promises to become a fine specimen. On the 5th inst., a few days over three months after the first birth, she bore a fully developed female fawn, which in less than an hour after birth, was strong enough to frisk around its mother. Immediately after birth the mother was found to be seriously sick, and in less than twenty-four hours died. Very naturally, on dissection, the generative organs were first examined, and were found in a healthy condition, Mr. Dury, the Society's prosector, remarking to me: "If you had not have told me of her having recently given birth to a fawn, it would have been almost impossible for me to have detected the fact from the state of the organs." Further examination proved that the prime cause of death was fatty degeneration of the heart, hastened by acute inflammation of the left lung. At present writing, April 8, the young one is being nursed by bottle, appearing perfectly hearty and healthy, and giving every indication of being successfully reared. Now here is an instance of an animal giving birth to two fully developed young ones within less than one hundred days of each other, whose period of gestation is well known to be eight months, and as customary with the family, only produces once a year. Is it possible that she could have been impregnated at two periods, with the above intervening space of time? If so, those who have made the zoogeny of the deer a special study, will have to write a new chapter on the subject. FRANK J. THOMPSON.

ZOOLOGICAL GARDEN, Cincinnati.

BIRD NOTE.—I inclose report of my observations of the arrival of birds during March: P. R.—March 6, crow (*Corvus americanus*), common. W. V.—March 7, Acadian owl (*Nyctale acadia*), rare; 18th, great northern shrike (*Lanius borealis*). S. R.—March 5, Phœbe (*Contopus fuscus*), common; horned lark (*Eremophila alpestris*); 6th, robins (*Turdus migratorius*), males only; 21st, bluebirds (*Sialia sialis*), males only; song sparrows (*Melospiza melodia*), common; redwinged blackbird (*Agelæus phœniceus*), common; 24th, purple grackle (*Quiscalus purpureus*), common; 28th, robins, (*Turdus migratorius*), females; 31st, bluebirds (*Sialia sialis*), females; cedar waxwings (*Ampelis cedrorum*), common.—J. L. D. (Lockport, N. Y., April 5).

Game Bag and Gun.

KEEPING QUAIL IN CONFINEMENT.

Editor Forest and Stream:

As the secretary of the New Jersey Game and Fish Protective Society, it fell to my lot to be designated as one member of the society to care for the large number of live quail procured in December last, to be kept through the winter months for stocking purposes in the spring. The first installment of birds came about the middle of last December, from Tennessee. They were at once turned loose into an inclosure previously constructed on the floor of a large room in the third story of my office. The size of the coop or inclosure was as follows: 16 feet long, 8 feet wide and 2 feet 9 inches in height. The top was covered with muslin, stretched tight. The front of the coop was constructed of open lath work. The back and sides were the brick walls of the building. Two windows over the inclosure allowed streams of sunlight to enter, and gave ventilation by lowering the top. As fast as other installments of birds were received they were turned loose among those already received until there were some 250 in the coop. Another lot of 100 birds being procured from North Carolina, another smaller coop was constructed along the west wall of the building, 12 feet long, 3 feet wide and 2 feet high, covered with muslin. The front of both coops were covered over with burlap, shutting out all sight excepting the door where food and water was furnished them. The bottom of each coop was covered with sand and small gravel, wood ashes, and the screenings from hay mows, which formed a covering to the depth of several inches, in which the birds scratched and wallowed.

At the suggestion of Mr. John J. Willis, of Westfield, N. J., who has had considerable experience in keeping game in confinement and breeding them, each corner of the inclosure was provided with small limbs or boughs of cedar trees. These were covered over with straw and in one corner with corn stalks. Under these the birds made their roosting places. In two corners were also placed the crates the birds came in, turned upside down, with a small aperture left so they could enter it. These they did not take to much. For food I gave them alternately every two days cracked corn, wheat, and screenings from the grist mill, with pounded oyster shells, and occasionally a little buckwheat. Twice a week cabbages, celery tops, water cresses, or some other greens were given them. Self-feeding drinking cans, such as are used in chicken hatcheries, furnished them water, which was changed every day, and cans were occasionally scalded out. The birds ravenously ate the greens provided for them. And now for the mortality. The birds had been cooped up several days in the crates and were in an exhausted condition upon their arrival.

In the first week I lost six of the Tennessee birds and two of the North Carolinas. None of them died until Feb. 3, when two more died. Then followed three on the 5th, one on the 6th, nine on the 9th, two on the 11th, twelve on the 12th, and then one and two birds on the 13th, 17th, 18th, 23d and 26th. When the increased mortality occurred on the 9th and 12th, at the suggestion of Mr. Willis, who examined them and pronounced the trouble distemper from indigestion, I put a small quantity of sulphur and a number of old nails in the water. After that they began to improve. During March I did not lose a bird, and only two or three up to the time they were liberated from the 1st to 10th of April. About 300 were thus kept in good condition, plump, with beautiful plumage and strong of flight when let loose. The greatest mortality occurred among the Tennessee birds. The North Carolinas seemed stronger and larger birds, and were much wilder. Those in the larger inclosure became quite tame, and did not attempt to fly against the brick sides but against the muslin top when disturbed, which prevented them injuring themselves. When it became necessary to catch them, I would crawl into the coop and the birds would seek cover under the cornstalks and straw, where they were easily captured. A large number were also caught under the before mentioned boxes by closing up the entrance to the inside of it, and turning it over after they had entered it. If this statement is of any benefit to others who have had experience in endeavors to keep over quail for breeding purposes, they are welcome to it. W. L. F.

PLAINFIELD, N. J., April 11, 1884.

ETHICS OF FOX HUNTING.

THAT was rather an unhappy remark of mine on the subject of fox shooting, for I see that "Awahsoose" takes my hyperbole in sober sadness, while on the other hand my fox hunting friends are reproaching me for treating a serious subject with unbecoming levity.

From which I infer that methods of sport are indeed matters of faith, and, of course, when the emotions are chief interpreters, irony becomes perilous unless properly qualified by an explanatory foot note. I will be more careful in future, and to avoid all possibility of misconstruction, will follow the illustrious mother of the modern Gracchi and put "all the indignation in capitals and all the sarcasm in italics."

However, I have no idea of taking up the cudgels for my fox hunting friends. In the first place they would not let me, for I have laughed too often at the extravagant terms in which they denounce the shotgun exterminators.

And yet they have a case; a pretty strong case. For of all creatures which exist, the fox, and the fox alone, meets, and exactly meets, the full requirements of the chase. The hare, the deer, the boar, the bear, the 'coon, the badger, all these are hunted by dogs, and are either shot from runways, brought to bay and dispatched, or worried in their dens. But the chase of the fox is altogether different. Different not merely in degree but in kind. It is a mixed game of well balanced strength and skill, mind and muscle, nerve, finesse and fortitude, unfolding constant scope for new resources, and dashed with just enough of the element of chance to make results forever uncertain. The fox understands his opponents, knows their powers and methods and often their individual characteristics. He is sophisticated. He has passed his life behind the curtains and is familiar with every rope and pulley. His profession is to hunt the hare—single, double, "ride and tie." To him the mystery of scent is an open book. He knows the value of each artifice, makes his road-runs with cool astuteness, notes the result of his doubles, and holds muscle in reserve for needed exigencies.

Of course, he may be hunted differently. You may head him off, cut his doubles and throw the dogs on him whenever he shows up, as in average hare hunting; but that is not the method practiced by those who censure fox shooting. Their idea is to play what they consider a fair and equal game, and it is but simple justice to state that I have never known a hunter of this class to sound a view-halloo. On quest or trail they will aid the dogs with every resource of woodcraft and cheer the chase with all the stimulus of voice and horn, but they would no more think of calling from trail to a sight race than "Awahsoose" would think of taking a pot shot at a huddle of quail, and I cannot put the case stronger than that, for I recognize in his letters (fox shooting apart) the unmistakable tone of a true sportsman.

It is by this scrupulous observance of laws, based on fundamental qualities of hound and fox, that the issue of the chase is held in nicety of balance, and therein, I take it, lies the fascination of all sport. For in its last analysis sport is conflict, and without approximate equality conflict is impossible.

If quail were as slow on wing as sora, who would care to hunt quail? Why do we prefer ruffed grouse to prairie chicken? or woodcock to turkey? The rejected birds are larger than the chosen ones and certainly as toothsome.

Glance for a moment at the history of field sports and observe how this principle has been illustrated by the sweeping changes which have followed each improvement in the fowling piece. With the introduction of the matchlock falconry decayed, and the beagle and harrier began to extend their domain. These, in turn, received a relative check from the flintlock, which widened the sphere of the shotgun and extended its scope to slow-flying birds. With the invention of the percussion cap came still greater changes. It gave us modern wing-shooting and all that modern wing-shooting implies—pointers, setters, breechloaders and all the paraphernalia of the field. It enthroned the neglected quail as prince of game birds and debased ground game into vermin. It gave us a literature of sport which reacted upon and exalted every form of outdoor amusement and made possible the existence of such a journal as our splendid and beloved FOREST AND STREAM.

But amid all these changes, these constant efforts toward a maintenance of equilibrium in presence of the ever disturbing factor of mechanical improvement, the old sport of fox hunting remains what it was of yore.

> "Age cannot wither it, nor custom stale
> Its infinite"—stability.

Horse and rider, hound and fox, are to-day substantially what they were in the centuries gone by, and the devotees of the chase simply ask that an extraneous agency shall not be employed to compass the destruction of their chosen sport.

Of "the Newport style of hunting" I know nothing. The anise-seed bag I suppose is pretty much a counterpart of the glass ball, and need scarcely excite one's indignation. Dandies, it is said, make excellent soldiers, and for aught we know, fops may develop into acceptable sportsmen. In any case, let us give these gentlemen a fair chance, for surely the dude affords as noble a spectacle when chasing a burnt bone over the open fields, as when carrying a cane on the pavement. In short, it is a move in the right direction, and for my part I sincerely hope that he will not "break his neck in his servile imitation of British sport." For a fellow who takes those chances has good stuff in him, and the fact that he was not cradled in the saddle adds immensely to his merit. The new theory that "it is unsportsmanlike to shoot foxes because it is un-English," sounds somewhat peculiar to us, inasmuch as our fox hunting usages go back to an earlier time than the landing of the Pilgrims, or the first settlement of New York.

To throw the matter into a sentence: There are deadlier ways of taking all kinds of fish and game than those practiced by sportsmen, and if sportsmen themselves willfully ignore each others' methods, how can they expect the general public to give even a patient hearing to their claims?

GLEN ALLEN, Va., April 6, 1884. WAUZEE.

THE FIRST GEESE OF THE SEASON.

GAME here this winter has not been so plentiful as some seasons before, on account of scarcity of rain, and so ducks and geese could find very little food; and many an eager look has been directed toward the southern horizon during the last few months in search of rain clouds. When, therefore, our ears were greeted by the "gentle patter of the rain upon the roof," one night last January, you can imagine how delighted we were. We were glad, too, to have it continue for three or four days; and many were the boasts made by this one and that one as to who should first get to the "honkers." Many an eager look was directed toward every farmer who chanced to come into town after the rain, and "Any geese out your way?" was often repeated, only to be replied to by a solemn shake of the head and a corresponding droop on the part of the questioner.

At last, however, I was delighted to hear that an immense band of "honkers" had located some twelve miles out, and immediately hunting up young Morgan, we engaged a team and driver and arranged to start the ensuing Tuesday.

Tuesday morning came—cold and rainy, but we got away about 7 o'clock, a late start, and in due time reached the place near where I was informed the geese were, but after taking observations all over the surrounding country in every direction we came to the conclusion that we were "badly left," for not a goose or track could we see. We were on the mesa or high plain overlooking the ocean up the coast about fifteen miles, and distant from La Jolla, a favorite seaside resort, twelve miles; from town, about three miles.

There being a large cañon coming down to the ocean, between us and La Jolla, and as it was next to impossible to get on to the beach from the mesa, we should have to make a return drive of about six miles to get to La Jolla, and by the aid of a glass we could see, or thought we could, something foreign on the sidehills at La Jolla. We decided to attempt to get there by going on the beach, as we were after geese, and Morgan and I were both pretty certain we saw a band of them light on the mesa opposite La Jolla. So down we went. There had never been a wagon down there before, so far as we had heard, and it was an open question for a time whether we would get down right or wrong side up. We were decided at length by seeing an almost obliterated wagon track ahead of us, and continued on down despite the remonstrance of our driver.

By taking the horses off once and drawing our wagon by hand over a cut or two, we arrived safely at the beach, and we were delighted to find easy traveling the remainder of the way. On arriving to within a short distance of the hills on which we supposed the geese were feeding, we left the

driver and reconnoitered, and were rewarded by sighting about eighty-five fat "honkers," quietly feeding near the bluffs that fringe the beach, and distant about 500 yards from us. It was not clear how we were, to get on to the beach from where we were unseen, and then along the beach and up the bluffs so as to get at the geese, but after deliberating a while we decided to leave Morgan, Sr., in a blind where we were, while Walt and I should take the beach and attempt to get our work in by crawling until we got to the beach, and then chance the tide and bluffs. If we could only get to the top of that bluff, we would be within about fifty yards of as fine a lot of geese as ever gladdened the eye of a hunter. After an almost incredible amount of crawling we got to the beach and ran down the bluffs, and were delighted to find the tide out enough so that we could climb around all the points on the beach between us and the coveted place. After getting almost blown by hard climbing, we arrived at the desired spot half way up the bluffs, and directly opposite where we supposed our victims were.

Morgan, after taking a hurried peep, whispered, "We have passed them," and down we climbed, and back about a hundred yards we retraced our way, and at last "Now," says Walt, and we sat down plumb blown and quivering all over with exertion, and the perspiration actually dropping off our bodies.

After resting, catching our wind, and seeing that our guns and shells were all right, we slowly crawled to the top, and cautiously peeping through the thin grass, we saw the beauties, totally unconscious of anything in the shape of a man within a thousand miles, quietly grazing about fifty yards off.

Cocking our guns, Walt whispered, "For God's sake don't cross fire—now!"—and bang-et-bang-bang-bang! went the guns. The geese were demoralized, and the hunters frantic. You ought to have seen us. We had three dead and four wounded, and two of them were just everlastingly getting up and getting out of that. We each took a goose, and breaking our guns in two as we ran, and putting in fresh cartridges, each succeeded in bringing his bird back to *terra firma*. Walt made an exceedingly long shot at his, the goose being all of sixty yards off, and correspondingly high.

After retrieving our geese we went back to the scene of our glory, to find that the two remaining winged geese had succeeded in reaching the beach and getting into the surf and we had the pleasure of watching them swimming off about eighty yards away in the ocean and totally out of reach. However, we had five, and I never saw larger or fatter geese. We laid down and took a good long rest, with the sea breeze fanning us, dirty, muddy, and our shoes a wreck, but oh, so happy.

At length we shouldered our game and rejoined Morgan, the elder, who had witnessed our victory from the blind, and who was delighted at our success. The old man had held his end up to, for part of the band had come within seventy-five yards. And with one barrel he had crippled one so bad that he fell about a hundred yards off, and into the surf, but the old man said that it was a wonder he got any at all, from where he was to where the geese passed it was a remarkable shot to cripple a goose with No. 1 shot.

We rejoined our team, tired out, but happy as kings, at the prospect of electrifying our rivals that evening, on arriving in town with five fine fat geese on as short a hunt as we had, for hunters generally go to El Cajon, or Santa Margarita, distant forty miles, for geese.

A little before dark we got home, and carefully arranging our trophies on the wagon sides, where they would show off to the best advantage and do the most good, we proceeded down Fifth street. In a few minutes our wagon was surrounded by an eager crowd, and numerous were the queries, "Where'd you get 'em?" "How many have you got?" and "Tell us where to find them, boys," etc. Of course we told them, each and every one, exactly where we found them, as we had had such an easy time to find them ourselves; and, judging from the different parties who left town the next morning, and the different directions they went, a stranger would have thought that San Diego was a town of hunters. Such a gathering together of hunting paraphernalia and whistling up and chaining up of dogs ready for the morning I have never seen before.

We seemed to have thoroughly scared the geese out, for not a man has seen a goose since within twenty miles of town, and we are yet the victors of the season. We enjoyed roast goose the next day, and had the pleasure of recounting to a few friends who helped us demolish the geese the *modus operandi* of our hunt.

I believe the more difficult game is to obtain, the better dish it makes served up, for I never enjoyed a dish as I did that of the first geese of the season. NOS-RA-EP.

SAN DIEGO, Cal.

LONG ISLAND DUCK NETTERS.

Editor Forest and Stream:

In pursuance of the subject agitated by W. N. Lane and some others interested in protecting game on Long Island, allow me to quote from Sec. 4, Laws of 1883, Chap. 317: "The Commissioners of Fisheries shall report to the Governor all cases of dereliction or neglect of duty of any protector which shall come to their knowledge, together with such evidence as they may have touching the case, and the Governor shall have authority to remove from office any protector so reported to be delinquent, after giving him an opportunity to be heard in his defense."

And allow me to call attention to the fact that each district protector is allowed $250 in each year for traveling expenses, independent of $500 salary.

The game laws also provide for the arrest of violators on a warrant, which any constable can execute. The section providing for penalties, judgments, etc., of the laws of 1879 includes the following: "One-half of the penalty recovered shall belong to the persons giving information on which the action is brought, and the other half shall be paid to the treasurer of the county in which the action is brought."

It will be seen, therefore, that instead of relying upon a man whose duty it may be to arrest or find out about violators, the course is open for the prosecution of parties by private enterprise, with the reward as an incentive for obtaining information.

A great deal might be said on this subject, but I will not ask you to give any more space to my crude ideas, I only wish to point out the channel leading to a settlement of the question. On the other hand, the game protectors may ask if they are obliged to lie in wait for violators, etc. My answer to that is, follow the example of District Protector Dodge, of Prospect. He can show you a wrinkle or two. His energy took him into the heart of the Adirondacks wilderness, and the course pursued resulted in the lives of a great many deer being saved. And the sermons he preached converted many old hunters and guides, so that his missionary labors were easier afterward. The good done in freeing the lakes of Central New York of nets was done with energy, and doubtless one-quarter the interest, honesty and persistence exercised on Long Island would preserve our game birds ten times better than they now are. WALLOT.

THE PERFORMANCE OF SHOTGUNS.

Editor Forest and Stream:

Concerning chambers for shells in shotguns, it strikes me that some one might strike a valuable lead in experimenting with barrels having no chambers. If shells were all of same thickness and length, then chambers might be well enough. The thickness of paper shells generally is about equal to the shoulder of chamber, but with brass there is considerable difference, so that shot must strike this shoulder more or less, resulting in resistance and deflection sufficient to impair accuracy and force. The same result, to an extent, obtains with paper shells. At least this appears so to me. I may be in error. Would it not be a good idea for some manufacturer to test this thoroughly?

"W. J." asks for opinions from some old hunter on loading with buckshot for deer. I am not an "old" hunter, but I have shot numbers of deer with rifle and shotgun, and have experimented considerably with buckshot, and that latter, it seems to me, is what is necessary for "W. J." No two guns are alike. Each gun has its own individuality in shooting. The load which proves most effective in one gun may not in another. I have tried Ely's wire cartridges, thread-wound cartridges, flannel cartridges, cartridges made of a section of paper shell slit longitudinally, and other kinds of arrangements for increasing effectiveness of buckshot, but none of these added to the effectiveness of my gun, which was a Parker .12-32-8½, medium choke, the best gun I ever shot for all sizes of shot. Either barrel would put eight out of twelve No. 1 buckshot into a two-foot square space at fifty yards every time, actual target. The first deer I ever shot with it got eight shot through heart and lungs at over fifty yards, and this at night, fire-hunting.

I experimented with this gun with all sizes of loads at different distances with different kinds of powder, with different wads, until I knew just what it would do. If it didn't do what I wished there was only one conclusion—the man at the end of the gun was "off." The load I always used was three drams Orange ducking No. 4 or Dupont's No. 1, once ounce, full, shot, two pink-edged wads on powder, same size of shell (paper) one on shot. If I shot brass, which I always did at deer, I used No. 10 wads, one each on powder and shot. "W. J." should be very careful to do what has been directed in these columns hundreds of times—chamber buckshot at muzzle of gun if a chokebore, and to choose that size shot that most nearly chambers, whether three or four, without crowding. I never crimped shells. Just that force employed in opening that crimp is wasted. Infinitesimal it may be, nevertheless it is just so much power lost.

Some one has said that we want a $75 hammerless. Just that we want. If the number of pieces in a gunlock can be reduced to five or six, it ought to reduce price of guns. But we will yet be able to own a reliable and fine shooting hammerless at $75. Then with the aid of electricity we shall be able to shock the game to bag with reasonable certainty and satisfaction.

On reading "W. J.'s" article again, I should say that if his gun will do as he says, he don't want to improve on it much. S.

Editor Forest and Stream:

The first gun I ever owned was given me by my grandfather, and had a grand record for shooting, being a muzzle-loader, 16-gauge, 34-inch barrels, and would pattern about 130 at an actual test, as I afterward found; but it was old and dangerously thin, and I laid it aside and bought me a W. & C. Scott & Son gun, muzzleloader, 14-gauge, 30-inch. About this time I commenced a series of tests with guns that resulted finally in the following conditions: I found by actual tests that my gun would target about 135 or 140 No. 8 shot, 30-inch circle, 40 yards, and as I make that my standard I shall mean that in all cases hereafter. About this time the chokebore craze began, and I caught it in its most violent form and talked chokebore all the time. I sent a gun belonging to a friend, with whom I had had many days' sport, and also my own, to H. C. Squires, with the request to choke them to their fullest capacity. Mr. Squires kindly sent word back that for upland shooting he should prefer a pattern of 135 or 140; but if I insisted upon it he would choke it. I replied, "Choke 'em," and he did. My friend's gun was a 14-gauge, 30-inch, and it would pattern all the way from 180 to 472, and upon my reporting the latter performance to a FOREST AND STREAM official, he said he never heard of such a thing for a 14-gauge. I have seen a woodcock's bill and head cut off close to the eyes and not another shot in it anywhere. Have seen numerous quail and woodcock split open, and utterly destroyed by this same gun, and my gun would average, right 240, left 330, when loaded properly, of which I shall speak hereafter.

My next gun was a Remington breechloader, and I took it home and targeted, and lost all faith in breechloaders. Its best pattern was about 130, and its average 100, and yet this same gun was as good a field gun as I ever want. I kept that a year or so, and bought me a Parker 12-28, which had no tag on when I bought it, and on taking it home found it would average right 240, left 300, and after using it one fall, I sent it back to the factory and had it bored for a cylinder. The gun came back with a tag bearing the No. 120, No. 8 shot, 24-inch circle, 45 yards, Parker's test; equal to about 145 or 150 on a 30-inch circle, 40 yards. I have never targeted it since it came back, I would rather remain in a state of "glorious uncertainty." It is enough for me to know that it works well in the field. So much for patterns.

Next comes loading, and here let me ask you to reprint "Charge for Shotguns," by Major H. W. Merrill, published in ROD AND GUN AND AMERICAN SPORTSMAN of April 7, 1877. I think at this time they would be very acceptable, and as I have always made them my standard for all cases, I find them very accurate; and by varying the conditions, suitable for all shooting. My experience in shooting is to find the load best adapted to your gun and then stick to it, and you will always know what is coming, and not expect one load to knock your shoulder off, and the next one to have to open your gun to see if it went off. My experience in regard to two wads on the powder, leads me to believe that it makes at least one-third difference in a muzzleloader, and a large increase also in a breechloader of both pattern and penetration.

I consider a cylinder superior in regard to penetration to a choke, all things being equal. I can give a positive test case that will show how it is in some instances. I don't say it is so in all cases, only my own can I prove. A friend of mine came up to my house and brought a single breechloader, cylinder or nearly so, and was going to beat me on pattern. We tested, and the result was that I beat him on pattern and he beat me on penetration. He secretly sent his gun to the city and had it choked, to use his own words, "all she'd bear," and then challenged me to another test at both pattern and penetration. He now beat me at pattern and I beat him at penetration in the proportion of 65 to 43, and all things in regard to loading were the same as before. After I had my gun choked, I found it lost fifteen per cent. of its former penetration. From the above experience I have deduced the following rule: A gun for upland shooting that will target 140 to 150, and shoot strong and even, is the gun for me, others may suit themselves. "You pays your money, you takes your choice." JIM CROW.

MR. GREENER CRITICIZED.

I HAVE recently read with some care the book entitled "The Gun and Its Development," by W. W. Greener, and derived no little information upon many points by its perusal. The work was written, I take it, from the intense evidence which it affords, as an advertising medium for the guns which the author is engaged in manufacturing, and this fact detracts in no small degree from the merits of the performance. But with this fault even, it is an interesting and instructive work.

That Mr. Greener makes an excellent gun no man can doubt who has seen specimens of his handicraft. But there are others who are fully his equals in this respect, and I think sell on more reasonable terms. With all due deference, I am not able to see how it is possible to put work on a gun which will make it worth over $150. Fancy work and elaborate engraving add nothing to its real value, and I am credibly informed that the best of English gun barrels can be had for $75, which is one-half of the cost of a gun. All charges beyond that sum I regard as mere payments for a maker's name.

But I did not commence this letter with the view of making any such criticisms. My object was to express my decided dissent from his ideas in regard to the aim of the sportsman at flying game. On page 486 *et seq.* Mr. Greener advises that in cross shots, no matter how fast the bird is flying, the gun should be held "on" the object. Now I do not hesitate to say that any man who follows this advice may shoot twenty times when the bird is in full flight and thirty yards off, and he will find that his bag is empty. Even in deer shooting—and I have killed quite as many as Mr. Greener has—it is necessary to hold the gun about the neck or well ahead, if it is expected to inflict a wound so deadly as to stop the flight soon after the gun is discharged. As to the distance ahead in wing-shooting, which is requisite to success, I am unable to say with proper accuracy, but I think when a bird is moving very rapidly at right angles with the shooter, and is distant from thirty to thirty-five yards, three feet ahead is not too much allowance to make. Mr. Greener cannot kill birds in such cases if he does what he suggests to others. When it comes to duck shooting, he who expects to get any game at all must hold his gun well ahead. If he holds "on" the bird he will surely miss.

Mr. Greener intimates that they who believe in the "hold ahead" plan only think they do so. With great deference, I beg to suggest that they who are the advocates of the "hold on" theory, only think they hold on the object, while, in fact, the gun is far enough ahead to allow for the "crawl," or advancing movement. If the "hold on" shooters kill anything in cross shots, I feel sure they aim better than they suppose they do.

But one of the most wonderful statements which Mr. Greener makes is, that "some quick shots pull the trigger while raising the gun to the shoulder." *Mirabile dictu!* He must be a quick shot, who can do that. I have never seen such; and I must be pardoned for saying that if any one should tell me he was so electric in his movements as to do that, I should begin to question his veracity. Hunters' tales often call for the exercise of human charity, and I have heard and read some which made a heavy draw on that quality of my nature. But this trigger-pulling story stands "in the solitude of its own originality." It is true he tells us that in such cases "the gun must be within an ace of the proper position." I should think so!

Mr. Greener's idea that the left hand should grasp the gun about the end of the forestock, is a good one. Besides being safer in case of an accident, the gun is more readily under the control of the shooter, and will be more securely held to its place. Whether sportsmen usually grasp where he says they do, I cannot say. Very few of those whom I have observed do so.

I confess that I am pleased with his views regarding the weight of a sporting gun. Of course I allude to a gun which the sportsman must occasionally carry a whole day in his hands, with the additional load of shells, game and provisions. For Bob White, which we usually call partridge—and that name is far more appropriate than quail—a 12, 14 or 16-bore cylinder gun, weighing from 6¾ to 7¼ pounds, will answer all the purposes required. There is no need of any choke about it. If there is any, it should be confined to one barrel, to be used as a second one, or when the range is long. The only objection to this is, that it results in shooting the cylinder barrel much more than the other. But Mr. Greener tells us that an expert gunner ought to use a choke always. I cannot admit that; and venture to assert that, with equal skill, the man who uses a cylinder gun will generally get more game than one who shoots a choke. In the open field, or in marshes, or prairies, the choke would have the advantage; but Bob White prefers to take refuge in the brush or brier patches, and in such places the choke is not the weapon.

I have used 12-bores, 14s and 16s; but the best shooting I have ever done was with a 16. It may be because it was made to order and fits me exactly.

I like his views in regard to machine-made guns. To my mind it is clear that, though they may shoot quite as well, they are incapable of standing the same amount of use that a carefully-made hand gun will bear. Americans are very expert mechanics, and perhaps, after a while, when the law shall require all gun barrels to be "proved" before they are put on the market, they may equal the skill of the English and Belgians. At present, however, their work is comparatively inferior, even when they import nearly all the first-class barrels which they use and then call their products

American manufactures. There is too much of the "cheap John" in our goods of all kinds.

But I will stop at this point, because I am getting on the "ragged edge" of a dangerous subject, upon which my opinions would not be agreeable to the supposed interests—not convictions—of quite a number of my countrymen.

WELLS.

ROCKINGHAM, N. C., March 21.

SUMMER SHOOTING.

IN this week's issue of FOREST AND STREAM (April 3) I notice a correspondent from Long Island, "G. W. R.," who does not agree with me in regard to the killing of woodcock in July. "G. W. R." thinks he would not have any woodcock shooting at all were summer shooting abolished; but I think he is greatly mistaken, for summer shooting is the very thing to make fall shooting poor. Surely, to kill the parent bird while trying to raise her young, is just killing the whole brood; whereas, if summer shooting was prohibited, no such thing would occur.

What pleasure is there in hunting while the thermometer ranges from 90° to 100° in the shade? Certainly none.

It is almost impossible to hunt woodcock in summer with any pleasure after sunrise, and then very often your birds spoil before night in your pockets. I, for one, would like to see a law passed prohibiting summer shooting, just to see what difference it really would make, and I am sure we would have two woodcock in fall for every one shot now in summer. Last fall I was out fifty times or more and I did not flush twenty birds. Last fall's shooting was very poor, and each fall will continue to be poorer until a stop is put to this infernal summer shooting.

On Long Island, where "G. W. R." resides, there cannot be many pot-hunters, since he says there are no partridges shot in summer, but that they are snared. Snaring is a curse, sure enough; but to kill a bird only half fledged is worse still, when such an act is against the law. Snaring is not carried on to any great extent in my neighborhood, for the simple reason, I suppose, that the partridges are much more easily killed in summer than snared in the fall, being then only half grown.

Black ducks have been very scarce with us this spring, unusually so. Sprigtails are quite plentiful on the Passaic River, two miles from here, but very few are killed.

English snipe were plentiful last week. This week snipe shooting will be much improved, as the water is much lower on the meadows, making better feeding grounds.

16-BORE.

MADISON, N. J.

THE CHOICE OF HUNTING RIFLES.

Editor Forest and Stream:

When everything has been said concerning the choice of hunting rifles, the problem of making a judicious selection will still remain practically unsolved, at least for many persons. The development of new ideas and inventions, and the march of improvement in the construction of rifles follow, one after the other, in such rapid succession as to bewilder and puzzle the chooser and tend to restrain many persons and keep them in doubt as to the wisdom of making a choice now. At the same time the discussion of the subject which has been going on in the many interesting articles kindly published in the FOREST AND STREAM from time to time lately, will result in much good, provided some of the gun makers read these articles carefully enough to catch the drift of them and get the ideas of the majority of the writers of them into practical shape, and will then proceed without delay to construct a hunting rifle which will be in harmony with the majority's views, and will meet their requirements. In the meantime, the careful, cool-headed practical hunter, who has some knowledge of the habits of the game he seeks, and who is a good shot, will continue to succeed in killing it in reasonable plenty, no matter what kind of a rifle he has. Such a hunter, were he armed with an obsolete flintlock muzzleloader, would probably get, in a given time, more meat with it than could a tyro, or a careless hunter, or one who was an indifferent shot, armed with a modern breechloader.

In fancy I think I now see "Deerslayer" and Daniel Boone, restored to life in the prime of their best manhood, arrayed in the conventional backwoods dress of the hunters of their day, armed with their long-barreled, fine-sighted, flintlock, muzzleloading rifles, about to enter into a competitive hunt of ten days, against two of the most successful hunters of the present day, armed with the best modern breechloading rifles; and I am led to marvel as their sinewy forms seem to materialize before me in this dream of fancy, but I quickly get back to the practical in trying to guess which party, which side, will get most meat in this competitive hunt.

Without asserting which rifle is the best, I will say the Peabody Martini, .45-caliber, is my choice for such game as elk, deer and antelope. This gun is very reliable from one hundred to three hundred yards; it is handy, strong, durable, and will stand any amount of rough knocking about and hard usage. With 80 grains of powder, and 500-grain bullet, sharp-pointed and hardened with about one-tenth part of tin, it is an exceedingly effective and very deadly rifle. I am speaking of the military model, having used one of them more than three years. The sights on it are correctly placed, and have not been changed in any way. It is the same kind of a gun that was used by the Turks with such deadly effect on the Russians, in their late war. For five shots, or forty shots fired in rapid succession without cleaning, it is the most accurate shooting breechloading rifle I have ever used. It will, at any distance named, group the shots closer together, and put them nearer to the center of the spot aimed at than any other breechloading rifle within my knowledge.

The sliding leaf of the rear sight is straight across its top edge, except the cut out V-shaped notch for aiming; this can be seen the minute the gun comes to the firing position. The butt-plate is checked and made rough on its outer surface to prevent it from slipping on the clothing. The low price of this gun—less than twenty dollars—places it within easy reach. Using 70 grains of powder, it has the following drift, penetration in white pine, initial velocity, etc.

DRIFT.

405-grain bullet.	500-grain bullet.
At 100 yards it is ½ inch.	1⅛ inches.
At 200 yards it is 1½ inches.	3 inches.
At 300 yards it is 4 inches.	5 inches.
At 400 yards it is 8 inches.	8 inches.

PENETRATION.

10 yards.	100 yards.	200 yards.	300 yards.
20.8 inches.	17.2 inches.	12.4 inches.	10.2 inches.

Initial velocity, 1350 feet; the bullet is then revolving around its long axis at the rate of about 850 times in a second. Using the same kind of ammunition, its penetration is about the same as the Springfield rifle.

I have a 500-grain bullet in my possession, which was fired with 70 grains of powder from a Springfield rifle, squarely at an old grizzly bear's head, at the distance of about six yards; it flattened out there and failed to penetrate the bear's skull. It cracked the skull bone, however, and lodged under the skin from whence it was taken out when the bear was being dressed. This happened last October, near Laramie Peak, about one hundred miles northwest of here. The fact that this bullet did not go through the bear's skull bone is a matter of some astonishment, since it is known that it had a power of penetration equal to twenty inches in pine wood. But to come back to drift, etc., the writer contends that the drift of the bullet will be lessened when we have a cartridge which, in loading, will seat the bearing surface of the bullet well into the bore of the rifle, so that the bullet will start with the spiral motion produced by the grooves. The bullet of the cartridges now universally used is not, in loading the piece, seated in the bore, and consequently it must jump straight some distance before it reaches the bore and comes in contact with the grooves, and when it strikes the shoulder which joins the chamber to the bore, it is then moving with such fearful velocity that the vibrations the shock produced by one of the components of the resistance of the sides of the grooves, namely, that which gives to the bullet a rotary motion around its long axis, tends to derange the muzzle of the piece to the right. Moreover, the element of accuracy, which is undeniably one of the most important in rifle firing, is sacrificed to some extent when the bullet is seated away from the grooves and is already in rapid motion when it reaches there.

I had designed to drop a few words about the different forces which act on a bullet fired from a rifle; the combined action of these forces, and some of the causes which tend to vary them, but this letter is now longer than was intended.

ANDY PAINTER.

Editor Forest and Stream:

In your issue of April 3, "Penobscot" says his rifle also blew unburned powder out on the snow. May I ask him if this is strictly so, or did it only look so? Has he ever collected this unburned powder, again placed the same in his gun or rifle, and with what result? Should he take the trouble to do so—from his present standpoint—I think he will be astonished.

As regards his ideal repeating rifle, he has my idea precisely as to proportion of powder and lead, only I carry the same to the shotgun also. That is, by weight, three times as much projectile as powder, or as he sensibly puts it, 80 grains powder, 240 grains lead. The above proportion of powder to projectile, whether ball or shot, is close to the maximum shooting qualities of the piece, whatever it may be.

M. U. SKRAT.

BALTIMORE, Md.

Editor Forest and Stream:

When the first call was sounded in your columns for a new repeating rifle, I was strongly tempted to express my opinion about arms of this type. I thought it better, however, to wait a little and hear what others might have to say on the subject, and I am glad that I have done so. Among the many very interesting and remarkable points brought out by this discussion, the most remarkable, to my mind, is the apparent general popularity of the repeater. Of all the letters about rifles that have appeared in your columns, I can at this moment recall but two, in which the defects of the magazine rifle have been alluded to. One of these was from a gentleman, "W. N. B.," whose experience, extending over more than thirty years, entitles his opinion to great weight. My own use of the rifle in hunting large game extends over only about half that time, but I give it for what it is worth.

Before stating any facts, however, I should perhaps say that I have never habitually used a magazine rifle, and am therefore unaware of all their faults, their failures to act, and their weak points. On the other hand, having always used the singleloader, I am probably prejudiced in favor of that type of arm. Still, I have hunted so much and have been so anxious always to obtain the best gun that was procurable, that, had the repeater presented to my mind any advantages over the singleloader which outweighed its disadvantages, I should have been very likely to use it. My hunting has always been done in the West, and so far as I can recollect, I have never, within the United States borders, killed a single head of large game east of the Mississippi River. In the Western country I have killed all descriptions of large game there found except the moose, the white goat and the grizzly bear; no one of which I have ever seen alive within rifle range. So much of personal explanation seems necessary in order to show that the opinions which I may advance are not ill-considered, hastily formed, or those of a tyro.

During the fifteen years which I have devoted to hunting on the plains and among the mountains, it happened that for eight or nine I was obliged to journey through a country where hostile Indians were very troublesome, and where it might often occur that a man's life would depend on his gun. Simplicity and certainty of action were thus of the first importance in the choice of an arm, and I learned very early that the magazine guns of the present type could not be depended upon in this respect.

Repeating rifles with the magazine beneath the barrel, or in the stock, I believe to be unsafe, as I know they are unreliable.

1. Repeating rifles are unreliable. My first experience with arms of this type was many years ago when I traveled for four or five months with a party of young men, seven or eight of whom were armed with Winchester carbines of the then latest model. During all that time there was not, I believe, any single day when all of these weapons were in working order. The common fault was that a little dirt or a grain of sand would get in beside the carrier block, and so long as it was there, the lever was immovably fixed, and the gun could only be put in order by taking it to pieces, cleaning and oiling it. I happened to occupy the same tent with a young man who had a taste for machinery, and used to enjoy taking guns to pieces, and every night before going to bed his blankets would be covered with the parts of the guns he was putting to rights. If a gun was dropped in the sand, or a horse ran near one lying on the ground and scattered a little dirt over it, or it was not taken to pieces and wiped for a week or two, the arm was useless. And in traveling in the West such things as these constantly happen, and must be expected to happen. It is no answer to such objections to a gun to say that a man should keep his gun clean, and that then it will work well. Suppose he does not keep his gun clean, and that he is jumped by Indians or charged by a bad-tempered grizzly, is he to lose his life because he does not devote every evening in camp to polishing up his weapon? I have heard marksmen complain that at Creedmoor in past seasons, when shooting at the "running deer" with the Winchester, it has been a common thing to have the cartridges stick in the gun and the lever fail to work. Usually this is caused by a bit of dirt acting on the carrier block, and no matter how the open breech is protected, this is something that is always likely to occur.

In the summer of 1877 I hunted with two men in a country where game was very abundant. One of my companions was very anxious to kill a bear. He carried a Winchester of the model of 1876, the magazine of which holds, if I recollect aright, eleven cartridges. We had one day killed some elk, and seen a great lot of fresh bear signs, which so inflamed the imagination of this man that the next morning he started out alone, with the avowed determination of shooting at nothing less than a bear. When he came in at night he told the following story: He had hunted till about 3 P. M. without seeing anything but elk, and at these he had not shot. Just as he was about to return to the camp, and while he was resting on the edge of a little mountain park, three bears, two cubs and an old she grizzly, made their appearance, one after another, in the little park, and traversed it, passing within about seventy-five yards of where he sat. He said that he had intended to shoot at the first of the bears, and that he had not doubted his ability to kill both the small ones, but that, when the third and big one came on the scene, his interest in bear hunting ceased. We laughed at him, of course, while he was telling the story, and when it was ended he tried to take out of his gun the cartridge which was in the barrel, and found that he could not do so. It was at length picked out, and the gun being taken to pieces, this was found to be the state of things: He had filled the magazine full, jamming in all the cartridges it would contain. The spring in the magazine had thus been greatly compressed, and the result had been that the lubricant in the cartridges had been squeezed into a very small compass and the balls pushed into the shell much further than in a fresh cartridge. Each cartridge was therefore somewhat shorter than it should have been. Now suppose we call the cartridge in the barrel No. 1, the one beneath it No. 2, and the one in front of two, No. 3. No. 1 could, of course, be fired, but the base of the shell of No. 3 encroaching upon the space which should have been filled by No. 2, interfered with the breech mechanism and prevented it from working. Each of the eleven cartridges taken from the magazine was from one-eighth to one-quarter of an inch shorter than a fresh cartridge taken from the box. Now it is very well to say that the man was a fool to put so many cartridges into his magazine, but suppose he had fired and killed a cub with his one usable cartridge, and afterward had been torn to pieces by the old bear, would the fact that he had been a fool have been any special consolation to his widow, or to us who would have been obliged to pack him back to the railroad?

I could give other instances where these arms have proven entirely unreliable, but the one cited above, and the letter from "W. N. B." some weeks since, should be enough, I think, to show that sometimes they do not work. And a gun that sometimes fails will never do for me to use. If it is for hunting in the East, or in a country where nothing more dangerous than a deer or an antelope is to be met with, the getting out of order of your gun is a small matter. To lose your shot, or even to go hungry to bed, is annoying, but no great hardship, but where a gun's failure to work may cost a man his life, the question becomes a more serious one. If one is going to use his rifle merely to pop away at a deer as long as it is in sight, let him use a repeater, if he thinks best, but if he expects to rely on it as a weapon of defense, he had better choose an arm on which he can place more dependence.

2. Repeaters are unsafe, as I believe. They are unsafe because, with the tube magazine under the barrel, or with the magazine in the stock, there is always liability to a discharge of the cartridges in the magazine. This, it is true, may be avoided, provided the primers are very deeply seated, so as to be flush with or below the level of the base of the shell, and the ball of the next cartridge be flat on the end, but a man who hunts much will use a great many cartridges in a season, and who shall say that every one of these cartridges will be perfect in these respects? It is scarcely to be expected that a man should examine each cartridge, and test it before putting it in the magazine.

In the hands of a friend of mine, the magazine of a Winchester rifle exploded on the discharge of the cartridge in the rifle. He was shooting from above, at a band of mountain sheep. He heard the sound of the intended shot, followed at once by the cartridges in the magazine, and involuntarily tossed the gun over the cliff after the running sheep. He then wiped the blood from his face and went back to camp. Fortunately he had but one slight cut on the side of the head from a piece of flying metal.

In the hands of another friend, a Hotchkiss gun went to pieces. He was prospecting, and was driving a lazy jack, which was packed with his outfit. In trying to hurry the jack he punched it with the gun, which he held by the muzzle. The magazine exploded, and—well, the jack hurried that time, and the gun flew down the mountain side, as far as a good stout arm could throw it. Those who are in love with the repeater will probably say that a gun should not be used to prod lazy animals. Very true, but I presume that every man who has ever traveled with a pack train, has made use of his rifle for just that purpose. These are my two objections to magazine guns as they are now made, and I believe that they apply to all those constructed as I have stated. The Lee guns are not open to the same objections, but they will probably never come into favor as a hunting arm, the clumsy side bar being enough to condemn them utterly for that purpose.

It would not be difficult to show that for other reasons the magazine gun is very faulty as a hunting arm. Its balance is constantly changing, a very grave fault indeed. It conduces to poor shooting, for a man does not use the same care in aiming that he does with a singleloader, feeling sure that he can get in three or four more shots before the animal gets far, and being willing to take his chances of killing on some one of these. From this fact, too, it is a cruel weapon. The shooter keeps on firing away at the herd of animals, shooting at the "bunch" as long as they are within sight, and at the end of the "engagement" he may find one or two dead, but he is quite certain that half a dozen have gone off with broken legs or balls through the paunch, and that for days they will linger with festering wounds in which the blow-flies have deposited their eggs, suffering we know not what agonies.

With the singleloader, this is not so likely to occur. A man

hunts more carefully, works harder to approach his game, plants his ball with more precision, and in my opinion, is more likely to get his game. To my mind, nothing is more unsportsmanlike than to keep on shooting, shooting, shooting, after the game is beyond all reasonable distance. You know that if you hit it, it is merely a lucky scratch, and not good shooting on your part, and by the continued noise and racket you frighten all the game within hearing, and that, to leeward, is a long way. A single shot is not very alarming to game at some distance, many shots in succession are terrifying. Let a man, who is a real hunter, get up as close to his game as possible; if it is not within 200 yards, let him wait for it to come to him, or to get behind some cover so that he can creep up to it, and then let him shoot so carefully that one ball will do the work. This will give him some satisfaction.

I do not profess to be a good shot; I rarely shoot at an animal over 200 yards distant, and yet I find that with a little patience I can almost always get up within my own distance of game. A year ago last fall, in a month's hunting, I killed with a single ball every head of game shot at inside of 150 yards. There were not very many of them, to be sure, perhaps a dozen antelope, four or five deer, and as many elk, but they were enough. I was not skin hunting or butchering; I only kept the camp in meat.

Since writing the foregoing lines I have received from a friend in the West a letter touching on this subject, which is so interesting and suggestive that I need not apologize for quoting from it very freely. It is in reply to some remarks of mine on repeaters and their disadvantages. After giving the origin of the Winchester as the Volcanic pistol, he says:

Not very long after they became common in this region, "Old Jim Baker," a famous mountaineer, while shooting at a target with others near this city, suffered an accident, supposed at the time to be fatal. I was not present, but as I now remember it was occasioned by the explosion of a cartridge in the carrier, or by the blowing backward of the plunger. The whole side of his face from the corner of his mouth to his ear was torn off, and although he recovered it left him terribly disfigured.

In my observation I have noticed the repeaters often failing, either in the process of loading or in the fouling of a cartridge. I am not certain that I ever witnessed a really serious accident. The failure in loading is easily to be accounted for, I think. To work properly the cartridge must be mathematically exact as to length. If a shade too long the carrier will not bring it up to the breech of the gun because it cannot pass. If a shade too short, then the butt of the next cartridge follows it down past the end of the carrier, and prevents the latter from coming up. Jolting of cartridges, by carrying a magazine full on horseback for instance, may cause this latter result. (Are not Winchester cartridges, after manufacture, put through a sizing machine, which cuts them to a certain length? And is not this the cause of so many of their balls being cut off at the point as though with a knife or shears, thereby presenting a bad front for true flight?)

When about places where hunters congregate, it is very common to hear them say "I would have got a splendid elk to-day, but my gun wouldn't work," or "I got left on a deer by getting a cartridge fast," or many other similar remarks, as every one who has been among hunters will readily recall. Such failures are, I think, charged to repeating rifles four times out of five in ratio to their use. I know that their common reputation in communities largely made up of hunters is that they are far more liable to disappoint the bearer than are other guns.

If you can find some officer who was in the army of the Shenandoah (valley of Virginia) about 1863, I think you can get some points respecting the absolute danger of magazine rifles when placed in the hands of bodies of men. My recollection is that a regiment or brigade of volunteers were armed with them, and that so many casualties followed from accidental discharges, etc., that the guns had to be taken away from the men. This arming was in response to the importunities of the manufacturers, who claimed that the efficiency of troops would be greatly increased by giving them repeaters. (Has there ever been a regular military force armed with magazine guns? Or have their manufacturers ever tried to introduce them in actual war except upon this one occasion?)

After all, what is the use of a magazine when any expert can recharge a breechloader as rapidly as there is any possible use to fire—faster than he can see and realize the effect of his last shot, and faster than the smoke will allow him to see where to put the next one? In fact, our arms are all too good, too fast, too fatal. There will soon be little use for any for sporting purposes.

This is about the way we older men look at it. "Nessmuk" threatens to go back to the old flintlock muzzleloader, and I think that there are many who feel as if something like this must be done, if the slaughter is ever to cease. Of course it is now practically too late to save the game, and the effort at present is to see who shall kill the most in the shortest time.

I have purposely refrained from expressing my preference for any type of singleloader, as I desire merely to present evidence against the repeater. G.

NEW HAMPSHIRE LEAGUE.

THE eleventh annual meeting of the New Hampshire Game and Fish League was called to order shortly after 11 o'clock in Mirror Hall, Manchester, April 1, 1884, the president, John B. Clarke, in the chair. The president read letters of regret from John Fottler, Jr., president of the Fish and Game Protective Association of Massachusetts, who was prevented from an attendance upon the meeting by reason of his presence being necessitated in Boston to look after the interests of the bill before the Massachusetts Legislature for the better protection of fish and game in that State. The secretary read an interesting paper entitled "Notes on the New England Salmon and Trout," the author being Mr. S. Garman, of Cambridge, Mass.

President—John B. Clarke, Manchester.
Secretary—Charles L. Richardson, Manchester.
Treasurer—Frederick Smyth, Manchester.
Vice-Presidents—C. W. Pickering, Portsmouth; Luther Hayes, Milton; E. B. Hodge, Plymouth; Fred Gould, Concord; Edward Spalding, Nashua; W. H. Shurtleff, Colebrook; Horatio Colony, Keene; Arthur L. Meserve, Bartlett; G. P. Whitman, Manchester; Herbert F. Norris, Manchester; Charles F. Stone, Laconia.

Hon. Charles F. Stone delivered the annual address; and Fish Commissioner Hodges spoke of the work done by his department; an abstract of his remarks will be found in another column.

A committee consisting of Hon. Herbert F. Norris, of Manchester, Hon. V. C. Gilmore of Nashua, and Hon. John M. Hill of Concord, were appointed to inspect the fishways of the Merrimack River.

Dr. Edward Spalding of Nashua, Luther Hayes, Esq., of Milton, and E. B. Hodge, Esq., of Plymouth, made interesting remarks on pertinent topics. The latter stated that during the months of December, January, February and March over 200 deer, one moose, and one caribou had been killed. A large number of deer are killed in the lumbering camps. Dr. William Jarvis read a paper on "The Woodcock," and Mr. John Foster of Manchester, discoursed of "Coons and Coon Hunting" in a style that delighted the veterans present. His paper will be given in full in our Kennel columns. An essay on "Guns and their Attachments," written by Mr. Chas. M. Stark, of Dunbarton, contained many practical hints on this topic. The members of the League were instructed on "Camping Out" by Mr. Herbert F. Norris, who said:

"The well-worn saying, 'He is a good fellow, but he can't keep a hotel,' may well be applied to many a lover of sport who has had no experience in camp life and knows nothing of the joys or discomforts of life in the woods. Recollecting well my first night's experience, when after a tramp of ten miles I slept, or rather tried to sleep, beneath a shelving rock on the mountain side, while the hooting owl and barking fox aided the drumming partridge in a grand evening concert, I can well believe that knowing how to camp out is as necessary to the pleasure of a week in God's first temples as is the knowledge of hotel keeping to the comforts of the guests.

"I will suppose for the purposes of this talk that you desire to go camping, but before making preparations for your excursion you should always settle three questions. First, the time you can spend in camp; second, the game or fish you seek; third, the place or locality you desire to make the base of operations. I have named these questions in the order I deem them important. Many an otherwise delightful week has been thrown away by attempting to crowd into it a trip that should have taken twice as long, and the boys returning say, 'Yes, we had a good time, but had hardly got there when we had to come back.' I believe it to be a good rule that no place is available for a week's camping that cannot easily be reached in one day. Having settled the question of time, the kind of sport, whether with rod or gun or both, can easily be disposed of, and, having always in mind the available spots the time at your command will allow you to visit, you can soon decide where you will go.

"Then select one of your number to act as steward, who, with a carefully prepared list of what you will need, will procure and have securely packed every thing except blankets and wearing apparel you think necessary for your comfort. In this way you avoid the trouble of carrying larger quantities of stores than are needed, and the vexation of finding yourselves in camp miles from home without some things that are absolutely indispensable to the pleasure of your stay. To attempt to enumerate the many things that are taken into camp by those who go out into the woods would occupy the attention of the League during the remainder of its session, but there are some things that are so essential that you will pardon me if I suggest them.

"No camp is complete without conveniences for cooking such fish or game as you take; but few desirable camping grounds are to be found where a heavy cooking stove and furniture can form a part of your equipage. It follows, then, that in this particular, as in every other, that the lightest, most convenient and easiest transported substitute for a stove is the best for your purpose. Let me suggest one that I have found, all things considered, unexcelled. Any sheet-iron worker can make it for you in an hour, and you will have a camp stove that will last a lifetime. Take a piece of sheet iron and form of it a cylinder twenty inches long and about fifteen inches in diameter; put on one end a bottom, first taking out of one side at the same end a piece three inches long and an inch wide. Then for a top either a coarse wire netting or make a double cross of some strips of sheet iron with the ends bent so as to clasp over the sides, and your stove is complete. It is light, needs no funnel, can be set up in a moment, and heats quickly. The bottom prevents the fire from reaching the ground, the hole in the side gives excellent draft, and the cross or screen sufficient support for the spider or kettle. Some one will say that a stove of that shape takes up too much room in packing. Let me explain its advantages in that respect. Your stove is simply a large sheet iron pail. Why not use it as such? Within it you can place your camp kettle, tin plates, dippers and dishes, knives, forks, spoons and lanterns, in fact, all of your cooking and dining equipage, and know that it is securely packed. If you wish baked fish and game, brown bread and beans, don't try to cook them in this stove, but dig in the ground a hole fifteen or twenty inches deep, stoning up the sides like a well, if you desire, and you have a splendid oven. To heat it, build in it and over it a rousing fire, and when the wood has burned to coals clear out the oven, leaving some hot ashes and coals on the bottom. For beans your oven may be heated at night. Place the pot in the oven, push back the coals and ashes around it and over it, and, adding fresh fuel, you may enjoy your evening campfire, knowing that in the morning you can take from beneath its ashes a superbly cooked breakfast.

"To cook fish: Having placed some grass on the ashes at the bottom of the oven, to prevent the fish being scorched, lay them on the side, and putting over them some more grass, fill up the oven as before. In three or four hours you will have a baked fish, with all its flavor and juice retained, better cooked than in the best range in the land.

"For bread a covered dish can be used; while game may be treated in many ways.

"What luxuries you take into camp your own tastes will govern, but you should never forget the following reliable and substantial things: Plenty of salt pork, pilot bread or hard tack, coffee, Indian meal, salt and pepper; and if your camp is easy of access, potatoes, beans, onions, canned meats and flour should be added.

"Your camp or tent should be on a dry, level spot as near as practical to a good spring or cold running water. You will need good water for cooking and toilet purposes, and it is sometimes the case that some members of the party will drink it.

"Having your tent in position, if possible facing the southeast, carefully dig around it a good ditch. This will save you a repetition of my experience at one time, when I awoke in the midst of a heavy shower to find a fine stream of water running beneath the boughs that formed my bed, but not far enough beneath to prevent my getting uncomfortably wet. Throw the tent wide open as soon as the sun is well up in the morning, hanging out the blankets in the wind and shaking up the boughs that form your bed. I speak of your bed as one of boughs, because I believe, that while other things can sometimes be secured to give a softer couch, nothing is always at your command that will serve you as well. Again, the object of your visit is to obtain health and strength as well as sport, and there is about a bed of boughs, rich in its flavor of the hemlock or spruce, together with the properties of the earth, strong medicinal qualities that I believe to be highly beneficial to those who for the remainder of the year are confined within doors in offices, stores or manufacturing establishments.

"Being well settled in camp, don't try to hunt or fish all the surrounding country the first day. Such a course will only serve to unfit you for the enjoyment of the remainder of your stay. It is a changed condition of things for you, and you can easily misjudge your strength, and the second day find yourself lame and sore and unable to join in the sport at all. Take things easy the first day or so, and then you will be more than repaid for the loss of the few hours at the first.

"Some people seem to fancy that all that is necessary in the way of clothing in camp is a fancy yachting shirt, with its broad, loose collar and flowing sleeves, and the attendant pair of hip pants, but you should not fall into that error. I can think of nothing more poorly suited to your purpose. Your shirts should be made of the best flannel, with a narrow collar and button close around the neck, with a close-fitting sleeve buttoning as tight as comfortable with three or four buttons at the wrist. You will then save the annoyance of catching your sleeve upon every twig and bush, or of losing a fine fish by the reel catching in the needless cloth that hangs about your wrist, while that greater trouble than all, the mosquito and black fly, will be unable to select your neck and arms to feast upon. For the remainder of your clothing, any strong, well-made clothes will answer, being careful to select warm woolen under flannels and stockings. While the shirt I have suggested will protect you partially from the mosquito and fly, your face and hands will still be exposed, and will need guarding; for this purpose get at some druggist's a small vial of a mixture of oil of pennyroyal and sweet oil of the proportion of two parts of sweet oil to one of pennyroyal, and when troubled by the insects apply it to the exposed parts. The singing and humming may still remain near, but the mosquito and fly will not harm you while the oil remains upon your hands and face."

MASSACHUSETTS GAME PROSPECTS.

WE had a heavy snow storm here Wednesday night. It fell about fourteen inches on the level, followed next day by heavy wind and rain. On going out to-day to see how the birds stood it, I was surprised to flush in about three hours eight woodcock and a nice bevy of quail, twelve in number. If we have a good dry summer, we will have good sport next September. Little yellow birds and fox sparrows, golden-wing woodpeckers and crow blackbirds are here. J. F. D.

DANVERS, MASS., April 5.

The winter and spring thus far has not been so severe as usual to game. A good reliable farmer told me that a few days since he saw eighteen partridges budding his apple trees at one time, visible from his front door, and that they have badly damaged them. Rabbits are on the gain in numbers hereabouts, and but for box trapping the gain would be much greater.

At time of writing the ground is white with snow about twelve to fifteen inches deep, and sparrows, bluebirds and robins have starved to death in great numbers. E. S. K.

WESTMINSTER, MASS., April 7.

TENNESSEE CONVENTION.

Editor Forest and Stream:

It must be apparent to all those who have investigated the subject, that the great destruction of game throughout the State, by netting, trapping and killing out of season, as well as the wanton and exterminating method of killing fish by the use of dynamite powder, will soon deplete our fields and streams.

The only legitimate method to prevent the wholesale destruction of all kinds of game must be by stringent legislation, and to this end the sportsmen of East Tennessee deem it expedient to call a meeting of all the lovers of sport throughout the State, on Tuesday, May 20, 1884, in the city of Knoxville, to form a sportsmen's association of the State for the purpose of memorializing our State Legislature and securing the passage of such laws as will save from entire destruction our fish and game birds.

The E. T., V. & G. R. R. will give excursion rates over their several roads. The Knoxville Gun Club will use every effort to render the meeting both agreeable and profitable, not only by assisting in the proper entertainment of their guests, the adoption of sound conservative and progressive resolutions, and in the furtherance of healthful legislation, but will hold their annual shooting tournament, lasting four days, which they hope may prove an interesting feature of the meeting.

A most cordial invitation is hereby extended to all lovers of genuine sport to meet with us at this time, so that by our united and harmonious councils we may be able to arouse public opinion to the importance of this subject and construct such safeguards as will make our State in the future what it was in the past—the sportsmen's paradise.

KNOXVILLE, Tenn. J. C. DUNCAN, S. B. DOW, F. W. ARMSTRONG, } Committee.

PHILADELPHIA NOTES.

VERY few snipe were killed on our grounds this week. Atlantic City duckers have within the past few days been bringing in many sheldrakes, an unusual number of these worthless fowl having appeared, evidently on their northward flight. Some big yellow-legs are to be heard on the salt marshes, and the regular spring flight may be looked for during the next pleasant weather we will have. These birds do not stool well in the spring, and it is a fact worth noticing that they show themselves in much small numbers in the autumn migration, their place being taken in great part by the lesser yellow-leg, and we seldom see this latter-named variety on our shores in the spring. Can any one explain this? I notice to-day at some of our Philadelphia game stands many shore larks in bunches offered for sale; also blackbirds, and both varieties picked and tied together as reed birds are when sold. There is a law against selling those birds at any season of the year. While writing of illegal trading in game, I might say that in Philadelphia, where game dealers were once so fearful of violating the law, they are now doing as they please with their stock in trade. When our Philadelphia Game Protective Association had its eye on these people they were kept in check, but now it might be said we have no law. An effort is being made on the part of the Philadelphia Kennel Club to procure the charter of the old organization, and a move I hope will be made to extend the usefulness of the Kennel Club to the protection of game and the prosecution of existing laws.

An ex-vice-president of the old Philadelphia Sportsman's Society said to me the other day when we were conversing on dog matters, "What earthly use is it to own a dog when there is no game?" He deplores the present condition of affairs in Pennsylvania, and I am sure would aid in reorganizing in some way the old association.

I am told that the freshets of this year in the Susquehanna carried so much mud and trash on to the flats at Havre de Grace that the wild celery has been entirely destroyed; hence the failure of this season's duck shooting at that point. I am compelled to think, notwithstanding this fact, that box-shooting also is having its steady and sure effect on the fowl also. HOMO,

PASSAIC COUNTY, N. J.—A meeting of the Passaic County Fish and Game Protective Association was held last week in Paterson, N. J.; the permanent organization was effected. The secretary reported that Senator Griggs was unavoidably absent, but that he had made some suggestions to the secretary with a request to bring them before the meeting. The first suggestion was in relation to the preservation of American song birds. The law at present prohibits the killing of all song birds, but as it is a State law with only a small penalty attached, it is very seldom enforced. The charter of this city gives the Aldermen the right to pass ordinances for the protection of song birds, and if the Aldermen could be induced to take action in this matter, the whole Paterson police force would be compelled to make arrests whenever they saw any person killing any song birds. Most of the killing of song birds in this vicinity is done within the city limits by boys and men who go out either for the sport of killing or in order to get birds to stuff. In this manner hundreds of birds are killed nearly every month in the year. Mr. Griggs's suggestion was to ask the Board of Aldermen to pass a stringent ordinance prohibiting the killing of song birds. The secretary was instructed to request the Board of Aldermen to pass such an ordinance. Another suggestion made by Senator Griggs was the printing in pamphlet form of the present laws in relation to the protection of fish and game. The laws have been fixed up every year by the Legislature, so that it is only with the greatest difficulty that persons can keep on the track of what is going on. The Senator offered his services in the matter, and was requested to draw up the compendium. A room for meetings will be procured, and until that time the association will meet at the corner of Cross and Oliver streets, where the next meeting will be held on Friday evening of this week.

ARROWHEAD IN GAME.—I read with great interest the article regarding the iron arrowhead found in the swan at Chesapeake Bay. Mr. Erastus Keith told me that some years ago, a wild goose, shot near Lake Village, Indiana, had an arrowhead imbedded in the breastbone. I own a bow and arrows from Washington Territory; the arrows are 26 inches in length, the iron heads are 2¾ inches long and ¾ of an inch wide; the bow is very strong, covered with snake skin, and is 38 inches in length, no mean weapon in the hands of a brave. None of these arrows are barbed where they enter the shaft, which makes me think the one in your cut may have come from the remote north, and there may be some among your readers who have seen such that are barbed where they enter the shaft, as iron arrowheads are still used by many tribes, and they may know the names of tribes using such. As game escapes from white men with the best weapons, there must be more that escape from the arrow of poor Lo.—W. A. N. (Springfield, Mass., April 7).

GAME IN IOWA.—Latimer, Iowa, April 10.—Ducks, geese and brant have visited us in large numbers this spring, and a few of the hardy duck shooters that could lie in a snow bank where the corn was not gathered, met with good success. Thousands of sandhill cranes are here now, but they are very poor. Ducks have also proved to be in miserable condition, which is another argument in favor of the abolition of spring shooting. Prairie chickens wintered well, and there seem to be more old birds than I have seen for several years, so that if there is any reasonable hatch the shooting will be excellent next fall. Some curlew are to be seen. Our little favorite, the Jack snipe, has not put in an appearance, but is reported as being plenty 100 miles south of us. A great many pickerel have been speared and shot along the small streams this spring.—RAW.

LIVE QUAIL FOR NEW JERSEY.—At a meeting of the Board of Directors of the New Jersey Game and Fish Protective Society, held in Plainfield, N. J., on Friday evening, April 11, the committee on distributing quail for stocking purposes, reported that the birds had been liberated on farms in the counties of Union, Somerset, Hunterdon, Middlesex, Morris, Monmouth and Essex, where they will have protection and good cover to breed. Some 300 birds, cared for during the winter months, were liberated. The percentage of loss in caring for them since December was small, in comparison to that of last year. Good results may be expected from this plant if the game laws are properly observed.—FOX.

A MAINE DECISION.—The following opinion has recently been rendered by the Law Court of Maine: "Penobscot County Case.—Thos. F. Allen vs. Benj. L Young.—'Plaintiff nonsuit.' Rescript—It is the opinion of this Court that if deer are killed during the time when it is lawful to do so, it is not a crime to carry or transport the hides or carcasses from place to place in this State during the time when it is unlawful to kill them; that such a carrying or transportation is not a violation of the statute for the protection of game. Barker, Vose & Barker for plff.; Davis & Bailey for deft." This applies to the transportation of all game.—J. F. S.

GAME IN MUSKEGON.—Notes are scarce in this part of the country, but I will give you one that probably the Muskegon Sportsman's Club will be proud of. Game—quail, ruffed grouse and venison—has been openly sold in this place all winter, even into March. Let the State society appoint some more missionaries. Personally, I do not feel much aggrieved, as my sporting proclivities do not extend beyond a fishing-rod; but I do not like to see the laws so flagrantly violated, even if I never shoot a bird.—A. P. S. (Muskegon, Mich., April 2).

BRANTING AT CHATHAM.—I promised to write you in regard to branting. There are lots of brant here, but the tides have been very high indeed. We killed 37 the last week in March; 17 the 3d of April; 17 the 4th, and this morning, the 5th, we killed 33 before 7 o'clock. These were killed from one box. April 7 we killed at one shot, with four barrels, 36 brant, and got five more, making 41 brant in all, and got back to my island home before 8 o'clock A. M.—I. G. C. (Chatham, Miss., April 8).

MARSHALLTOWN, Ia., April 5.—Your correspondent in company with Mr. L. C. Abbott, our crack shot, spent the afternoon of the 4th on the "Snipe Bog," with the result of a small bag. It is rather too early, and the birds are wild.—L. T. D.

SALEM, Mass., April 7.—Woodcock are yet in our pastures. Some black ducks (*A. obscura*) noticed; also snowbirds (*J. hyemalis*) and tree sparrows (*S. monticola*). We look for snipe soon.—X. Y. Z.

PAY FOR THE MECHANICS.—In the clerk's office of the U. S. Circuit Court at Trenton, N. J., in the case of Charles E. Quincey *vs.* the Yellowstone National Park Improvement Company, there was filed, on Tuesday, April 15, a petition asking the Court to permit the receiver to borrow $7,000 to pay the laborers, who have taken possession of the hotel and fixings, and refuse to let the receiver take possession until their claims are paid. Judge Nixon signed an order to that effect.—L. N. C.

BIRDS IN ILLINOIS.—We lost a good many quail last winter, although there are some left. The duck shooting is about over. The weather is very fine, and birds have gone north. I should like to see the spring shooting stopped, especially for market.—L. G. (Lewiston, Ill., April 3).

DUCKS NEAR MONTREAL.—Our spring duck shooting has just opened with prospects of very good shooting. One man was out last Friday and shot 54 yellow-eyes, 11 whistlers and 4 geese; not so bad for these parts.—TUQUE BLEUE (Montreal, April 8).

Sea and River Fishing.

THE ROD—PAST AND PRESENT.

Editor Forest and Stream:

The article written on the "dowel question" in late numbers of FOREST AND STREAM are instructive as well as amusing; and any apology for troubling your readers with what may follow, is due to the truth stated in Mr. H. P. Wells's excellent article of Feb. 21, wherein he justly arraigns the followers of Walton for not writing more on what pertains to the art of angling and the implements used.

But their silence is due, no doubt, more to the gentle, unobtrusive spirit which pervades this fraternity, than to any selfish motives or ignorance on the subject.

Many years have passed since I have used a rod made with dowels. My first departure from the creed of the fathers occurred shortly after the debut of that most excellent work, "The American Angler," by Thad. Norris.

The teachings of that eminent author were so plain and thorough that I concluded to try my hand at rod making. My first attempt was to reduce the unwieldy proportions of a store rod which I had used some seasons. This rod was furnished both with dowels and rings, such as were considered orthodox in those days. As I had made up my mind to try the experiment of making a rod without dowels or rings, I proceeded to remove both, but to my surprise on putting the rod together I found the joints as shaky as an old window in a March wind.

That experiment proved the use of dowels in rods constructed with badly made ferrules. To make a good ferrule I soon found required more skill and tools than I possessed. However, I believed that a perfectly fitting ferrule could be made, and on the strength of that belief continued to make all my ferrules, some fairly good, others bad, until I found a brother of the angle, who had both brains and tools enough to make ferrules of so perfect a fit as to leave nothing more to be desired in that direction.

Next, I replaced the old rings with standing guides which I made of hollow wire. At first I made them large, but when John Shields produced the enamel line—the greatest improvement in lines the world has seen—I found that a guide a little larger than the line answered every purpose.

After experimenting with the construction of the standing guides, I found that two perfectly round rings of wire soldered together so as to form a A shape with a piece of metal at the base, thus constructed so as to be attached to the rod by silk windings, gave the best results. These guides have lately been improved both in fineness and finish by the same party that makes the ferrules.

With these ferrules and guides the amateur can construct as perfect a rod as any professional, provided he knows how to make the wood part of a rod. Last season I was gratified to hear that salmon rods had been sent to the East from California to have the rings taken off and these guides put on.

While on a fishing trip last summer, in the Provinces, I was shown bamboo rods, made by our best makers, and owned by resident anglers, that had been sent to Boston to have these guides put on, and they expressed themselves more than satisfied with the change.

From some of the articles written by the angling fraternity, and those anglers whom I had formerly met, living in the Provinces, I had been led to suppose that the antiquated "spliced rod" was the only one considered the thing in those regions. But I was mistaken.

Before closing, I will state for the benefit of those of the craft who desire to make their rods, that the ferrules and guides that I have found so satisfactory, can be had in New York of Hawks & Ogillvey; in Boston, of Appleton & Litchfield, Washington street; C. F. Pope & Co., 33 Weybasset street, Providence, R. I., or of the manufacturer, A. Seekel, 409 Pine street, Providence, R. I. The ferrules are made of eighteen per cent. German silver, finely finished and reinforced so as to admit the same size of wood above the joint as below it, thereby obviating most of the danger of the rod breaking at the ferrules.

The following sizes can be had for fifty cents each, viz.: $\frac{5}{32}$ to $\frac{1}{2}$ inch inside diameter. Guides are made in four sizes, and sell at sixty cents per dozen, all sizes, and will fit the finest fly-rod or heaviest bait-rod.

To recapitulate. The history of the rod may be summed up somewhat after this fashion. First, we have the pole intact from butt to tip, as used by "the fathers." Second, the pole cut in two or more pieces, probably for the convenience of transportation, or in some instances to avoid the trouble of cutting a "mast" for each expedition. The uniting of these pieces with strings constituted the "spliced pole." Third, the uniting of the sections of a pole by ferrules which were so poorly made as to require some device of the wood-worker to help out what the metal-worker lacked. This device consisted in adding a piece of wood below the end of the male ferrule, and was called a "dowel."

But I had nearly forgotten to mention a companion piece of the dowel, credited to our English cousins. I refer to those wire loops placed both above and below each joint for the purpose of tying the joints together, and when a "pole" is thus rigged out for action, it presents an appearance as substantial and ornamental as that of an Italian team in the streets of Florence or Rome, with the Jack harnessed to the cart by rops and rags.

Finally, instead of the larval state called "pole," we now have that most perfect of all angling implements, the split-bamboo rod with short ferrules that fit perfectly, and guides that do not hinder or fray our elegant enameled lines.

Therefore, at this stage of "evolution," I conclude that the day is fast approaching when the "pole," the "spliced pole," the "doweled rod" and the ringed rod will be relegated to the past, as stage coaches, etc., etc., have been by the advent of the railroad, telegraph, telephone, and electric light.

ESPRIT FORT.

PROVIDENCE, R. I.

AN OLD-FASHIONED ROD.

Editor Forest and Stream:

Let me fully indorse Mr. Wells's articles about dowels, and corroborate him by saying that I have an old rod, made without them, which has seen hard service for twenty-five years or thereabouts. I think it was in 1859 that I went to a gunsmith in Manchester, N. H., and selected the slenderest bamboo rod that I could find, 20 feet long, and had it cut into five lengths of 4 feet each, and put together just as Mr. Wells describes. The three top joints gave me a 12-foot trout rod for brook fishing; the addition of the next one made 16 feet, and was occasionally very useful for wide, shallow streams or mill ponds, and the butt, when added, gave me a long pickerel rod.

Of course I had no reel-seat, but a few feet of strong cord or old linen line, and a few minutes' work, would fix the reel firmly to either joint.

The original tip came to grief against a stump, in an alder swamp in Maine, while I was endeavoring to keep the mosquitoes off with my left hand, and also trying to avoid getting over boot-tops in the mud.

An old lancewood tip, from an older rod, was then spliced on and lasted for some years, until it met with a somewhat similar mishap, and was finally replaced by a foot of whalebone which I worked down from one of the ribs of an antideluvian umbrella, and which is still capable of good work. To be sure, it is not a fly-rod, but in most of our mountain brooks a fly-rod is of no use, and we have to depend on the primitive mud worm.

In all this long service only one ferrule has worn loose, and that might be easily tightened if I did not always forget it, so that when I get out on a stream and put my rod together I usually wrap that ferrule with one thickness of thin paper.

I have not used the rod much the last six years, except for trolling and bass fishing, as the charms of a light split bamboo have caused it to be honorably retired, for the good it has done, but I mention it now in evidence of the truth of Mr. Wells's theory, that dowels are non-essential, and I also fully believe them to be detrimental to the strength of a rod, as I broke one of my split bamboos two years ago, just below the butt ferrule, in the endeavor to disengage the hook from a sunken log, where a malicious black bass had left it, too deep under water to be reached by hand.

SAMUEL WEBBER.

LAWRENCE, Mass., April 5.

TROUTING ON THE BIGOSH.

THE COLONEL'S STORY.

A HEAVY shower kept us in camp in the morning for over an hour, and as we sat in our dry bough shanty the Doctor turned to the Colonel and asked: "How did you pass the day, yesterday, while we were wading the stream?"

"Jack and I took a few trout."

"Lakers, I suppose; lugged them up from the bottom, much as one pulls up a water-soaked stick that his hook has fastened to, and can't tell whether it be stick or trout until it heaves in sight."

"That uncertainty," answered the Colonel, "is what gives variety to the sport. If variety is the spice of life, then uncertainty is the salt which gives the relish. It is the uncertainty whether it will cost seventy-five cents or a dollar a piece to raise turnips, which makes amateur farming so attractive to the city merchant, and this reminds me that Cape Cod is the most charming agricultural country in the world. They are always sure of a crop, but there is the delightful uncertainty before the spade is put in the ground whether it will be potatoes or clams. But you are wrong in your guess, Doctor, we took some fine trout here in the lake. We found a spring hole and fished it from the boat."

I groaned audibly. There I had been, climbing logs and forging through thickets, to reach a stream which I missed, and merely to keep the Doctor company, getting wet and having no luck, while the Colonel and his son had struck good fishing from a comfortable boat, where we did not even think of finding brook trout. "Where is this spring?" I asked.

"It is about six boat lengths to the east of the big sycamore across there, and about the same distance from the shore. After you had gone we rigged up our fly-rods and rowed across the lake on a voyage of discovery, and going along shore carefully and casting ahead of the boat to see if chubs, trout, or dace would rise, I hooked a small trout. About twenty feet in advance of where he rose we could see a slight boiling motion to the water, and I told Jack that we had found a spring hole and might get some good trout. I let the little fish go back in the water, and Jack was for rowing right up where we could cast into the center of the spring at once. I explained to him that such a course would frighten all the fish in the pool as soon as the first one was hooked, and that we had best stop where we were and fish carefully all around the spring, and pick off those on the outside first. He saw the point, and we arranged that one should take the oars while the other cast, and as soon as a trout was hooked the boat should be pulled from the hole, so as not to disturb the inhabitants of it by allowing them to witness the plunging of their friends at the end of the line. After a capture we would change positions. We worked in this way until about 9 o'clock, full three hours, and took in that time thirty trout, of which we returned to the lake twenty-one that were under six ounces in weight. Here are the others, nine trout, whose united avoirdupois is four and a half pounds, just enough for dinner."

"It was too bad to put all those trout back," said Jack; "they would have made a nice show and were big enough to eat, every one of them, but father insisted on it, and that settled it."

"It is very hard," said the Colonel, "to make a boy understand that all life is sacred and should not be wantonly destroyed. The desire to kill seems to be part of our Anglo-Saxon heritage. The Frenchman who said that when an Englishman asked his friend what they should do to enjoy the morning, was answered, 'Let us go and kill something,' struck many a bird with a single stone, and especially our younger men and boys. Not that boys in all ages are not the same, but I mean to say that the older we get the more

we value life of all kinds, including our own, as something, which we can take but cannot give."

"Colonel," said I, "you have stated a fact that we all acknowledge as time passes. I remember, when a boy of twelve years old, that three of us borrowed a gun, an old musket, and went to the outskirts of the village to shoot 'game.' We saw a little yellow bird on a thistle-top picking the seeds in a perfect sense of security, and, as the oldest, I claimed the right to shoot. Advancing behind the fence, I put the old musket through the rails and rested it on one of them, with the muzzle of the gun within ten feet of the little innocent, pulled the trigger, and then jumped the fence and exulted over a shattered mass of skin and feathers, which a moment before had been a living thing of beauty in the full enjoyment of life. O, had some sensible man, wearing a stout boot, been there, and had he applied the boot impartially, he would have enforced a lesson that took years to learn in a slow way."

"True," broke in the Doctor, "but having learned this lesson of the value of life by years of observation, and the ease with which it can be destroyed and the impossibility of restoring it, you are in duty bound to teach this to the new crop of boys which is constantly coming to the front, and who are as thoughtless and heedless as you were."

"It's no use," said the Colonel, "there are many things that boys must learn for themselves. One of those is the value of life. Some boys learn it at forty, some at fifty and some never seem to know that any life is of value except their own and that of their fellow man. I once talked with a man on the subject of shooting birds in the nesting season. He asked why he should not kill birds at any time he wished, and when I said that the idea of young birds starving in the nest should be enough to deter one from killing the parents, he brutally answered that their sufferings were nothing to him, he only considered his own wants. Of course, there is no more to be said to such a man, yet he was a professor in a German university."

"How many fish did Jack take?"

"Jack has not yet learned to give his line time enough behind him in retrieving and he snapped off seven flies, which lost him that number of chances, or our system of alternate fishing would have equalized our catch. I made him lose his chance every time he lost his fly, hoping to make him more careful in future." Fred Mather.

BLACK BASS IN MASSACHUSETTS.

An article in the Worcester *Spy*, which from the style we think was written by our friend Mr. S. H. Coe, sums up the character of the black bass in all its qualities of game, table and other points. We make the following extracts from it, though we do not agree with the writer on the odor of the black bass, which to us seems an agreeable weedy flavor, yet we do not care for them on the table. He says:

Of the several towns in this vicinity which began experimenting with black bass, it is doubtful if there is one which is fully satisfied with the result of the undertaking. Mendon Pond was one of the first to receive attention, through the efforts of a company of sportsmen, and they were among the first to be dissatisfied with the results attained, or rather the lack of results. There are bass, large ones too, to be seen in the waters of the pond, but they defy the ingenuity of an angler and the dead-falls of the potter alike. Occasionally one can be taken by still-fishing with a mud worm, but there is no sport for a sportsman. Experiments were tried at Asnebumskit, in Paxton, but the results have not been satisfactory. At Lake Chauncey, in Westboro, there has been a fair measure of success, and the same may be said of Crystal Lake, in Gardner, but at neither of these places has the outcome been what anticipation pictured. In Brookfield all has not been realized that was anticipated. In the Lynde Brook reservoir the fish were considered as doing well till the disaster of 1876, which carried away the dam, the waters behind the dam and the bass in the waters. Millbury is the last of the towns in this vicinity to make the experiment and the result is unsatisfactory. Webster was one of the first of the Worcester county towns to make the experiment and is satisfied with the results as far as numbers and sport are concerned. While the various towns have met with varying degrees of success, have the bass been yet given a fair trial?

An alien to New England waters it has been brought here and left to shift for itself. Turned loose among fresh-water sharks in waters abounding in other fish which prey not only upon their own, but the spawn of all other occupants of the same waters, has the bass experiment been tried under the most favorable circumstances? Once large enough it is well able to take care of itself, and it seems to be the verdict of all who have studied its habits that it is more of a fresh-water shark than the pickerel, and every half-pound pickerel is looked upon as having eaten three times its weight in other fish. The bass has been here but a few years, hardly more than ten in the ponds first stocked. Other varieties, pickerel, perch and the like, in the waters where the bass have been introduced, have not held their own. All interested seem to agree in testifying that they have diminished rapidly.

And the black bass is the gamiest fish of its size that swims in any water, fresh or salt. It fights continuously from the time it is hooked till it is brought to net. It never sulks, like the salmon, and goes to the bottom after being hooked only when it sees a possible chance for escape among the rocks or weeds at the bottom of the pond or stream. A bass always forces the fighting, and is never upon the defensive. The moment he is hooked he comes to the surface, jumps clear of the water, sometimes to a height of between two and three feet, and shakes himself vigorously while in the air, in the effort to dislodge the hook. Then he makes a rush through the water for the same purpose, following the first with other rushes, and often breaking water two and three times, and sometimes more, in his efforts to escape. Only when forced by sheer exhaustion to swim on his side, does he show signs of quitting, and then he usually has vitality enough left for another struggle in deep water when he nears the boat. He seldom breaks water again after once turning upon his side. He is a better fighter than the trout, but the pleasure of catching him ends with the landing. A trout landed is beautiful to look at; to the enthusiastic sportsman there is no handsomer sight. The bass has nothing to recommend him in this direction, and he is the "stinkingest" fish found in fresh water, and admiration of his fighting qualities is often turned to disgust by the disagreeable odor he emits when being unhooked.

For the table he is pronounced undesirable, because of the coarseness of the flesh, but he has not grown coarse since he was the general favorite for introduction in New England waters. He was as coarse then as now, and under a coarse scale fine flesh is seldom found, especially when that scale is set into a skin tougher than that worn by any of the fish found in the waters of this vicinity, when the bass was introduced. But there is no bad taste about a bass. On the contrary, although coarse, it is sweet, with the added merit that the bones are large and easily detected.

Even at Webster, where the bass is quite freely taken, his habits are not yet fully understood, and he still defies the sportsman's cunning, refusing many times to be taken after the latter has exhausted all his patience, drawn upon all his resources, and employed all the art he may possess. They seldom take an artificial fly, although on other Worcester county ponds they rise fairly, and it is believed can be brought up by a "Ferguson" at any time in July or August. Sometimes a trolling spoon coaxes them to strike, but it is never sure. A common mud worm is good at times, but fails often. Grasshoppers are good to-day, useless to-morrow. Live bait users tell the same story. Bass are not strong biters as a rule, showing their strength only when hooked. Then coolness, judgment, skill and good tackle are necessary, or the bass, no matter how securely he may be hooked, has a good chance for escape. Whether using artificial or natural bait he can be handled best with a fly-rod and click reel.

The Fish Commissioners do not abandon the bass, although many who have taken the trouble to introduce them do. It may be possible that they have done so hastily. It is certain that there is more sport taking black bass than any other kind of fresh-water fish, and if taken for sport alone there is no reason for finding fault with him. For food he is as desirable as when the experiments were begun. He has not increased in numbers as fast as was anticipated, but has time enough elapsed to make the experiments thorough? In size he excels any fish that will live in ponds in this vicinity, specimens weighing two pounds being freely taken, with those weighing three and four not infrequent, while occasionally those weighing five or six pounds are captured. The friends of the bass say give him a chance and you will be satisfied, while the sportsmen admit that for sport he is unequalled. The raising of any fish in fresh water for profit save trout in very retired localities, is out of the question. Is not the bass, the sportsmen's delight, then, preferable to perch or pickerel?

THE DUBLIN POND TROUT.

Prof. Spencer F. Baird, Director U. S. National Museum:

Sir—With reference to the trout recently received from Mr. Walter J. Greenwood, fish and game warden, Dublin, N. H., I have the following communication to make: These trout have also been made the subject of a letter to Mr. Richardson from Mr. J. H. Kimball, of Hillsboro, N. H. They have been referred to, also, in the Boston *Journal* of March 22, under the title of "Dublin Trout," and are also mentioned in Forest and Stream of March 27, 1884, page 170, second column, under the title "A Peculiar Fish."

After a careful examination of the individuals received from Mr. Greenwood, I arrived at the conclusion that they are the common brook trout, *Salvelinus fontinalis*, differing in no respects, so far as I can see, from the usual type of the species, excepting in their pale coloration and few vermilion spots—variations which I have frequently observed in trout from widely different localities. In order to aid in determining the species, I record the following characters of the Monadnock lake trout:

It is a *Salvelinus* without hyoid teeth. The gill rakers are fifteen to sixteen in number; there are about 115 tubes in the lateral line, the number of rows of scales, of course, being much greater. The eye equals the snout in length, and is contained four and one-half times in the length of the head. The maxilla reaches a little beyond the vertical from the posterior margin of the orbit, and is nearly one-half as long as the head. The origin of the dorsal is nearly midway between the tip of the snout and the root of the upper caudal lobe. The length of the pectoral is one-sixth of the total without caudal. Dorsal ten; anal ten. Coloration silvery-gray on the upper parts, whitish below; pectorals, ventrals, and anal, largely vermilion; vermilion spots on the sides few in number. Tarleton H. Bean,

Curator, Dept. of Fishes, U. S. National Museum.

Washington, April 5, 1884.

"BIRCH LAKE PERCH."

A letter from "S. E. B." appeared in these columns two weeks since deprecating the wholesale destruction of fish in Michigan lakes by netting and fishing with hook and line through the ice. Although "S. E. B." is "away off" as regards the law and also as regards the location of "Birch Lake," still his strictures are timely, and his intentions evidently are to do good. The clause he quotes as from the laws of Michigan, however, is not to be found in them anywhere, while his suspicion that "Birch Lake" is a misnomer for some Northern Michigan sheet of water is altogether unjust. Mr. Gillman has never heard of "Birch Lake"; never fished it to his knowledge; in fact is surprised to have "S. E. B." quote him as knowing its whereabouts. And as Mr. G. has never been in Manitoba, I don't wonder at his ignorance of the lake; for "Birch Lake," be it known, is but another name for Lake Winnipeg or a small lake near Lake Winnipeg. At all events, seventeen car loads of fish have been brought down from Manitoba by the Buffalo firm that our skeptical brother thinks also a myth. Of the seventeen car loads three or four have been distributed by Detroit parties, who acted as agents for the Buffalo firm, in Michigan, Ohio and Indiana.

The fish were of the variety called shovel-nose pike, and ran remarkably even as regards size and weight, averaging from three pounds to five pounds each. None were larger than five pounds and few less than three pounds. They were caught by Indians who fished through the ice with hooks and lines, and the fish were nearly incredibly voracious and hungry. They bit at anything dropped in the water, and could be jerked out as fast as one pleased. Caught in a temperature of 20 to 40 degrees below zero they froze at once, and then were hauled nearly 100 miles to a railroad, where they were packed in cars, or rather corded up like so many sticks of wood. Upon the arrival in Buffalo or Detroit, the inside of the car would be found literally covered with frost and the fish as solid as ice. Arriving as they did in superb condition, they met with ready sale, and the meat moreover was pink in color, and like nearly all the fish from the northern lakes, very palatable.

When the first lot reached Buffalo, the question with the fish firm was, what shall we call them, and then the Birch Lake name was pitched upon and they were called "Birch Lake Perch." Anything to make them sell, you know. The season is now by for them. At any rate, a carload, I am told, went begging for a purchaser last week in Chicago.

So much for Birch Lake, but after all I don't wonder that "S. E. B." is skeptical, or that he apparently has great confidence in the contents of our Michigan lakes to feed the multitude, at least for a while. Had he not the confidence he would never have imagined that Birch Lake, from which seventeen full carloads of fish have been taken inside a few weeks with hooks and lines, was situated in Michigan. He knows perhaps a few lakes as I do that might pan out nearly as well. I took the pains to ascertain the above facts, and my authority is undoubted for declaring that "S. E. B." is all wrong in the conjectures he made. His letter won't do any harm, however, for our Michigan fish are certainly greatly lessened in numbers yearly. Delta.

Detroit, April 12, 1884.

FISHING THROUGH THE ICE.

Editor Forest and Stream:

In your issue of March 20 is an article on fishing through the ice. Now let me say, and I speak from actual knowledge, it is a mistaken idea that fishing through the ice lessens the amount of fish taken by the rod during the summer. I know of several large ponds that have been fished through the ice thoroughly for years, and the supply seemed to be inexhaustible. Ten years ago they were stocked with black bass, and fishing was prohibited for seven years. Since that time it is almost impossible to get many fish, while other ponds of small area have been thoroughly fished, winter and summer, and now yield good strings of good-sized pickerel in only a few hours' fishing. The facts are that the large fish eat up the small ones, and that is the whole secret. I say if a man wants to freeze up and fish through the ice and catch the large ones, let him do so, and then in the summer he can have better sport than if no traps were used through the ice.

A few years ago, while fishing for trout in the early spring at Rangeley Lake, a party of three of us caught in one hour thirteen trout that averaged four and a half pounds apiece, on ground that had been thoroughly fished through the ice all winter, and I hooked one and took from his stomach a dace, or chub, that was over a foot long, that was partly digested. Fortunately for the fish, but unfortunately for me, it hooked in his dinner instead of his stomach.

S. P. Hubbard, M.D.

[When we wrote the article in question we were under the impression that if a pond contained a certain number of fish after the season's fishing, all those taken through the ice would necessarily be subtracted from that number. We now see that a lake which is thoroughly fished through the ice all winter is not robbed of its fish, because only the big ones are taken, and the fingerlings grow to take the places of the captured ones in a few weeks. The results of fishing in the Rangeley Lakes, as quoted by our correspondent, are convincing, and instead of propagating fish to stock these waters, it will be well for the Commissioners of Fisheries to have them thoroughly fished through the ice each winter.]

TENNESSEE NOTES.

The angling season began in earnest on the 1st of April, and already a number of parties have been out to the various streams of Middle Tennessee. Ben McCann, Anderson Crosswaite and four others returned from White Oak on the 7th, having had royal sport each day they were there. General Ira P. Jones had a splendid day in the preserved waters of the Rockvale Club, at Turnbull. Hermann Burkholz, Jim Palmer and Jack Bentley are at present on the banks of South Harpeth, and Messrs. Eugene and Allert left for Buffalo to-day.

Besides the above, hundreds of less well-fixed disciples do White's and Mill creeks, bringing home very creditable creels. It is generally conceded that the streams are more abundantly supplied with fish this year than any within the last ten. I am glad to learn, from every section of the State, that the feeling in favor of enforcing the protective laws is gradually growing stronger. This is all that is necessary; for, situated as is this favored region, millions of fine fish from the Cumberland and Tennessee rivers will annually seek spawning grounds in those of their tributaries which rise in or run through it.

Mr. Warner is succeeding admirably at his trout hatcheries near Craggie Hope, in Cheatham county. Hitherto he has imported the spawn (to be hatched) from the North, but last year he stripped a number of his native bred fish, and their spawn came to maturity and yielded a large percentage of healthy fry. There are a great many localities in the State where an abundance of sufficiently cold water can be found, to establish even larger hatcheries than the one above mentioned, and it is safe to predict their early utilization since Mr. Warner has practically tested the feasibility of the industry.

It is amusing to read the various opinions as expressed with reference to the German carp as a food fish. It has been considered a delicacy in Europe for the past 1,000 years, and is so much in demand at present, that carp pond projects (on colossal scales) form the theme of hundreds of newspaper items. Compared to the flesh of the salmon, trout and bass, or red snapper, Spanish mackerel, pompano, sheepshead, or codfish, it is less firm and savory, but then there are thousands of persons who cannot enjoy the pleasure of eating them, while the carp can be raised anywhere and in unlimited quantities, and serves as an elegant substitute for the more delicious varieties named. J. D. H.

New Law in Iowa.—The Iowa Legislature has enacted a law preventing the spearing of fish in any of the permanent lakes or ponds or outlets or inlets thereto within the State, between the first day of November and the thirty-first day of May next following. The sale of fish so taken is made unlawful. Any person who may draw from the water any game fish, such as pike, bass and the like, when seining for minnows for bait, shall return the same without injury under the penalties of this act.

The Adirondacks.—April 10.—It may be interesting to Adirondack fishermen to know that a letter with date of 8th inst. has just been received from Blue Mountain Lake, Hamilton county, N. Y., which says, "Sleighing is good as any time this winter, and the ice in the lake is two and one-half feet in thickness."—T. S. S.

The Limited Payment Policies of the Travelers, of Hartford, Conn., concentrate payments into the *working years* of a man's life, and leave him free from all worry in his later years even if helpless.—*Adv.*

Fishculture.

NEW HAMPSHIRE.

AT the recent meeting of the Fish and Game League Mr. E. B. Hodge, Fish Commissioner of New Hampshire, was called upon and spoke as follows:

"Mr. President and Gentlemen of the Fish and Game League: I will endeavor, in as brief a manner as possible, to give you a short review of our work during the past year. Since our last meeting the Commissioners of Massachusetts and New Hampshire have planted 400,000 salmon fry in the Pemigewasset River. We have now in the hatchery at Plymouth 600,000 eggs of Penobscot salmon, which will constitute the plant for this year. There were not as many salmon taken at Plymouth last season as in 1882, as the water was so low in September that the usual fall run did not reach there. I think that the usual number came over the fishway at Lawrence, but it was impossible for them to pass the falls here and at Bristol. The salmon taken at Plymouth, with two exceptions, were unusually large, the two exceptions were very small fish, seven to eight pounds, and most likely of the plant of 1880.

"From my observation of the young salmon in the Pemigewasset, I find that a part of them go down to the sea when one year old, the main body at two years of age and the small remainder at three years.

"The habits of the salmon after they reach the sea are enveloped in mystery. Two years ago the run of salmon in the rivers at the head of the bay Chaleur was very light, and the fishermen said that it was owing to the government hatching on the Restigouche. But the last season they came back in large numbers, and the catch on the Restigouche, Matipedia and Cosopsicul was much larger than for many years. From the large number of parr and smolt in the river the past three years, I feel confident that the only difficulty in restoring the salmon to the Merrimack is the want of water in the river. The volume of water in the Pemigewasset during the summer months of the past three years has not been over one-half as large as it was six and seven years ago. The falling off cannot be attributed to the cutting away of the forests, for in that valley there is a larger area of woodland than there was twenty-five years ago, and the main part of the river comes from an unbroken forest not yet disturbed by the ax of the lumberman, but is due to causes over which man has no control, and as one extreme always follows another the series of dry years through which we are passing will undoubtedly be followed by a series of wet ones, when success is certain to reward our labors in this matter.

"Last year at this time we had in the hatchery 125,000 eggs of the land-locked salmon. The young fry were distributed as follows: Roxbury, 5,000; Hancock, 5,000; Andover, 5,000; Squam Lake, 10,000; Haverhill, 5,000; near Manchester, 15,000; Newfound Lake, 15,000; near Laconia, 5,000; Hillsborough, 5,000; Francestown, 5,000; Sunapee, 15,000; Pittsfield, 5,000; in the eastern part of the State, 25,000. We have now in the hatchery 120,000; they will be ready for distribution in June. We are getting good reports from the various parts of the State where they have been planted, and in some places the growth has been extraordinary, reaching fifteen pounds in six years. We received from the U. S. Fish Commissioner, through the courtesy of Prof. Baird, 200,000 whitefish eggs. The young fry were planted in Newfound Lake. We have the same number this year from the same source. It is only an experiment, but as it costs only the express charges on the eggs it is well worth trying.

"Fifty thousand brook trout were distributed last year, and we shall have 125,000 ready in May and June for this year's plant. During the past year over 2,000 trout have been added to the stock in the ponds at the hatchery, and 5,000 more will be added this season. It is the intention of the Commissioners to extend the cultivation of the trout as rapidly as possible, so that in a short time we can have a million of young fry instead of 100,000 or so as at present, but of course it will take time to collect and raise a stock of breeders in this work as in everything else of the kind.

"We have also 100,000 eggs of the Lake Superior trout. These fish are of the red flesh variety, and are beyond a doubt the finest of all the lake trout species. I have made some experiments that have never been attemped before in fishculture. Impregnating the eggs of the brook trout with the milt of the Saibling or German trout, Penobscot salmon eggs with the brook trout, Penobscot salmon eggs with the California salmon. I am in hopes that the cross between the brook trout and Saibling will produce a fish that will breed and not a hybrid.

"The senseless cry against the black bass has died out, and people are beginning to find that they are a great addition to our game fishes.

"And now while we are doing all we can to increase the supply of food fishes by introducing new varieties and propagating our native fish, there is a large class of men that are doing all they can to destroy and exterminate not only the fish, but what little is left of our game. Our laws are ample as far as laws go, to protect our game and fish, but the difficulty lies in enforcing them. One reason is that it takes more direct evidence to convict a poacher than it does to convict a man of murder. In Lake Winnipesaukee hundreds of trout are destroyed on their spawning beds every year with spears and nets; yet it is almost impossible to obtain evidence against the guilty parties. There are some that think that it is a disgrace to furnish information of the violation of the game laws, and in many cases they are afraid to do so. For my own part I believe it to be as much the duty of every person to give information to the proper parties of the violation of any of the game laws that may come to his knowledge, as it would be to furnish information of the violation of any of the laws upon our statute books. The Commissioners are willing to enforce the laws against any one, no matter who, provided they can get evidence that will convict; and we ask and urge all to take hold and help us in the matter.

"In this State during the months of December, January, February and March over 200 deer, 1 moose and 1 caribou have been killed illegally, and some of them by parties who think that their social position will prevent proceedings being instituted against them.

"And now, gentlemen of this League, allow me to urge the necessity of having help from you. In this State we have no State police that the Governor can place at our service to aid us in enforcing the law. We are compelled to rely upon ourselves, and it is impossible for us unaided to prevent violations of the law in our 240 towns.

"In many parts of the State a sentiment is fast growing that we must enforce our laws if we wish to have either fish or game left, or remove the game laws from our statute book and give a man who is willing to observe, or who is afraid to violate them, an equal chance with those who snare our partridges, spear our fish on their spawning beds, and cut the throats of the deer on our mountains when deep snow renders escape impossible from the ruthless hand of the cruel hunter.

"I do not believe that the people of this State are willing to do the latter, and as long as our laws remain as they are, the Commissioners will use every means in their power to enforce them. And we ask not only the co-operation of the members of this League, which indirectly as well as directly in the years past, has done a good work in this matter, but of every sportsman and law-abiding citizen to take hold and help us."

Mr. E. A. Brackett, one of the Fish Commissioners of Massachusetts, gave a brief history of the movement which sprang up favoring the construction of fishways along the line of the Merrimack River, and of the early efforts of the Commissioners to secure salmon for the restocking of the river. The cost of securing salmon, which was $40 in gold, we have reduced to $2.50. In 1885, you may expect a large run of salmon up the Merrimack River, and an increasing run yearly afterward. Massachusetts, besides sustaining one-half of the expense of supporting the hatching-house at Plymouth, has paid out $500 yearly for salmon spawn. Last year, at the annual meeting of the League, I suggested that a committee be appointed to visit and examine the fishways along the line of the Merrimack River. We have a population on the lower part of the river who are determined to break down our laws for the protection of fish in this stream. I have no question that when people begin to understand the cultivation of carp that they will enter upon their encouragement. The speaker closed by making an appeal that the men residing on the lower Merrimack be given no encouragement in their efforts to do away with the laws regulating the catching of fish.

REPORT OF THE NEW JERSEY COMMISSION.

We have the report of the Fish Commission of New Jersey covering the operations of 1879 and 1883. For some time preceding the death of Commissioner Howell, he had in preparation an elaborate report upon the shad fisheries in the Delaware River, which branch of the State fishing interests was especially committed to his care, and to which he had consequently given more attention than any other member of the Commission. By reason of his death that report was never completed, and the presentation of a full report of the operations of the Commission was necessarily postponed to permit of the collection of the data requisite for the preparation of the report herewith presented, which, while it will aim to give a comprehensive view of the work of the Commission, will of necessity lack the completeness of detail and the full statistical information which would have characterized Dr. Howell's account of that branch of the work which was under his particular care.

The ordinary work of the Commission consists of a supervision of the wardens of the several counties, in the performance of their duties in enforcing the laws regulating and governing the times, seasons, and modes of taking fish; and through the judicious legislation of the past few years, supplemented by a vigorous enforcement of the laws, they have had the gratification of seeing immense benefit to our coast and river fisheries, in an annual increase in the catch of food fishes.

Much attention has been given to the enforcement of the law relative to close time, affecting the shad fisheries on the Delaware River below Trenton. These fisheries employ more capital, provide employment for more men, and furnish a greater amount of food fish, than the fisheries of any other section of the State, and although they are not usually in active operation for more than three months in the year, constitute an industry which is of immense importance to the citizens of the counties bordering upon the Delaware River. It has not been possible to procure perfectly accurate returns of the number of shad taken from the Delaware River each year, although the wardens of the several counties have made every effort to procure reliable information. Many of the fishermen being residents of the States of Pennsylvania and Delaware, but little can be learned of the catch made by them. In the report of the Commission for 1878, it is stated that, from the data available, it appeared that the whole number of marketable fish taken during the three months of the fishing season was about 7,000, and that the value of this product, at the prices realized, was $175,000. In each of the two succeeding years there was an increase of about 200,000 fish over the year before, and in 1881 the increase was so great that it is estimated that at least 1,400,000 fish were taken. In the opinion of the Commissioners, this great increase in the value of the important industry is due to the vigilant enforcement of the laws respecting close time, and to the effects of artificial propagation.

The operations of the present and former Commissioners, in connection with the attempts to stock the Delaware with salmon, were set forth with considerable detail in the last report. Efforts had been made by the United States Fish Commission, for some years previous to the appointment of the present New Jersey Commission, to stock the Delaware with this most valuable fish, and Prof. Spencer F. Baird, United States Fish Commissioner, was deeply impressed with the possibility of accomplishing this desirable result. During the four years included between 1879 and 1882, there were 1,121,200 salmon fry planted in the Delaware and its tributaries, part of which were California salmon and part were the Penobscot species. No attempt has been made to capture any adult salmon which may have returned to the river, and it was not expected that they would make their re-appearance until four or five years after they were placed in the stream. In the spring and summer of 1877, however, six or seven fish were taken in shad nets at different points on the river. They were medium-sized fish, averaging about ten pounds, but had evidently been to the sea and returned to the river to deposit their eggs. This was deemed highly encouraging, and the next season was looked forward to with much anxiety, by those who were interested in fishculture, and who appreciated the immense importance of the success of the efforts to establish this valuable fish in the rivers of the State. In 1882, the plantings were discontinued, notwithstanding the offers of the United States Commissioner to continue the annual shipments of impregnated ova. Prof. Baird, in correspondence with the State Commission, expressed himself in favor of a continuation of the work, and as strongly of the opinion that it would yet prove successful. It is now being carried on, the Commissioners believe, under his auspices, by the Fish Commissioners of Pennsylvania, but in view of the meagre results which had been attained, and the uncertainty as to the future, the Commissioners of New Jersey did not feel justified in continuing the annual expenditure involved in hatching and distributing the fish. The Commissioners say that it would be idle, or at least profitless, to speculate upon the causes which operate to render these efforts unsuccessful. The well known instinct which impels anadromous fishes to seek, at the spawning season, the head-waters of the streams in which they originated, was relied upon to bring an annual run of salmon into the rivers of the State, and many theories have been advanced in explanation of the failure of the habit in this case, but these theories are necessarily not capable of being reduced to a certainty. In the opinion of the Commissioners, the most probable explanation is, that in the late summer and early autumn, the waters of the Delaware are usually very low, and of a higher temperature than that of rivers to which the salmon is indigenous, and for this reason the fish have been deterred from ascending the stream, and have sought more congenial spawning grounds.

The efforts of the Commission to restore the partially depleted trout streams of the State have been continued, and have met with a cheering measure of success. There was planted in 1879, 169,800 brook trout; in 1880, 153,000; and in 1881, 93,500.

Since the date of the last report, they have distributed 23,420 black bass and 98,192 land-locked salmon.

Of smelt the report says: "Many attempts have been made to increase the production of the smelt fisheries by artificial propagation, and it has been found to be entirely practicable to procure impregnated ova and hatch the fish, but, on account of their infinitesimal size, it has proved difficult to confine and care for the fry until they are of a suitable age to be liberated in the stream. Mr. George Ricardo, fish warden of Bergen county, has probably more nearly succeeded in overcoming the difficulties in the way of smelt propagation than any other experimenter, and, by a device of his own, he has been able to add many millions of young fish to the supply in the Hackensack River. Mr. Ricardo is an enthusiastic fishculturist, and his ingenious efforts to restore the productiveness of the smelt fisheries, as well as his services in the artificial propagation of shad in the Hackensack River, are worthy of the highest praise. There is but little doubt that these efforts will result in a largely increased annual run of smelt in that river."

DEATH OF EDWARD M. SMITH.—A telegram to the Rochester papers, dated London, April 12, says: "Mr. Edward M. Smith, American Consul at Mannheim, died, of apoplexy, last evening." Mr. Smith was one of the Board of Fish Commissioners of New York for a number of years. At the time of his death he was on his way from Mannheim to Liverpool, from which place he was to sail for home on the 15th of this month. He was fifty-three years of age, and had held many positions of trust in Rochester, and for the past four years had resided abroad in connection with his duties as consul.

FIXTURES.

BENCH SHOWS.

April 23.—The St. Louis Gun Club's Bench Show, St. Louis, Mo Entries close April 14. J. M. Munson, Secretary.

May 6, 7, 8 and 9.—The Westminster Kennel Club's Eighth Annual Bench Show, Madison Square Garden. Entries close April 21. Chas. Lincoln, Superintendent. R. C. Cornell, Secretary, 54 William street, New York.

A. K. R.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (25 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **1115.** Volume I., bound in cloth, sent postpaid, $1.50.

EASTERN FIELD TRIALS CLUB.

AT a meeting of the Board of Governors of the Eastern Field Trials Club, held at Delmonico's, on Tuesday evening, April 8, it was voted that the Members' Stake and the All-Aged Stakes close Oct. 1. The prizes and conditions for the Members' Stake are the same as last year, the judges will be selected from members of the club, if available, by the nominators the evening previous to the running. There will be two All-Aged Stakes this year, one for pointers and one for setters. The purse in each event will be $400, with $250 to first and $150 to second. Forfeit $10 with $15 additional to fill. Open to all pointers and setters which have not won first prize in any All-Aged Stake or any special pointer cup. There will also be a special champion sweepstake, to close after the finish of the All-Aged Stake, with $50 entrance and $200 added by the club, all to go to the winner. Open to all first prize winners in any All-Aged Stake, and to winners of any special pointer cup. Three dogs, the property of different owners, must enter to fill. The order of running will be as follows: The Members' Stake, the All-Aged pointer stakes, the All-Aged setter stakes, the champion sweepstake, closing with the Derby. In response to a request for instructions as to the distribution of the donation of the club to the schools at High Point, to which a member generously added $50, it was voted that Mayor Snow and Prof. W. A. Blair be requested to distribute the same as they may think best among the schools that are situated within 500 yards of the grounds used by the club at the trials. The revised running rules, as soon as printed, will be sent to applicants.

NEW YORK DOG SHOW.

Editor Forest and Stream:

Arrangements have been completed with all the express companies to return dogs free of charge, providing they have prepaid the usual rates to the show. Nearly all the railroad companies will carry dogs free when accompanied by their owners or care-takers. For dogs coming over the Erie Railroad their owners must apply for a pass for the same to Mr. Jno. Abbott, general passenger agent, Cortlandt street, N. Y.

It has been decided to leave the entries open for the sweepstakes prizes until 12 o'clock at noon on the first day of the show, but all entries for the regular classes close on the 21st inst. Following are additional special prizes: Silver cup, value $100, for best fox-terrier, dog or bitch, in the show. Silver cup, value $100, for best pair of bulldogs. $10 cash or silver medal for best collie dog, sired by champion Robin Adair or Tweed II. $10 cash or silver medal for best collie bitch, sired by champion Robin Adair or Tweed II. $25 cash for best-looking setter dog or bitch, placed in field trial in England or America, the Westminster Kennel Club to be allowed to compete. $25 cash for best-looking pointer dog or bitch, placed in field trial in America or England, the Westminster Kennel Club to be allowed to compete. Large framed photograph from Mr. J. M. Tracy's picture, "The Eastern Field Trials," for best pair of pointers. Large framed photograph from Mr. J. M. Tracy's picture of "Dog Talk," for best brace of English setters. Silver medal for best brace of Irish setter puppies of same litter. For best English setter dog or bitch, over twelve and under eighteen months old, a valuable solid silver flask, suitably engraved. $20 cash for the best trained setter or pointer, which has been trained by the methods laid down in "Training vs. Breaking."

Messrs. Sterling and Higgins, assisted by some one selected by them, will judge the pointer and English setter sweepstakes.

CHAS. LINCOLN, Sup't.

ENGLISH KENNEL NOTES.

TO begin where I left off, I have not seen my namesake quoted in the betting since I posted my last notes, but I don't despair of hearing, on Derby Day, Lillibulero in everybody's mouth, as it was in the year 1688, when all the King's army were singing "Lillibulero and Bullen-a-lah."

So the truth is out. We now know why the Rev. A. Carter gave £300 for the smooth St. Bernard bitch Leila. She has been transferred to the American purchaser of Rector, for whom the same figure was paid.

I could not understand an Englishman paying such a price for a bitch, as he stood no chance of ever seeing his money back. After all this very tall dog dealing, and chiefly on the part of Kennel Club men, I hope we shall hear no more silly sneers at a man for turning to a profitable account his judgment and experience, both of which he may have acquired dearly in cash and time.

The same thing is daily done by gentlemen with horses and cattle, then why should it be *infra dig.* to do a "deal" in dogs or birds when the opportunity occurs? Smooth-coated St. Bernards are not so valuable as rough, but Leila is by far the handsomest specimen of the type. She has, I think, won the Challenge Cup twice.

Alongside the prices that have been given for Rector and Leila, £250 was cheap for Leonard, and Mr. J. F. Smith has a bargain. I have heard that the great Thor once changed hands at £300. I should like to buy his equal at stud for the same price. From a show point of view, he was not a wonder, but his stock, Hector, Oscar, Avalanche, Abbess, and many other giants, proved where his value lay.

He was himself a mangy old brute and of very uncertain temper. His stud fees were a considerable source of income

o his successive owners—Murchison, Stiff, Mackillop, Montgomery, etc.—and it was probably due to the heartless use made of his services that his nature became soured.

He died in the possession of the father of the breed in this country, the Rev. Cumming Macdona, in whose grounds he obtained an honorable burial. But enough of St. Bernards, or my readers may mistake "Lillibulero" for the man who once had a name in the breed and was lately a reporter of the *Live Stock Journal*.

The entries have closed for the Warwick show, and I shall be on the lookout for any wonders that may make their first appearance there. I will give a full description of them in this column.

Last year the collies were in great force, and we may expect the champion class to be of unusual interest this time, as it is organized on the sweepstake principle. The meeting of several champions is always interesting. Collie men are speculating upon the chances of Eclipse turning up to win the spurs. He has sulked since Edinburgh, they say. I saw in the office this morning the *American Kennel Register*, with a picture of this dog on the title page. Writing from memory, the dog struck me as being more lithesome than the picture conveys, besides which, it is difficult to recognize a sable dog in an engraving.

Speaking of doggy pictures, that is a splendid page of the basset hound hunt in the London *Sporting and Dramatic News* last week. The peculiar incidents arising in this diminutive form of sport are comically portrayed by the artist, a Mr. Dadd, whose whimsical expressions of dog life have afforded amusement on several other occasions. I miss any mention of Mr. Krehl, whose name is so closely connected with these odd little hounds.

I see the New York schedule gives them a class, from which I suppose some of them have already found their way across the Atlantic. I generally see a few of them in the foreign classes at our large shows, and I read in the *Kennel Gazette* that Mr. Krehl lately sold one named Fino V. for £140, a big price for a small dog of a new breed.

They have been termed the dachshund's rivals, but their introduction does not seem to have affected the position of the Fatherland's pets. The Dachshund Club deserves great credit for this. There is no more energetic or orderly conducted specialist club than that which jealously guards the rights of these animated yard measures.

There are few breeds now that are not protected by a club. The last that has honored itself in this way is the black and tan terrier. It owes its birth to the perpetual activity of Mr. James Berril, the well-known judge of bulldogs and toys. He wrote a letter to the papers, an enthusiastic meeting was held in a public parlor, a sanctum dear to old members of the "Fancy," and the thing was done.

The Black and Tan Terrier Club, by passing an emphatic resolution forbidding the continuance of the cropping, has already won the approval of dog lovers who cherish and admire their pets for themselves, and not solely as means to gratify their owner's vanity by winning pots and medals.

Now, then, ye bull-terrier, Irish terrier, Great Dane men, will you rest content to be distanced in the policy of humanity? Putting aside the cruelty of the practice, do not its supporters tacitly admit their incompetence to breed good ears when all alike are sliced off by the operator's knife? And when cropping goes let docking follow.

Even the free lance of the kennel press must join in the praise of this specialist club's action. Mr. Hugh Dalziel, to whom I allude, has lately led a crusade against specialist clubs in the columns of your English contemporaries.

I don't believe the charge of cliquism he has brought against them. I have met most of their honorary officials who very generously devote their time and abilities to disseminating knowledge and appreciation of their hobby breeds. I am convinced of their disinterested motives and of their just claim to the thanks of breeders, their only reward.

It is also idle affectation to ignore the beneficial influence of a club—it gives a breed a spurt and position. It brings factions together, smooths out petty differences and unifies the type. So far from misinterpretating the influence of the specialist clubs, I think they are themselves unconscious of their own power.

It may rest an unrealized dream, but I am strongly impressed with the notion that if a union of the specialist clubs could be accomplished the result would be an association that would wield power and influence in dog affairs and be in sympathy with the ruled. It is a wish natural to all free spirits to have a voice in the election of those who are to govern and direct their acts. This is a Spanish castle for which even the bricks are not yet moulded. Meanwhile we have the Kennel Club, which satisfies those who are satisfied with "whatever is, is right."

How wonderful are the subtleties of legal phraseology! Here is a specimen that appeared in the police news last week. It was headed "Cruelty by a Baronet." Why throw the man's title in his teeth? It is not kind to reproach him with the accident of his birth. The unfortunate gentleman was charged "that he did beat, ill-treat, abuse and torture, and did cause to be ill-treated, abused and tortured, a certain animal, to wit, a dog." There is almost as much comfort in the description as in that "blessed word Mesopotamia."

We have been awfully amused with Mrs. Weldon's cross-examination of Dr. Forbes Winslow, the mad-doctor and mastiff breeder, owner of Crown Prince. It seems our fellow fancier had been trying to get the lady into his asylum, but I think after the terrific "powdering" she gave him in the witness box, the doctor was the more "mad" of the two.

I drink to your New York show. May it be a great success! I don't know what you do about puppy classes, but let me utter a word of warning to intending exhibitors of dogs under a year old. Let them strew well the bench and straw with a dry disinfectant—I prefer Sanitas powder, because it does not incommode the dog—and shake the same all round. This may keep the immediate atmosphere pure; if it should not, then it is two to one that your pup brings home distemper. An additional precaution is to wash the dog with a strong disinfecting soap on its return from the show, and before putting it back in the kennel with its mates that stayed at home.

I don't hear of any bloodhounds going to America. They are all noble brutes, but I believe not easy to keep. I know the trouble. Grantley Berkeley used to say "he would show his hounds the whip, but never struck them." And I have heard of more than one awkward case of these dogs turning round on their own masters.

There are only a few kennels of them in this country. The most successful is Mr. Edwin Nicholls, who can becomingly boast of having bred two of the grandest dogs of the day, Napier and Triumph.

Napier was the hero of the great doggy libel case. The reporter of the *Field* insinuated that the dog's eyes had been faked to show more of the haw. Napier's head was a study; so narrow, and the loose thin skin folded in heavy wrinkles over his forehead, his ears set on very low were thin and papery and hung quite lifeless in beautiful curves. He has gone over to the majority.

In the living pup Triumph Mr. Nicholls has a worthy successor. He is what has been termed a "fancier's fancy," all the points of beauty are exaggerated. I heard that the St. Hubert Club were going to subscribe among themselves his reserve figure, £500. I am told he has been painted by Verlat. The picture should be engraved; there are many admirers of this wonderful pup, who would like to have a copy of the engraving.

The mastiff men are slinging ink at one another, but more of them another time. I note that one of the correspondents mentions the big price, £500, paid for Turk. Mr. Nicholls was the lucky vender. This was a long time ago; the dog is dead and the man who bought him, let us hope, has grown wiser. It was Mr. Frank Robinson, who then had more money than discretion.

LILLIBULERO.

A PIOUS POINTER.

A BEAUTIFUL pointer named Sandie, owned by a lady in Avon, N. Y., has often displayed a degree of intelligence almost human, and his latest achievement deserves particular mention. A few Sundays ago the dog's mistress did not go to church as usual, and soon he began to show signs of unhappiness, and finally begged to be let out of doors. As soon as he gained his liberty, however, he ran off, staying so long that his mistress became alarmed for his safety. At last he returned in company with a lady of whom before he had never taken the least notice, and she related the following story: She said that when about half way to the church, which was within walking distance, the dog came bounding past her and ran on ahead, but all the time keeping her in view. At last he ran up to the church steps and there waited her arrival; when she came he followed her into the church and got up on the seat beside her, where he lay, putting his head in her lap. During the services Sandie paid strict attention to everything that was said and done, getting up every time the congregation rose, and sitting down again when they did, all the time as grave and decorous as possible. When, finally, the plate was passed, he put his nose wistfully into it and seemed to say, "I am so sorry that I have no money for you." At the close of the service, Sandie followed his friend home, and seemed to look with reproach upon his mistress, who had, he probably thought, neglected her duty.

A. R. CUSHMAN.

NEW YORK, March 29, 1884.

NON-SPORTING DOG SHOW.—*Editor Forest and Stream:* Kindly announce in your columns that in response to the invitation to non-sporting dog owners in your issue of the 2d inst., that over 125 entries have been promised by well-known breeders and kennels, and that letters volunteering support, both pecuniary and otherwise, have been received by the score. Everything seems to give evidence of hearty approval and an assurance of success far beyond expectation. A guarantee fund is rapidly being subscribed. A question of much difficulty has arisen in exactly defining what breeds of dogs come under the head of non-sporting dogs. A list will be shortly prepared and announced. Probably the excluded classes will only consist of dogs shot over with a gun.—THE CLOVERNOOK KENNEL (185 Fifth avenue, N. Y.).

BEAGLES AT THE NEW YORK SHOW.—The American English Beagle Club will offer several special prizes for the beagles exhibited at the show of the Westminster Kennel Club, to be held at Madison Square Garden next month. These little hounds are fast winning their way in the public favor, and we shall expect to see the classes well filled. At least one representative from the kennel of every member of the club should be present. The standard of the Association, which will be used in judging, was published in our columns last week. Although a few typographical errors crept in, owing to the incorrectness of the proof sent us, they will be readily interpreted.

THE CLEVELAND DOG SHOW.—There were two or three slight errors in our report of the Cleveland dog show. In the open class for small pointers. Mr. R. C. Cornell's Match was awarded vhc., and our comment upon the supposed omission was therefore both right and wrong. In the corresponding bitch class the types made us say that "Dora, unnoticed, deserved the three letters." It should have been Dove. We also omitted the award of the sewing machine special prize for the best brace of cocker spaniels, won by the Hornell Spaniel Club's Hornell Silk and Hornell Rattler.

PHILADELPHIA DOG SHOW.—The many dog shows held in the United States during the present spring season will be followed in the latter part of September by a very extensive display of the same kind by the Philadelphia Kennel Club in their city. This organization has also secured grounds for holding a field trial for members' dogs in November, and the meetings of the club show a determination not to be behind sister cities in trials of merit in the field and displays on the bench.

CORRECTION.—Flatbush, April 7.—*Editor Forest and Stream:* I would like to correct the pedigree and date of birth of Lit Laverack. In your paper of March 27, I gave it whelped Dec. 28, 1883, by Tempest (Pontiac ex Fairy II.) out of Lilly (Carlowitz ex Queen Bess). It should be whelped Nov. 28, 1883, by Tempest (Pontiac ex Fairy II.) out of Lilly (Carlowitz ex Princess Nellie).—THOS. F. CONNELLY.

MASTIFF IMPORTATION.—Mr. Wm. Graham, Newtownbreda, Belfast, Ireland, has shipped to Messrs. Shaw & Bates, Clinton, Mass., the mastiff bitch Hilda V., by Mr. Wynn's Young King out of Hilda IV. She won first at Birmingham in 1882, and second in 1883, and will doubtless prove a valuable acquisition to their kennel.

SALE OF MINSTREL.—*Editor Forest and Stream:* I have sold my imported black, white and tan, 13½ inches high, English beagle stud dog Minstrel, to Mr. A. C. Krueger, of Wrightsville, Pa., and would refer those who have written to me for information regarding the dog to Mr. Krueger.—W. H. ASHBURNER (Philadelphia, Pa.).

PRIDE OF CANADA.—*Editor Forest and Stream:* The Gordon setter dog Pride of Canada, winner of first at Toronto, is owned by me instead of Mr. H. F. Curtis, who had charge of him, and in whose name he was entered. By making the correction you will greatly oblige, CHAS. HUGES (Montreal, Can., April 7).

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, or breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

June 2 to 9.—Annual Tournament Louisville Sportsmen's Association, Louisville, Ky. J. O. Barbour, Secretary, 157 Third avenue, Louisville.

RANGE AND GALLERY.

BOSTON SCHUETZEN TOURNAMENT.—The East Boston Schuetzen Corps have arranged for an interstate shooting festival, commencing Monday, August 11, 1884, at 10 o'clock A. M., and continuing each day following, closing at sunset on Friday, Saturday, the 16th, being devoted to the award of prizes and a grand ball and banquet. For the purposes of this festival, the corps have secured the entire grounds of Oak Island Grove, where its shooting range is situated. A target of honor has been decided upon, the first prize being $100 in money and a gold badge, the winner to be crowned "shooting king" for 1884. Other valuable prizes will be given in connection with the target of honor, contributed by sister societies. The target of honor will be a ring target, entry to be $2 only, one score of five shots per man, any rifle. All shooting to be off-hand. No telescope or magnifying sights allowed.

Other matches will take place as follows: Creedmoor Match.—National Rifle Association rules. Seven shots to a score; any rifle allowed of three-pound pull. Entry, $1; re-entry, 50 cents. Sixty per cent. of the gross entries for this match to be divided into twelve prizes. Team Match.—Open to all organized clubs in the country. Five men to a team. Entry fee, $10 per team; five shots per man allowed. German ring target. Five money prizes to the value of $170, and each member of the winning team a gold badge, to be known as the "champion team of the year 1884." The other targets will be: "Man."—Three shots to a score, any rifle. Shooting rules. First entry, $2; re-entry, $1. 18 money prizes to the value of $259. "Ring."—Same as above, 17 prizes, value $430. Bullseye.—Ten shots to a score. First entry, $1; re-entry the same. 12 prizes to the value of $130. One dollar will be paid for the first and last bullseye each day. Full particulars may be obtained by addressing, S. WOLFFSOHN, 47 Court street, Boston Mass.

BOSTON, April 5.—The prize shooting for month of March closed last Monday night at the Mammoth Rifle Gallery, Mr. M. L. Pratt winning the first prize, silver badge; A. B. Loring the second; H. M. Drew the third, in new beginners' match. This month there will be five prizes offered, open to all that have never shot better than 48 on any range. Conditions—10 rounds, the best five scores to win in each class or possible 250; range, 150ft. Following are scores made in closing match of March:

Amateur's Match No. 1.

M L Pratt	46	46	47	47	48—234
A B Loring	47	47	46	46	87—232
R Ford	46	46	46	46	46—230
R W Gardner	45	45	45	47	46—228
J T Stetson	43	45	43	43	45—219

Amateur's Match No. 3—Beginners.

H M Drew	43	43	43	42	44—215
E A Peirce	41	44	41	43	43—212

E Metcalf	39	43	41	42	40—205
E F Stevens	39	40	40	41	42—202

April 12.—The Mammoth Gallery prizes offered for this month for amateurs: Gold and silver badge, 3 cash prizes, $5, 3 and 2, to be shot for in first class, open to all who have never shot better than 48 on any range. Bronze badge offered for new beginners. Rounds 10, the best five scores to win in each class, or possible 250. Creedmoor targets. Following are the scores:

Match No. 1.

A B Loring	46	45	45	45	46—227
B W Gardner	45	55	44	43	42—220
J H Bird	44	42	43	43	43—215
J A Hills	43	43	42	41	42—211
S Lyman	41	41	43	43	42—209
C H Hamilton	41	42	43	41	40—207

New Beginner's Match.

S A Lynch	42	39	40	40	40—201
C L Foster	38	39	40	40	41—198

BOSTON, April 12.—A nicer day than to-day would be harder to find at this season of the year. As a result there were a large number of riflemen at Walnut Hill. The wind was moderate from 11 o'clock, and the light was fine. Among the gentlemen present was a large delegation from the Harvard Shooting Club, and besides practice they indulged in a team match. J. B. Fellows made a fine 82 in the victory medal match, and Mr. Wilder made an 89 with his new Kirkwood three-barrelled gun, which includes a strictly hunting gun, a double-barrelled shotgun with a rifle barrel under the others, the whole weighing but 8¼ pounds. Following are the best scores:

Creedmoor Practice Match—J. A. Frye 46, H. C. Nash 45, re entry 45, A. L. Brackett 45, C. A. Hunt 44, W. L. Allen 43, M. R. Jafry 43, A. Faulkner 41, F. Chauncey (mil.) 40, J. D. Bradley 39, J. H. Payne 38, W. Kirkwood 38, H. N. Grover 37, F. B. Austin 36, P. H. Jones 36.

Decimal Match—W. Charles 84, B. A. Lappen 81, A. J. Look 78, W. H. Oler 76.

One-day Match—Creedmoor Target.

J B Fellows	46	45	47+1½=139½
W Charles	45	47	47+0 =139
A L Brackett	43	45	45+6 =139
J N Frye	44	45	46+3 =138
J P Bates	42	42	42+5¼=134½

Harvard Shooting Club—First Team.

J A Foye	5	5	5	3	4	3	5	4	5	4—43
A C Nash	5	5	4	3	3	4	4	4	4	4—41
A Faulkner	4	4	4	4	4	4	3	4	0	5—36
F B Austin	5	4	3	2	4	4	2	4	3	4—35—155

Second Team.

C C Foster	5	3	4	4	3	2	5	4	4	5—40
W L Allen	4	4	4	4	4	2	4	4	4	4—38
J S Bradley	4	4	3	3	3	5	3	4	4	4—37
W H Slocum	5	3	3	2	3	3	2	4	3	5—33—148

NEWARK, N. J.—The sixth tournament of the Associated Rifle Clubs was begun on Monday, April 7, with the Frelinghuysens at the butts. The following excellent scores were made: G. Williams 49, A. C. Neumann 49, W. F. Lynn 48, Geo. Weigman 48, Wm. P. McLeod 48, J. L. Tobin 48, E. O. Chase 48, J. K. Walsh 47, S. Shackelford 47, R. Westerman 47. Total 480, out of a possible 500.

On Tuesday evening the Celluloids shot, with the following result: E. Coe 32, F. Willzey 43, F. Brandt 45, A. Erhard 48, W. Babbitt 42, N. Puder 43, S. T. Simmonds 45, W. Coe 47, C. F. Jackson 44, W. Vreeland 47. Total 448.

On Wednesday night the Plymouths scored as follows: C. H. Townsend 47, J. L. Summer 45, G. M. Townsend 43, J. Brower 41, G. Kinney 39, A. A. Baldwin 48, H. L. Leibe 45, J. E. Pollard 42, H. Grewe 41, J. Kearny 45. Total 438.

The Domestic Rifle and Rod Association shot on Friday evening and scored as follows: B. Jeffreys 47, J. Reynolds 45, W. B. Pettigrove 45, J. McGuiness 46, J. Velsor 43, W. Wadams 48, J. Leitz 45, J. Leitz 45, J. Dainty 48, John Long 45, A. Milward 45. Total 459.

CARSON CITY, Nevada, April 6.—To-day was a field day among our crack rifle shots. The weather was beautiful, making all feel animated and eager for the sport. The most notable contest of the day was that between Mr. George C. Thaxter, of ours, and C. H. Galusha, Captain of the Emmet Guard team, and both members of the Nevada Rifle team. The conditions were 100 shots at the 200 and 500yd. ranges, 50 shots apiece at each range. The contestants both used the Hepburn Remington. The contest was remarkable close throughout, and if the shooters had cleaned their guns the scores would have been much higher. As it is, the scores are unusually high. The best previous record was that of Captain H. G. Parker—453. It is the opinion of all present that Thaxter and Galusha can beat any two men living at the two ranges in question. Below are given the scores in detail:

	200yds.	500yds.
Thaxter	4445544454—43	5555554555—49
	4455555545—47	5554555555—49
	4544444445—42	5544554454—45
	5554445545—46	5445354455—44
	4555455545—47—225	4455554355—45—233—457
Galusha	5444454544—43	5555554545—47
	4444544455—44	5555555525—43
	4554555545—45	5455554555—46
	5455454544—45	3454451555—44
	4444454454—42—219	5455545555—48—222—452

The four members of the Nevada team taking part in the shooting practice made the following scores:

	200yds.	500yds.
Thaxter	47	49—96
Galusha	44	48—92
Saffel	45	47—92
Crawford	44	46—90—370

This is an average of 92½, and proves that the men are more dangerous for the Californians this year than last.

Two squads were selected from members of the Carson Guard present and a match shot with the following result. Some of those taking part have not fired a shot this year, while others are new beginners. Taking these things into consideration the scores were excellent:

Thaxter's Team.	Thaxter	43	49—92
	Wright	40	42—82
	Laing	42	40—82
	Meder	41	44—85
	Little	39	44—83—424
Crawford's Team.	Crawford	44	44—90
	Saffel	44	45—89
	Cheney	44	43—87
	Alley	40	38—78
	Hark	40	39—79—423

Mr. J. D. Laing and Doc. Alley shot 100 shots at the two ranges. Laing scored 422 and Alley 308.

The bad shooting throughout the day of Mr. Alley, who is usually one of the best and most reliable of the Carson Guard team, is accounted for in the fact that he was suffering from a severe strain in the back.

GARDNER, Mass., April 12.—At the last meet at Hackmatack Range of the Gardner Rifle Club there was not as large a number of the members present as usual, Messrs. F. Parker and N. Jewett of the Ashburnham Club were present as guests. The American decimal target was used, distance 200yds., with a possible 100. Shooting off-hand. The following is the score:

G F Ellsworth	9	9	9	9	8	9	9	10	9	—90
W C Loveland	10	7	8	7	7	8	9	7	10	9—82
I N Dodge	10	9	8	7	7	8	9	10	4	9—81
A Mathews	5	4	8	8	9	9	10	8	9	10—89
F Parker	7	10	9	8	8	9	4	5	5	7—72
N Jewett	1	2	7	9	9	6	9	10	0	0—53

GRAND CENTRAL GALLERY.—The competition for prizes in the all comers' match excites increased interest as the match progresses. The leading positions are closely contested by Messrs. Brown, Fenning, Oehl and Zimmerman. Mr. Brown being an officer of the New York Rifle Club, under whose management the match is to a certain extent run, shoots for a record only, and will not contest for a prize. The match has developed considerable proficiency among new men, who have had no experience heretofore. For instance, Mr. Keator never competed either in or out of doors heretofore, and yet he stands high on the record, leaving some old and experienced shots to bring up the rear. The match will continue for two weeks more, and during that time some crack shots in and out of town will, no doubt, put in an appearance, and make those now at the head of the list look out for their laurels. The following are the best scores, the possible being 350 on a decimal ring target: J. H. Brown, 333; P. G. Fenning, 330; Henry Oehl, 325 W. Zimmerman, 322. M. Dorrler, 319; W. M. Farrow, 317; C. E. Keator, 314; L. Bird, 310; A. J. Howlett, 308; J. Coppersmith, 308; Geo. J. Seabury, 308; Wm. Simpson, 307; G. D. Weigman, 307; H. Von Derlinden, 307; W. Klein, 303; C. Rein, 299.

BRATTLEBORO, Vt., April 11.—Brattleboro Rifle Club, off-hand, 200yds., on the Massachusetts target. Small attendance but good scores, Mr. Cobb making the best score ever made on the range off-hand, it being a possible 50 Creedmoor, and 114 Massachusetts count:

Cobb	11	12	11	11	12	11	12	11	12	11—114
Knight	11	11	11	10	11	10	11	11	12	12—110
Read	11	10	11	11	11	11	11	11	11	11—109
Howe	11	11	11	12	12	11	10	10	10	10—108
Nichols	11	11	10	12	11	11	9	10	12	11—108
Taft	11	10	11	11	10	10	9	11	12	12—107
Wood	12	10	9	12	10	11	10	11	11	11—107
French	12	11	11	11	10	12	9	8	11	11—106
Brockway	10	9	11	11	12	12	10	11	9	10—105
Barnes	10	9	11	9	12	10	11	10	11	11—104
Hannon	11	11	10	9	13	8	11	11	10	11—104
Pentland	12	11	8	10	9	9	10	12	10	10—101

NEW YORK, April 3.—Regular weekly shooting of the Bullshead Rifle Club, 12-ring target, possible 120: G. Zimmerman 119, M. Dorrler 118, A. Lober 118, C. Rein 116. E. Holzmann 115, W. Steinbach 111, H. Hackmann 114, J. Schneider 104, B. Walters 103, G. D. Johnson 105, J. Jordon 101, J. F. Campbell 95, D. Lowitzki 89.

JAMESTOWN, N. Y., April 12.—Scores of regular medal match yesterday at 200yds., off-hand, Creedmoor target. Wind, at 10 o'clock, heavy:

A F Ward	4	4	5	5	4	5	4	4	5	—44
J R Moore	5	5	5	4	4	4	5	4	4	3—43
George Shattuck	4	4	4	4	4	5	4	4	4	—41
A F Warner	4	4	5	3	3	5	4	4	5	4—41
S N Ayres	3	4	4	5	4	4	0	4	4	4—36

FLORIDA RIFLE TEAMS.—Two new rifle teams have recently been organized at Jacksonville, composed of the First Florida Artillery and the Jacksonville Light Infantry, as follows: First Florida Artillery—W. W. Simpson, Captain; B. E. Oak, Theodore Ball, H. L. Weller, W. A. Styles, A. T. Williams, L. J. Stevens, M. C. Rice, A. W. Barrs, and Geo. R. Reyolds. Jacksonville Light Infantry—R. M. Call, John T. Tyler, C. Ashmead, C. C. Barrs, Perry Holland, J. B. Burroughs, S. A. Cohen, Walker Lund and W. Palmer. All are well-known Jacksonville gentlemen. The rules and regulations of the National Rifle Association were adopted. An elegant gold badge has been purchased to be contested for every month. The first contest came off April 3.—RED WING.

TORONTO, April 12.—The sweepstakes match of the club on Good Friday was well attended. The moderate wind was changeable enough to annoy the riflemen and land them in the outer or magpie when they were sure of a bull. The light was sometimes bad, yet altogether seldom do they get such favorable weather on Good Friday. The principal scores, ranges 200, 400 and 500yds., 7 shots at each, possible 105: Foreman 90, Mitchell 87, Bell 86, Mowatt 86, Lewis 81, Thompson 81, J. W. Duncan 79, Jack 79, W. S. Duncan 78, Brown 78, McQuestien 77, Kennedy 74, Allan 74, Lanskail 73, Schmidt 71.

SPRINGFIELD, Mass., April 12.—At the return match at Lake Lookout, yesterday afternoon, between the Collinsville, Conn., team and the Rod and Gun team of this city, the Collinsville team won by a score of 484 to 467.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

LOUISVILLE TOURNAMENT.—The tournament will begin June 2 and close June 9. Secretary's address is J. O. Barbour, 157 Third avenue, Louisville, Ky. June 2. First shoot, purse $250; five single, 20yds., plunge traps; entrance, $5. Second shoot, purse, $600; eight single, 26yds., plunge traps; entrance, $8. June 3. First shoot, purse, $800; ten single, 26yds., plunge traps; entrance, $10. Second shoot, purse, $5,000. The American field cup for the championship of America, value, $250; 50 birds to each entry; fifteen single, 26yds., plunge traps; fifteen single, 30yds., ground traps; ten pairs, 21yds., plunge traps; entrance, $50, $3 forfeit. June 6. First shoot, purse, $600; four pair, 18yds., plunge traps; entrance, $8. Second shoot, purse, $600; eight single, 26yds., plunge traps; entrance, $8. June 7. First shoot, purse, $800; ten single, 26yds., plunge traps; entrance, $10. Second shoot, purse, $600; eight single, 26yds., plunge traps; entrance, $6. June 9. First shoot, purse, $500; eight single, 21yds., plunge traps; entrance, $5. Second shoot, purse, $600; four pair, 18yds., plunge traps; entrance, $6. Louisville Sportsmen's Association rules to govern. Only wild pigeons will be used. Class shooting in all matches. All purses fill or prorate. Five per cent. of purses for field expenses. In all but championship match, 40 per cent. to first; 30 per cent. to second; 20 per cent. to third; 10 per cent. to fourth. Birds extra except in champion cup shoot. Tie birds in all matches extra and must be paid for before shooting.

KNOXVILLE, Tenn.—Regular monthly shoot of the Knoxville Gun Club; Ligowsky medal match, 15 clay-pigeons, 18yds., 4th notch of trap:

Armstrong	111111111111111—15	Curtis	110110111110101—11

Ties on 4—Mead 2, Duncan 2, Woods 2, Slocum 1, Jenkins 1.

Second tie on 4—Mead 2, Duncan 2, Woods 2.

Third tie on 4, miss and out—Duncan 2, Mead 1, Woods 0.

Ties on 4—Rutherford 2, McClung 2, Chase 0, Hebbard 3, Nicholson 0.

The Knoxville Gun Club's tournament will be held May 20 to 23. Shooting to be at clay-pigeons and live birds if they can be procured. All matches class shooting, unless otherwise specified. Club rules to govern. Entrances to matches to be made on the grounds. For further particulars address C. C. Hebbard, Secretary.

NIAGARA FALLS, N. Y., March 27.—Match for Ligowsky medal:

Smith	111111111111111001111111—23
E Moody	111111111111111111111100—23
Gombert	011111111111101111111111—23
Rice	111111111111101111101111—23
Jennings	011110101111011111111111—22
Barker	111111101101101111111001—19
Tugby	111111110111101100110011—19
Philpott	010111001110011101111111—18
Howard	101011100111011101101011—18
C Moody	010100111101101101101111—16
Green	111001011010111011000011—15

Shooting off ties of 23 at 10 birds each—Smith 9, E. Moody 8, Gombert 2, Rice 8. E. H. Smith wins medal and first money, T. Jennings wins second, Barker and Tugby divide third, Philpott wins fourth. The shoot of ties for first place was a hot contest and all were pleased with the result, as it would have greatly lessened the interest in future shoots to have the same person win twice so early in the year. The boys crowded Mr. Smith very close indeed, and as may be seen from the score, he won by just one bird—23 out of a possible 25, with Rice and Moody right behind him with 21 each.

EMERALD GUN CLUB, New Dorp, S. I.—Match at pigeons for the club medal. The trophy, which is a gold representation of the sunburst of Ireland, was won by Mr. William Glaccum, who killed 8 birds straight at 25yds. rise. The president, Dr. George V. Hudson, killed his 8 birds at 21yds. rise, but one of them fell out of bounds, and he captured the second prize, $10 in gold. Following is the score: Wm. Glaccum 8, L. Viemuster 4, Wm. Turner 6, M. W. Murphy 6, Dr. Hudson 7, J. Glaccum 5, J. M. Watt 3, J. J. Ryan 4, M. Cherry 4, R. Regau 4, J. W. Godfrey 5, C. M. Grainger 6, H. Veidt 8, J. Fitzpatrick 3, Austen McHale 3, P. Keenan 3, J. Howard 3, J. Measel 5, S. Thrader 4, N. Measel 4, C. Measel 6, H. Mackin 3, Counsellor Cody 5, J. Mackin 2, J. Tane 4, H. Otten 6. After the shoot President Hudson invited the members of the club to an excellent dinner. The club meets at No. 55 Henry street the first Thursday in the month, and holds its pigeon shootings every two months at New Dorp. It is the only Irish gun club in the country. It is in excellent financial condition and proposes to rent commodious quarters for club purposes. The following are the officers for the next year: Dr. George V. Hudson, President; John Glaccum, 1st Vice-President; John Measel, 2d Vice-President; M. W. Murphy, Treasurer; John Guilfoyle, Secretary.

SOUTHERN ILLINOIS.—The fourth annual meeting and tournament of the Southern Illinois Sportsmen's Association will be held at Carbondale, Ill., Tuesday and Wednesday, May 6 and 7. The tournament will be held on the grounds of the Carbondale District Fair Association. Citizen's purse of $75 in gold, the association medal, and other valuable prizes to be contested for. The prize list is extensive, and it is anticipated that, as usual, the tournament will be a most enjoyable affair. Full programmes may be had upon application to the secretary, Mr. P. Richards.

UNION CITY, Ind.—The Union City Gun Club holds its first rifle and pigeon tournament for the season on Thursday, April 24. Three premiums to be awarded: One live deer, a Marlin rifle for the best five shots, distance 100 and 150yds., a double-barrel breechloading shotgun for best average at clay-pigeons.—THOMAS JONES, President.

ST. CLAIR, Pa.—The St. Clair Sportsmen's Club held its sixth monthly contest for club medal to-day. Clay-pigeons, 2 Ligowsky traps, screened, 7yds. apart, third notch, 18yds. rise, angle 30°, direction of flight changed for each shot:

Sprouts	1 0 1 1 1 0 1 1 0 1—7
Luthe	0 0 1 1 1 0 1 0 1 1—6
Evans	0 1 0 0 0 0 1 0 1 0—3
Daddow	1 1 1 1 0 0 0 1 1 0—6
Farne	1 0 0 0 0 1 1 0 0—3

Sprouts having won medal for third time it becomes his property.

NEWARK, N. J., April 9.—To-day, at Fred Erb's Shooting Park, Bloomfield avenue, Newark, N. J., there was a live pigeon match between Messrs. Miles Johnson and Ziegler, 25 birds; find, trap, handle and pull your own string, for $100 a side; Johnson, 21yds.; Ziegler, 25yds. Miles was a little rattled at the start, missing his first and second birds, so that bets of $100 to $20 were offered that he would not win. At this juncture a Philadelphia delegation, headed by Messrs. Robinson, Kleinz and Greenwood, arrived on the ground, and the tide turned in favor of the veteran, the betting changing to $100 to $40 against Ziegler, and finally $100 to $5 that Johnson would win.

M Johnson	0011111111110011111101—18
Ziegler	1111100011100111110110—14

A 20-bird race for $50 a side, trap and handle, was afterward shot, between Messrs. Ryan and Bunn, the latter winning by killing 9 to his opponent's 6.

PHILADELPHIA, April 10.—The double-bird clay-pigeon shoot gotten up by Mr. C. Bragg, manager of the Globe Shot Company, in imitation of field shooting, came off at Pastime Park this afternoon. The actual rise from the score to the five traps was 30yds. A slip was drawn by the referee and handed to the puller, which confined the number of yards or steps that the shooter was to advance before the traps were to be pulled, the shooter not knowing how far or how short a distance he had to go. The new style rather upset some of the shooters, but under the circumstances, the average was good, while D. Clew, of the Keystone Club, distinguished himself by breaking 9 birds out of his five pair.

Sweepstake, $1 entrance.

BOSTON TOURNAMENT.—The Boston Gun Club has decided to continue a tournament April 16 and 30, and May 1 and 14, and the New England clay-pigeon team badge match will be continued on those dates. The highest scores made so far have been by the Massachusetts Rifle Association. As the dates have been arranged, it will be seen that April 30 and May 1 will give shooters from a distance a chance to fill the match for the gold medal offered by the club. The team match will be conducted precisely as the great Chicago shoot is to be.

WELLINGTON, Mass., April 12.—The leading feature of the Malden Gun Club shoot to-day were the badge and silver cup contests, the winners in the former being J. Buffum, J. Nichols and F. J. Scott. The silver cup was taken by J. Buffum. There are four other days' shooting in this contest.

CINCINNATI.—Cosmopolitan Gun Club is the name of a new Cincinnati gun club. The officers elected for the ensuing year are: Mr. John H. Laws, President; Mr. F. W. Moore, Vice-President; Mr. J. E. Miller, Secretary; Mr. W. H. Campbell, Treasurer.

New Publications.

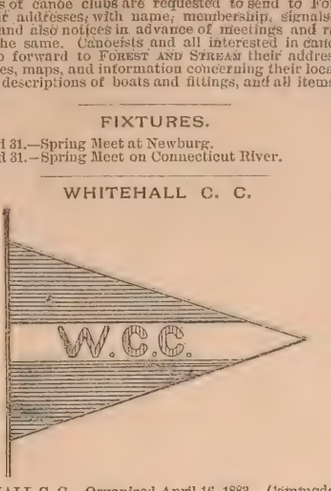
"ROD AND LINE IN COLORADO WATERS."

A CHARMING little book with this title has been published by Chain, Hardy & Co., Denver. No author's name appears on the title page, but before we had read many chapters in it we thought we knew the style, and on turning to the end we found the signature "Bourgeois," and immediately jumped at the conclusion that the chapter entitled "The Lure," in "Fishing With the Fly," was by the same facile pen. The seventeen chapters of the book make no pretense to being a continued story, but each one is complete in itself, and each includes a mixture of fishing incidents, philosophy and humor, which makes it most easy and interesting reading, yet there is such a variety of incident that the stories bear little resemblance to each other. A little picture that mirrors us all is given in these words: "Did you never go fishing when a boy, and come home at the close of a Saturday without so much as a single chub on a string to console you for the anticipated dressing because of your interdicted absence? I have. But the chagrin of the ten-year-old is nothing in comparison to the mortification of the middle-aged boy under similar circumstances." Speaking of trout-hogs, he says: "There is no genuine enjoyment in the easy achievement of any purpose; there is no bread so sweet as the hard-earned loaf of the man who works for it. The rule holds good in the school of the sportsman. The fellows I have been writing of, had they their way, would become mere engines of destruction; they would catch, not for the pleasure of catching, but because they could, and a universe of trout would not satiate them." The book is neatly printed and has a map of Northwestern Colorado, and is illustrated with initial letters and vignettes. Price, one dollar.

PUBLISHER'S DEPARTMENT.

COUGHS, Colds and Bronchitis are always cured by Humphreys' Homeopathic Specifics, one and seven. They are used by thousands with the most triumphant success. Not only are the coughs and colds cured, but far graver diseases like pneumonia and chronic lung diseases, or consumption, are also arrested. No one should permit a cough or cold to linger when it is so easily and pleasantly cured.—*Adv.*

CROWN WAD WORKS, Rochester, N. Y.:—I have during the past season used your wads on various game, woodcock, snipe and ducks, and in every instance I am satisfied I obtained better results than ever before, when using the common felt wads. I most cheerfully recommend them to sportsmen, and predict that in a short time the felt wad will only be used for powder.—GEO. M. ROBERTSON, (New Iberia, La., April 2).—*Adv.*



Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

May 30 and 31.—Spring Meet at Newburg.
May 30 and 31.—Spring Meet on Connecticut River.

WHITEHALL C. C.

WHITEHALL C. C.—Organized April 16, 1883. Commodore, R. E. Bascom; Vice-Commodore, E. P. Newcomb; Secretary and Treasurer, W. W. Cooke, Jr.; Measurer, W. C. Blodgett; Cook, Francis E. Cooke. Eleven active members; 9 canoes, 1 cutter, 1 yawl, 1 catboat. Signal, blue with white stripe two inches wide, with red letters.

THE SPRING MEET ON THE HUDSON.

ON Friday last, Messrs. Smith, of Newburgh, and Stephens, of the N. Y. C. C., visited the spot on the west shore of the Hudson where it is proposed to hold the spring meet, in order to locate a camp ground. The point selected is about three miles below Newburgh near the Moodna River. The ground rises abruptly from the beach to a height of 20 or 30ft., at which point are the remains of an old earthwork occupied by the Continentals in the Revolution. Just back of the embankment is a level piece of ground admirably fitted for a camp, and from the rear of it rises a steep hill which isolates the camp ground completely.

At the lower end of the fortification is a road leading to the beach, and on the latter a short distance above is a spring of fine water. The beach itself shelves gradually, and is composed of small stones, but a canoe can easily be beached and carried up. The rise and fall of the tide is three feet.

Canoeists from up the river can send their boats by the steamer Eagle to Newburgh, where they will be stored in the boathouse, their owners coming down by train on Thursday evening and paddling to the camp. The steamer Melzingah leaves New York every morning at 10 A. M., from the foot of West Tenth street, arriving at 3 P. M., and returning leaves Newburgh at 7 P. M., reaching New York about 4 A. M. She will carry canoes for $1 each way.

Arrangements will be made for her to stop at 152d street, near the K. C. C. house, for the boats on Thursday, May 29, dropping them, if the tide permits, at the camp ground, and on returning, to pick up the boats at the camp, and leave them at 152d street.

It is proposed to have the camp ready by Thursday, several canoeists going in advance to make the necessary preparations, the others coming by train or boat in the evening. Friday and Saturday will be devoted to a series of impromptu races, and those who are compelled to return to business by Monday will take the boat or train on Sunday evening.

General Oliver, of the Mohican C. C., also visited Newburgh on Friday evening, and discussed the details of the meet with Messrs. Smith and Stephens. It is desirable to know as soon as possible about how many will be present, and canoeists intending to do so will please send their names to the FOREST AND STREAM as soon as possible. Further information will be given in our columns, and inquiries from canoeists will be answered as far as possible.

CANOE VS. SNEAKBOX.

Editor Forest and Stream:

This "Canoe vs. Sneakbox" controversy has assumed a different aspect. Originally, as my files show me, it was as to their respective merits in rough water as sea boats. The question of speed came up then, and now, that being dropped, it is carried on by the dragging in of an outside question—that of stability.

No canoe owner disputes with "Bojum." Mr. Wild or "Seagull" on that point. Any boat 3 to 5ft. wide, on the same or less length, must be stiffer than one of 30 to 31½in. But here, and for a party of more than one, gunning in shallow waters, the superior merits of the sneakbox ceases. I maintain that the modern sailing canoe will sail faster, go better to windward, and live in as rough a sea as any sneakbox of an approximate size. For the general cruiser alone, or in company with other boats, on the sneakbox's own water, viz., open bays, the modern sailing canoe is a more comfortable and handier all-round boat.

I am not crazy on the subject of racing canoes, but I am fond of the excitement of a good race, and never unwilling to take up a challenge when fair conditions can be made. I would call your attention to the fact that my letter was an acceptance of a challenge made boastfully and containing an implied slur on canoes and canoeists. The gentleman was hopeless of a race under conditions which he stated to be so overwhelmingly in his favor, and his lame withdrawal, now that his challenge is taken up, is not very creditable.

To my good friend "Bojum" I would say that the conditions he proposes are of a nature to make a trial impossible. A reefing breeze from the southwest with an ebb tide are only to be had by "patient waiting." While that would certainly be "no loss" in his pleasant company, my duties to the N. Y. C. C. this year will necessitate my spending the summer on New York Bay, but all discrepancies of size waived, I will be most happy to sail his big sneakbox a friendly race to windward and back when I pass through the Sound, as I hope to do in July.

I claim, however, that that race will not be a test of the respective speed and merits of the two models, as no advantage of form ought to be able to overcome so enormous an advantage of beam on the same length. I consider a 15ft. canoe a match for any 12ft. sneakbox, and am willing to go half way to make a match to prove it. In conclusion I hope that "Bojum," Mr. Wild, "Seagull," and as many others interested in small boats as can, will come to our Newburgh meet on Decoration Day and see what such veterans as the owners of Dot and Snake can get out of their craft. It is, beyond a question, a work of some skill to sail a canoe well, but the possibilities of the boats are much greater than ignorant scoffers are as yet willing to admit, as several small catboats of 12ft. length have found to their astonishment on more than one occasion. WM. WHITLOCK.

NEW YORK.

TORONTO C. C.

TORONTO Bay is now (March 29) clear of ice. Mr. M. F. Johnson launched his Peterboro on that date, and had a paddle along the city front. The other members of the T. C. C. are all busy rigging up sails, centerboards, etc., and soon as a pleasant day arrives will be afloat.

Several new craft will be placed on the Toronto Club list this season. The first will be a 16x30 tandem, on the lines published in FOREST AND STREAM last fall. She will be skippered by Mr. Pelman, a new member, and is being built by S. R. Heakes. John Clindinning, our leading builder, has just commenced a new model 14ft. 8in. x3ft. 10½in. at gunwale and 3in. round of deck. She was laid down by Richard Jenkins, Clindinning's foreman, and promises to be a first-class all-round canoe for our waters. It is likely she will become the property of another new member, and if so will appear in the novice's sailing race at Grindstone Island. Her rudder, hatches, etc., will be like those on the Isabel and Boreas. Both of the new productions will have Atwood boards. In addition to these accessions, two or three open Peterboros are likely to be purchased and added to the club's list.

The Isabel will have a new style of cruising sail this season. It has not been tried much, but the captain has such confidence in its turning out a success that he has sold his balance lug sail formerly used for cruising.

The Boreas will be much the same as last season, with the possible exception of a larger dandy and the use of the aft centerboard while racing. Her owner is determined that even in a light wind the Isabel must not be allowed to beat the Boreas.

The Rushton Princess, Sadie N., Capt. F. M. Nicholson, will be much improved this spring by the addition of seats on deck, a proper deck tiller, and probably an Atwood board in place of the wooden scimitar now used. A large racing sail is also contemplated for the August meet.

As already mentioned, Mr. Johnston has ordered from English of Peterboro an open 16'x28".

Mr. J. L. Kerr will attend the '84 meet in a new craft of some kind, as he has advertised his Racine Shadow for sale.

Mr. F. W. Mason has the Whimbrel, formerly the Fairy, the property of ex-Commodore Bridgman, almost ready for launching. He will also attend the meet.

Mr. A. B. Eadie is thinking of putting the imported English Nautilus in commission this season, and being present at the Thousand Islands in August. Properly rigged and with sufficient sail area, she should be fast, but her length—13ft.—is against her in lumpy water.

The new vice-commodore of the club, Mr. Stinson, will also be out this season in his Racine Shadow; other members will have the same craft as last season.

It will be seen from the foregoing that the T. C. C. is still to the fore, and not likely to decline.

Some of the members have already had their uniforms made, and it is possible that at Grindstone Island the Knickerbockers and Mohicans may find opposition in the "mashing" business at the ladies' camp.

CANOEING IN GREAT BRITAIN.

WE reproduce the following resumé of canoeing in Great Britain from the London *Field*, as some of the points are new to our canoeists, and it also shows the present condition of the sport there. While local conditions have encouraged the growth of a fine class of sailing canoes, and of match sailing, cruising has run to the lowest ebb, and as the racing is necessarily more or less exclusive, requiring time, money and skill to take and hold a fair place, the numbers of racers have dwindled to a few. With our larger waters, cruising qualities will always be most esteemed, and there is no danger of racing supplanting the more legitimate form of the sport. We wish our cousins as much success as has attended us in their similar attempt at a yearly meet. The *Field* says:

It is now nearly twenty years since Mr. Macgregor made his famous tour of the rivers, canals and lakes of Europe in the canoe which bears the name of Rob Roy. It may be said that Mr. Macgregor invented this particular type of vessel, and indeed, canoeing itself as it is now practiced in England and America. Subsequently the Rob Roy made an expedition to the Baltic, and an account of each voyage, written in a very fascinating manner, inspired many young men with a desire for similar adventures. Disaster overtook some of these, and an evening paper of the day, discussing the subject of canoeing and the formation of the Royal C. C., said that the pursuit "unites the maximum of danger with the minimum of utility." This criticism is epigrammatic, but scarcely just, and may be classed with another epigram in the same paper, that a "Hanson's cab is very difficult to get into and almost impossible to get out of."

At any rate, a few mishaps and severe satire did not prevent the nautical proclivities of adventurous youths taking the peculiar form of development described as canoeing. That canoe traveling is open to some kind of criticism appears to have occurred to the mind of Mr. Macgregor himself, as, after describing the many advantages which a canoe has for exploring rivers or hidden nooks in lakes, he says a canoeist may well be asked, "Has he traveled in other ways so as to know their several pleasures? Has he climbed glaciers and volcanoes, dived into caves and catacombs, trotted in the Norway carriole, ambled on an Arab, and galloped on the Russian steppes? Does he know the charms of a Nile boat, or a Trinity eight, or a sail in the Ægean, or a mule in Spain? Has he swung upon a camel, or glided in a sleigh, or trundled in a Rantoone?" Mr. Macgregor answers joyfully that he has done all these things, but the pleasure of canoeing was better than them all. This was something like enthusiasm, but any one who reads his delightful books will have no difficulty in realizing the great charm of canoe traveling.

The Rob Roy, it should be said, could be sailed, and her owner appears to have been very proud of her qualities in this respect; indeed, we found in 1866 that shrewd old sea dog, the late Sir Edward Belcher, discussing canoe sails, and comparing them with those of the canoes used by the Esquimaux, at the Institution of Naval Architects, Mr. Macgregor having honored that society with a description of his vessel and her achievements. But the sailing qualities of the Rob Roy were not quite so good as her owner thought them; at any rate, when Mr. Baden-Powell, a young naval officer, took up with canoes in 1867, he thought more of sailing than paddling, and to that end produced the Nautilus, which was almost as distinct in type as the Rob Roy herself. Mr. Inwards, another canoe enthusiast, and the first "mate" of the Royal C. C., ridiculed the idea of a canoe being adapted more for sailing than paddling, and produced the Ringleader, longer and narrower than either the Rob Roy or Nautilus, and of course very much easier to paddle. Both the Ringleader and Nautilus were taken on many long expeditions, and the merits of the three types were warmly discussed. In the end the sailing canoe proved to be the more popular, and it can very well be understood that sailing affords a greater variety of incidents than paddling, from a capsize to a successful thrash to windward.

At first the sailing qualities of canoes were rather irreverently spoken of, and it was not even admitted that they could be made to go to windward at all: but by the aid of heavy metal center plates, lead ballast, and battened sails, they were not only made to ply to windward, but could do so better than any boat of similar length not provided with a center plate or lead ballast. The advent of Mr. E. B. Tredwen, with his Pearl canoe, did much to show the capabilities of canoes under sail, although it was not in the nature of things that she could be so distinct in type as the Rob Roy, Nautilus or Ringleader, each of which had, in a more or less complete manner, fulfilled the three possible missions of canoes. Then there came Clyde canoes, Humber canoes, and Mersey canoes, each noted for some peculiar "kink or knot," by which the type is claimed. The Mersey, however, is nothing more nor less than a double-ended boat, with a turtle-back deck, and ought to be placed out of the category of canoes. This everlasting "typing" of canoes has undergone even greater extension in the United States of America, where the British form of canoeing has been adopted with much vigor, and although it may be open to much ridicule, there cannot be a doubt that it tends to keep alive the stimulus for canoe building. Old hands, who have been through all the variations of sailable-paddling, or paddleable-sailing, or paddling-sailing canoes, as defined by Mr. Baden-Powell, smile when they hear of a new type; but in canoeing, as in other matters, there is nothing else to do but re-invent.

The great success of the sailing canoes and the excitement of match sailing made even paddling appear to be a very insignificant affair, and the superiority of sailing as an amusement was considered demonstrated, because any one could learn to sit in a canoe and paddle in five minutes, whereas it required weeks of patient practice to learn to sail a Nautilus or a Pearl by the wind. The originators of the pastime acquired great excellence in canoe sailing, and two or three others attained almost equal skill; but this excessive cleverness disheartened many other beginners, who had not equal patience or that intuitive kind of aptitude for the art which no amount of practice will supply. At any rate, there is no doubt now that, as the old hands in the natural course of events appear to be retiring from the sport, there are no younger men coming on who seem to care about mastering all the elaborate details of match sailing in canoes. The gatherings on Hendon Lake last season showed great falling off, and excited very little interest, even among members of the Royal C. C., and with the Nautilus, Pearl, Lurline and Merlin out of the way, the contests would inevitably collapse. Under these circumstances, it is not surprising to find that the members of the Royal C. C. are striving to arouse a new interest in canoe life, and one which seems to be more in accord with the spirit of canoeing which existed when the club was founded in 1866. The programme issued by the club for the coming season is much the same as in past years so far as racing canoes go, but the committee have set a project on foot for having a grand meet of canoes on the Norfolk Broads in August. We cannot avoid agreeing that this is a movement in the right direction, and the many successful gatherings which American canoeists have every year—and, indeed, many such have taken place in Scotland—make one think that such meetings ought to be popular in this country. A more delightful region than the Norfolk Broads could not have been chosen for a canoe meet, and one that is fairly accessible for all members of the club.

Such a project as that which we have just referred to would be well worthy of attention, even assuming that the interest in racing canoes under sail is not dying out. Something required to be done to bring the many members of the club together, which match-sailing quite failed to do, and we think there is not a doubt that a fortnight of adventure on the Broads will prove more popular than four sailing matches on Hendon Lake. Of course it can be said that sailing would be more popular were it not for the elaborated gear of a racing canoe. This may be true enough so far as sailing goes, but when it comes to racing, a competitor is bound to use the most effective means for achieving success. If a man is really fond of racing, and has the patience and patience to master the art, he will not care whether it takes two minutes or two hours to get underway; but the case is very different when a man wants a canoe to sail about by himself for idle amusement. He wants something he can jump into and be off at

once, without having to spend an hour or so over reeving gear, arranging ballast, etc. But there are plenty of sailing canoes to suit this man, and we have illustrated many in the *Field*, one of which was exhibited at the Sportsman's Exhibition. Thus, so far as canoe sailing *per se* is concerned, it cannot be justly said that the exigencies of racing stand in the way of the pursuit being generally enjoyed or retaining its popularity. Such meets as that projected for August next should show the advantages of a paddling canoe which can be sailed, over a sailing canoe which can be paddled.

A HINT TO CANOEISTS.

WE would call the attention of canoeists to the report of the condition of the Toronto C. C., giving, as it does, such an interesting statement of the prospects for the season, changes in the boats and other details, such as canoeists care for just now. We should be glad to have similar reports from other clubs, as such an interchange of information will be of value to all.

AMATEUR CANOE BUILDING.

Thirteenth Paper.

SAILS AND RIGGING.

THE success of a canoe as a sailing craft depends largely on the proportioning of the sails to the boat and the work to be done—on their proper fitting, and on the perfection of all the smaller details of the rigging. Almost every known rig has been tried on canoes, all but a few having been in time rejected, so that to-day but three types are at all popular with canoeists—the leg of mutton, the lateen, and the lug.

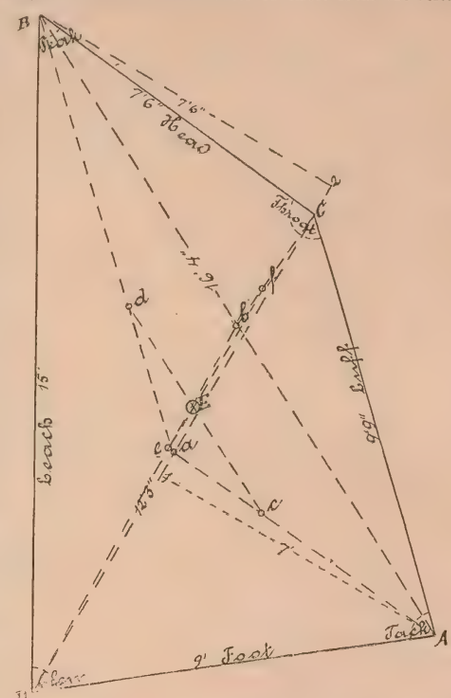
Before deciding on the shape of the sails, the first question is, How much sail to carry? a question only to be decided by a comparison with the boats and their rigs. Attempts have been made to formulate expressions by which the area of sail may be calculated when the dimensions and weight of the boat are known; but in a canoe the greatest elements in carrying sail are the personal qualities of the canoeist, his skill, activity, daring, prudence and good judgment; and their value is easily appreciated when on the same canoe one man can carry 100 square feet of sail, while another will hardly be safe with fifty. This being the case it is impossible to calculate what area a canoe will carry, but a comparison with similar boats will give the average cruising rig, the canoeist making such an addition to it as he considers will suit his individual wants.

Another uncertain element in carrying sail is the character of the water on which most of the work is done. If on a river or lake, among hills, where squalls are sudden and violent, the sails should be small, and the arrangements for furling and reefing them as complete and reliable as possible; if on open water, where the wind is strong but steady, a large sail may be carried, fitted with an ample reef for rough weather.

Whatever area be chosen, the almost universal practice with canoeists is to carry two sails. The cat rig, though simple, requires larger and heavier spars, a large boom and a high center of effort, and is more difficult to handle, as far as setting, furling and stowing sail, than the main and mizzen rig; and, on the other hand, a jib has been proved to be of little use, as it is difficult to set in a boat where the crew cannot go forward, a number of lines are needed, it requires constant attention, is useless when running, and of little benefit when doing its best. By having the bulk of the sail forward, it can be easily reached, is always in sight, draws well when running, and can be quickly spilled without losing the power of luffing, while the mizzen aft requires very little attention, luffs the boat promptly and keeps way on her, and even if neglected, can do little but bring her into the wind.

In a long, narrow boat like the canoe, the sail should be spread well fore and aft, long and low, rather than narrow and high, as the propelling power will be as great, and the heeling or capsizing power much less, and this end is best attained with the main and mizzen rig.

In order to obtain a proper balance of the sails, it is necessary that their common center or the point at which, if a force were applied, it would balance the pressure of the wind on the sails, which point is called the center of effort, should be nearly in the same vertical line with the center of lateral resistance of the hull, which latter is the point at which, if a string were attached, and the boat, with rudder amidships and centerboards down, were drawn sideways, it would advance at right angles to the string, neither bow or stern being ahead. These points would be described in technical language as the common center of gravity of the sails, and the center of gravity of the immersed vertical longitudinal section, including rudder and centerboard.

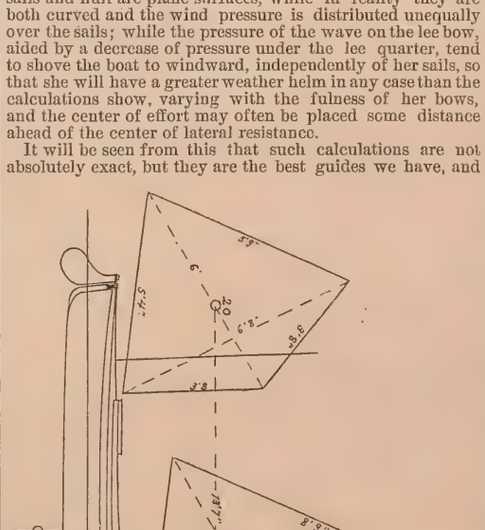


The center of lateral resistance can be ascertained by drawing accurately to scale, on a piece of cardboard, the outline of that portion of the hull below the waterline, including rudder, keel or board, taking it from the sheerplan, then cutting out the piece and balancing it on a fine needle stuck in a cork. The point on which it will balance is the center of lateral resistance.

To ascertain the center of effort, some calculation is necessary. A sail draft is first made showing the sails, masts, hull and center of lateral resistance, the scale being usually ½ or ¼in. to the foot for a canoe or small boat.

First, to determine the area of the sail, if triangular, a line is drawn from one angle perpendicular to the opposite side, or to that side produced. Then the area will be equal to one-half of the side multiplied by the distance from the side to the angle; for instance, in the triangle B C D in the first figure, which represents the calculations of a sail of 89 square feet, a line perpendicular to C D would not pass through B; so C D is produced to *g* then 12ft. 3in.x7ft. 6in. =91.87÷2=45.9ft., area of B C D. If the sail is not triangular it may be divided into several triangles, each being computed separately. The sail shown will first be divided by the line C D from throat to clew; the area of B C D has been ascertained to be 45.9ft., and similarly the area of A C D is 42.9, then the entire area will be 88.8ft A shorter rule, and one that in most sails is sufficiently correct, is to multiply the distance A B by C D, and to take half of the product, but in a high, narrow sail, this would not answer, as in this case, where 16ft. 4inx12ft. 3in.=200÷2= 100ft., or an error of 11ft.

The area being known, the center of gravity of each triangle is next found by drawing a line from the middle of one side to the opposite angle, and laying off ⅓ of this line, as in the triangle, B C D, where half of C D is taken at *a*, a line, *a* B, drawn, and ⅓ of it taken, giving the point *d*, the center of the triangle. The point *c* is found in a similar manner, and we know that their common center of gravity must be on the line *c d*. Now, dividing the sail by a line, A B, into another set of triangles, A B C and A B D, we find their centers at *e* and *f*, and drawing the line *e f*, its intersection with *c d* will be the center of gravity, and consequently center of effort, of the entire sail.



To determine the common center of two or more sails, a vertical line is drawn just ahead of the forward sail, and the distance of the center of each sail from this line is measured and multiplied by the area of the sail. In the drawing, showing two balance lugs of 45 and 20ft., the cruising rig for a 14x30 canoe, these figures would be 40x5ft. 2in.=232, and 20x13ft. 7in.=273, or 505. Now, dividing this sum by the total area of the sails, or 65ft., we have $\frac{505}{65}$=7.77, or 7ft. 9in., the distance of the center of effort from the vertical

line. In this case, the center of effort of the sails and the center of lateral resistance of the hull will fall in the same vertical.

To be safe, a boat should always carry sufficient weather helm to luff easily, or in other words, when sailing on the wind, the leverage of the after sail should be enough to require that the helm be carried slightly on the weather side to prevent her coming up into the wind, then if it be left free she will luff instantly. To do this requires in theory that the center of effort should be aft of the center of lateral resistance, but in the calculations it is assumed that both sails and hull are plane surfaces, while in reality they are both curved and the wind pressure is distributed unequally over the sails; while the pressure of the wave on the lee bow, aided by a decrease of pressure under the lee quarter, tend to shove the boat to windward, independently of her sails, so that she will have a greater weather helm in any case than the calculations show, varying with the fulness of her bows, and the center of effort may often be placed some distance ahead of the center of lateral resistance.

It will be seen from this that such calculations are not absolutely exact, but they are the best guides we have, and

if the calculated centers, and actual working in practice of different boats are recorded, a comparison will show what allowance is necessary in the case of a similar boat.

In planning a canoe's sails then, three things should be kept in view; to distribute the sail well fore and aft, keeping a low center of effort; to keep the latter about over the center of lateral resistance, and to keep as short a main boom as is consistent with the first point.

In order that a boat should sail equally well with her board up or down, the center of the board should come under the center of lateral resistance, otherwise, if the board be forward and the boat balances with it lowered, on raising it, the center of lateral resistance at once moves aft, and the center of effort being unchanged, the greater leverage is forward, and the boat's head falls off.

If it is necessary to place the board well forward, it may be done by using a small mizzen, a reef being shaken out in it when the board is raised. A mainsail is sometimes rigged and tried with a cheaply made mizzen of any shape until the proper balance is obtained, when a suitable mizzen is rigged permanently.

NEW CANOE CLUBS.—A club was organized on March 24, at Oshkosh, Wis., with six active members, all canoe owners, and two more have since joined. We have received the signal of the Ianthe C. C., of Newark, N. J. The club now numbers twelve members and nine canoes. The club house is on the Passaic River at Woodside, above Newark.

FIXTURES.

May 18.—Eclipse Y. C., Opening Cruise.
May 24.—Oswego Y. C., Opening Cruise.
May 24.—Boston Y. C., Opening Cruise.
May 30.—Knickerbocker Y. C., Spring Matches.
May 30.—Atlantic Y. C., Opening Cruise.
May 30.—Newark Y. C., Spring Match.
May 30.—South Boston Y. C., Spring Match.
May 30.—City Point Mosquito Fleet, 13 and 15ft. boats.
May 30.—New Haven Y. C., Opening Cruise.
May 31.—Boston Y.C., First Match,Connor and Commodore's cups.
June 9.—Portland Y. C., Challenge Cup.
June 10.—Atlantic Y. C., Annual Match.
June 11.—Hudson River Y. C., Annual Match.
June 12.—New York Y. C., Annual Matches.
June 14.—Seawanhaka Corinthian Y. C., Annual Matches.
June 16.—East River Y. C., Annual Matches.
June 16.—Newark Y. C., Open Match.
June 19.—New Jersey Y. C., Annual Match.
June 21.—Hull Y. C., Pennant Match.
June 23.—Newark Y. C., Open Matches.
June 24.—New Haven Y. C., Spring Match.
June 28.—Boston Y. C., Ladies' Day.
June 30.—Manhattan Y. C., Annual Cruise.
June 30.—Eclipse Y. C., Spring Match.
July 4.—Larchmont Y. C., Annual Open Matches.
July 4.—Hull Y. C., Review and Cruise, five days.
July 9.—Beverly Y. C., Marblehead, First Championship.
July 12.—Boston Y. C., Second Club Match.
July 12.—Hull Y. C., First Club Match.
July 19.—Hull Y. C., Ladies' Day.
July 26.—Beverly Y. C., Nahant, Second Championship.
July 30.—Oswego Y. C., Open Matches.
Aug. 2.—Kingston, Ont., Open Matches.
Aug. 2.—Hull Y. C., First Championship Match.
Aug. 6.—Bay of Quinte Y. C., Open Matches.
Aug. 9.—Boston Y. C., Open Matches, all clubs.
Aug. 16.—Hull Y. C., Annual Open Matches.
Aug. 16.—Beverly Y. C., Swampscott, Third Championship.
Aug. 23.—Beverly Y. C., Marblehead, Open Matches.
Aug. 23.—Boston Y. C., Third Club Match.
Aug. 30.—Hull Y. C., Second Championship Match.
Sept. 6—Hull Y. C., Third Championship Match.
Sept. 6.—Beverly Y. C., Marblehead, Special Matches.
Sept. 13.—Boston Y. C., Second Ladies' Day.

"BAD ADVICE."

THE proverbial jackass braying in a lion's skin is always amusing. A scribbler, who was convicted not long ago of malicious fabrication in the daily *World*, has, through some oversight, come to the surface in a paragraph of notice in the Toronto *Mail*. Guileless senility from a notoriously incapable source would be passed by without another thought, so far as I am personally concerned, but friends have insisted that the individual should be "put in his place," to double back the arrows of his ignorance, lest they might lodge casually in some spot.

Granting that my letter, read before the Toronto Yachting convention, did directly advise and urge the installation of a length and sail area rule, my advice would have been in accord with views positively expressed by all recognized and tried authorities the world over.

An expert committee of the Y. R. A. Council of Great Britain gave simple length measurement full investigation this winter, and declared that measurement totally unfit to fairly class widely differing types. Mr. Dixon Kemp has often pronounced the same judgment. The French journal *Le Yacht*, and the German publication, *Wassersport*, presided over by Von Saefkow, of high scientific research and great experience, arrive at the same conclusion. The committees of experts appointed last year by the New York Y. C., and the Seawanhaka Corinthian Y. C., after mature deliberation, with the application of length measurement in local clubs before their eyes, also condemned simple length upon the ground of prejudice to small, snugly rigged boats on a given loadline. There is a unanimity against that custom on the score of its inequity all the world over. On the other hand, even such clubs and people who have sought to establish it upon theoretic derivation have so far completely failed to agree upon any underlying theory. The Boston Y. C. and the Atlantic Y. C., which pirated its wisdom from Boston, set forth their "belief" that the speed of boats will compare as two-thirds of the cube root of the lengths, while other luminaries insist that it varies as the square root. Even where such empyrical explanations are laboriously set up as a shaky foundation, the reasoning presupposes the comparison between boats of like or nearly like bulks in proportion to the lengths. But as in the modern practice of yacht racing boats of diverging types and bulks on a length are being brought to the line, the assumption no longer includes the field and equity no longer exists. Common experience tells every man living that a 40ft. canoe or a 40ft. boat of small bulk is not possessed of the same innate possibilities for speed as a 40ft. yacht several times as big. Common sense rebels against racing boats even which differ materially in bulk on like lengths. And common expediency forbids a rule which drives boats of small bulk out of existence in slavish deference to those which are large, unwieldy and expensive. Until it can be exactly demonstrated that like lengths, without regard to bulk, can produce like speeds all round a course, until it can be shown that a 60ft. telegraph pole, whittled into shape, is possessed of the same potentiality of speed as a 60ft. sloop, common fairness points the necessity of granting compensation for difference in size on a length, unless public attention is to be focussed into one rut and confined to that small realm of experimentation which deals only with the largest possible on the length to the exclusion of everything else which may be preferable on other scores and for other purposes.

That, in view of the foregoing, a flippant ignoramus, who gives no evidence of a single earnest thought in the matter, a hand-to-mouth scribbler with no worthier aim than to fill space at the behest of a verdant master, should have the effrontery to parade his spleen in a supercilious "opinion" concerning my letter to gentlemen in Toronto, and should seek to spring a clumsy "trick of the trade" upon my audience by indecently prejudging the contents of my letter, and slurringly reflecting upon lake yachtsmen, is comment enough upon the reprehensible dishonesty of purpose animating that person.

I draw satisfaction in the knowledge that during five years past his "opinions" have never been quoted elsewhere, but have been received universally with the contempt of silence, until the Toronto *Mail* last week fell into his trap, and gave him the advertising of a paragraph under reservation. But it is nevertheless repugnant to find that my work is to be weighed even in a single instance in the scale against the disjointed jabber of an empty-pated pretender. That such persons are appreciated at their real worth, I am gratified to learn from the following editorial in the Belleville *Intelligencer* of April 8:

"We also read in the *Mail* of Monday:

"'Says the New York *Spirit of the Times* with regard to the lately formed Lake Yacht Racing Association:

"'"Acting on some bad advice from this city, the new association adopted the rule of measurement used by the Seawanhaka Corinthian Y. C., but as a trial of that will show its imperfections, that can easily be amended next year. The lake clubs are to be congratulated on having formed this association."'

"The 'bad advice' referred to is the advice which was given by Mr. Kunhardt, the yachting editor of FOREST AND STREAM, an uncompromising advocate of the cutter type of yacht—as against the sloop. Mr. Kunhardt's views are so pronounced as to, perhaps, justly lay him open to the charge of bias.'

"Our contemporary is unjust to Mr. Kunhardt, who, while advocating the cutter as the fastest and safest type of yacht, has always striven to secure fair tests as between the varying styles of craft. With this end in view he urged the general adoption of bulk measure-

ment—of the actual size of hull—as the best means of testing type, and in this we heartily agreed with him. This rule was in force in the New York Y. C. for several years, but the easy victories of the English cutters Madge and Maggie over centerboard sloops of much greater capacity gave assurance that, were a match sailed under it with one of the big British cutters for the America's cup, that very carefully guarded trophy, which was at one time emblematical of the yachting championship of the world, would infallibly cross the 'herring pond' in the plate locker of the cutter. So in 1883, owing to a rumor that a cutter would challenge for the cup, the New York Y. C. altered its rule so as to embrace sail area and length, under a formula which was less fair to cutters than a rule founded on a similar basis which had, the year previous, been adopted by the Seawanhaka Corinthian Y. C., of New York, which is now the best yachting organization at the commercial metropolis of the United States. Having thus found that he could not secure the adoption of a rule which would test model and type with absolute fairness, theoretically at least, Mr. Kunhardt therefore, like a wise man, at once accepted the fairest rule which he could get, and that is the Seawanhaka Club's rule, which the Lake Yacht Racing Association has adopted. This much it is necessary to say in order to vindicate Mr. Kunhardt—the ablest and best writer on yachting topics in America—from an unjust aspersion, and to justify the course of the Lake Yacht Racing Association in adopting the rule of measurement which met the unanimous approval of the yacht clubs of which that body is composed.

"For the *Spirit of the Times* to lecture the Lake Yacht Racing Association as it does is a piece of downright impertinence. That body numbers among its members many men far more able by nature, by education and by experience to arrive at correct conclusions than the yachting reporter of the *Spirit*, who is a mere echo of the kid-glove brigade and sea lawyers of the New York Y. C., and stupidly sticking to one style of craft will not, despite the hardest of hard facts to the contrary, admit that any type of yacht but that which his mentors favor can possibly possess any merits. We assure this 'critic' that when the L. Y. R. A. want advice they will not apply to him, but seek for it in better informed quarters."

I am sorry to take up so much space with what is more or less personal, but it is necessary that the minds of some yachtsmen should be disabused, and that the difference should be established between the trickery of a witless time server and the deductions formed by men who have given the subject at least conscientious study and who are honest in their expressions. I also confess that I resent warmly being mixed up indiscriminately with the cattle bellowing and yelping in my wake, seeking to curry favor with the "great unwashed." C. P. K.

A CRUISING STEAMER.

IN contradistinction to the extravagant display steamships building at Wilmington is the Mariana, a new cruising yacht built for yachting purposes by the famous establishment of Bristol, R. I. She possesses all the good points of a cruising steamer, and is remarkable for the originality of everything about her. At a fraction of the outlay for the New York and Electra, much more practical results are obtained. The Mariana will out-steam her big sisters in point of distance and in speed, considering difference in size. She has ample and pleasant accommodations for a family, and we are at a loss to know what more a yachting man can ask. Carting a mob of guests about at sea may afford a chance to lavish wealth, but the occasions for such Oriental magnificence will be found very few indeed in yachting experience, and ninety-nine times out of a hundred the owners of the unwieldy monsters will view with envy the superior handiness, economy and adaptibility of the Mariana. Fortunately the people who can construct Nourmahals must always be few, else steam yachting would soon degenerate into steam shipping. Enormously large yachts are built, with few exceptions, by persons who do not know what they want, and are possessed of the fallacious notion that size and quality are concomitants. Building large yachts for the sake of their size is little better than buying paintings by the square yard. We write from the point of the sporting yachtsman. We know that a great deal of real sport can be derived from steam yachting; but when sport degenerates into a race for notoriety in tonnage, we feel like disowning the monster ships and refusing them recognition in the circle of elect.

We venture the belief the Wilmington yachts will prove the worst investment their owners have ever made. They are sailors' boarding houses, consuming and wasting thousands upon thousands, too unwieldy for handy nearby service, and fit only for voyaging round the world, so far as size is concerned, and scarcely fit for that in their rapacious coal consumption and limited bunker capacity. In comparison with the typical English steam cruisers of the Sunbeam and Lancashire Witch type, of 600 tons, the two Wilmington attempts are nothing more than ridiculously overgrown steam launches, representing the maximum outlay with the minimum of return in serviceable characteristics.

Per contra, the Mariana is a scheme which fills the bill as a cruiser and smart vessel under steam, though we should certainly prefer more rig and more complete equipment aloft, so that sail might be used to good purpose in the event of running short of coal or a break down in the machinery. Mariana is a fine flush deck yacht of extraordinary strength and "toughness" combined with lightness of hull. She carries coal enough in the bunkers for ten days, steaming at ten knot speed, an endurance scarcely equalled by small English steam cruisers and due to the great economy of the Herreshoff coil boiler and superb design for compounding the steam.

The Mariana is 50 tons carpenter's measurement, Length 86ft., beam 13ft., and 8ft. depth of hold with a draft of 5ft. Her engines are compound 8 and 14in. cylinders with 14in. stroke. Four tons of lead are bolted to the keel so secure perfect immunity from being tripped in a sea, and to steady the yacht in rough water. She has a bold high side, long easy entrance, light and jaunty stern and a plumb stem. The hull is composite, having iron frame with the plank screw-bolted and "edge-nailed" besides, strong enough to be rolled down an embankment. The deck is extremely attractive with no superstructure but the pilot house forward. The smoke stack is braced in its construction below, so that no guys are needed, and nothing interferes with clear passage fore and aft. She is rigged as a schooner without head gear. Below, the accommodations are very roomy, light and cheerful, ventilated by large lights in the side and mahogany skylights overhead. Her planning and fittings are much in the style of a smart modern racing cutter. The mains companion is spiral and lands in a steerage or hallway, on the port side of which is a berth and opposite a retiring room. Aft is the ladies' saloon and sleeping cabin, having one berth each side and a large double berth at the end athwartships. The steerage leads through doors into the main saloon, with sofas each side and table in center.

Forward of this is the space allotted to engine and boiler, the latter being abaft the machinery. This space is between bulkheads and is entered by a ladder from deck. The boiler is of the improved coil pattern, in which a head of steam can be raised in three to five minutes. While the mob of stokers aboard a Nourmahal or Electra are thinking about loading up the grates with coal and slowly starting fires to wait one or two hours before steam is raised, amid smut and grime, one hand lights a few chips aboard the Mariana, throws a shovelful of fuel on top, and at once the gauge begins to rise. The operation may be performed by a lady in silks and satins and the engine started with little more trouble than getting a sewing-machine under way. The room is at all times cleanly and cosy as a studio. The space occupied by the motive power is very small and the bunkers handy at each side. Coal passers get no show aboard the Mariana. One hand, if required, can fire up and attend to all below if desired, as the furnace room is within reach of the man attending the engines. Comparison would be odious between the sweet, clean and ever ready arrangement of Mariana and the ancient, clumsy and time-wasting preliminaries aboard the Wilmington vessels. When steam is up, in a few minutes the anchor is catted by deck hoisting gear operated from the engine room, and the pilot in his house steers the vessel at will by pressing the lever of the steam steering gear with his little finger. The Mariana would be fifteen or twenty miles on her course by the time the master of the Electra sends below to find out whether ten pounds has been raised and the screw can be turned over. Three hands all told in a watch will run the Mariana if needs be, and three times that many would be a short allowance for the Electra. Yet Mariana is capable of all and more than the service the Electra can ever hope to accomplish. She draws but 5ft., and for work about the coast, for short runs from residence to place of business in the morning and return the same day, she is infinitely better adapted than the Wilmington ships, which in fact cannot perform such service at all. Furthermore Mariana will go to sea and stay at sea with the best.

Forward of the engine space is a forecastle with berthing for captain and crew, both ends of the boat and hold being devoted to storage. All the cooking is done in a galley of oil stoves, and no nuisance or lost time warming up a range are permitted. In finish, the Mariana is stylish all through, without any pretense to lavish and improper display which ought to have no place aboard a well regulated vessel. She is a new type of steam cruiser, and one we welcome as a refreshing variety and great improvement upon prevailing customs among the builders about New York, whose conceptions of a steam yacht consist of a dugout with a tug engine and coal yards at short intervals. For ordinary day cruising about the coast the coal supply of the Mariana will last from four to five weeks. We consider she marks a new departure ahead, and that in time her characteristics will find expression in an entire fleet.

THE LAKE Y. R. A.

IT has been further decided that the classes should include yachts of 38ft. corrected length and over, 25 to 38ft., and under 25ft. These figures were adopted in order that yachts accustomed to particular classes under the old tonnage rule would continue to race with the same boats. A yacht must sail in her own class and no other. Shifting ballast prohibited in first and second classes. First match open to the union will be sailed off Oswego July 30. Kingston will follow suit Aug. 2, Bay of Quinte Aug. 6, affording a round in a fortnight.

WHICH SHALL IT BE?

THE yacht of common sense—say 30ft. loadline, 8ft. beam, 6ft. hold and 5ft. draft, with 24ft. hoist, and 11 to 12 tons displacement, at a cost of $2,000? Or,

The yacht of length measurement—30ft. loadline, 12ft. beam, 6ft. hold, 9½ft. draft, with 34ft. hoist and 15 to 18 tons displacement, at a cost of $3,000?

Which shall it be? Shall both be allowed to exist, pay for their size, through sail area, and the most meritorious of the two survive after fair competition?

Or shall the large boat smuggle in her power and size under length measurement, avoid a just accounting, and overwhelm the smaller, more economical and more serviceable boat, profiting by a rule playing into the hands of the big and swindling the small, until warped interpretations bestow upon the larger boat's form praise wrung from her smaller sister by brute force, victories which in truth are to be attributed to superior size and not to superior fashioning of body at all?

WANTED, YACHT SKIPPERS.

Editor Forest and Stream:

Some time since, I read with considerable surprise that the Fortuna hove to in a gale, had lain broad off, and naturally been considerably swept by the sea. The other day I had an opportunity of asking what sail was she under, and the answer, "double reef foresail," of course solved the mystery, and gave me another proof of the stupidity of the average yacht sailing master.

Generally, an individual whose brains seem to have stopped expanding at the age of say twenty-five, and who handles all successive vessels in the manner which was applicable to the Mary Ann or Betsy Jane, on which he served his time. It is twenty-eight years since my first yacht race, and I have seen a great deal of the sport in all sorts of boats, and year after year I notice the same mistakes made by our sailing masters. Attempts to carry balloon sails to windward, forestaysails held on to when tacking, beamy boats in light winds trimmed until the life is all out of them, and then abused for not going fast; vessels like Fortuna, with a midship mainmast, hove to under what is practically headsail, and villified for laying wide and being wet, and so on *ad nauseam*. The only chance for an improvement in these matters seems to lie in more study and observation on the part of the owner, and the practice of an understanding that the owner is supreme, and if he chooses to lose his races by bad sailing he has a right so to do. I should advise all intending yacht owners to religiously avoid American masters, above all the fisherman variety, and to select instead Danes, Swedes or Germans, as these latter have some idea of subordination, and can be made to see that the man who pays the bills has a right to give the orders. M.

MEASUREMENT ON THE LAKES.

THE letter below we print by request. It was forwarded in answer to some private correspondence with Toronto. The recipient thought well enough of the communication to read it before the recent convention for the formation of a Y. R. A. The subsequent deliberations of that convention resulted, as is known, in the adoption of the Seawanhaka rule for lake racing.

A buffoon in this city, actuated by jealousy, thereupon blurts forth his venom in the columns of one of the turf papers of this city, and reflects upon the intelligence of the Toronto meeting, with the assurance that the delegates had acted upon "bad advice from this city." This particular personage, long a laughing stock to all but the "great unwashed," has proven over and over again a cringing time server of a low order of intellect, and of too little account in the community to waste many words over. The Toronto convention can get the true gauge of a gentleman by consulting the record of his own pen.

The writer of the subjoined letter is not surprised that the meanest newspaper trickery should be resorted to by an unprincipled clown seeking to coin cheap capital by the methods of literary "shysters." But he learns with regret the failure of the sporting editor of the Toronto *Mail* to distinguish between a private letter written with honest intent and purpose, and the brazen chicanery of a vulgar nonentity superciliously summing up that letter as "bad advice," without even knowing a word of its contents, or what influence it had in bringing about the decision of the conference.

The letter was written as a private communication. It contains no advice, but seeks to explain the reasons for granting time allowance. It champions no scheme for benefitting any style of build, but on the contrary, keeps in view throughout equity for all.

Finally, no matter what the correspondence may have contained, we decline such flattery as the implication that a single letter from our pen could turn the heads of all lake yachtsmen and make them accept black for white and white for black. True, no yachting publication has ever exerted such widespread and radical influence upon yachting affairs as FOREST AND STREAM, that much we know to be so, but we refuse to think we are able to rob other people of their own straight senses. If the Toronto convention was influenced by the letter below, it was because the members agreed with its logic, and were about to come to just the same conclusion by themselves, and not because they accepted in blind faith anything at all which the editor of these columns might choose to send forth.

It is our chief punishment that in a position before the public, we have to meet and hustle men who earn from us nothing but that contempt we feel for the demagogue of the curbstone or the bravo of a gin palace. And when untenable positions like the Toronto *Mail* can be hoodwinked by such worthies, and we are made to sail in the same boat with such cattle, we fain would haul down our flag in disgust and turn the wheel of the future over to the *sans-coulottes* without further word, in preference to clubbing clowns under hatches any longer.

George E. Evans, Esq., Toronto:

DEAR SIR—In reply to your letter of March 20 in relation to coming Y. R. A. meeting of the Lake yacht clubs, I offer the following, hoping it will not reach you too late for your purpose:

Leaving out of question all that relates to purely theoretical derivation of measurement rules, and viewing the subject only in its practical bearing, I should say that whatever your proposed association concludes to accept, it ought at once to abolish the present Royal Canadian L. and B. rule. No matter what type a person may prefer, he has no right to force his preferences upon others through prejudicial measurement. The choice of model should be free. The wants of all are not alike, and it is not desirable to proscribe those who, to meet the requirements of their environs, choose to build different from the particular style, to foster which an empyrical rule has been set up. Liberty of choice is the only fair basis of intelligent competition. No person can assume to dictate what style should prevail, as long as opinions and tastes differ. But the style should be allowed to grow out of trial of all kinds by a natural process of evolution or selection of the best by the decision of each man for himself. Hence, I take it, no rule ought to be looked upon with favor which dictates model to any serious degree. A free field and no favor, or else our ideas are bound to become warped on the subject of design, as it will not be the best boat which wins, but may be only that boat which happens to suffer least from improper discrimination of a rule showing partiality to one style and nursing it into prominence and favor beyond its deserts. It can be understood that by such partiality the best boat may actually be driven out of existence and the worst kind may be made to prevail. The door would be shut against all improvements, variations or new ideas, and the evolution of yacht building would come to a permanent standstill with "vested interests," finally so strong that efforts to restore logical methods of comparison would be sure to fail.

My first proposition is that a rule should show no appreciable partiality to any class of boat, and a rule which does so is upon the very face of matters illogical, and of baneful influence in the long run.

For this reason I should say the tonnage rule L—B×B×½B should

at once be abolished for the common good, no matter what private interests it may for a moment affect. It has been already materially modified in England, where the hold of L×B rules are fast weakening every day. Moreover, it would be impossible to expect international competition with yachts from the American side, as they would probably refuse to submit to any tax on their beam for the benefit of others deriving the same quality from a depth not taxed.

The question is then what substitute to offer, so that all boats can be matched with as much equity as possible. Such a rule should take no account of model. During all the agitation of the subject and the numerous propositions made, there has been a gradual "settling of the mud," and we are now able to see ahead pretty clearly.

The propositions have to all intents and purposes narrowed down to only two which deserve serious consideration.

These are measurement by plain waterline length (with possibly some definite limit set to overhang to avoid circumventing the spirit of the method) and second, a measurement of waterline modified in some way by sail area.

The first rule is decidedly objectionable because in opposition to the first principle set down. On equal lengths the large boat is certain to drive out of existence the small boat. In consequence, only the largest and heaviest (most costly) boats of greatest draft and running expenses would, after a while, survive. The small boat would be forced out of racing and, of course, go under, as all will gradually accept the fashion and the economy of the sport seriously undermined. In Boston they have already built a sloop of 20 tons displacement, 10½ tons ballast, and 8ft. 2in. draft, with 32ft. hoist on only 31ft. loadline as the direct outcome of competition under length. Now what chance against such a monster can another boat of like length, but with 5 tons (reasonable amount for all yachting purposes) ballast and 22 or 24ft. hoist possibly have in the majority of cases? She would be simply overpowered by her big sister and quickly go out of existence. No fair rule should leave any such effect. Let A build as big as he chooses, but also let B for his purpose build as small on the length as he prefers. He may have just as good reason for so doing and no one has a right to command him to the contrary at the penalty of being handicapped in having to race with much larger boats which may happen to be of same length. On the contrary, from reasons of economy and for shoal water and for handiness, the small boat ought to receive just as much recognition from a fair measurement rule as the large one.

We then come to this problem: How can the small boat be compensated in equity as against a large one of like length? The answer is this: A small boat will, broadly considered, carry proportionately smaller sails than a larger and more powerful boat. Hence, if we introduce sail area as a factor in the rule, the correction is easily made and it only remains to place the proper value on the factor of sails in the formula so as not to offer a premium so great upon small sails as in turn to bear against large boats and rule them out by too great favor to the other side. This would be altogether a matter for experience to decide by the tentative plan, as no theory can afford a basis for the extent to which sail should be taxed. A comparison of performance of two well known boats, considered good or best of their kind, will show how much one can allow the other to bring them home alike. With that correction applied, any difference at the finish between other boats brought about, in competition, would represent the superiority in design of the victorious party.

One objection to such a rule has to be met at the outset. It is possible that a large boat, through being crank or of an unstable form, may actually carry less sail in practice than another smaller, but, nevertheless, stiffer boat. Example the Bedouin 43½ beam cutter of 104 tons displacement carries the same sail only as the flat broad 3 beam sloop Gracie, of 55 tons displacement. Their total size will not show quite the difference of their displacements, as Bedouin is narrow and small comparatively above water, and the Gracie big and heavy. Still the total size of the Bedouin is perhaps one-quarter more than that of the Gracie of same length. Yet she carries only same sail area, and would bring her extra bigness to the line free of tax under a sail and length rule in consequence of the foregoing.

Here that rule would appear to be an unfair imposition upon the smaller boat of the two. But a good answer or explanation lies in this: If the Bedouin, owing to her form, can drive a larger body with same sail as Gracie drives a smaller body, at same speed, so much the better for Bedouin. She is really performing a meritorious feat, as the largest boat driven by the smallest sail must be considered the most successful and praiseworthy design. Such a design accomplishes with relative economy what the smaller Gracie only accomplishes by the aid of greater sail area in proportion to her size. Hence the Bedouin profits not by the introduction of the sail factor, but really because her narrow, deep form is so much superior to the flat, wide form of Gracie, that she reaches the same speed in spite of her (Bedouin's) greater body with no more driving power. And if she does this, it is no reason why in equity she should be made to pay for that superiority in form due to proportions which enable her to do so.

Again, a *crank* boat will carry small sail, and it might be supposed the L. and Sail rule would be putting a premium upon bad unstable forms. But it does not, because the unstable form carries less driving power, and what might be supposed a gain under the rule one way is exactly lost in the other.

The conclusion is that Length and Sail area is equitable as near as a rule can be made in practice, in its general application, and that under it a person can choose a narrow deep type driven with small sail or a broad type with large sail, the latter paying for her large sail, it is true, *but also* receiving in return the benefit of large driving power.

Under this rule, the opposite types of like length can be raced, being only asked to put themselves on equality in driving power, or else pay for the use of more than an adversary. In practice the greater sail area is as often found on one type as upon another.

If a person takes great beam and great depth and draft, he obtains the largest boat on the length, requires the biggest sail and through the sail factor pays for the bigness of his boat.

If a person wants a small boat, takes moderate beam and depth, he carries less sail, and through the sail factor of the rule, cognizance is taken of the fact that his boat is small on the length.

If a person spars heavily or overspars and another builds on the same model but rests content with a snug rig, the rule in artificially bringing about an equality in the driving power of the two would (extraneous causes excluded) bring the two boats even at the finish, and that would be perfect equity, as both being like in model, neither one can claim superiority over the other.

Without the sail factor the largest rig would win in the case cited, not from any superiority in the planning of the boat but from the fixed, inherent and well-known advantage of excess in driving power, to demonstrate which no race is at all required. To eliminate that inherent advantage of greater power, the sail factor serves. Then if two boats differing in shape or proportions compete, the result has a logical meaning, and from it we can derive a correct opinion of the worth of the two forms.

As to what importance or weight the sail area should be given, it is comparatively a minor question, if the general principles or basis for measurement can only once be agreed upon.

The Seawanhaka Corinthian Y. C. gives it a little more weight than the New York Y. C., and the English proposed rule more than either, by the following formula:

English Rule: $\frac{L \times \text{sail}}{6000}$ = tonnage. The divisor being a fictitious figure adopted only to bring out the tonnage about as it is by the old L. and B. rule to make former time tables serve. Seawanhaka Rule: $\frac{L + \sqrt{\text{sail}}}{2}$ = corrected L. New York Rule: $\frac{2L + \sqrt{\text{sail}}}{3}$ = corrected L.

If you wish to bear light on large rigs, follow New York rule. If heavy, follow English rule. If an average between the two, nearer the New York rule a little, adopt the Seawanhaka rule.

If none of them suitable, compare well-known standard boats of radically different types of same length, and give such weight to sail area that both (on assumption they represent equal talent in the shaping of their lines) shall be figured at the finish at the same corrected time.

As for the amount of time in minutes and seconds, only experience can guide. Although theory gives a table based upon the assumption that speeds vary as $\sqrt{L}$, it does not serve, when length is modified by the introduction of sail, at least not in a direct way. If two boats with proportionately like sail are supposed to compare in speed as $\sqrt{L}$, then those two boats having different proportions of sail would not come up to the theory, and the difference between their performance and the theoretic results (with equal proportion of sail) will represent the weight to be given to the difference in sail.

Thus, if two boats 35 and 38ft. long, with like proportion of sail, finish, by theoretic formula, 5m. apart, and in practice, with different proportions of sail, say 8m. apart, then the extra 3m. is to be laid to the smaller sail area, and the sail factor should have just such weight in the length and sail rule that upon applying the time table, the figuring should just cover or wipe out the extra 3m. So that the value to be given to sail depends upon the time scale you accept and *vice versa*.

If you start with the theoretic comparison that speeds vary with the $\sqrt{L}$, and first build or adopt a time scale on that, then sail area should be given such weight as will cover the difference observed in practice with different proportions of sail beyond and above the difference deduced from the theoretic comparison by $\sqrt{L}$ *and equal sail*. It is customary to accept for practice only 40 per cent. of the theoretic time allowance, as full speed would seldom be attained and 40 per cent. is supposed to be the average proportion of the maximum speed the lengths are capable of, which is achieved in actual racing. Or in short, the factor of sail is a correction of the theoretic allowance (based upon assumption of like proportions of sail) for those variations of sail in practice, not in accord with the theoretic assumption. The intention of the correction being to assimilate the differences

of driving power to the equality in that respect demanded for the equitable application of allowances of time deduced from the comparison of speeds on the theory that they vary as the $\sqrt{L}$.

You will find in Kemp's "Yacht and Boat Sailing," pages 563 and 564, a time table figured according to $\sqrt{L}$, but 50 per cent. of theoretic amount is given instead of 40 per cent., as I mentioned. The percentage will be governed by the prevailing winds, though a perfect scale ought to be adjustable to the strength of the wind for each occasion, were it practicable. If much strong racing weather, then 50 per cent. If much light summer weather, then 40 per cent., and so on. For our New York climate 50 per cent. has recently been reduced to 40, as the former tax was deemed too heavy for the average weather.

Time is computed in any scale or under any formula by starting with some speed of which a boat is assumed to be capable, and with variations in that assumption will occur variations in the scale also, after interpolating for other sizes of boats. Thus Kemp assumes a boat 64ft. long, able to make 10 knots, and upon that deduces the speeds of other lengths as per $\sqrt{L}$ theory. Had he started with 10½ knots, all the scale would have been increased throughout. But for practical purposes he is as near the truth as need be with 10 knots for 64ft. Yours very truly,

NEW YORK, March 23. C. P. KUNHARDT.

THE NEW STEAMER ELECTRA.

WE glean the following concerning Mr. Elbridge T. Gerry's new yacht from the *Herald*. She is building at the Harlan & Hollingsworth yard, Wilmington, Del., from models and plans by Gustav Hilman, of this city. Conforms to Lloyd's specifications. Length on waterline is 161½ft.; beam extreme, 23ft.; depth, 13ft. 6in.; draft, 9ft. 6in.:

Her keel is of the best hammered iron 6in. deep and 2in. thick, while the stem, also of iron, is 7in. by 1¾in., rabbeted to receive the plating, and her stern frame forging is 6in. wide by 3½in. thick. The frames are of steel angles, spaced 22in., and are in one piece from keel to under side of rail, 8in. by 2¾in. The floor plates (of iron) are 21in. deep at the center and run up to the bilge to a line of double their height, with a thickness of 6-16in. under the boilers and engine and 5-16in. forward and aft of the machinery. The reverse angles in the frames are of steel, 2½in. by 2½in, by 5-16in.. every other one running to the upper deck, and one of 12in. to the cabin deck, while they are doubled under the machinery to the lower turn of the bilge. There are doubling pieces at all keelsons and stringer angles. The keelson at the center is an intercostal plate 6-16in. in thickness, 25in. wide, and runs well forward and aft. The side plates are 8in. wide by 7-16in., and are held to the intercostal by 3½in. by 3in. by 6-16in. angles, while the clips are 2½in. by 2½in. by 5-16in. The bilge keelson runs the full length of the vessel. The beams are of bulb T steel, 6in. deep by 3¾in. by 5-16in. for the upper deck, with steel stringers 22in. wide by 6-16in. thick. The deck is of 3-16in. iron plates, covered with 3in. square white pine plank, though the cabin deck is covered with 1¼in. Georgia pine, tongued and grooved. All the plating is of steel, and varies in thickness from ⅜ to 7-16in., the plates being worked flush and riveted and strapped as usual. The keel, stem and stern frame are double riveted with ⅞in. diameter of rivets, while the garboard and sheer strakes are double chain riveted with ¾in. rivets, and the balance of the outside plating is single riveted with rivets ⅝in. in diameter. There are six bulkheads made water tight of 5-16in. iron plate, which is stiffened with iron angles 3in. by 2½in. by 5-16in, every 30in., all extending from the frame up to the upper deck beams. The doors in the bulkheads will shut water tight, and can be closed from the deck.

The Electra is to have one inverted, direct acting, surface condensing, compound engine. The high pressure cylinder is 22in. in diameter and the low pressure cylinder 40in. in diameter by 26in. stroke of piston. All the journals are of such size and length as to insure uninterrupted work for any length of time without heating or needing the use of water or excessive lubrication when working at maximum speed. There is an independent condenser not built in the frame of the engine, and independent air, circulating and feed pumps, and also an independent steam, fire and bilge pump, with a blower, which will do much to secure proper ventilation, in addition to its providing for a good draft. The propellor is 8ft. in diameter, 13ft. pitch, and capable of 160 turns a minute. Steam is provided by two cylindrical steel shell boilers of the Scotch pattern, each 10ft. 6in. in diameter by 11ft. long, with two furnaces 42in. in diameter. Each boiler has from 1,500 to 1,600 sq. ft. of heating surface. The smokestack is double and fitted with a hood.

On deck forward is a house 27ft. long, 9ft. inside, and another aft 24ft. long. Built of iron with mahogany casing. Pilot house located in forward structure and a bridge with a wheel is arranged in connection. Remainder devoted to stateroom with companion leading below. Under deck are the usual quarters for crew and rooms for mate and pilot. Opposite a family stateroom. Abaft this the main stateroom of the owner 13ft. long and the whole width of the vessel. Connected with this is a ladies' room 9x11ft., with bath and toilet. A passage way leads along the boiler and engine space to the accommodations aft. On port side is the engineer's room, on starboard side the galley, which is 9ft. long. Beyond these is a large dining saloon 17ft. long, then a companion with guests' rooms on either side, with cook and steward, wine lockers and store rooms in the stern. Such is the huge white elephant building for Mr. Gerry in the competition for making the greatest show afloat with the least return in sport or pleasure for the largest outlay of money. What the owner will do with such a vessel is a problem, and that there is no economic relation between her size and cost and the sport to be derived from her possession is quite certain. She is not to be classed as a yacht but as a steamship.

THETIS.—The Boston *Herald* gives the following particulars: Mr. Henry Bryant will command his cutter Thetis, and Mr. William Crocker will be his mate. In important races, Mr. Aubrey Crocker, the successful captain of the yacht Shadow, who divides with Capt. Watson the honor of being the most skillful navigator along the south shore, will handle the Thetis. Length over all, 72ft.; length on loadline, 64ft.; breadth, extreme, 19ft.; depth, 9ft. 6in.; draft, 8ft. 6in.; draft, with centerboard, 18ft. 6in.; keel of oak, sides 26in., moulded 26in.; stem of oak, sided at head 11in., sided at keel 8in.; post of oak, sided at head 11in., sided at keel 4in.; floors of oak, sided at head 4in., moulded 6in.; first futtocks of oak, sided at head 4in., moulded 6x8in. First futtocks are in one piece from keel to gunwale; top timbers, sided 4in., moulded 5x8in.; stanchions of locust, sided 4in.. moulded 8in.; clamp, in one length, 64ft. of yellow pine, 12x8in.; shelf, in one length, 64ft., of yellow pine, 13x8in.; beam partners of oak, moulded and sided, 6in.; beam of hackmatack, moulded 6in. and sided 9x5in.; coamings of mahogany, 8x12in.; bilge strakes, one length, 4x4in., square bolted and clinched with ⅝ iron; twelve iron floors, 3x2in., arms 3ft. 6in.; ten iron floors, 3x2in., arms 1ft. 6in.; covering board of oak in one length of 65ft., 9in. wide and 2¼in. thick; lock strake, 65ft. long and 3½x2½in.; beam ends bolted through the lock strake and shelf, ⅝ iron; steering gear, quadrant and horizontal wheel. Chain plates and union plate extend 5ft. below the gunwale, 2¾x½in. between plank and timbers; centerboard case, first rim, 6x12in.; second rim, 4x12in.; rest, 3x10in.; rails of oak, 64ft long and 5x2in.; deck plank of selected pine, 2x2in.; outboard planking of hard pine, 2½in. thick; garboard and next strake of oak, in one length; garboard, 3in. on lower edge, the bottom treenailed with inch treenails all through and wedged in and out; bottom plank, butt bolted with ½in. copper through and clinched; topsides and wales, square fastened with galvanized spikes, 6x⅜in.; clamp and shell bolt of ⅝ galvanized iron; lead keels, weighing 20 tons, bolted with 1⅛ yellow metal between each frame; room of frames, 18in.; centerboard, 19ft. 6in. long, 10ft. deep, 3½in. thick; mast, 71ft. long; at partner, 16in, in diameter; main boom, 61ft. long; at sling, 15in. in diameter; gaff, 35ft. long; bowsprit, outboard, 27ft. long, 13x13in. topmast, 35ft. long, 9½in. at cap; skylights and companion of the McIntyre patent, after skylight and cockpit circular, and made of St. Domingo mahogany. The Thetis will carry two boats, one a Spanish cedar gig 19ft. long, 4ft. 3in. wide and 29in. deep, and the other a working boat 14ft. long, 4ft. 6in. wide and 22in. deep.

LAGONDA.—Mr. J. C. Hoagland's new steamer was launched April 8, from Mumm's yard, Bay Ridge. She is 130ft. on deck, 120ft. on water line, 19ft. 6in. beam and 10ft. hold, with 6ft. 6in. draft. Will receive her machinery in Wilmington from designs by Chas. Emory. Cylinders 14 and 24in. by 16in. stroke. Boiler of the Scotch pattern, 9 by 9ft. 6in. Space occupied fore and aft by the motive power, 26ft. Engine will be forward of the boiler. Bunkers for 40 tons. Flush deck with open iron round rail. Pilot house forward 15ft., feet long. Least freeboard 5ft. Rigged as a schooner. Accommodations consist of a saloon abaft the mainmast, stateroom each side of companion and a large owner's room with bath, etc., forward of saloon. All forward of machinery given up to crew and officers. Cabins finished in bird's eye maple and mahogany. Eighteen 9in. lights each side.

SINGLEHAND SAILING.—Our Paris contemporary, *Le Yacht*, is republishing, with illustrations, the series of articles on singlehand sailing we wrote for these columns some time ago. *Le Yacht* is pleased to remark: "The articles denote a deep sympathy and love for a boat on the part of the author, and a complete practical experience. The composition of those articles is as fascinating as instructive, and for this double reason we believe them well worth reproduction, conserving their original character, which gives such picturesqueness to the description, and grace of style of the author."

ATHLON.—The new deep centerboard, built by John Mumm, of Bay Ridge, for Dr. J. C. Barron, has been launched and is fast fitting out for the campaign. In point of model she is clean cut and fair and gives promise of a good record. In point of rig she is a cutter in principle so far as Bay Ridge dared venture upon such an innovation. The forestay has been carried out 6ft. on bowsprit and it is hard to say whether she carries jib and flying jib or foresail and jib. This will put the skipper in a quandary as to what plan to show in a breeze. Jib only would be almost too small and far out ahead, and yet foresail only would be a ludicrous and lubberly arrangement. When Athlon's rig was determined upon, it was supposed to be something original, as Bay Ridge is constitutionally opposed to learning too much at a jump. The sloop being now in bad odor, was no longer wanted, and the cutter too advanced for the local mind. Besides, all good patriots disdain to copy the cutter outright, though they come it nevertheless in the end. So things were split up half way aboard the new Athlon with the result that she is a half breed in rig with few of the good attributes of the cutter, but enough of the sloop left as salve to the good patriot and in deference to the love of old. It is more than likely that Athlon will soon discover in her racing career the value of shifting jibs to adapt her sail plan nicely to the occasions, and that in a season or two the half-hearted copy of the cutter will give way to an arrangement more creditable to all concerned. If course this is high treason to tradition, but Athlon will come out a full fledged cutter in due season, as all smart racers are sure to do with the acquisition of greater experience. Athlon is 58ft. over all, 51ft. 6in. on water line, 17ft. 4in. beam, 7ft. 6in. hold, and 6ft. draft without board. Keel post and stem of oak. Frames of hackmatack 3in. sided and 7in. moulded at heel, reduced to 4in. at head. Plank of 2¼in. yellow pine with oak topstreaks. Decks of 2¼in. square white pine. Cabin house is the stereotyped, 15in. high and 24ft. long; locust stanchions. Fastenings galvanized nail work. Shelf clamp 4x6in., through riveted. Finish in mahogany. Spars as follows: Mast, over all, 62ft.; deck to hounds, 49ft.; masthead, 7ft.; topmast, 35ft.; boom, 50ft.; gaff, 31ft.; bowsprit, outboard to stay, 24ft. Accommodations below include small stateroom each side the companion ladder, saloon 12ft. square, owner's room 7ft. long, with bathroom on starboard side forward and guests' room to port, also pantry, kitchen, etc. Finish in white ash with mahogany trimmings.

NEW SLOOP.—Miller Bros., of Chicago, have a new sloop under way, from a model by Cuthbert. According to the Toronto *Mail*, she is 50ft. over all; length on water line, 45ft.; length on keel, 40ft.; beam extreme, 14ft. 10in.; depth amidships, 5ft. 6in.; draft aft, 4ft. 6in.; draft forward, 1ft. 6in.; length of centerboard, 12ft. 2in.; drop of centerboard, 4ft.; frames, double, of oak, 5in. moulded 2in. sided; 21in. between centers; keel, oak, 9in. moulded, 6½in. sided; plank sheer of oak, 9 by 3; mast, deck to cap, 48ft.; mast deck to hounds, 43ft.; mast doubling, 5ft.; topmast, extreme length, 24ft.; bowsprit, outboard, 24ft.; inboard, 4ft.; mainsail hoist, 33ft. 3in.; mainsail foot, 44ft.; mainsail after leach, 51ft.; mainsail on gaff, 24½ft.; jib after leach, 39ft.; jib foot, 28ft.; jib on stay, 48ft. 3in.; mast from stem, 14ft.

NEW BOOKS.—From Norie & Wilson, 156 Minories, London, we have received a neat little volume containing all the laws and regulations governing the ownership of yachts in Great Britain. It is entitled, "Yachting Under Statute," and being compiled by R. A. B. Prested, a lawyer versed in maritime affairs, supplies a want very generally experienced. No owner abroad can any longer plead ignorance of the law, as the little volume covers the whole ground including interpretations of the courts as to responsibility, insurance claims, shipping articles, liabilities, navigation laws of the various authorities controling the chief rivers and harbors, etc. Laws relating to yachting in America are much simpler, but still a similar publication on this side of the Atlantic will be needed before long, as the value of property at stake is increasing very fast.

NEWARK Y. C.—Officers for the year: Commodore, E. M. Grover, Vixen; Vice-Commodore, J. W. Williams, Onward; Treasurer, C. E. Cameron, Emmy C.; Secretary, A. F. Adams, Rambler; Measurer, G. Hartung, Jr., Maud L.; Regatta Committee, C. E. Cameron, Chairman; A. F. Adams, Secretary; J. Skellenger, B. H. Price and E. M. Grover. Opening race on Decoration Day. June 16, open match, free to all. Six classes cabin sloops, jib and mainsails over 24ft., over 20ft., and under 20ft.; cats over 18ft., under 18ft. Prizes, $20 cash, with entrance $3.

SOUTH BOSTON Y. C.—Has 158 members and 9 honorary members. Expenditures for past year $4,869. Has joined the New England Y. R. A. Officers for the year: Commodore, Henry Hussey of the Nora; Vice-Commodore, J. W. Sherman, Jr., of the Echo; Fleet Captain, C. L. Braman of the Zulu; Measurer, James Bertram of the Sylvan; Secretary, John Winniatt of the Blush; Treasurer, Thomas Christian. Regatta Committee—S. A. Crowell, John Bertram, C. McKenna, H. J. McKee, J. E. Chandler, R. V. King, F. G. Cooley.

AMERICAN Y. C.—The steam yacht club has elected the following officers for the year: Commodore, G. S. Scott, Viking; Vice Commodore, A. De Cordova, Promise; Rear-Commodore, C. F. Timpson, Julia; Treasurer, W. B. Dowd; Secretary, H. A. Taylor. Trustees—J. A. Bostwick, Orienta; J. C. Hoagland, Lagonda; H. A. Taylor, Sphinx; A. De Cordova, Promise; C. F. Timpson, Julia; F. R. Lawrence and W. B. Dowd. After making first payment for new harbor at Charles Island, the treasurer reports $16,000 on hand.

DORCHESTER Y. C.—Has 227 members. Fleet comprises 36 sloops, 45 cats, 2 cutters, of which 32 are keels. Club will join New England Y. R. A. Expenses last year were $460. Officers elected: Commodore, S. P. Freeman; Vice-Commodore, Dr. C. G. Weld; Secretary, Edward G. Chase; Treasurer, C. H. Whiting; Measurer, Hartford Davenport. Directors—W. H. L. Smith, C. Barnard, C. H. Nute, Dr. L. B. Shepard. Regatta Committee—S. G. King, C. H. Whiting, Erastus Willard, H. B. Callender.

ORION.—This historic cutter, in which Mr. R. T. McMullen made the memorable voyages subsequently transferred to print in the "Cruise of the Orion," etc., and in the columns of FOREST AND STREAM, is now offered for sale, as her owner is obliged to retire from active sea life. She is of twenty tons, strongly built of hard wood and copper fastened, looks like a new vessel and likely to last another fifty years. Thoroughly rigged and equipped, capable of navigating round the globe.

THE NOANK SCHOONER.—Dimensions of Mr. H. D. Burnham's new schooner building by Palmer, of Noank, are as follows: Over all 115ft., beam 23ft., hold 10ft., draft 12ft. She is a keel vessel of wholesome form. Working sails 13,000sq. ft., lower sails of 14in. No. 1 duck. Spars as follows; Mainmast 87ft. 6in., foremast 86ft., mainboom 70ft., maingaff 33ft., foreboom 32ft. 6in., foregaff 29ft., bowsprit outboard, 21ft., flying jibboom 25ft. outside the cap, fore and main topmasts 40ft.

OSHKOSH Y. C.—We have received the new club book, containing list of 128 members, constitution and by-laws, etc. The club now measures by multiplying mean length by greatest girth wherever found. Club signal is a red pointed burgee with white Maltese cross. Officers: Commodore, Geo. W. Burnell; Vice-Commodore, John Dickinson; Fleet Captain, A. H. Woodworth; Secretary, G. M. Hasbrook; Treasurer, Frank Heilig, and Measurer, S. P. Gary.

IMMENSE DRAFT.—What length measurement leads to, is shown in the boat J. H. Buckley, of Boston, has built for himself this winter. Length, 24ft.; on loadline, 21ft.; beam, 5ft., and draft, 6ft. On keel is a lump of 900 pounds and 1,500 pounds inside. Hoist, 18ft.; boom, 23ft.; gaff, 14ft.; bowsprit, outboard, 9ft. Six feet draft on 21ft. loadline! Can people close their eyes to the pressure upon model exercised by the length rule in face of such evidence?

MAGGIE.—This beautiful cutter has been receiving more lead on the keel, and with a larger rig this season, ought to make it pretty warm for all comers, including the sloop Vixen. It will be remembered that Maggie does all the pointing you can ask for but failed to foot like Vixen for want of sail, though she has shown herself good enough as it is, for all the rest who tackled her.

CLEVELAND Y. A.—Officers for the year: Geo. W. Gardner, Commodore; P. W. Rice, Vice-Commodore; W. H. Eckman, Rear Commodore; J. Geo. Downie, Secretary; H. G. Phelps, Treasurer; Henry Gerlach, Measurer; B. Lyman, Surveyor. Executive Committee—R. E. Mix, W. Scott Robinson, Joseph Corrigan, H. D. Coffinberry and N. P. McKean.

PETREL.—We hear this smart cutter has been sold to Mr. Stevens, of Hoboken. We hope the Petrel will be put in thorough condition and ship a live crew of lithe and quick-witted amateurs, in which case Petrel ought to make a clean sweep of her class from here to Maine. Those who really know the boat concede her to be the fastest of her loadline.

QUINCY Y. C.—Will join New England Y. R. A. Officers for the year: Commodore, George W. Morton; Vice-Commodore, C. F. Adams, 3d; Fleet Captain, P. B. Turner; Treasurer, H. H. Sheen; Secretary and Treasurer, N. B. Furnald; Regatta Committee, B. F. Bass, G. C. Adams, George H. Hitchcock and J. E. Maxin.

STEAM LAUNCHING.—Wood Brothers, of East Boston, have been busy with launch work all winter. They have nearly completed one of 50ft., and will start another for Mr. S. Pickering, to be 37ft. long, 33ft. 6in. water line, 7ft. beam, 8ft. depth, 4 and 7×7 compound engine and coil boiler.

ANOTHER CUTTER.—They are turning them out fast in the East, by the dozen in fact. Jacob Rood, of East Boston, is at work on a cutter 31ft. over all, 26ft. loadline, 7ft. 8in. beam, and 6ft. draft. Sails by McManus.

RACING UNDER STEAM.—The secretary of the American Y.C. has issued a letter proposing a series of steam races this year, open to all clubs, and suggests correspondence on the subject from all interested so as to make suitable arrangements for the equitable test of steam tonnage.

SEAWANHAKA CORINTHIAN Y. C.—Hereafter five professionals will be allowed for schooners, and four for first-class cutters in the Corinthian races. This is on the English plan, and will be productive of more entries, as large vessels are difficult to man with Corinthians throughout.

XANTHE.—Is the name of a new steam yacht built by the Herreshoffs, of Bristol, for Mr. J. B. Watkins, of Lake Charles, La. Over all, 45ft.; water line, 41ft.; beam, 9ft.; depth, 4ft. 3in., and draft, 2ft. 9in. Cylinders, 4½ and 7×7in. stroke, taking steam from a coil boiler.

ROYAL BERMUDA Y. C.—Officers for the year: Commodore, Staff Commander E. Scobell Clapp, Royal Navy; Vice-Commodore, Lieut. P. C. Gubbins, Royal Engineers; Rear-Commodore, James L. Trimingham. Committee of Management—R. D. Darrell and C. H. Santi.

SPRING CRUISING.—On a recent cruise the cutter Surf, 35ft. loadline, ran with quartering wind from Oyster Bay to New London in 12h. 35m., from anchor to anchor; distance 95 nautical miles. Next day, close-hauled from New London to Northport during daylight.

LYNN Y. C.—Officers for the year: Commodore, E. C. Neal; Vice-Commodore, J. F. Lee; Fleet Captain, W. S. Doak; Secretary, W. B. Newhall; Treasurer, C. B. Taylor; Regatta Committee, W. M. Rand, W. Hawkes, C. H. Lockhart, W. B. Newhall and F. S. Newhall.

ON SPECULATION.—D. J. Lawlor has put up a schooner for sale. Length, 80ft.; beam, 18ft.; depth, 8ft. Michael Horton has got out a keel sloop 25ft. long, 9ft. beam, 5ft. 6in. deep, and 5ft. draft. Both are offered to buyers.

ANOTHER GOOD RECORD.—*Editor Forest and Stream:* The record of the Gleam is no better than that of the Boston sloop Hera. She won four races; all that she started in, and the prizes amounted to $1,600.—C. G. W.

SURF.—This seven-ton cutter has been in commission, and cruising since early April. She was the first to show a yacht's burgee in the Sound ports. Had some strong weather, but the cruising was enjoyable nevertheless.

THOUGHT SO.—Last year Mr. J. E. Bake, of Harrison Square, Mass., had a huge catboat built, over 30ft. long. She is now to be altered to a sloop. Simplicity is one thing, practical economy a much better thing.

"HUNT'S" FOR APRIL.—The last number of *Hunt's Magazine* is more than usually full of interesting yachting sketches, among which we note with pleasure the accounts of several cruises in small boats.

"NAUTICAL MAGAZINE".—The April number of this London publication contains some instructive articles on compulsory pilotage, stability of ships, navigation, and merchant shipping affairs.

BOUND THIS WAY.—New York gentlemen have bought the Boston keel sloop Gracie M., hauled out at Hutchings & Frior's, City Point. She is to receive an overhaul and have her name changed.

NEW CAT.—Harris, of South Boston, has launched a catboat 21ft. 3in. over all, 17ft. 10in. loadline, 8ft. 4in. beam, 18in. draft, 8in. forward. Hoist of mainsail, 19ft. 6in.; boom 22ft., gaff 13ft. 6in.

ANOTHER CAT.—Borden, of South Boston, is building for J. P. Bullard a cat 19ft. over all, 15ft. 6in. loadline, 7ft. beam, and 14in. draft without board. Hoist 14ft. 6in., boom 19ft., gaff 11ft.

NEW SCHOONER.—Mr. H. W. Collender is having a keel schooner built at Bay Ridge. Length 87ft., waterline 76ft., beam 21ft. 4in., depth 9ft. 6in., draft 8ft. 10in. To be named Speranza.

NEW CUTTERS.—Toronto is building a smart 5-ton cutter, of which particulars later. Quebec gentlemen advertise for a 20-ton cutter to be delivered in Quebec from England.

NICE REGATTA.—The Boston schooner Gitana won the big purse for yachts over thirty tons on a sail over, the only other entry being the small English cruiser Gladys.

CRICKET.—This Boston sloop has become the property of J. Q. Adams, who proposes to put her in racing trim. She is 29ft. 4in. loadline, 11ft. beam, and 7ft. 6in. draft.

NEW YAWL.—Lawley & Son are to build a yawl-rigged yacht 24ft. loadline, 6ft. beam, and 5ft. draft, with 4 tons iron on keel, for Mr. Wellman. She will be named Fad.

HULL Y. C.—The appointments for the season will be found in our fixtures. They include a five days' squadron cruise in midsummer.

SMALL CUTTER.—Mr. John W. Truesdell, of Syracuse, is having a 20ft. cutter built. McManus & Son, of Boston, will supply the rig.

NEW CUTTER.—H. A. Davis has laid the keel for a 30ft. stunner of the modern style, at his yard, foot of Marion street, East Boston.

THE PILOTAGE BILL.—Remarks will be found on the editorial page, which we trust may have the desired effect before Congress.

HUNTRESS.—Webber & Son, of South Boston, will launch a new sloop 26ft. 8in. long, 10ft. 2in. beam, with 1,000lbs. on the keel.

SARACEN.—This is the name of Mr. Fowle's new 22ft. cutter built by Lawley & Son. She is a promising craft.

RAJAH.—This is the name of the new cutter building in Greenpoint for Com. Beecher, New Haven Y. C.

SAPPHO.—This famous schooner is now in the hands of Mr. W. F. C. Wigston, and lies off Cowes, England.

NEW ENGLAND Y. R. A.—First annual meeting at Parker House, Boston, April 23.

NAUTILUS.—This 40ft. schooner, of Boston, is to have 1½ tons iron on the keel.

LESLIE.—This Boston sloop, 22ft. long, will receive new iron keel.

MONTAUK.—Arrived at Kingston, Jamaica, April 9. All well.

AMY.—This Boston sloop, of 33ft. will receive 1,000lbs. on keel.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

E. A. R., Baltimore, Md.—Can find no trace of it.

R. T. D., New York.—See answer to "Razor" this week.

J. L. N., Philadelphia.—The cheapest and best way would be to take it to a gunsmith.

W. A., Bay View, Mich.—Grease is a lubricant. Tallow, either of beef or mutton, is very good.

W. M. B., Philadelphia, Pa.—The gun you mention is a good and safe arm, and worth the price asked for it.

C. H. C., Philadelphia, Pa.—"Training vs. Breaking" will tell you how to teach your dog to retrieve. We can send it. Price $1.

C. H. S., Hartford, Conn.—Such a canoe should need no ballast besides the weight of her crew. The boat is smaller than is customary for sailing.

W. T. B., Brooklyn.—The gun you mention is a good shooting gun, and the other is also good. We cannot recommend one over the other. You had better consult a gun dealer.

RAZOR, Wrightsville, Pa.—1. It will be safe to show her. 2. See FOREST AND STREAM, Feb. 2, 1882, for article on conditioning dogs for bench shows. 3. An ordinary collar and chain will answer every purpose.

W. G. D., Boston, Mass.—1. Yes. 2. Generally from nine to twelve months old. 3. We prefer to commence training a dog when two or three months old; six months is not too old, if he has not been tampered with.

WALLIN.—1. A mature pure white setter we have never seen, although we have seen many that came very near it. If your bitch is absolutely free from any other color, we should like to see her, as she would be quite a curiosity. 2. The color is not an indication of impure blood.

E. G. B., New Britain, Ct.—Stonehenge says that the coat of the cocker spaniel is "flat, slightly wavy." The standard of the American Cocker Spaniel Club says, "Straight or wavy, but without curl," and that of the International Cocker Spaniel Association says, "Straight or wavy, but without distinct curl."

W. P. C., Elmira, N. Y.—1. The game protectors are appointed by the Governor. 2. At request of protector or other officer, district attorney is required to prosecute, and is empowered to make requisition on county treasury for necessary funds. We can send you the law in full; price twenty-five cents.

M. A. B., Olean, N. Y.—Is there any law compelling owners of dams, in the State of New York, to build fishways over them? Ans. We were of the opinion that such a law was passed but have failed to find it. We wrote to Gen. R. U. Sherman, secretary of the Board of Fish Commissioners, and he replies that he knows of no law

this kind except in the case of the waters flowing from Cayuga Lake into Lake Ontario. In 1862 a law was passed covering the dams in these waters, but we do not think that a general law covering the whole State was ever passed. All the dams on the Seneca and Oswego rivers belong to the State and fishways were placed on all except two of them last year.

A. M. H., North Springfield, Mo.—Where can we of this region be t obtain brook trout to stock our streams, and which is best to place in them, the spawn or the live fish? Ans. Perhaps the Fish Commissioners of Missouri may have them. They are John Reid, Lexington: J. G. W. Steedman, 2,803 Pine street, St. Louis, and Dr. J. S. Logan, St. Joseph. If they have none, you may write to B. F. Shaw, Anamosa, Iowa.

IGNORAMUS, St. Johns, Mich.—There is no such book published at present. The papers on "Canoe Building" now appearing in FOREST AND STREAM will be published in book form when completed. 2. The "Long Lake" is not a canoe, but a boat used by the guides in the Adirondacks. They are about 16ft.×33½ft., sharp at both ends. 3. The Pearl, and also the canoe spinaker will be described in "Canoe Building" shortly.

C. D. W., Portland, Mich.—Will you kindly inform me as to the best works extant on ornithology, also cost of same? Also best work for a beginner to study? 2. Is it good or bad shooting to put 225 pellets inside a 30-inch circle 40yds. distance, load 1⅛ ounces No. 8 shot? Ans. We regard Coues's "Key to North American Birds," price $7, as the most useful book for a beginner. There are many other works varying in price from $1,500 to $2.50. 2. Very good.

RO, Detroit, Mich.—1. Is it possible to procure a good serviceable camera (nothing fancy) with a lens capable of doing good work on interiors, exteriors, landscapes, machinery, etc. 2. What lens for above purpose would you recommend? 3. What would be reasonable price for such an outfit? 4. Will single achromatic lens do good square work on machinery, interiors, etc., or will outside lines be curved? Ans. 1. Yes. 2. A platyscope costs about $30. 3. Camera for view 5x8 and above, lens about $90; with single achromatic lens about $65. 4. No; lines will be curved. A double lens only will take straight lines. We send you some views taken with single lens.

E. E. E., Greenport, L. I.—Where can I obtain Schultze gunpowder, and also is the Col. Hawker ducking powder a good article? I use breechloaders, and my shooting is mostly ducking at long range. I have found Hazard's DS. to be quite good, but I want a strong clean powder. Ans. The Schultze powder cannot be obtained in this country. Hawker ducking powder is made by Curtis & Harvey (English), and but little of it is imported. Can sometimes be procured, but not often.

C. H. C.—1. To settle a dispute please tell us whether good English guns can be bought for less money than American guns; a friend says that they can. 2. Same party says that in order to be a good snap shot one must commence shooting that way. I said it was the wrong way for an amateur to practice at first, that "deliberate shooting" was essential to make a good snap shot. Please give us your opinion. Ans. 1. Yes. 2. It takes long practice to become a good snap shot, but it comes more natural to some than others.

W. H. D. B., Montrose, Pa.—1. What do you consider the best length of barrels, weight and size bore, for a double-barreled shotgun, for all kinds of shooting? 2. Should it be choked or cylinder bore? 3. What is your opinion of an English double-barrel gun (new) with all improvements, laminated barrels, that a dealer can afford to sell for $25, and is such a gun preferable to an American gun (new) that could be bought at the same price? 4. Do you consider a .32-caliber Winchester rifle suitable for deer shooting, if not, what caliber would be allowable for shooting squirrel, duck and deer? Ans. 1 and 2. We should select an eight-pound, 12-gauge, 30-inch gun, right hand cylinder, left modified choke. But it is a matter of fancy very largely. 3. We have no opinion to offer, and can tell nothing from the form your question takes. 4. Depends on the powder charge. .32-caliber is large enough, if you can place the balls on the right spot. It would probably be effective within ordinary distances.

C. L. W., Cambridge, Mass.—Will you please inform me if there is any way of catching the common black turtle found in rivers and fresh water ponds? I have tried several ways but have always failed. Ans. If you mean the snapping turtle they can be found on land only when they are laying their eggs in May and June. At other times they can only be taken with baited hooks or spears, as they never sun themselves on logs. The smaller water turtles can be netted, or if the object is to get rid of them, they can be shot, when on the logs, with a rifle.

R. T., Topeka, Kan.—1. Does chilled shot make a better pattern than soft shot? 2. Is a jug choke as good as one bored cylinder to within 1 or 1½in. of muzzle? 3. How many No. 5 pellets (172 to ounce) 1⅛ ounces to charge, can be placed in 30-inch circle at 40yds.? 4. Would you advise a jug choke? 5. My gun gives as good penetration at 30yds. with 3¼ drams powder and 1⅛ ounces shot as 4 drams powder and 1⅛ ounces shot; in fact, it gives a better penetration, the 3¼ drams and 1⅛ ounces than 4 drams and 1⅛ ounces. I would like to know the full amount a 12-gauge will burn and why my gun will not burn more powder? Ans. 1. Chilled shot makes a better pattern because fewer of the pellets lose their spherical form in passing through the barrel. 2. No. 3. About 140 pellets. 4. No. 5. The proper charge for a gun is the one that it will do best execution with: overloading is to be avoided as much as underloading.

HUMPHREYS' HOMEOPATHIC VETERINARY SPECIFICS

FOR THE CURE OF ALL DISEASES OF HORSES, CATTLE, SHEEP, DOGS, HOGS, and POULTRY.

S. ALLCOCK & CO.,

Fish Hook & Silk Worm Gut M'f'rs.

Redditch, Eng., and Murcia, Spain.

We beg to call the attention of the trade to the fact that our hooks are made from very best spring steel, and that they obtained gold medals at Paris, Berlin, Norwich, Wurzburg and Calcutta, and the hightest awards at Sidney, Melbourne, Adelaide, South Africa, Toronto, London and other exhibitions. We are the only house either in Redditch or New York that has a manufactory in the town of Murcia, Spain, for the production of all kinds of silk worm gut, for which we received the highest award, viz.: a silver medal at the Murcia exhibition.

Buy Allen's Brass-Shell Swage.

You can swage a shell to its original size in one minute. Price $1. No more tight shells. No more profanity. For sale by the trade, and by F. A. ALLEN, Monmouth, Ill.

Harrison's Celebrated Fish Hook.

Registered.

Trade  Mark.

Whereas, It having come to our notice that some unprincipled house, to gain their own unworthy ends, and to attempt to damage our good name having spread reports to the effect that the manufacturers of the above hooks are defunct, we now take this opportunity of informing the American and British public that such reports are utterly false. The same efficient staff of workpeople is employed as heretofore, and we challenge the world to produce a fish hook for excellence of temper, beauty and finish in any way to approach ours, which are to be obtained from the most respectable wholesale houses in the trade.

Signed, R. HARRISON, BARTLEET & CO., Sole manufacturers of Harrison's Celebrated Fish Hooks, Redditch, England. (December, 1882.)

Manufacturers also of Fishing Tackle of every description. Sewing and Sewing Machine Needles.

SOMETHING NEW.

Sportsman's Fishing or Camping Tents

WITH AWNING.

D. BROWER, 22 College Place, N.Y. City, Agent for Pennsylvania, N. Y. and N. J.

Freeport Machine Co., Freeport, Ill., U. S. A.

KYNOCH'S

Patent "Perfect" Brass Shells,

MANUFACTURED BY

KYNOCH & CO., Birmingham, Eng.

These shells are made of extra fine thin pliable metal, with reinforced base; are adapted to either Winchester or Wesson No. 2 primers. Can be reloaded as often as any of the thicker makes. Cost only about half as much. Weight less than paper shells. They shoot stronger and closer, and admit of a heavier charge, as owing to the thin metal, inside diameter is nearly two gauges larger. Load same as any brass shells, using wads say two sizes larger than gauge of shells. Or can be effectually crimped with tool and straighten out to original shape when discharged. The crimping tool also acts as a reducer, an advantage which will be appreciated by all experienced sportsmen. Sample shells will be mailed (without charge) to any sportsmen's club or dealer, and prices quoted to the trade only. For sale in any quantity by gun dealers generally, or shells in case lots only, (2,000), and crimpers not less than one dozen, by

HERMANN BOKER & CO., Sole American Agents,

101 & 103 Duane Street, New York.

Antelope and Deer of America.

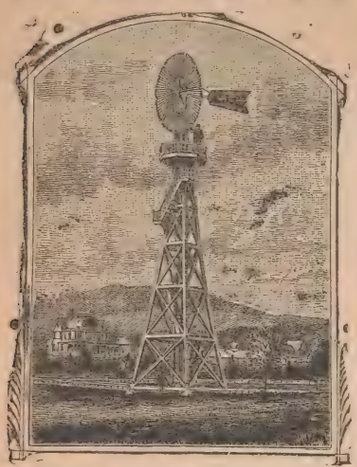
—BY—

JOHN DEAN CATON, LL.D.

This work is the most important publication ever printed on the subject.

The subject is a capital one. These animals are the most interesting of all our American game.

It takes a deer hunter to write of deer; and he must bring to the work the same enthusiasm that prompts him to carry the rifle day in and day out in pursuit of the game. There is no need of Judge Caton's telling us in the preface that deer hunting has always been his favorite diversion, for the reading of his book shows us that.



The characteristic of the book is that it is, all the way through, a statement of facts which have been learned by the most patient and industrious study of these animals. Judge Caton has for many years kept in domestication the American antelope and all of the American deer, save the moose and the two species of the caribou. The chapters are devoted to the following: The Antelope, Moose, Elk, Woodland Caribou, Reindeer, Mule Deer, Columbia Black-tailed Deer, Virginia Deer, Barren-ground Caribou, Reindeer, Acapulco Deer.

"The Antelope and Deer of America" is a large volume of 426 pages, illustrated with more than fifty illustrations (most of them from photographs), bound in cloth. The former publishers sold the book for $4.00.

We have reduced the price from $4 to $2.50.

Forest and Stream Publishing Co., 39 Park Row, New York.

STORM-DEFYING WINDMILL

For pumping water for rural residences, fountains and fish ponds. A. J. CORCORAN, 76 John street, New York City.

FITS

A Leading London Physician establishes an Office in New York for the Cure of EPILEPTIC FITS.

From Am. Journal of Medicine.

Dr. Ab. Meserole (late of London), who makes a specialty of Epilepsy, has without doubt treated and cured more cases than any other living physician. His success has simply been astonishing; we have heard of cases of over 20 years' standing successfully cured by him. He has published a work on this disease, which he sends with a large bottle of his wonderful cure free to any sufferer who may send their express and P. O. Address. We advise any one wishing a cure to address Dr. AB. MESEROLE, No. 96 John St., New York.

PHOTOGRAPHY MADE EASY.

The Tropicals (dry plates) are the only ones that can be used succesfully in warm weather without ice.

Remember the negatives may all be developed on your return home.

The lightest, most complete and practical of Amateur Equipments. Price $10 and upward. E. & H. T. ANTHONY & CO., 591 Broadway, N. Y. Send for catalogue. Book of instructions free. *Forty years established in this line of business.*

By S. T. HAMMOND,

(Kennel Editor FOREST AND STREAM.)

THIRD EDITION NOW READY.

A complete guide for the amateur dog-trainer. System endorsed by the practical success of hundreds who have adopted it. Sent postpaid on receipt of $1.00.

Forest and Stream Publishing Co.

EXCELSIOR BAIT PAIL.

(Patented). The Fisherman's Friend.

There is an inside pail which can be removed and placed in the water the same as a "fish car," thus keeping the bait alive for an indefinite time. The pan which fits in the inside pail can be raised and lowered, thus affording an easy selection of bait without wetting the hand. The bait is kept alive during transportation (the critical time) by the continuous flowing of the water through the perforations, thus causing a never failing supply of fresh air. For sale by all dealers, or will be sent on receipt of price. 8 Quarts, $2.50 each; 12 Quarts, $3.25 each. Manufactured only by DE LA VERGNE & CO., 176 Chambers street, New York.

PURIFIES as well as Beautifies the Skin.

Removes Tan, Pimples, Freckles, Moth Patches and every blemish on beauty, and defies detection. It has stood the test of thirty years, and it is so harmless we taste it to be sure the preparation is properly made. Accept no counterfeit of similar name. The distinguished Dr. L. A. Sayre said to a lady of the *haut ton* (a patient):—"*As you ladies will use them, I recommend 'Gouraud's Cream' as the least harmful of all the skin preparations.*" One bottle will last six months, using it every day. Also Poudre Subtile removes superfluous hair without injury to the skin.

MME. M. B. T. GOURAUD, Sole Proprietor,
48 Bond street, N. Y.

For sale by all Druggists and Fancy Goods dealers throughout the U. S., Canadas and Europe. Also found in N. Y. City, at R. H. Macy's, Stern's, Ehrich's, Ridley's, and other Fancy Goods Dealers. Beware of base imitations. $1,000 reward for arrest and proof of any one selling the same.

The English "Fishing Gazette."

Devoted to angling, river, lake and sea fishing, and fishculture.

Every Friday, 16 pages, folio, price 2d.

Volume VI. commenced with the number for January 7, 1882.

EDITOR—R. B. MARSTON

Free by post for one year for 12s. 6d. (say $3.20) to any address in the United States.

Sent direct from the office for any portion of a year at the above rate. U. S. postage stamps can be remitted, or money order payable to Sampson, Low, Marston & Co., the proprietors.

Contains special articles on all fresh and salt water fish and fishing; reports of the state of the rivers; reports from angling clubs; fishculture and natural history; where to fish; angling notes and queries; angling exchange column; notices of fishing tackle, books, &c., and other features.

A copy of the current number can be had (post free by sending six cents in stamps to R. B. Marston, the FISHING GAZETTE office, 12 and 13, Fetter-lane, London.

The FISHING GAZETTE circulates extensively among anglers and country gentlemen in all parts of the Empire.

"There is a large public interest in fishing. . . . An excellent class organ."—*World.*

"One of the best authorities on these and kindred subjects."—*Truth.*

"A brighter and gayer little paper is not published."—*Mayfair.*

The FISHING GAZETTE is quoted by the *Times* and all the best papers.

One of the best mediums for

ADVERTISEMENTS

of fishing tackle makers, fishculturists, hotels and fishing quarters, whisky, waterproof fishing goods, cigars and tobacco, books of angling, and all other requirements of anglers; also for all general advertisements addressed to a well-to-do class in all par of the country and abroad.

Office—12 and 13, Fetter-lane London

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, APRIL 24, 1884.

VOL. XXII.—No. 13. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canadas. On sale by the American Exchange, 449 Strand, W. C., London, England. Subscription agents for Great Britain—Messrs. Samson Low, Marston, Searle and Rivington, 188 Fleet street, London.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices $1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted.

Address all communications,

Forest and Stream Publishing Co.

ANSWERS TO CORRESPONDENTS.

With its compact type and in its permanently enlarged form of twenty-eight pages this journal furnishes each week a larger amount of first-class matter relating to angling, shooting, the kennel, and kindred subjects, than is contained in all other American publications put together.

OFF FOR THE ARCTIC.

TO-DAY one of the vessels of the Arctic expedition sails for the North, to be followed in a short time by the other two which are to assist in the work of rescuing the Greely party. The little fleet starts under favorable auspices, and appears to be in all respects, so far as can be learned, well found in its ships, in its supplies and in its *personnel*. It will, no doubt, accomplish all that is possible, and we shall not have to record another disgraceful failure like that of Lieut. Garlington's expedition.

It had been hoped by many of those who have watched the preparations of this rescue party, that some steps might have been taken toward enlisting for each vessel a couple of woodsmen. We have urged time and again that the services of such men would save for explorers many valuable lives and much treasure. Had two such men been with De Long on his disastrous retreat along the Lena Delta, there is little doubt that the whole party would have been saved, instead of miserably starving to death. Food was all that was needed to enable them to reach a settlement, and this food was present in quantity, had there been any one in the party who understood the ways of the wilderness and of game. They passed through a region where ptarmigan were abundant, but had left their shotguns, and knew of no other means of capturing the birds; the idea of traps and snares does not appear to have entered their heads. There were plenty of reindeer in the country through which they marched to their death. They saw and shot at them, and their tracks were frequently seen, but there was no hunter in the party to kill the single deer which in all probability meant life to the hopeless, starving crew; and so in the midst of what to a man used to the wilderness would have been plenty, they struggled on a little further, and then one by one they died. The expenditure of a few dollars for the pay and equipments of a single man, such as may be found in any wild section of our country, might have saved all this loss of life.

That the landsman is a necessary part of any Arctic expedition is perfectly apparent to any one who has traced the history of the various expeditions which have tried to penetrate the mysteries of the frozen North. He knows a hundred secrets about animal life, which help him to succeed in his search for food, and can make himself a warm and comfortable shelter, where the sailor man would freeze to death.

And why should we not utilize this special knowledge, which can only be acquired by years of labor, and in the stern school of experience? Our Arctic expeditions occasionally take along an Esquimau or two, which is certainly a step in the right direction; but the Esquimau's pluck often gives out just when it is most needed, and then he becomes useless. It is hard to say why such men as we have referred to have never been employed in this most difficult work. Probably the real reason may be found in the inability of a Department to move itself out of a rut until it is absolutely forced to do so.

With the record of the Jeannette and other sadly unsuccessful expeditions before its eyes, it would seem as if the Navy Department would spare no pains to make the present rescue party successful. If the Alert, the Thetis and the Bear had each two men on board who were thoroughly familiar with the lonely, self-reliant life of a trapper and hunter, the prospects for a safe return for the members of the expedition would be much more favorable, and if, without any public announcement of the fact, the services of such men have been secured, the Navy Department is to be given credit for unusual foresight and appreciation of the progress of events.

This subject we have treated before at considerable length, and for our views upon it we cannot do better than refer our readers back to FOREST AND STREAM of May 10, 1883. We shall all of us watch the progress of the Greely rescue party with anxiety, and hope that before many months the prisoners in the North may be welcomed back again.

SHOW OF NON-SPORTING DOGS.

IN our issue of April 3, a correspondent suggested than an exhibition of non-sporting dogs be held in this city. Since the publication of this call a number of communications have been received, all in favor of inaugurating such an exhibition.

We suggest to the gentlemen who have interested themselves in this matter, that they confer with the managers of the Westminster Kennel Club. It is possible that the club might be induced to organize such a show; and if under their control, the success of the enterprise would be assured.

The public interest in the several non-sporting breeds is increasing at a remarkable pace; witness the crowded non-sporting classes at the bench shows. There is certainly sufficient material for an exhibition exclusively made up of these animals.

The entries for the coming bench show of the Westminster Kennel Club are so full that the capacity of the Madison Square Garden will be taxed to accommodate them all. A less number of entries would provide a more satisfactory exhibition. If the popularity of the shows given by this club increases at its present rate, the Westminster managers might find it advantageous to give two exhibitions annually, one of sporting dogs and the other of the non-sporting classes. The former could be given in the spring, and the other in the fall. The public would support two shows of this character; and there is no question that greater satisfaction to visitors and exhibitors would be secured by the added facilities such a division of classes would permit.

MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION.—Following are the officers for 1884-5: President, John Fottler, Jr.; Vice-Presidents, Hon. Thomas Talbot, Hon. Daniel Needham, Walter M. Brackett, Esq., Charles W. Stevens, Esq., Horace T. Rockwell, Esq., Ivers W. Adams, Esq., Dr. John T. Stetson; Treasurer, James R. Reed; Secretary, E. S. Tobey, Jr.; Librarian, John Fottler, Jr. Executive Committee—Frederick R. Shattuck, Warren Hapgood, Wm. S. Hills, Walton C. Taft, Edward T. Barker. Committee on Membership—W. M. Brackett, George Mixter, B. F. Nichols.

INTERCOLLEGIATE SHOOTING.

GUN clubs have been established at several colleges, and in some instances the members have acquired a very fair degree of skill in trap-shooting. We note with great satisfaction the growing popularity of the sport among college students. As has been said already in these columns, shooting with rifle and shotgun is a recreation worthy of college students, and a form of amusement which one is not likely to throw aside after commencement day. In this it differs essentially from baseball, football, cricket and rowing. The college student who learns how to use a gun, has found a means of recreation that he may employ in after years.

We are so thoroughly convinced of the good results likely to follow from increased participation in college shooting, that we are quite willing to do something as a practical encouragement of it. To that end we propose to offer a $100 cup or trophy as a prize for intercollegiate shooting competitions. It is probable, since the college year is already so far advanced, that the trophy will be given for the next year, beginning in the fall. Further particulars will be shortly announced.

SOME QUESTIONS.

EVERYWHERE the game is growing scarcer. We all realize this, and grumble about it. There is a vulgar saying to the effect that "talk is cheap," and, like many another proverb, there is a world of truth in it. We are all of us good at talking about game protection; how many of us have done anything besides talk? Suppose some one were to come around to-morrow soliciting subscriptions for a fund to pay a detective to secure evidence against some individual for killing or selling game out of season, or to pay a lawyer's fees in some game case, how many of us would contribute $10 to such a fund? How many men, among all our readers, who believe that birds should not be shot in spring, have refrained from starting out after snipe or ducks since the birds came on? Has not each one who could take the time for a day's shooting, said to himself, "Every one else will go, and my staying at home will make no difference," and then gone and killed or tried to kill?

How long is this to continue? Surely, at the rate things are going now, the game cannot last much longer. It looks as though the day were at hand when there will be no shooting grounds open to the public. And who is to blame for all this? No one but those who shoot. With what show of reason can we complain, if twenty years hence, we find that there is nothing for us to go afield for?

When the forests are gone, and with the forest the game, we shall probably all think that this wholesale destruction might have been avoided, but then it will be too late to seek a remedy.

WEAPONS FOUND IN GAME.—If a list could be had of all the old weapons and missiles found in the tissues of living animals, and a complete history of them all collected, the record would be an interesting one. Such finds are, we think, much less infrequent than is generally imagined. We have seen a number of them, and many others are on record. Several years ago we saw taken out from beneath the tenderloin of an elk, an old-fashioned round ball from a muzzle-loading rifle. The imprint of the cloth patch was still distinctly visible on it. The arrow head from the swan's breast-bone, figured a short time since in our Natural History columns, has reminded some correspondents of similar finds, both in birds and mammals. "Caballero" sends us from Buffalo, N. Y., a vertebræ, in the body of which is imbedded the point of an iron arrow head, and asks to what animal the bone belongs. The specimen was picked up in the Nation by a man who was gathering bones for market. The bone is one of the anterior dorsal vertebræ of a young buffalo, probably a two year old, and the arrow head is one of the common iron points which, until within a few years, have been used for hunting by all the tribes of plains indians.

SHOOTING TOURNAMENTS.—The early summer of 1884 will be a busy season for the man who lives to attend all the big shooting tournaments. There is nothing upon which we may base a prediction of the number of wild pigeons that will be killed, but it is very certain that the demolition of the "clays" will be unparalleled.

THE MASSACHUSETTS GAME BILL passed the Senate unanimously, but was lost in the House. Our dispatch says, "Country members advocate poaching."

The Sportsman Tourist.

DOWN THE YUKON ON A RAFT.

BY LIEUT. FRED'K SCHWATKA, U. S. ARMY.

Tenth Paper.

WHEN our miners were encountered they were packing on their backs their scanty supplies of "grub," according to frontier parlance, and anxiously inquiring the distance to the next lake, where they hoped to find a canoe or two, and thus make better time back. So dense was the undergrowth and fallen timber in the valley of the Yukon and its tributaries, that they had been forced back along the mountain ridges, where the fires had partially cleared out the underbrush, and although the fallen timber was a little worse, in the sum total it was the least of the two evils. So absolutely impregnable had it become in places for them that, waiting for a favorable wind or one sweeping before them, they then set fire to the woods and again waited until it had cleared a way for them, and then proceeded through the burning path. They also confirmed the Indian reports that the moose and caribou (woodland reindeer) follow the snow line in the spring and summer as it retreats up the mountains under the effects of the warm weather, and this undoubtedly from the dense swarms of mosquitoes that appear all over the face of this country as soon as the snow is lifted, as if that mantle held them down in layers several inches thick.

During the 9th of July in the afternoon we had seen dense volumes of smoke ahead, showing the pine forests to be on fire, probably set by the miners, although we afterward ascertained that Indians often do this, not only carelessly while camping, but also in a premeditated manner to drive game to certain runways. This firing of the woods, however, is more likely to take place in the winter, when the runways of game are limited to fewer trails, and the Indians can, therefore, stand better chances of intercepting them on these few, than in the summer months, when, after all, their principal diet is fish and fowl when the latter are moulting. I also heard that when a brown or grizzly bear invades a neighborhood which is of value to the Indians for purposes that fire will not destroy, they do not hesitate to burn out the woods when a favorable wind makes them think that the blaze will be carried in the direction of the bear.

The 10th of July we got away early and about ten in the forenoon, passed through forest fires on both sides of the river (here from 300 to 400 yards wide), and the natural query was how it could have crossed unless set fire on both sides, for there was so little wind that great billows of smoke went lazily upward directly for the zenith, and these, when seen in the morning, looked like vast banks of cumulus clouds arising up from that direction. At 1:15 in the afternoon we passed the mouth of a large river coming in from the eastern or right bank and was the one the miners had been prospecting before their party broke in two. They said they had ascended it nearly 200 miles and that from its width at that point they believed it to be 50 to 75 miles further to its very source. At this point the caribou tracks had been very thick and so recent that the deer could have only migrated but a short time before. One active Nimrod among them, maddened by so much sign, had taken his gun and kept tramping for 30 or 40 miles up one of the branches of the river until he overtook a herd and killed two, and putting their meat on a raft started down to join his party. The raft was a very rude affair and finally brought up on a big boulder in the center of a rapid, where it stuck until it was liberated in two sections. The miner not being a double bareback rider abandonded his twin rafts and walked home with one saddle of venison and a couple of reindeer tongues.

It was not until well past eight that we camped in a dense grove of small poplars. A great number of them had their bark chipped around by rodents at an altitude of eighteen to twenty inches from the ground, and as there was a considerable amount of rabbit (hare) sign about the place it must have been these little gnawers, when food was the scarcest at the deepest snow, which therefore could not have been much deeper than that during the past winter. Among the grove were many trees that had been killed in previous years, and probably in this very way, but the thicket was so dense that the intertwining branches with live ones on all sides held them erect. From the slight depth of snow, I imagined that the winters must be ushered in with a sort of Arctic suddenness peculiar to polar regions, rather than like the nearer coast country where the snow falls deep and nearly all winter. Rummaging around, we found a couple of places where a number of dead trees were standing in a cluster, and readily pulling them up by the roots, we turned them over to the cook, and spreading our canvas and blankets in the spots, bivouacked as well as the weather and mosquitoes would permit us. We had passed a small family of abject Takh-heesh a mile or so before camping, and the man having mustered up the remaining courage of his life, managed to walk down to our camp, where he stood around with his mouth wide open, almost paralyzed with astonishment, and I think if I could have only deodorized him and varnished him up, I could have gotten a fortune out of him at a San Francisco Chinese "josh" house, he looked so much like one of their idols.

Shortly after starting on the morning of the 11th we saw a magpie or two sailing around near the bank and finally disappear across an opening into the groves near the foot hills. Only once after that were magpies seen on the Yukon River. Several owls were seen during the day. During the day we passed several "Stick" or Takh-heesh families (a family seems to be about the highest organization they can get together at any one place), and at every point there were seen small rafts of logs bound together with willow withes tied up at the shore in front of their brush houses, and nowhere would there be seen any canoes.

As we approached the last rapids on the river, a huge number of gulls rose in swarms from the rock towers where they were breeding and gave us the most discordant reception of screechings and splashings that I had heard for some time. When the ice breaks up in the spring (although I doubt if these rapids are frozen over at all during the winter so swift is their current), these castles of rock become impregnable to foxes, wolves and all other carnivora not supplied with wings, and here these gulls find a safe and secure breeding place. As we rushed by some of the small gulls just from their calcareous bandbox were standing around with that stupid astonishment characteristic of the young of all species, from an oyster to a man.

During the day we had passed the mouths of two rivers; one I called Daly River, after Chief Justice Daly, of New York. Some twenty miles below this the river became very tortuous. About forty miles beyond the Daly River came in another of quite formidable dimensions, about 200 yards wide at its mouth, and, to change the order of things, came in from the west, the first noticeable stream on that side since we had passed the mouth of the Tahk River, a few miles below Miles's Cañon. Nearly opposite its mouth was a bold bald peak that we caught a glimpse of a few miles away. It seemed to be on the river bank directly ahead, but a sharp bend in the river sent us well off in another way, and showed it, as we supposed, to be inland. Another curve, and we started for it and ran up much closer, but not past it, before we were again hauled back along another stretch of the river, as if there was some repulsion in its great mass, and this oscillation we kept up until no less than seven times we had pointed our raft toward it on as many different "reaches" of the river. It appears on the map as Tantalus Butte, and the river opposite I named after Sweden's great Arctic explorer, Baron von Nordenskiöld.

A few minutes past two a crackling of brush was heard on our right, and in a few moments a big buck moose came bolting out into an opening of slight scrubby willows, and before a gun could be brought to bear on him again disappeared, but still kept persistently parallel with us as he struggled through the brush. Occasionally through the brush a vista of his dark brown sides and swaying horns was seen, but directly ahead of him was a small creek putting in with wide grassy banks, and here I felt sure of a shot. Just as he reached the open creek bottom, he whirled like a flash and once more buried himself in the deep brush of its upstream side. This animal and another about two hundred and fifty miles below this point were the only moose the party saw the whole length of the great river, a stream noted for the large number of these animals in its valley. The Indians of this country know nothing about "moose yards," and when described to them say they are not made by the moose of this part of the world. I afterward heard this corroborated by an old Hudson Bay trader, who had hunted them in lower latitudes and knew by experience what "moose yards" meant. Again a Mr. Carr, a very intelligent miner, who had wintered on the river a good ways below this point, spoke of this. From what I could learn from the Indians I do not believe their sense of hearing is so acute in these parts as in the southeastern districts of the moose, as they are said to be easier to approach and kill in the summer than the caribou, and the stories of their sense of hearing as told by hunters from Maine and Nova Scotia borders almost on the miraculous. The greatest number of moose are killed in this end of America while crossing rivers where they are completely at the mercy of their pursuers in their swift birch-bark canoes. Mr. Hearn, who was an Arctic explorer in these northern regions of the Hudson Bay Company, by whom he was sent over a hundred years ago when everything was purely primitive, says that he has seen an Indian paddle his light canoe up to one of the moose calves after its mother had been killed, and take it by the nape of the neck without its showing any resistance or apparent fight whatever, the doomed defenseless animal seemed, at the same time, as happy and contented alongside of the canoe as if it was swimming by the side of its mother, and looking up into the faces of those who were about to be its murderers with the most apparent innocence, using its forelegs and feet every now and then to clear its eyes of the numerous mosquitoes which alighted upon them, and which seemed to be intent on eradicating as preventing its keeping up with the canoe. This reminds me of a very similar incident occurring with a little buffalo calf whose dam had been chased and killed by some cavalrymen, the little creature following the company on its scout for several days when, there being nothing to feed it, and the scout ahead but little prospect of termination for a long time, it was killed out of sympathy for its forlorn condition.

OWLING.

ON several occasions during my morning or afternoon rambles through the lower meadows, I had awakened from his midday sleep a great white and brown horned owl, just as during more than one night in the past summer and autumn he and others of his fraternity had disturbed the midnight and early morning slumbers and dreams of a dozen or more cowpunchers. Frank, the ranch cook, being quite a skillful amateur taxidermist, had frequently expressed a wish to get him and see what kind of an appearance he would present with his wings and tail spread on the wall and his head peeping through them. I promised Frank that I would locate Mr. Blink and capture him; and though finally succeeding in fulfilling my contract, it was only after considerable hard work and hard luck in connection with some thoughtlessness that I redeemed myself.

My first attempt at finding him was a successful venture, so far as the simple finding was concerned; but the capturing of him proved quite a dismal failure. I had tramped for a couple of hours through snow, from one to two feet deep, meanwhile carefully and thoroughly inspecting every tree that seemed likely to afford him a hiding-place and shelter. Finally, on the banks of the creek I came to a large beaver dam, and while inspecting it and the signs of recent work done by the beavers, had laid my gun aside and stepped out on the ice above the dam, when from a tree close by my intended victim darted away with almost the speed of a woodcock. I watched him as he dodged his course among the cottonwoods and box-elders. Up stream he went for nearly half a mile and alighted in the top of a tall cottonwood, where I sighted him when about three hundred yards away. But he was wide awake, and again hit the breeze, this time going down stream by a circuitous route; and he was lost to me for that day at least. However, he had divulged one of his hiding-places, which was a great point in my favor, as they are almost invariably difficult to find, as they hug the trunk of the tree very closely. The first day was not barren of results.

The owl is considered a wise bird, *vide* the old saying, "wise as an owl;" but this individual was a foolish one in at least one respect, inasmuch as he chose for his perch a tree with a dark background, which, on one's coming toward him from the right direction, showed him up perfectly; but he was a lucky bird.

The following afternoon I strolled down to the old place, taking no special precautions to conceal my movements, and not expecting that the foolish bird with the magnificent orbs had come home so soon. The first time I was in search of him he was indebted for his life to the beavers; this time it was to a jack rabbit, which sprang out from a cluster of willows, and on my making a quick snap shot caught the rabbit and lost the owl, for at the report of the gun he was again wending his way by the air-line toward the Eastern States. I had learned that there was no use in following him at the time.

Before owls are followed they must be given a long rest to divert any suspicion, and when they find that they are not pressed too closely they may resume their doze and give you another chance. They can be approached very closely before they are aware of any danger, but after once awakening to the situation, it is a most difficult matter to get anywhere near them, for we verily believe that their eyes are able to detect any hostile or other advance, and being fortified by ears more capacious in proportion to their weight than a burro, a second approach to them is rendered almost impossible. If their night sight is any better than their day sight, they would not be able to answer as Sam Weller did, "Yes, I have a pair of eyes and that's just it. If they wos a pair o' patent double million magnifyin' gas microscopes of hextra power p'raps I might be able to see through a flight o' stairs and a deal door; but bein' only eyes, you see my wision's limited." The owl can pretty nearly do those things at midday.

A few days after the rabbit had forfeited his life and thereby saved the owl, I went out again in search of him. Coming in sight of the tree which had by this time become quite a familiar object, I carefully slid down the bank on to the creek a few rods above the beaver dam; quietly walked down on the ice, and soon had him in sight. There he was, perhaps seventy yards away, peacefully and contentedly sleeping on his perch, all unaware of the danger he was in; and so was I in as blissful ignorance of my own danger. Sinners, it is said, stand on slippery places, but I could not; for while trying to reach the little snow drift on the edge of the ice my feet suddenly went from under me, and again the owl took his departure toward the east, but not soon enough to save all his feathers, for from a sitting posture I had a chance to "turn loose" (pardon the quotation) one barrel. A couple of feathers floated a while in the still air, then came softly down like two big yellow brown snow flakes and anchored themselves in the willows. His splendid run of good luck was nearly over, the charm was about to be broken and my unlucky stupidity at owling was also drawing to a close. A wise owl would have changed his habitation after the repeated interruptions he had experienced, but this hunted and persecuted bird dreaded not the fire, though he had been slightly scorched at long range.

The love of home was strong within him, and heedless or forgetful or ignorant of the danger menacing him, he would hoot "Home, Sweet Home," and return to the hospitable shelter of his own box-elder which was soon to know him no more, and no more would he contribute his hoot to disturbing the slumbers of wearied "cowpunchers." Over the same ground I tramped again, and this time succeeded in administering to him part of an ounce and a quarter of No. 4 shot backed up by four drams of powder, just as he was spreading sail for another voyage down the stream.

There he is—what remains of him—with wings and tail outstretched, and looking down at me through a pair of glass eyes from over the mantle-piece, and he is the handsomest ornament in the room, looking as wide awake and life like as when he was darting among the trees, with only the one instinctive idea of escaping danger. MILLARD.

BEAR CREEK, Wy.

WHERE THE BUNG TREE GROWS.

'TWAS early in July, the Professor and I left the land of Gotham to the bulls and the bears of barter and trade, for a couple of weeks sojourn in the land where the bung tree grows. Our quest was rest and recreation from the corroding cares of business, and like many another, who sometimes got bit by a trout, we felt the old longing stealing o'er us, and when I whispered the magic word "trout" in the ear of the Professor, he suffered himself to be led off without remonstrance.

The land where the bung tree grows? "Now what in the name of goodness is a bung tree?" says the Professor.

"What, John don't know what a bung tree is? A bung tree is—is—is—John, did you ever casually observe men, of doubtful mien and wistful expression, cautiously approach something standing on the sidewalk like, which looked very like a beer keg, and stealing a quick, apprehensive glance up and down the street, slowly remove that protuberance discernible under his coat, which might be a tomato can, and witness the intense satisfaction with which he gloated over the find if it were large, or the all-gone hopeless look if the reverse? John, did you know a beer keg had a bung hole, and the same is stopped by a bung, and these bungs are made from hard wood, such as beech, maple, and other bung trees, which grow away up in the mountains, way up where the deer, the bear, and the wily trout, do disport themselves and propagate their species, and furnish enjoyment to such miserable fellows as you and I, John—grow, along with hemlock, the same you once essayed to walk, when the peeler had just left it, and John, you 'got left,' didn't you, old boy? I could wipe the tears from my eyes now, just thinking about it. I can see the spray fly way above the pile of old driftwood, as your gravity and mine was upset, and how cold the water was, and how scared the trout who took my fly, almost at the same instant you took yours, dear John. That was the most sagacious trout I ever saw, for he evidently foresaw what was coming down 'among him' when he took his place in your element and you took your place in his. Do you remember that pole you carried into the woods? That pole, you had builded it a purpose for the occasion. Your experience down on the Shrewsbury doubtless led you into this conceit, and you had the last big weakfish in your mind while you were building it. Well, the first trout you treed with it went about twenty feet straight up into the blue ethereal, and there took two or three turns round the limb of a bung tree, and I reckon it is hanging there yet. When you first exhibited the production I could see the look of pride on your face as you drew it from it's case, and fondled it before the astonished 'natives.' Never shall I forget the emphatic exclamation, joined in by all hands simultaneously, and one old fellow with a sadness he could scarcely control, tremblingly muttered, 'Hanged if I haint seen most every kind of pole brought inter these woods to ketch trout with, but that 're beats 'em all, blamed if it don't.'"

That pole was a short time ago still to be seen, being preserved in the family like some huge two-handed, prehistoric sword, handed down to posterity to excite its wonderment and surprise.

And now we were once more at the haven where we would be, and these old scenes came back upon us—reminiscences of other days—and the trout were rising ever and anon in the pool just in front of the house, as some luckless fly or insect hovered temptingly over their hungry maw. The June bugs had not all gone yet and a few had been drawn inside the house on a tour of investigation, and were now buzzing round a light which our host had kindly placed inside, in the gloaming.

"John, would a trout rise to a June bug?"

"I don't know why they wouldn't; suppose we try."

A couple of old hats were brought into requisition in capturing a dozen or so, and, stepping down to the water's edge, one was flung out into the eddying current. Round and round he spun, then, catching the edge of the swift current, shot down into the pool below with the velocity of an arrow. Vain were his frantic efforts to escape from the surging current, when the well-known splash and the sudden disappearance of the bug decided that a trout would accept a June bug for his dinner. Many went the way of the first, until the Professor, who by this time was worked up into a high pitch of excitement, declared he was going to see what a little investigation with hook, line and June bug might do toward solving the enigma of the size and temper of the fish we had been feeding.

Hanging under the eaves of the piazza were several bait-rods belonging to our host, and some were already rigged out with hooks and lines. Seizing one, which gave promise of holding a fish were we to hook one, a bug was carefully adjusted. The line had no sinker on, and the bug remained on top of the water for some little time, long enough to float down to the spot where his predecessors had disappeared. Splash! and the Professor reeled in the biggest chub it has ever been my lot to witness; but cheer up, John, there's trout in there; try again. And sure enough there were, for a good half-pounder took the next bug, then another and another, until we had a dozen fine fish, for our experiment had proved a complete success, much to the surprise of our host, who said he knew the trout were in there, for he had often seen them jumping, and laughed at the futile efforts of his guests to catch them.

At daybreak the writer was up taking his usual survey of the horizon and making preparations for a good tramp up stream. The air was clear and bracing, laden with the odor of balsam, which grows in great abundance in close proximity to the house. "Old Sol" had not shown himself above the mountain tops yet, but the rays illuminating the mist rising over High Peak gave tokens of his early appearance, the sparkling, foam-flecked waters before me flowed rippling along, lending their melody to the song of the birds; a spring of icy cold water, distilled way up among the clouds and brought down to the dwelling through a series of wooden tubes, poured its crystal waters into a tub half buried in the sand near by—its music lulled me to sleep last night—while ever and anon, from far up the mountain side, came, faintly echoing, the sound of cow bells, as the herd came slowly down, urged at intervals by the sharp barking of the dog Shep, and the maid of the house, Jennie, was wending her way with song to meet them; the tall mountains looked down upon the valley in majestic silence, their heavy foliage dense and impenetrable to the eye; a long, slender thread of smoke, slowly curling up from the kitchen chimney, and a savory odor of melted butter, with a suspicion of frying trout, permeates the atmosphere.

As we journey up the stream, we follow the remains of an old bark road, part corduroy, part rock, and part swampy ooze, into which our brogans sink ankle deep, every step, or outline a double row of hob nails in the mud. After journeying some three miles, we came to a small clearing—big enough for its lazy occupant and his dozen or more frowsy tow-headed youngsters, whom we accosted for information as to our bearings. He had lived there three years, so he said, and had not been a half mile from the house either way during that time, and he looked it. When we made his acquaintance, he informed us what a bad time he had the night previous, laying both fat "paws" over a corpulent pair of crushed strawberry jeans.

"Yes, the old 'oman hed made me some pennyr'yl tea, but it did not tech the spot, an says I—Hanner, says I; if some er them York fellers was only to kem along this way, says I. Yes, the pain iz awful, it's bin tremenjis bad; it did let up a leetle this mornin like, but now its cummin back wus en ever.' And the wily old rascal bent over, his face a study of assumed suffering, until finally my companion, taking compassion on the old fraud, contributed the longed for alembic. We sat there a full half hour and listened to tales of family troubles, bear fights, in which the old rascal pretended to have come off victorious, and of how in the winter he went to some trout pond, known only to himself, and cutting holes through the ice, "shoveled em out with a dung fork." To cap the climax the old rascal set his dog on us when we came back that way.

About half a mile above the house had been a mill pond; the dam had been worn away by frequent freshets, until only a few projecting timbers remained to show where the once pent up waters poured and seethed. The trout, eager to join their companions in the stream above, no longer leaped up in frantic endeavor to surmount the impassable barrier to their progress, and the waters now rushed through a great fissure where the dam had formerly stood and seemed to invite a sweep of the rod over its surface. The old mill still stood there, a ghostly relic of former activity, weather beaten, stark and grim, its wheel dismantled—silent forever. Passing on up stream to the head of the pond (still so called), I quickly adjusted pole and line, and before the Professor had decided which fly to select I was struggling with a one-pounder, which took a coachman dropper almost at the very edge of the old hemlock, whose roots and branches trailing in the water had long afforded him a safe hiding place. I stood on a deposit of pond ooze left by the recent high water, and my footing, to say the least, was very insecure, as I was every second sinking deeper and deeper into the mire. A few yards off was a large rock, if I could only reach that; between the struggling fish and the mire I was badly handicapped, but making a determined effort I reached the rock and saved my fish.

Perched on my elevated island I took a survey of my surroundings. The water came down a ravine, and entering the pond at an angle, formed a deep pool, at the foot of which I was standing; the Professor had selected his flies, and was moving up toward the head of the pool preparatory to making a cast, and the very first cast he made caught my old felt hat on his leader and whirled it far out into the current. He broke the tip of his rod as he did so. Here was a dilemma, which, as experienced fishermen, with the aid of some strong waxed silk, we soon overcame, and securing the hat which had stranded on a projecting point, went on our way rejoicing. Our catch was about forty each, none as large as the one I caught at the old mill, and at 5 P. M. we were glad to avail ourselves of the home comforts at our domicile, whose welcome portal loomed up before us as we cast off leaders and reeled in for the night.

It is a singular fact that large trout seldom bite from sunrise to sunset except for about a half hour or so at midday, when the water becoming warmed by the fierce rays of the sun, they will occasionally work out into the stream from their hiding places, seeking a cool spot where some spring of water oozes up from the bottom or empties its waters into the stream. One reason why large trout are not more frequently caught in the day time is because you can't get your bait where they lie hid, for if you do, it will be frequently taken by him even when he is not on the feed; perhaps he hates to see it waxed, suggests the Professor.

About a mile up the stream from our house the waters make a sudden bend against the mountain side, the abrupt declivity against which they force themselves, rising hundreds feet above the eddying current, turning the stream almost at right angles to its former course. The surging current had washed a side stream extending back a hundred feet or more alongside the mountain. This was overhung with dense foliage, reaching almost to the water's edge. Being of an investigating turn of mind on this occasion, I made a wide detour, coming in at the head of the side stream where, as I surmised, a spring of very cold water flowed in. I carefully adjusted my flies, and with a deft twist of the wrist, sent them some twenty-five feet below me, past the overhanging boughs, the flies circling underneath and dropping lightly on the dark water. In justice to myself, I must assert that I took a good many chances on that cast, resting on my knees in the sand so as to expose as little of my body as possible, for if I got fast to a bough all further attempts would be useless, as it would have been impossible to get loose without exposing myself to the gaze of the old settlers, which I felt sure had worked their way up from the pool below to refresh themselves in the cooler water, and subsequent events showed my judgment correct. My flies went right to the very spot I could have wished; I could not do it again in a hundred casts, and I don't know who was the most excited over the result, the wielder of the rod, or the big trout going down toward the pool with my fly imbedded in his jaw. So soon as I could get on my feet I plied reel and showed myself to the rest of them; I believe every trout who made his home in that pool was "taking a day off," and visiting that binnikill either for my benefit or his own. I could plainly see my trout side by side with one which might have been his grandfather, so much larger was he as they sped along, in fact I could not tell at first which of the two was trailing my line after him, so close were they together; but I quickly brought the smaller of the two up with a short turn and soon had him panting in my basket, his head and tail forming a crescent therein. For the next half hour I might have been mistaken for a sentry on post, so still I sat there, puffing away on my pipe and waiting events. Soon the other big trout came, slowly working his way up the binnikill as if reconnoitering every foot of the way—he did not notice that bunch of old gray tweed on the sand peering down upon him with eager eye through the protecting branches, watching proceedings with such intense interest—whether he was seeking his mate or not I shall never know. He swam up into the shallow water until it barely covered his back, and then I began operations; pulling my leader through the rings on my rod I shortened it to about three feet, then poking the rod through the branches, whisked a fly over his nose; fly after fly was tried, then a grasshopper, a worm, everything available, nothing would suit his fastidious palate. After working over him some time, and seeing my efforts were futile, an evil spirit suggested, "You have tried all fair means, try foul." Taking off my leader and cutting off a couple of yards of line, I tied it to a branch, then splicing three hooks together attached them to the end of my line. Carefully reaching out, the hooks were placed directly under his jaw, and then I pulled with all my might; and then—and then—well, the branch broke, and a streak of lightning went down that binnikill into the pool with the broken end of my branch bobbing up and down like a pea in a hot skillet, and me dumbfounded and inconsolable. Confound it! "Serves you right," said a brown thrush over my head. "Serves you right," croaked a frog in the spring. "Serves you right," said I to myself, and I bade adieu to the binnikill, the pool, blasted hopes and blasted luck.

[TO BE CONCLUDED.]

Natural History.

A QUAIL NEW TO THE UNITED STATES FAUNA.

THROUGH the kindness of an Arizona correspondent I am enabled to announce the occurrence in that Territory of *Ortyx graysoni*. This species has not hitherto been known as occurring north of the western Mexican boundary.

Ortyx graysoni was first made known by Mr. George N. Lawrence, in a paper entitled "Descriptions of New Species of American Birds," published in the Annals of the Lyceum of Natural History of New York, Vol. VIII., p. 476, May, 1867. The type of the species was collected by Col. A. J. Grayson, and came from Guadalaxara, in Western Mexico. The species bears a general resemblance to the common Bob White, being most like the form *Ortyx virginiana texana*. In fact, the females of the two forms are almost indistinguishable, but the male of *graysoni* may easily be recognized by the uniform reddish chestnut of the lower breast and belly.

For the knowledge of the existence of this form of *Ortyx* in Arizona, I am indebted to the courtesy of Mr. Herbert Brown, of Tucson, who sent me an almost complete skin of a female bird, and portions of the wing, breast and tail of a male. These fragments were submitted to Mr. Robert Ridgway, of the Smithsonian Institution, who pronounced them undoubtedly *Ortyx graysoni*.

From a number of letters received from Mr. Brown on this subject, I am enabled to give some details as to the habits of this species, and especially as to its range within the Territory. In the country lying between the Barboquivari range in Arizona, and the Gulf coast in Sonora, and more especially between the Barboquivari and the Plumosa, this species is quite abundant. In fact, the bird appears to be exceedingly common in Southern Arizona. They are to be found on the Sonoita, about sixty miles south of Tucson, and perhaps thirty miles north of the Sonora line. From the Sonoita Valley they can be found to the west for fully 100 miles, and through a strip of country not less than thirty miles in width within the Territory. Very possibly they may go beyond that both to the eastward and westward. Further observation must settle this point, but over this stretch of country they have been reported. There is some evidence that the northern range of the bird extends somewhat beyond the limits above fixed. I hope before long to receive more definite advices on this point.

The habits of *Ortyx graysoni*, so far as we know them, appear to resemble very closely those of the common quail, only slightly modified by the conditions of their environment. They utter the characteristic call "Bob White," with bold, full notes, and perch on rocks and bushes when calling. They do not appear to be at all a mountain bird, but live on the mesas in the valleys, and possibly in the foothills. Mr. Brown has kindly promised to collect further information about this species, and to advise me of the results of his investigations. GEO. BIRD GRINNELL.

NEW YORK, April 22.

SOUTHERN LIMIT OF QUAIL AND GROUSE.

Editor Forest and Stream:

In this week's issue I notice under the above heading an account of the supposed occurrence of Bob White (*Ortyx virginianus*) and ruffed grouse (*Bonasa umbellus*) in Costa Rica. The birds observed by your correspondent were probably Leyland's partridge (*Ortyx leylandi*), and the large-tailed partridge (*Dendrortyx macrurus*). The former belongs to the same genus as the Bob White, and while possessing similar habits and notes, is very distinct in plumage. The latter is a large bird, nearly equal to the ruffed grouse in size, and with a somewhat similar, long, broad tail, but belongs to the partridge, and not to the grouse, family, the genus being quite peculiar to tropical America.

As to the southern limit of the Bob White and ruffed grouse, I would add that the former occurs indigenously in Cuba, and has been naturalized in others of the West Indian islands. On the continent, however, it does not, so far as known, occur south of the Rio Grande, its place being taken in Mexico by allied representatives, but quite distinct species. Of the grouse family no member is known to occur south of the United States and Mexican boundary, the species which has been traced furthest southward being the dusky grouse or "blue grouse" (*Canace obscura*), which is abundant on the higher portions of the White Mountains in Arizona. It is not impossible that both this species and the Rocky Mountain race of the ruffed grouse (*Bonasa umbellus umbelloides*) may eventually be found on the more elevated parts of the mountains of Central Mexico; but there is little chance of either extending very far over the border.

The bird fauna of Costa Rica is probably more thoroughly known than that of any other country in tropical America, more than seven hundred species having already been actually taken within the contracted limits of the small republic. The temperate districts of the interior especially have probably been more completely ransacked by the ornithological collectors than any other State in the Union with the exception of Massachusetts, and possibly one or two others of the United States. Therefore, it is not likely that any two birds of the partridge and grouse families can have been overlooked. ROBERT RIDGWAY.

U. S. NATIONAL MUSEUM, Washington, April 18, 1884.

DEER IN THE ADIRONDACKS.

BY C. H. MERRIAM, M.D.

[From advance sheets of the Transactions of the Linnean Society of New York.]

Cariacus Virginianus (Bodd.) Gray.

COMMON DEER; VIRGINIA DEER; RED DEER; WHITE-TAILED DEER.

DEER are at present so abundant in most parts of the Adirondacks that they outnumber all the other large mammals together, and this in spite of the fact that during the present century alone, hundreds of them have perished of cold and starvation, hundreds have been killed by wolves and panthers, and thousands by their natural enemy, man. And there is every reason to believe that if proper game laws are enforced, their numbers will not materially decrease.

This beautiful and graceful animal, by far the fleetest of our mammalia, roams over all parts of the Wilderness, being found high upon the mountain sides, as well as in the lowest valleys and river bottoms. It frequents alike the densest and most impenetrable thickets, and the open beaver meadows and frontier clearings. During the summer season, which is here meant to apply to the entire period of bare ground, loosely reckoning, from the first of May to the first of November, its food consists of a great variety of herbs, grasses, marsh and aquatic plants, the leaves of many deciduous trees and shrubs, blueberries, blackberries, other fruits that grow within its reach, and largely of the nutritious beech nut. While snow covers the ground, which it commonly does about half the year, the fare is necessarily restricted, and it is forced to subsist chiefly upon the twigs and buds of low deciduous trees and shrubs, the twigs and foliage of the arbor vitæ, hemlock and balsam, and a few mosses and lichens. In winters succeeding a good yield of nuts the mast constitutes its staple article of diet, and is obtained by following the beech ridges and pawing up the snow beneath the trees.

When the first warm winds of approaching spring uncover here and there in the beaver meadows small spots and narrow strips of ground between the snowdrifts, the new marsh grass is found already sprouted, and its tender blades afford the deer a tempting change from the dry twigs and tough lichens that constitute its winter fare.*

From this time until the latter part of September much of their sustenance is procured in the immediate vicinage of water. After the snow has left the forests and the new vegetation has fairly started, they gradually work back into the woods, but return again in early June to feed upon marsh plants and grasses, and wade or even swim to procure the lily-pads and other aquatic plants that thrive in the shallow water near by. During June, July and August, hundreds of deer visit the water-courses of this wilderness every night, and retire at break of day to the deep recesses of the forest.

It has been stated that they do this to rid themselves of black flies and mosquitoes, but a little reflection will suffice to show the absurdity of this assertion, for nowhere in the entire Wilderness are these insect pests so abundant and annoying as on the marshes and in the immediate neighborhood of lakes and streams. And since it is rare to find a deer above his thighs in water, the fallacy of this supposition is apparent. The fact is that, for the sake of obtaining the plants that grow in such situations, they submit to the annoyance of swarms of insects, most of which they would

*I was particularly struck with this fact on the 29th of April, 1882, while crossing from Big Moose Lake to Lake Terror, in company with Dr. F. H. Hoadley. Here, along the banks of a sluggish stream which was still bordered with ice eight to ten inches in thickness, we observed fresh green grass already over an inch and a half high in small bare spots between snowdrifts two and three feet in depth. The same day we saw a deer standing on a mass of ice and snow on the shore of Lake Terror, doubtless in search of food.

escape did they remain amid the mountain fastnesses. It is true, however, that deer, particularly at the South, do sometimes enter water when not in search of food, and sink to such a depth that little save the nostrils and eyes remain in sight; but whether this is done for the riddance of insects, or for the refreshing effects of the bath, is an open question, and for my part I incline to the latter view.

Mr. E. L. Sheppard tells me that he has on two occasions seen deer enter the water and immerse themselves until almost the entire body disappeared from view, and this when not "skulking," or endeavoring to elude an enemy. The Rev. John Bachman once witnessed this diversion and described it in these words: "We recollect an occasion, when on sitting down to rest on the margin of the Santee River, we observed a pair of antlers on the surface of the water near an old tree, not ten steps from us. The half-closed eye of the buck was upon us; we were without a gun, and he was, therefore, safe from any injury we could inflict upon him. Anxious to observe the cunning he would display, we turned our eyes another way, and commenced a careless whistle, as if for our own amusement, walking gradually toward him in a circuitous route, until we arrived within a few feet of him. He had now sunk so deep in the water that an inch only of his nose, and slight portions of his prongs were seen above the surface. We again sat down on the bank for some minutes, pretending to read a book. At length we suddenly directed our eyes toward him, and raised our hand, when he rushed to the shore and dashed through the rattling canebrake in rapid style.†

Early in September our deer begin to desert the water courses, and before cold weather sets in there is a marked decrease in their numbers in the localities which a short time previously were their favorite feeding grounds. The reason is apparent; the marsh grasses have matured and are now dry; the tender aquatic plants near shore have mostly withered and decayed; and the lily-pads and pickerel weed, cut down by September frosts, no longer remain to tempt their appetites. They retire, therefore, to the higher ground in the forest, which still affords them abundant subsistence.‡

A large number of the Adirondack lakes are heavily bordered with a dense frontage of arbor vitæ (here called "white cedar"), which so overhangs the water that the lower limbs barely clear the surface. Around many of these lakes all the lower branches, up to a certain height, are dead, so that on viewing the shore one is struck with the strange appearance of a sharp cut line, about the height of a man's head, extending partly, or entirely, around the lake. Above it the dense foliage presents an almost continuous and unbroken front, impenetrable to the eye, while below it not a green sprig can be seen, the dead limbs and branches remaining in the form of a broad belt.

The cause of this phenomenon long remained a mystery, and many and amusing theories have been advanced for its explanation. It has been supposed that some unusual and unknown agency operated to produce a great overflow of these lakes, and that the present green line indicates the high-water mark of this unrecorded inundation, the branches below it having been killed by the water or ice. Were there no other reasons for disbelieving this hypothesis, its absurdity is demonstrated by the fact that on many of the larger lakes the line is confined to one side. The only other theory, so far as I am aware, that is worthy of refutation, was advanced by no less distinguished a gentleman than Mr. Verplanck Colvin, superintendent of the Adirondack Survey. Mr. Colvin's theory is, the snow which is blown off from the ice on some of the larger lakes, and is sometimes piled in drifts in certain places along the borders, buries the lower limbs of the cedars; and he thinks that this snow "in some unfavorable season, becoming compact and icy, had killed the inclosed evergreen foliage."§

The fallacy of this view is proven, I think, by the following facts: First, branches on the opposite or shore side of these very trees are usually alive and green, which could hardly be the case were the drift theory true; second, the line is often more strongly marked on the shores of ponds that are too small, and too closely hemmed in by hills, to afford the wind a chance to drift the snow about their borders; and, third, the foliage line is, in all instances where I have observed it, perfectly straight and exactly parallel to the surface of the water, which could not possibly be the case were it caused by irregularly drifted snow.

Moreover, it is now an ascertained fact that the green line is a result of the wintering of deer along the shores where it exists, and the evidence on this head may be summed up as follows: In the first place, it is absent from at least half of the cedar-bordered lakes, and is only found, of recent origin, in localities where deer are known to winter. On some of the larger lakes it is confined to one shore and sometimes to a single deep bay, while the cedars about the rest of the lake remain unmarred. Furthermore, it is a fact, which can be verified by any one willing to take the trouble, that where the deer still winter in these places the snow which covers the ice is literally trodden down by them, a well beaten path follows closely the outline of the shore, and the stumps of newly broken branches may here and there be found. The height of the line shows the distance that a full grown deer can reach when standing on the snow and ice. And finally, trustworthy witnesses affirm that they have observed the deer standing on the ice in the act of browsing upon the low branches of cedars overhanging the lake. I regard all this evidence as conclusive.

Though deer are generally spoken of as nocturnal, they are by no means strictly so, their habits in this particular being modified by the environment. In localities that are much frequented by man they keep their beds during the greater part of the day, and feed mostly by night; while in the remoter sections the reverse seems to be true.

The spot on which one lies to rest is called its bed. It is generally hidden in some thicket, under the low branches of an evergreen, or by the top of a fallen tree.*

They have no fear of water, and, when pressed by wolves or dogs, take to it as a means of escape. They are excellent swimmers, moving with such speed that a man must row briskly to overhaul them. Even the young fawns swim well, and I once caught one alive that had been driven into the lake. It was in the spotted coat, and not more than three months old.†

The extraordinary sagacity of some of these animals, and the temerity, I might even say stupidity, of others, is astonishing. As a general thing, a deer is always on the alert; his eyesight is good, his hearing acute, and his sense of smell developed to an unusual degree. Under ordinary circumstances he detects the whereabouts of man at a considerable distance, and even if abundant is seldom seen. At other times, particularly when feeding on the margin of a lake or river, if the wind is right he may be approached in broad daylight by aid of a boat, and will only raise his head from time to time, gazing at the intruder in a vacant sort of way; but let the wind shift a trifle, so that he gets a whiff from the direction of the boat, and he is off in an instant. Along the borders of the Wilderness a deer will sometimes join a group of cows or sheep at pasture, and follow them home within gunshot of the house. Not a few have met their death in this way.

During the deep snows of our severer winters deer are apt to congregate and remain in one locality till the food supply in the immediate vicinity is exhausted, when they move off to some other place. By working to and fro in search of browse the snow becomes much trampled, and pathways are beaten in various directions. These places are called yards, but they fall far short of the regular inclosures, walled in by deep snow, that we so often read about, and even see pictured under this head. They afford the much-persecuted animals no shelter or protection, for if discovered by either the panther or the infamous "crust-hunter," they become graveyards for many. Mr. Verplanck Colvin, speaking of one he had found on the south side of Seventh Lake Mountain, Feb. 15, 1877, said: "It was impossible to estimate the number of deer which had occupied this yard, as they had fled at our approach, plunging into the deep snow below. The ground of this central area resembled a sheep yard in winter, the forms of the deer being plainly discernible in the beds of snow, in which they had slept, on every side.

"Here we were startled by the sight of the fresh tracks of a panther or cougar, which evidently made his home in this abode of plenty; and shortly thereafter we found the body of a deer freshly killed, and shockingly torn and mutilated. The guides were now all excitement, and followed the cougar's trail eagerly. In less than thirty minutes a shout announced that he had been encountered, and rushing forward to the southern front of the plateau I came upon the monstrous creature, coolly defiant, standing at the brow of a precipice on some dead timber, little more than twenty feet from where I stood. Quickly loading the rifle, I sent a bullet through his brain, and as the smoke lifted, saw him struggling in the fearful convulsions of death, till finally precipitated over the cliffs he disappeared from sight in the depths below."‡

It is stated by several writers that the deer delights in destroying snakes. Dr. Harlan thus speaks of this proclivity:

"This species displays great enmity toward the rattlesnake, which enemy they attack and destroy with singular dexterity and courage; when the deer discovers one of these reptiles, they leap into the air to a great distance above it, and descend with their four feet brought together, forming a solid square, and light on the snake with their whole weight, when they immediately bound away; they return and repeat the same maneuvers until their enemy is completely destroyed."§.

---

*Quadrupeds of North America, Vol. II., 1851, p. 223.

‡The largest and best conditioned deer I ever saw was a magnificent buck that Dr. F. H. Hoadley shot at Big Moose Lake, Oct. 31, 1881. Its stomach was full, containing a quantity of the leaves and stems of the "bunch berry" or dwarf cornel (*Cornus canadensis*), a small amount of wintergreen (*Gaultheria procumbens*), and a few leaf-stems of the mountain ash (*Pyrus americana*), while throughout the mass were scattered numbers of beech nuts with the shucks on.

§Report of Adirondack Survey, 1880, p. 162.

*While on a snowshoe tramp from Big Otter to Big Moose Lake, in January, 1883, I counted upward of forty deer beds—mere depressions in the snow. One only was in an exposed position, being in a little opening alongside a maple sapling. With this single exception all were under shelter of small spruce and balsam trees, the space between the bed and the overhanging branches, loaded down with ice and snow, being in most cases barely sufficient to admit the animal.

†In FOREST AND STREAM for Dec. 6, 1883 (Vol. XXI., No. 19, pp. 362), occurs the following: "Deer at Sea.—Portland, Me., Nov. 29.—The British schooner Howard came in yesterday with one of Howard Knowlton's deer on board, which had been picked up about five miles out at sea. The animal escaped from the garden on Peak's Island last summer, and had not been seen since, probably having kept in the woods at the lower end of the island. This is the biggest feat of capturing deer in the water on record."

‡Report of Adirondack Survey, 1880, pp. 159-160.

§Fauna Americana, 1825, p. 242.

[TO BE CONTINUED.]

CONGRATULATIONS AND SPECULATIONS.

[Extracts from a speech that might have been made on a late "solemn and interesting occasion," had not circumstances prevented, or rather, had they been propitious.]

OWING to a constitutional weakness I am perhaps a little late, but as my congratulations are somewhat different from those you have already received, they may be acceptable even now, at any rate they will be ready for next time.

Ten years is no great of a life in journalism; I have known dreadful mean papers to live longer than that. The question most prominent at present seems to be the progress made by the FOREST AND STREAM in all those years, with its assured prosperity for the future. Why and from whence does it come when so little is ventured by its managers in either department it represents? I see no prizes sought or awarded to any of its "staff officers," and yet the paper fills a place that has long and sorely needed just such a representative, and consequently its permanent success is a legitimate result.

Starting at first as a sportsman's journal, that plebian recreation has risen to respectability under its influence, so that one may be proud of his rifle or gun, where once he was ashamed to be seen with one on his shoulder. Now we willingly acknowledge that the keen-eyed hunter in his light canoe, penetrating regions unknown to civilization, has brought to light facts and fancies in organic life new to science and the world.

The call for living issues, for facts as they appear to-day under our advanced intelligence, has brought out an overwhelming amount of contribution and incident, raising the question as to the reliability of certain early writers of natural history, and laying bare discrepancies and omissions which should no longer exist.

Here are opened channels of thought and research before unused. The sportsman in his record of facts and incident becomes a naturalist and scientist without effort, a source of human knowledge, now as never before showing its importance; and as new fields are under consideration and grow broader with each day, just so the interest, enjoyment and real soul, as well as bodily profit, is increased. It is the full free breath of mountain air that fills his lungs with oxygen, the living flame, and gives him strength and endurance beyond other men. The man of study and letters finds in the woods renewed energy from the same source, his writings have sharper edge and point, while to the "wit" the field is new and just exhaustless. And yet this particular advantage has been overlooked, its necessity in the maintenance of a well-balanced mind underrated in the fret and fever of business life. It is here that the FOREST AND STREAM steps in to fill a place compilers have been obliged to leave blank, or a story half told. The hunter tells his own story in his own way, and with a directness no other man can reach. The lion, tiger or panther in the menagerie is one thing; in their wild state, where the hunter's life depends on his coolness and precision, they are quite another. As one said to the writer: "We were standing side by side; the panther gathered his feet for the spring, but hesitated a fatal moment, as we knew he would do. My companion raised his rifle, with 'See me put his eye out,' which was done."

Its columns also offer a broad field where rival theories can be sustained or demolished; an elevated plateau overawed by no institution, governed by no clique, and not likely to sacrifice its dignity and position by bolstering a failing dynasty or a prestige that is passing away.

All honor to the projectors of the Central Park Museum and the State foremost in its fostering care of natural history; but beyond precedent fortunate that the FOREST AND STREAM is under its shadow. Both are necessary, I might add indispensable; but if one must be sacrificed, which shall go first? In the Park we see form, size and color, pictures which every child knows and can name at sight, while character, habit, passion, emotion—that which constitutes its story through the whole realm of organic life—must be sought outside its walls. It is, therefore, no idle boast that, as natural history is being re-written, the compiler must draw largely from these columns both base and structure of his work.

Ornithology as a pure science is exhausting itself. Microscopic distinctions, which at best only confer microscopic honors, have reached a point where common sense gives up the helm and abandons the guidance. The mighty craf already touches gravel, and unless a new tack is made it will stick fast where a neap tide will not float it off.

I have read somewhere that "man cannot live by bread alone." A striking illustration of its truth is herein apparent. Making no pretense to be a scientific journal, the FOREST AND STREAM has on its pages more of what natural science is built upon than any other publication in the language. Look at the exhibitions of canine sagacity. Look at our yachts, true sea birds of the ocean, marvels of improvement in naval architecture; the rifle of to-day, the deadliest arm the world has ever seen, and deny, if you dare, the strides natural history has made, gleaning in old fields, picking heads of abandoned grain and shaking out the grass in sheaves already gathered—all living issues of to-day, and for which, anxious to know and have their children know, men are pouring out money like water.

I might as well here as elsewhere crave the reader's indulgence while I offer a word in explanation of a devious course. I was drawn into the publication of papers on natural history as subjects came up for discussion in the FOREST AND STREAM, until, before I was aware of the danger, honorable retreat was impossible. I now go back to an article written years ago, and which should have appeared at first as defining the position assumed, only hoping, if the same idea is sometimes repeated, it will bear the repetition. The primary object of the essay was to engraft science back upon its parent stock, natural philosophy; because science is only a human method of studying creative works, and may go astray, while philosophy, the law under which all works were accomplished, came with them from the Creator's hand. The man who cannot see this is to be pitied, the man who denies it is a fallen angel.

I offer, therefore, a simple record of what I have seen in more than half a century of research, and what others have seen, and which I believe true statements. My own discoveries are neither brilliant nor numerous, and yet they are such as I hardly feel willing to see "appropriated" or forgotten, to be rediscovered by and by. If the conclusions drawn are given with the confidence of strong belief, rest assured that that is precisely the case since many an episode cost years of attention as its month came round, and many questions could only be settled in certain degrees of latitude. I may be pardoned for writing that a mushroom growth is here of all places most pernicious. To the young and superficial mind there is a charm in classification, orders, genera, and minor divisions. An array of hard names and indefinite distinctions obscure all above or beyond, the conclusion is at once reached that if these terms can be fluently repeated and profusely written, the whole matter is understood, and that this constitutes the study of nature in all its fullness and fruition. This weakness of young writers is a sad and fatal mistake; it has filled our pages of natural history with crude unphilosophic theories, improbable "probabilities" and strange reports, ready to seize any real discovery that is made, and still, erroneous record if no occurrence brings them to light. What I would impress is, that beyond this dark barrier of technicalities lies a field boundless as the love of God for his creatures, where is spread out all that is beautiful, all that is elevating and satisfactory to an inquiring mind. It is the little story of life in the simple language of nature that every creature brings before us; the place they occupy in the great chain of intelligences; the contemplation of which raises us in the same scale, ennobles our position and leaves us to feel and think.

I would also impress a more close observance of the laws which govern and sustain life in the orders below us, ministering as they do by life and liberty to our pleasures and our necessities. They have a claim on our mercy at least, which it is sin of deepest dye to disregard.

When we deprive a bird or animal of liberty, we also perhaps take from them ability to obtain the food on which they live, and without which they must die. We may exhaust invention in mixing substitutes, but the broken natural law remains, and the penalty is death. Take the Southern mocking bird, an insect and worm eater exclusively. Not one in ten survives the first year in confinement; not one in twenty lives two years, and not one in a hundred lives over five years. And why is this? Not because you did not give food in abundance, but because you did not and could not give the food the Creator made necessary to sustain that life. "Why did my bird die when he sung so beautifully but yesterday?" I have heard many times repeated, with only the same answer to give: "Your bird had only the language of song, and the last wail of starvation could be nothing else." Here is your bird, a mere skeleton covered with feathers; as I said before, the unremitting penalty of a broken law, immutable through the whole realm of organic life.

There's an old book "laying around," you will find one in almost every house; in fact, every well regulated family possesses one or more copies, for "there is a great deal in it." Not particularly a work on ornithology, although a bearing in that direction is perceptible. Turning its pages one day

my eye fell on this passage, "If a bird's nest chance to be before thee in the way, in any tree or on the ground, whether they be young ones or eggs, the dam sitting upon the young or upon the eggs, thou shalt not take the dam with the young, but thou shalt in any wise let the dam go and take the young unto thee." (Deut. xxii. 6–7.)

I sat a long while in deep thought over it. Here was a key to what had been for years to me a mystery, and although giving no clue to the origin or process, such was my confidence in the authority of the command that I accepted the fact, willing to abide by it. But why was this command necessary in this and in no other phaze of organic life? Yes surely, why?

The pet fever touched me at the usual age, to be supplanted by love for higher objects as years formed new tastes and aspirations, and culminating at last on that last work of creation, where it sticks to this day. (I account for the anomaly only on the simple fact that it leaves nothing further to be desired in that direction.)

I took from the nest a brood of young birds with both the parent birds, put them in a cage, placed in it abundance of food, congratulating myself that the old birds were quiet and did not worry, and of course would tame easily. Six hours afterward I looked into the cage; the mother bird lay dead, while the male survived a short time. Wishing to preserve the skins, I found the flesh dry and shrunken, the fluids exhausted, with every appearance of starvation a week rather than the work of a few hours. I tried the same experiment several times, with the same result invariably, and grew discouraged.

After reading the above quotation the mystery was greater, while the liberty of investigation was abridged. Thoroughly human, I sought to evade the letter of the law and see how near I could come without incurring its penalty. I found a family of grosbeaks and carried the young in my pocket, the old birds in a basket. I placed the old birds in the basement and the young birds in the attic. When I came in at evening the old bird was dead. It being warm weather the windows were open, the old birds would hear the call of their young, and hence the result. I must confess that seeing this my heart was far from flint. One trial more and I ceased forever. I took a pair of grosbeaks with the young, carried the young to my house, and the old ones to my office. They all lived. The young grew large and beautiful, the old birds easily domesticated, and all were lovely as tame birds could be. The question comes up then, what is this power, this influence of the passions and emotions which will so quickly exhaust the functions of life, shrink the living tissue and paralyze muscular action?

The power of mind over matter is acknowledged in general terms, but the particular province and physical effects of passion, emotion, will and like attributes in organic life, science has not reached, and could not if it would. This train of thought I propose to follow, noting the physical results of their influence and power, in moulding forms of life, changing and breaking up its organizations, with such other phenomena of interest as may occur.

To return to the question, why was this single class of creatures designated among myriads to receive special privileges and exemption from calamities to which all organic life is subjected. We shall find the answer in their peculiar nervous organization and susceptibility. They could not be the fairy creatures they are with less. The rapidity of motion, the circulation of blood and muscular action, all show sentient intensity not possessed by any other warm-blooded creature. To offset and counterbalance this, comes in the wise provision of short memory, and a cessation of nervous excitement when the cause is removed. As was said before, the moment the call of the young bird ceases, whether from death or removal, the parent bird becomes quiet, and after a short time gathers food for itself, and all is forgotten. We see then, how the passions and emotions paralyze the functions of life, and how quickly the living tissue is affected by them. We find also that desire, effort, or will, though less rapid in operation, is not less wonderful in physical results.

When I first looked at the American crossbill, creative design was beyond my reach. The consideration followed of how far circumstances might have influenced the distortion of mandible, and that led me to keep one in confinement where neither desire nor opportunity could be indulged and where the mandibles would not be twisted, now right and now left, nor elongated by efforts to reach a seed a little beyond his reach. At the end of one year I saw the mandibles were assuming a natural position. At the end of two years the bird died when the crossing was hardly perceptible. It may be urged that this being the case, the mandibles of the young bird should be parallel and straight. I reply, not necessarily so, since no fact is better substantiated than that in the transmission of life, both character and bodily deformity are carried with it. Here is positive evidence of natural effort to restore symmetry to a distortion brought on by the varying circumstances and necessities of life. What we urge is that subjects fraught with such serious consequences to the best interests of life should receive the attention due to them, and we may rest assured that the line between what the Creator has done and what he has left us to learn and do, will grow definite and plain as we proceed. The laws which govern the physical universe, govern also the beating of your heart and mine, and when understood, leave less and less of His dealings with humanity inscrutable.

Henry Little grew from boyhood to manhood by my side. From a burn on his neck when quite a small child the injured muscle contracted, and laid his head down on his right shoulder. He grew up a strong, healthy, spirited young man, but continually cramped by this misfortune, which did not in the least impair intellect or ambition. Every moment of waking life was an effort to raise his head to an upright position, and this grew more intense as the approach to manhood made the misfortune more apparent. A physician, skillful, though somewhat given to hazardous experiments, said to him one day: "Henry, I can part that contracted muscle and set your head up right." "Do it—do it," said Henry. "Cut my head half off if necessary. I'll risk it."

So one day he thrust in his knife, and feeling around among nerves and blood vessels, severed the strap, and over the head went to the opposite shoulder. Bracing it up in proper position, the wound soon healed, and his head was all right. But a new phenomena now appeared, the face was all awry, the whole side was carried upward, the whole orbit of the eye and eyeball was carried three-quarters up into the forehead, so that the distortion was really more painful to look at than before. What counteracting influences might have followed we are unable to record, as a few months afterward he fell from the yard arm in a stormy night at sea and was lost. B. Horsford.

Springfield, Mass.

Bird Notes.—Robins, bluebirds and larks are here in force. The song of the lark is especially sweet after the terrible winter just experienced. Long before summer the meadows are vocal with his songs. The robin has not got tuned up yet, but is practicing. Several mornings I have heard him near my bedroom window. The bluebird warbled all through the month of March. It was pretty tough on him, but when he got here he stayed. The English sparrow was here all winter, but with the first breath of spring has gone hence. The 15th of March I counted forty-nine wild geese, and on the 19th ult. sixty-one, sailing northward. Some five days later I heard a flock in the dusk of evening, but did not see it. I have not noted the flight of our wild ducks this spring, though I am informed that a great many have come in along the Hock-Hocking River. I usually see a great many this time of the year. Quail will be scare here this fall. Reports from the country around say that entire flocks perished during the extreme cold weather. Last winter was one of the worst ever experienced in this State. Near the office of our iron works (which, by the way, is way back in the woods) is a large coal slack dump which has been burning for several years, and over which is dumped hundreds of bushels of slack every week. Adjacent to this dump is a woodland, and one morning a flock of twelve quail filed out of the woods down to this fire. After a little time they flew away to the stables and were fed by the stable boss. Every morning I watched them, and with each visit the number was less. At last only three were left to answer roll call. All day they hovered close to the heat, but when the firelight began to brighten the dark landscape, and night was fairly on, they fled. In the morning the encampment was silent, and after a search, made this entry in the note book: "Found dead upon the picket line." Grouse wintered well, and are to be found in abundance.—Parson O'Gath (Baird Iron Works, Gore, O., April 6).

The Deadly Wires.—A large flock of wild geese passed over here northward this morning, the first I have observed this season. Last week the boys picked up in the road an English snipe and a woodcock. Both were probably killed by flying against the telegraph wires which line the highway. From the numerous similar instances noticed, must we not conclude that the total number of game birds killed in this way is very large indeed? Unfortunately for this kind of destruction there seems to be no help, but on the contrary it must continue to increase as the cause increases. —H. W. C. (Rye, N. Y., April 8).

The Speed at which Ducks Fly.—A few weeks ago the writer was riding at the side of the Connecticut River on a train which was running not less than twenty miles an hour. As it passed a certain point a duck flew up and headed the same way we were going. It came just in a line with the edge of the window and kept there for several minutes without losing an inch until it began to slow down preparatory to settling into the water again.—Curtis.

Game Bag and Gun.

SHOOTING IN CUBA.

A DAY AMONG THE QUAIL.

I HAVE just risen from the perusal of my weekly file of the *Herald*, filled with terrifying details of the disastrous floods in the West, the destructive cyclones in the South, and the piercing blizzards in the North of our grand republic, and cannot help feeling satisfied for the nonce that I am smiled upon by kindlier skies. While our fellow sportsmen north of Mason and Dixon's are blowing their fingers and kicking their toes against the ice-covered trees to keep up the circulation of blood in them, I am kicking Bob White out of the matted grass in green fields and pastures new. No wonder then that the New Orleans and Cedar Key steamer of this week brought us seventy-three passengers, and nearly every week from forty to sixty, when, but three or four years ago, from six to ten was the usual number brought in by this line each trip. The fact is, increasing numbers of my countrymen are discovering that this is a wonderfully fine winter climate, generally with clear skies and the temperature ranging between seventy and eighty from November to April, frequently below seventy, with an occasional dive down to sixty for several days at a time during the northers which are probably the spent breath of your northern blizzards.

Since sending you my last letter ("A Day Among the Wild Guineas") I have not been out until this week, on account of the sickness of my dog, which I will briefly mention *en passant* as a matter of interest to sportsmen.

The dog in question is the red Irish setter bitch Fire Fly, formerly owned by Mr. Crause, of Baltimore and Ohio Railroad, for which he paid, as he assured me, $1,150, and was purchased by me and brought to this island about eighteen months since. Soon after her arrival here I noticed she was very deaf on one side, and would often scratch her head furiously on the deaf side, and this continued until the day referred to in my last letter. That day she did unusually heavy work, and suffered from lassitude and lack of appetite for several days thereafter, when her head became much swollen with an offensive discharge from the deaf ear. Becoming alarmed at her symptoms, I laid the ear open and found the inner ear completely filled up with a blood tumor with broad base, which I dissected out, a suppurating mass with more than thirty maggots a half inch long and full line in diameter within it.

The wound was dressed daily with water medicated with chinolin tartaric, two grains to the ounce. She made a good recovery, and now, four weeks after the operation, is entirely well, with hearing perfectly restored.

Yesterday, 24th of February, I took her to the country for a day among the quail, which we both thoroughly enjoyed, she appearing desirous of showing especial gratitude for her improved abilities.

The morning was particularly cool and pleasant, we, in the best form, were on the ground at sunrise. Light dewdrops sparkled upon the grass, refracting the cheery light that played upon and through them; the twitter of song birds filled the morning air with animating sounds, which wonderfully harmonized with its charming freshness, while we enjoyed the thrill of the quickened circulation that coursed through its circuit of arteries and veins, the pleasure of which is heightened by our pleasing expectations of our favorite sport. The dog, in full sympathy with these expectations, is inclined to widen her range as she goes rollicking over the field, but to my great delight is now quick in hearing and obedient to the whistle.

Our first bevy we flushed wild in a field denuded of cover, and they scattered badly; one quartered within reach of my left barrel, and I scored my first bird, which the bitch retrieved in her usual handsome style, laying in my hand a plump bird without ruffling a feather. These birds were so scattered I was unable to mark them, so did not try to follow, but at the other side of same field the dog commenced roading another bevy which she worked very cautiously, and finally located. They were in good cover, and so cautiously had the dog crept upon them, that when flushed they rose in one bunch within a yard of her nose and two yards of the nose of her master, who did not molest them, only trying to mark them down. All except two, however, went out of the field; these two made the second and third birds contributed to my bag.

I now followed into the field where the last bevy had flown, a full hour having been devoted to the last field with a result of only three birds in the bag.

Before proceeding far in the next field the dog began roading and soon came to a point. I flushed and killed a large water hen (*Crex porzana*), and a little further, on a second point, I flushed a bevy of quail and killed the Jaggard, marking the rest down, but little scattered, in a splendid cover of short, but thick and matted grass. Here I at once knew I was to have the best sport of the day. The grass was such as the quail, when flushed, love to hide in, and in which they will not run; so I called the dog to the cool shade of a neighboring tree to rest and cool off in the gentle breeze. Near us we had the bevy marked down, within a space not exceeding two hundred feet square, in such cover that I knew they would rise in ones and twos.

The owner of the hacienda rode up to invite me to breakfast with him and his family at 10 o'clock, and I told him of the game marked down, inviting him to remain to see the sport. Asking me to be careful not to shoot in his direction, he accepted my invitation. When both I and the bitch were quite rested, keeping her close, I commenced at one side and worked that patch of field as closely as if looking for needles in hayfields, she seeming to be as well aware as myself of the vicinity of the whole bevy, and that any unnecessary fuss would spoil our sport. How very like a cat she did all that delicate piece of work, constantly talking to me with her eyes as she successively and surely pointed with her nose to their secret hiding places without ever making one mistake, her knowing glance saying to me, "There is your bird, are you ready?" and how quietly she would slip away to retrieve the dead birds and how carefully she laid each in my hand and resumed her work. I think it was the prettiest piece of canine work I ever witnessed, and my enjoyment of it was greatly augmented by my friend remaining to witness it also. His enthusiasm for the dog was boundless, and I could not help doing my part better than ever before. One by one (except once when two rose together) she found and pointed for me fourteen quail, and never before do I remember having killed twelve quail out of fourteen successive rises. This time, as if to honor the fine work of my dog, twelve of these fourteen went into my bag, and then we adjourned to the house for breakfast, both I and the bitch having acquired a high reputation for skill in the estimation of my host. Sixteen birds fat as squabs, a glowing satisfaction with myself and dog, and a rousing appetite, were the results of my morning's work.

The breakfast was worthy of my preparation for it in my glorious tramp over those fields, and I honored it with gusto such as only a sportsman can comprehend. My host and I were full of the enthusiasm brought in from the field, and we killed all those birds again over the breakfast table in company with his family.

After two hours devoted to our breakfast and quiet rest, the gentle breezes under the wide balcony, the thermometer marking there about seventy degrees, I amused myself by a few shots at the wild pigeons which were plentiful in a millet field near the house, bagging ten of them in a half hour. Until four o'clock I strolled about the place, and observing the domestic animals, among which is a phenomenal friendship, existing since several years, between a cow and a sturdy old gander, which are inseparable. Wherever that cow ranges that gander is ever by her side, and her champion against all violent aggressions, and will put to route even the most ferocious cattle that attack her by striking them violent blows with his sturdy wings and sharp, horny bill about their eyes, sometimes leaving incised wounds in their eyelids. This you may think a very improper gander, but that is the only kind permitted in this anomalous country, no propaganda being allowed by the authorities of the "Siempre Fiel" to be even talked about, and I quail before indulging in such a thought.

This being so, and 4 o'clock coming around, with myself and Fly perfectly rested and refreshed, I followed her to the fields, this time with the head and small boys of the family to show me where the game was most quickly to be found, and with a desire on their part to witness a renewal of the performances so celebrated at the breakfast table.

The birds were already running. Several bevies were successively found, and they furnished us fair sport, though I was not able to mark down any in so favorable a cover as to repeat the morning's performance; consequently I somewhat injured my reputation for great skill by more frequent misses. Notwithstanding this I had a very enjoyable tramp, at sunset had flushed five bevies during the afternoon, and had added thirteen quail to my morning's score. Total bag for the day, 29 quail, 10 pigeons and 1 water hen—40 birds—with which I arrived home by early train yesterday, the 25th inst. Note the date, and that I say "total bag," not "total results," which are still more far-reaching and important.

It is big medicine, and I take it whenever I can get a day off, from November to April, for all bodily ailments, not to mention the alimentation which is one of its minor advantages also agreeable to your subscriber.

Notwithstanding that there is no legally closed season here, the birds are plentiful because the absence of snow, abundance of cover and food, and comparatively few sportsmen do for them what only the most stringently enforced game laws can accomplish in the States. Included under the word "cover" are the cane fields, tangle woods and their vicinities, where shooting is impracticable, so it will ever be impossible to exterminate the quail by much shooting, as it will always be replenished from these impenetrable preserves, and the same is true in some degree of the deer.

Nemo Niemand.

Habana, Feb. 26, 1884.

Central Lake, Mich., April 16.—Crow blackbirds first seen April 14. No wild geese reported as yet. The inland lakes are opening fast, but there is still a good deal of ice. Grand Traverse Bay not open yet.—K.

INCREASE OF MAINE LARGE GAME.

ALMOST cheering report to the sportsman and friend of game protection comes from Maine. Moose, caribou and deer are increasing. The information comes from good authority and there is no buncombe about it. Protection of these kings of game animals was not begun in real earnest till the jack-shooters and crust-hunters had made a heavy beginning in the work of utter extermination—was not thoroughly begun till the winter of 1881-82, and followed up with a vengeance till the winter of 1882-83. But when early last winter Payson Tucker, Superintendent of the Maine Central Railroad, issued his remarkable order to forward no more moose, caribou, deer, or other unlawfully-killed game over his road or its branches, the backbone of Maine market hunting was broken. He was immediately followed by a similar order from the managers of nearly every other express and transportation company with lines leading out of Maine. The result has been most gratifying. Instead of nearly two thousand deer, forwarded from that State a year ago, there to be wasted or sold for a mere pittance, the winter is now over, the crust-hunting season is past and not over fifty deer have been received in Boston.

But the effect upon the game itself is most pleasing. A gentleman thoroughly familiar with the history of the moose in Maine, who has just returned from a trip through Aroostook county, says that the most noble of game is surely on the increase. Lumbermen report their tracks as more plenty than ever seen before. The lumbermen have frequently seen them. Alas! for the love of fresh venison they would probably have killed them, but the game wardens and detectives made themselves too much of a terror a year ago, when they suddenly "dropped into camp," helped themselves to moose hides, and called upon the lumbermen to call at the county attorney's office and settle in the sum of $100 and costs for every moose killed. Deer are reported as more numerous than ever before in that county, and they have not been molested by either lumbermen or crust-hunters.

From Piscataquis and Penobscot counties the reports are equally good. The game wardens have done efficient and seasonable work, but the moose and deer unlawfully killed have been very few, while a few hours' drive from the city of Bangor would bring anybody within sight of deer tracks as plenty as sheep tracks. Occasionally moose also have been seen. Though respectable citizens of that city have not been bitten by them, yet the question may be asked in sober earnest, what would have been the result of the seeing of a deer, or even his track, without the efficient arm of the game law over him?

But the good work has been done, and too much credit cannot be reflected upon the earnest efforts of the worthy fish and game commissioners of that State. The reports are cheering, and only equalled by the fact that the admirable code of laws, published already in the FOREST AND STREAM, have passed the Massachusetts Senate without a single damaging amendment. A veteran lover of the rod and gun in Maine sends a greeting to the Massachusetts Fish and Game Protective Association, and offers to extend it to the editor of the FOREST AND STREAM. He says, "Moose and deer have made a decided gain in our State. I expect to live to kill yet another moose by square still-hunting in open season. And it now looks as though there were going to be enough for all of us. Come down next fall, in open season, and look over your trusty rifle barrel at the roots of a pair of antlers that stand ten feet above the ground!" SPECIAL.

BOSTON, Mass.

THE CHOICE OF HUNTING RIFLES.

Editor Forest and Stream:

Rifles and mechanics have been my hobby, and added to this is an experience of fifteen years in rifle shooting. I have hunted from Texas to the Canadas and used all kinds of rifles in match shooting. I have owned one of each gun worth anything appearing in the market and have made some barrels according to my ideas of rifling, twist, etc., so this *ipse dixit* will have some solid basis.

One correspondent advocates a bottle-neck shell. This pattern has been long since discarded both by government and long range-experts; it is a type of the past. The recoil of a bottle-necked shell is fully two foot-pounds heavier than that of the same charge in a straight shell. The powder blow becomes more percussive (with equal charges) in proportion as the chamber is shortened within practicable limits.

This percussive force we must get rid of and endeavor to make the conditions as nearly similar to the accurate muzzle-loader as possible, *i. e.*, a ball so hard as to upset only for one-fifth its length, and of the same diameter as the barrel at bottom of grooves. Results of trials show same accuracy as when ball is loaded from the muzzle in the grooves.

Upon the subject of recoil another contributor speaks with such temerity as in a measure to vitiate his opinion. I have used as much as 130 grains powder and 550 grains lead, off-hand, and although case-hardened by firing thousands of shots each year, can get better work from lighter charges. The less the recoil the greater percentage of hits will be made. It is a curious fact, too, that the closer the shot the harder the gun seems to kick.

We can expect only recoil and unaccountables from this .40-90 bottle shell, and it seems a shame to spoil a good barrel by chambering it for it.

Use in its stead a taper shell of same length, loaded in the following manner, which will give the same initial velocity with 25 per cent. less initial pressure, and has 10 grains less powder to dirty the barrel. I saw in an Ordnance report that in the shell for the Austrian "Werndl" rifle a cake of compressed powder was used, with a resultant gain of some 250 f. s. initial velocity over shells loaded with same weight loose powder. This set me thinking, and experiment indorses the following: Load with 20 grains FG in bottom of shell, then put in a cylindrical cake of compressed powder of 50 grains, then add 10 grains of a small-grained quick powder, say FFFG.

The primer should be No. 1 Winchester, as its safety in a magazine is in proportion to the size, besides we want only enough flame to surely ignite the base of the charge to get the desired accelerative effect.

The ball should be 300 grains, 4 canelures, with a point terminated by a flattened spheroid, to get the maximum area of striking surface.

An alloy of $\frac{1}{10}$ is best, while the rings on the ball should caliper same as the barrel at bottom of the grooves.

Sir Joseph Whitworth and Dame Experience both tell us that to insure the rotation, a twist of one turn in twenty inches must be used for a ball of three diameters in length. The energy wasted in starting a ball not seated in the grooves, and it cannot be in a repeater, is equal to a loss of two inches in trajectory.

On some balls fired in snow to determine this, the grooves in the lead were from .01 to .10 inch wider than the lands in the gun, and *vice versa*. I find that for a ball started not in the grooves, an increase twist starting one turn in sixty inches and finishing one turn in sixteen inches, will deliver it most perfectly, giving at the same time so little recoil, with a marked increase in accuracy and trajectory, as to recommend its adoption.

The number of grooves may be 6 or 8, .005 inch in depth and twice the width of the lands. All corners should be rounded off to reduce the area of friction and fouling. We cannot choose a better action than the Winchester.

To remove the fears expressed by some, I relate the following: I use from 3,000 to 10,000 Winchester cartridges in their guns every year. Such was my faith in them that, to convince a friend who doubted, I shot first 18 shots in 9 seconds, with only one link; then fired from the shoulder a charge of 120 grains and three 200-grain balls on top of it. He is a convert.

Every accident with these guns may be traced to home-made shells and badly-seated primers.

With a .76 inch Winchester, chambered for the taper shell, adding thereto the modes of charging and rifling I have advocated, we have a gun that has all the requirements called for by expectant readers of the rifle column.

Let us hear the criticism of some of your correspondents who replace experiment with theories hatched in fertile brains, and portray them with a more fluent pen than mine.

W. DEV. F.

PHILADELPHIA.

THE PERFORMANCE OF SHOTGUNS.

Editor Forest and Stream:

In ante-railroad days in Arizona, together with several others, I went to the first station west of town, known as the Nine Mile Water Hole, to meet the incoming California stage, upon which we expected friends. The place was at that time kept by Colonel Whipple, a frontiersman of no mean renown, who has since died from the bite of a rattlesnake. In the immediate neighborhood of the station was an immense mesquital that swarmed with the birds common to that neighborhood, and although it was July, many were nesting. Among them was a thrush, at that time a stranger to me, and as I had noticed the customary shotgun standing behind the bar of the station, I took it and blazed away at my bird. What exactly followed I cannot tell, but I have and had then a faint recollection of being over-ended some four or five times in rapid succession and finally of bringing up with a bump against a neighboring tree with a bleeding nose, an aching head and an almost dislocated shoulder. I rested till I could properly get my bearings, then started back with the gun, that during my gyrations in the air had never left my hands. On the way I met Whipple, and he expressed surprise at my want of judgment in the use of a gun that stood specially loaded for special purposes behind the liquor bar of a station on a lonely stage road. He then told me how much he had paid for it, and what a good gun it was. It had, he acknowledged, been pretty well filled up, and then added, by way of condolence, that he liked to feel a gun when it went off, inasmuch as the result was always the more positive. I of course felt satisfied that he was right, and am yet convinced by the back action of that one load that the performance of shotguns is a something not to be despised. I afterward gathered up the little remaining skin and feathers of the bird and sent them to a gentleman in San Francisco for identification, and, by way of apology for the rags sent, recounted my sad experience. In reply, he advised me to "load lighter and shove a little on the breech." I regret much that I do not know the weight and gauge of the gun, or the pounds of shot and powder used; but it was a muzzleloader, and I have my own experience and Whipple's word for it that the gun was a good one.

ADIOS.

TUCSON, A. T.

Editor Forest and Stream:

I hope I will be excused for stating facts, as my personal experience has proven them to be, not guess work, in the performance of shotguns, in points wherein the facts are at variance with what many persons have stated as facts in late numbers of this journal. Not that I believe that these persons, any of them, would knowingly make misstatements of facts, but have done so, by accepting as true a proposition that at the time to them seemed self-evident, but which, put to the crucial test of actual trial, would have been proven erroneous.

Let us take, for example, the most common of these misstatements of fact when speaking of shotguns both by editors and correspondents, which is the expression, when speaking of charges, "The 10-bore will stand much heavier charges than the 12 or 16-bore because it is the strongest gun." Is this a fact as written? Most certainly no. The 16-bore, with the same thickness of metal at the breech as the 10-bore, is very much the strongest, and the 20-bore in the same way, very much stronger than the 16. A tension that would lay a 10-bore wide open would be easily withstood by the 20-bore of equal thickness of metal. The strength to withstand tensive force of your gun or your steam boiler is in proportion to the area of its inner surface, the greater the area the less tension a certain thickness of metal will stand. The dentist's boiler of thin brass, four by six inches, withstands a tension of 900 pounds to the square inch as safely as the boiler of an ocean steamer made of the best steel ten or twenty times the thickness withstands twenty pounds to the square inch. This I give as a sample, easily understood, of some of the assertions of seeming facts that are not facts, and no one is excusable for presenting them as facts.

I will now take up in sequence some of the assertions made in the issue of this journal in the number of March 13 and other sportsmen's journals that actual experience has proven, and will prove in all trials, are not true. We will take the assertion by "* * * *," on page 125: "A close, hard-shooting gun * * * will kill with No. 8, 9 or 10 shot * * with remarkable certainty 45 to 50 yards." This is not true of any shotgun, be it "hard-shooting" or close, with No. 9 or 10 shot, and generally not so with No. 8. Try it and see. Put your quail up at 50 yards—measured yards, not guessed at—and see how much shooting at with No. 10 shot he will stand; if you can make him "lay down" oftener than once in ten shots then I know nothing about shotgun shooting. I think my experiments in the line of testing the killing range of fine shot have been careful and extensive enough for practical purposes, and I have found it to be as follows: For No. 12 Chicago shot, 26 to 27 yards; for No. 9, 34 to 36; for No. 8, 36 to 44. I mean that this is as far as any gun will injure a quail so badly sitting, as to be retrieved. Perhaps for one on the wing, if the gun be properly held, 5 to 10 yards further could be added. Try it and see. It is no more possible to kill a goose 100 yards with No. 10 shot than it is to kill one a mile with the same charge, unless the shot should in some way cement together by "balling."

Again, we have in the same article: "But the larger the shot the larger the pattern." The writer evidently means the larger the shot the wider the spread, while exactly the reverse is the fact with all shotguns.

In the following article, by "Spicewood," we have: "If I load my 26-inch gun with the coarser grade (of powder) I find some of it blown out without being burnt." This is truly wonderful. But as preposterous as it is, how often do we see the same sentiment in print; yet I do not believe but what the men writing it believe it. I believe—yes, I think I know—that if we had a tube reaching from here to the moon filled from end to end with gunpowder of any of the ordinary kinds, or extraordinary, and we set fire to one end of it, that each and every grain of that power would be burned before that powder got rid of that fire. That a gun can be overcharged with powder so far as to even reduce its effectiveness is a fact that trial has proven. But gun powder is quite sensitive to fire, notably so, and never becomes so disgusted and demoralized from misuse as to fail to explode or burn when subjected to the white heat of the flame issuing from the muzzle of an overloaded gun when fired. A. is out shooting when there is snow on the ground; he accidentally overcharges his gun. When he fires it he finds strewn on the snow in the line of fire something that very closely resembles grains of powder. He at once concludes without further examination that it is unconsumed powder. What is it? Simply the loosened powder scale left in his gun by former charges; and powder being a compound substance, made up of three very different things, with no two things exactly alike, some of them are consumed or changed into gas instantly, while others (notably those which have nothing in their composition but sulphur and charcoal) burn very slowly and are projected on the snow while still burning, and are "put out" by contact with the snow, resulting in a pellet of charcoal looking very much like powder, these being the only two kinds of powder ever found on the snow in front of a fired gun.

In the next article Mr. Alden seems to have struck a snag with his first breechloader, when there was really no snag there. He says: "It proved to be a very inferior weapon, although I paid a high price for it." I suppose, of course, he means that it did not shoot well. A remedy correcting that is easily found. The art of manipulating shotguns has for years reached that stage whereby the good gunsmith can, with his reamer, give any well-built gun any desired closeness of pattern in reason that one may desire. Therefore, I consider one shotgun as good as another, all other things being equal, if it only has metal enough to withstand the requisite reaming or chokeboring.

A gunsmith with his reamer will manipulate the despised muzzleloader as readily as a breechloader, then how is "38" (in issue of March 13) going to beat it, all other things being equal? The only, only advantage the breechloader has over the muzzleloader, is its ease of manipulation, and its self-evident disadvantages are, that it "kicks" a little harder and requires a little more powder to do the same work.

"38" is very nearly as lame in his next paragraph, taken as a whole. There is no measurable, or rather discernible, difference in the shooting of a 18 and a 12-bore gun, loaded with 4 drams of powder and 1¼ ounces of shot, all other points but the bore being equal, except that the 10 gives appreciably the most recoil in all the experiments that I have made, and they have not been few. Why should the 10-bore "cover more territory" than the 12, with same loads?

Your correspondent, "Mark Ivel," has at last got a gun so very much superior to the rest of the boys, and so far ahead of any gun mortal man on this planet ever built, that I know without asking that he had it built on the planet Mars to special order. Does "Mark Ivel" himself believe that he was writing facts when he wrote, "This gun, when properly loaded, is sure to kill at 100 yards if held on the game"? He may if the Alabama yards are short, very short.

The next paragraph by Mr. Newcomb. Who can find any fault with it? Not I. There is not. I should judge, an overdrawn statement in it. We have all made wonderful shots, shots that seemed far beyond the range of possibilities, but we must leave the "kill every time" off if we wish to live happily and go to some place when we die. Have our mouths and pens chokebored, as it were, so that they may not scatter so outrageously.

The next man, "New Subscriber," will find plenty of men to enter the lists with the 12-bore against his 10-bore, all things being equal, except the bore, and many of them without qualifications, and not get beat on any point.

So much for the notes on "The Performance of Shotguns" in one number of FOREST AND STREAM. If I have gone beyond, in these remarks, the spirit of fair critisism, it is not my fault, but that of the writers. My excuse is, we want facts and nothing but facts. Yes, only one issue, but it has been going on week after week and year after year. When "Almo" says positively that he can kill a goose one hundred yards with No. 10 shot, and the tyro, having purchased an expensive gun and goes out to test it by this standard of "Almo's," and finds that he cannot ruffle the feathers, or even make the old gander dodge, or scarcely, if at all, find the marks of his shot on a soft pine board that distance, he is liable to throw away a good gun, or try to ruin the reputation of its maker. Therefore I say, let us all get chokebored very frequently when writing on gunnery. BYRNE.

LACON, Ill.

Editor Forest and Stream:

I use 9¼ lbs., 10 gauge; load 4½ drams powder, one pasteboard wad and one felt wad on powder, 1¼ ounces shot, one felt wad on shot, and wads two sizes larger than bore. Find good work on all sizes of shot; No. 9 shot for snipe and quail, 5s chilled for ducks. I killed a mallard clean, and she struck a treetop as the gun cracked, at eighty-four paces. Of course such shots are a scratch, but still the shot must fly hard to kill at that distance. WADS.

LEWISTON, Ill.

ARKANSAS.—Memphis, Tenn., April 16.—Messrs. W. A. Wheatley ("Guido"), D. H. Poston and John H. Freeman had some rare sport last week across the river. They bagged 167 game birds in one day, and in half the next 150 fell before their unerring fire. From 8 to 11 o'clock Saturday morning, at Madison Station, on their way home, they killed fifty-six. Nearly all were snipe, and a run of sixteen straight kills (four doubles) was made. All their families and friends had a feast Sunday morning.

PHILADELPHIA NOTES.

DURING the past week we have had some real snipe weather, about the first of the season that can be called favorable in every respect. Some birds were killed, yet very few compared to the good old times, when a dozen snipe in a forenoon was considered only fair work within a radius of five miles of Philadelphia. Nowadays a pair of snipe for a morning's tramp seems to satisfy our city men who carry the gun, and lucky is he who makes even this showing from our Philadelphia meadows. On the warm days of last week it would be safe to say there were fifty men with dogs on the Broad street meadows, and the Schuylkill and Darby Creek grounds had as many visitors.

A snipe once found on these near meadows generally jumps out of gunshot, and circling round and round in a wide, diverging flight, keeps up an incessant squeaking that always tells of fright, and vainly seeks for a safe place to pitch into, not daring to trust himself in such populated quarters; until at last, weary of the cannonading and saluting he is receiving in his course away out of gunshot, he betakes himself to a more congenial section.

A day's journey from Philadelphia, and by this I mean in neighborhoods only reached by steam railroads, good snipe shooting can very frequently be had. Delaware State has many spots and so has Maryland. Just now Milton Creek, Delaware, has many birds on its borders. This section is reached by railroad and stage, and therefore few visit it, the grounds are quite isolated and the local gunners "do not bother with snipe." They wait for the quail season and only go "a birdin." Milford, Delaware, neighboring snipe meadows are more easily gotten at and have many Philadelphia visitors, but there is a very large extent of good ground and plenty of room when birds are numerous, and they are often struck. The early coming varieties of shore birds have made their appearance on the New Jersey coast and the big yellow-leg has arrived in fair numbers. The later spring visitors of the wading tribe do not show themselves until next month, and those that enjoy and follow spring bay bird shooting wait for them. Of these there are the black breast plover, the robin snipe and the dowitcher, their stay is short and the flight must be hit just in time.

Some of my friends, who have made the acquaintance of Western market shooters, whom they have at times employed as guides on October shooting trips, have been the recipient in the spring from some of these men of boxes of snipe. I have seen these packages of game opened, and am sorry to say, on more than one instance found half of the birds to have been upland plover, or as the market shooters termed them, "prairie keets."

Snow can be still seen in the hollow places on the northern side of our Pennsylvania mountains. The season is late for trout fishing, and one may look for spring to tumble right into the lap of summer. HOMO.

April 19.

DECREASE OF BIRDS IN FLORIDA.—I found nothing new or strange in Florida worth reporting; in fact, did not get away from beaten paths and the currents of travel. Thus much for going alone. I observed this, however, that the birds of Florida are greatly reduced since I first traveled in the State ten years ago. Ducks and other common water fowls have apparently diminished three-fourths, while the more rare and finely plumaged birds have almost entirely disappeared along the lines of travel. This result, in the latter class of birds, is caused in some degree by the shooting of visitors, but mainly by their destruction for commercial purposes. The steamer lines have stopped promiscuous firing from their decks, for which good step the officers deserve great credit. Formerly a Florida steamboat resembled a gunboat in constant action, except in the lamentable fact that all the shots were from her decks. Now she is an orderly, respectable craft in the main. At Tampa I found a commercial man fitting out a bird-killing expedition for the southwest coast further down. He declared his intention of bringing back 10,000 bird skins. I hope he will be disappointed. Further up toward Cedar Key, seeing many deer skins en route to market, I made inquiry and learned that deer are habitually hunted in the less-inhabited districts for their skins alone. This kind of butchery will soon destroy Florida's attraction for sportsmen. The diminution of ducks and other migratory water fowl is probably caused by their destruction further north. Comparatively few of them are killed in Florida. The most accessibly fishing resorts are also perceptibly depleted of their finny game.—W. N. B.

WILDFOWL IN NEW BRUNSWICK.—*Editor Forest and Stream:* In your issue of March 27, I noticed a communication from "B." on "Wildfowl in New Brunswick." I live on Northumberland Straits, but have never seen the time when even one hundred geese could be bagged in one day. Most of our gunners would be very well satisfied if they could secure that number during the whole season. I admit that there are better shooting grounds on this coast, but I think, for all that, that "B." has exaggerated, unless he means birds of all kinds, including "coots." Most of the shooting here is done in icehouses (a structure of circular form two or three feet high) over decoys. The boats described by "B." are used for a short time only, when the ice is breaking up in the channels. In my opinion they injure the shooting, for the birds are driven from their feeding grounds and become very wild. We have had very bad weather for the last fortnight, and but few birds have been killed. The largest score for last week was five geese and one black duck.—C. (New Brunswick).

MINNESOTA.—Long Prairie.—Although the snow went off early, and the streams opened up in good season, we have had but few ducks when compared with the flight of 1880 and 1881. There have been but few bags made here, the largest being fifteen ducks in a day by two men. Last spring the river opened late, and there were no ducks to speak of, and they were scarce last fall. Our sportsmen are puzzled to know whether the good old days are gone to never return, or whether the ducks have simply taken a different route in their northerly flight, and next spring may come again. In the fall of 1882 the high waters destroyed most of the crop of wild rice, and this may have caused the ducks to shun us for a year or two. We have to content ourselves with looking forward with high hopes for the fall shooting.—A. W. S.

HALLOCK, Minn., April 10.—Yesterday ducks and geese were coming over in large flocks. The coulees connecting with Two Rivers are filling up with them and sport will be fine; a warm rain will start them north by the hundred.—NORMAN.

EXPERIENCE WITH LIVE QUAIL.—Downington, Pa., April 7.—On 12th of February I had ten dozen quail shipped from Tennessee. They arrived evening of the 15th with twenty-eight dead. The rest were put in a room 10ft. x5ft. 3in. high, covered with a blanket, and branches of cedar trees leaned against side of room for cover. Two days after I found thirty dead ones. In five days they had all died except four, which I turned out, thinking they might live, but have every reason to think they went the way of the others. Can give no reason for their dying, unless they caught cold, as they seemed to have a sneeze and be stopped up in head. I accept this reason. As you see, my first attempt has not been very successful, but not disheartened, I am going to try it again. If any one can advance any reason for their dying I would be glad to hear from them. —HENRY E. ELSTON.

BUFFALO, N. Y., April 15.—A sad accident—the old story—took place Saturday last. Henry K. Childs, a young man of twenty-one, was returning from a duck hunt. In taking his gun out of the boat it was discharged, striking him in the chest; he lived four hours. This was the second casualty of the week, the other being caused in the same way, when "Billy" Stewart, a market hunter, lost the greater part of his forearm. Several of our fly-fishers have been to Caledonia and succeeded in making fair catches. Perch are beginning to bite, but the fishing will not begin in earnest for some weeks. Snipe are coming in slowly, one or two good bags having been made up the lake shore.—CABALLERO.

NEW HAMPSHIRE.—Colebrook, April 21.—State Commissioner E. B. Hodge, of Plymouth, N. H., made us a visit last week, and three of the crust-hunting fraternity paid for their dog-chewed venison, and the fourth bound over for trial. There are others to follow. Much snow remains in the mountains about here. Not as many deer crust-hunted in this State as in 1883, but done without regard of a probable enforcement of game laws. Wild geese and ducks have been here ten days, grouse have wintered well, while many owls found shelter in barns. Saw hawk owl yesterday with mouse in claws.—NED NORTON.

BIRDS IN DAKOTA.—Chickens are quite plenty this spring, but many are being killed, which should not be done at this season of the year. Geese and ducks are quite plenty, but very wild, ten to fifteen rods being about the nearest that we can get to them. Three of us went to the lake hunting yesterday. We got eight ducks and two geese; one of the geese when it struck the water, tore its gizzard and some of the intestines out.—G. E. C. (Letcher, Sanborn county, Dak.).

DROP OF GUN STOCKS.—Hartford City, Ind.—*Editor Forest and Stream:* Will you invite one of your correspondents of a recent issue to please give his method of changing the drop of a gun stock as he promised that he would in a future issue? I have one that is too straight for me.—C.

Camp Fire Flickerings.

"That reminds me."

110.

FISH were rather scarce at Put-in-Bay that fall, and the capture of a big bass was a rarity; so in order to keep even, some of the more unscrupulous of visiting fishermen were known to stoop so low as to drop a hook in a "crib" and quietly disentangle a large bass, while the oarsman kept a lookout for the owner. But fish so caught usually had some tar sticking to their scales, owing to having brushed against the net in their efforts to regain liberty, and when a string of fine fish would be brought to the hotel and hung up for exhibition, there would always be questions put and equally suggestive glances made in relation to tar, etc. Rob P., a young lawyer from Cincinnati, caught an elegant bass, and as it was his first experiment in fishing, he was greatly elated with his trophy. I hadn't caught any, but was "going to" shortly, and intent upon that was sitting in the other end of the boat paying no heed to Rob. Happening to look around I saw Rob with the big bass between his knees rubbing its nose with a piece of sandpaper in a vain endeavor to erace a coal black birth mark, extending from the nose to one eye, with which the poor fish had been unfortuuately endowed. I promised not to tell, but being a fisherman my brethren will not be surprised at my transgression. TAR.

111.

It was in the days of muzzleloaders. Dominie M. was fond of an occasional outing with gun or rod, in company with a congenial spirit. On this occasion he had gone after ducks, with lawyer T. for a companion. They had concealed themselves on a point, and toward night ducks were flying lively, exciting the gentlemen, who found it difficult to load and fire fast enough. In the midst of the melee the Dominie forgot to put powder in one barrel and rammed home the shot vigorously. Along came the ducks. Bang! went one barrel, and snap went the other cap. Fresh cap with like result. Another. Then the good man, striving to restrain his—well, call it impatience—remembered his omission. Calling to his friend, he said:

"T., do you know what hymn this reminds me of?"

"Don't know as I do," replied that gentleman, whose acquaintance with hymn books was quite slim.

"Well," said the dominie, eying the gun regretfully, it runs this way:

"A charge to keep I have." S.

MONTHLY LIST OF PATENTS

For Inventions Relating to Sporting Interests, Bearing Date March 25, 1884. Reported expressly for this paper by Louis Bagger & Co., Mechanical Experts and Solicitors of Patents, Washington, D. C.

295,630. Cartridge Loader and Cap Expeller.—L. Keller, New York, N. Y.
294,429. Fishing Rod Reel Fastening.—G. L. Bailey, Portland, Me.
295,056. Animal Trap.—H. B. Sargent, New Haven, Conn.
294,856. Cartridge Decapper, Recapper and Reloader.—F. Gifford, Burlington, Ia.
294,772. Barrel Lock for Break Down Guns.—N. R. Davis, Freetown, Mass.
294,993. Row Lock.—S. H. Haas, Chicago, Ill.
295,350. Artificial Fish Bait.—W. D. Chapman, Theresa, N. Y.
295,246. Armorplated Gun Carriage.—H. Gruson, Buckau, near Magdeburg, and M. Schumann, Magdeburg, Prussia, Germany.
295,245. Gun Carriage.—H. Gruson, Magdeburg, Germany.
295,585. Magazine Gun.—A. H. Russell, U. S. Army.
295,286. Magazine Gun.—A. H. Russell, U. S. Army.
295,235. Gun Wad.—J. W. Dennis, Cincinnati, O.
295,234. Gun Wad Retainer.—J. W. Dennis, Cincinnati, O.

Sea and River Fishing.

BLACK BASS FISHING IN CENTRAL NEW YORK.

EVERY lover of the gentle and health-giving sport of fishing regrets to see the disappearance of the brook trout from the streams where they once were so plentiful. But so long as the people are so indifferent to their own interests as to take no measures for their preservation, we can look for no increase, but rather for the total extermination of this beautiful and game fish in all the settled portions of the country. This compels all lovers of the rod who cannot spare the time or the money for a trip into the North Woods, to Maine or Canada, to look for a substitute for the trout.

The only fish worthy of being called a substitute for the trout, is the small-mouthed black bass. Those who have become familiar with the habits of this wary fish will agree with Dr. Henshall that he is the coming game fish of America. There are several reasons for this. Among them that the black bass will readily take any kind of bait, or spoon, and is the only fish besides the trout that will rise to the fly, and when caught throw himself out of the water in his struggles to escape the hook. The Oswego bass will also take the fly, but rarely throws himself out of water, and, however gamy he may be in the West or Florida, is tame indeed compared with the black bass in New York.

The black bass is very prolific and hardy, and thrives in lakes and sluggish streams where no member of the salmon family can live. He grows to a good weight, and is an excellent table fish when properly cooked. But to the sportsman, his chief value is in his splendid fighting qualities, his strength, endurance and artful resources. He is as coy and shy as a young girl, as cunning and uncertain as an old one. To-day he is content to feed upon the humble angle worm and to-morrow nothing less dainty than a moth-miller or a butterfly will satisfy him. Minnows are his most regular diet, yet he will rise eagerly to the R. W., silver doctor, Ferguson, Mann, peacock hurl or magpie when minnows are swarming around him. And then, his local habits have to be studied if the sportsman would lure him from his home.

An Onondaga Lake bass and one from Oneida Lake differ as much in manner and habits as a New Yorker differs from a Bostonian.

Central New York is very fortunate in having so many beautiful lakes and streams where the bass are plenty, and each year growing more numerous. With Syracuse as a center, the angler can go in any direction and in half an hour to an hour's ride get on good bass-fishing ground. East, Cazenovia Lake; south, the Tully chain of lakes; west, Skaneateles, Cayuga and Seneca lakes and Seneca River; north (almost at our door), Onondaga Lake, Oneida Lake and River, the Oswego River and Lake Ontario. Good fishing can be had in each of these waters during the season.

Fly-fishing begins in the Seneca River May 20, and is good upon the reefs throughout the season till November. In the other waters the season opens June 1. In the lakes fly-fishing actually does not begin much before July 1, as the fish will not rise much before the water gets warm. July, August and September are the best months for the lake fishing.

On Lake Ontario at Mexico Point and near Oswego, and on Oneida Lake at Messinger's, north of Canastota, and at Lakeport and Shackleton's Point are rocky, blind islands where the bass come in great numbers from deep water to feed. At each of these places the bass will rise to the fly for a brief period in July and August, when rare sport may be had; but during the greater part of the season minnows are the most killing bait. In the other waters mentioned, especially in Onondaga Lake and the Seneca and Oswego rivers, more fish are caught with the fly than by any other method, and as nearly all our sportsmen are expert fly-casters, those waters are their favorite resorts.

The bass of Onondaga Lake bear off the palm for game qualities, for hardness and firmness of flesh. In this lake the shore slopes very gradually until it is four or five feet deep, and then suddenly very rapidly into deep water. The steep slope is covered on all sides of the lake with a luxuriant growth of aquatic plants, which afford shelter for the fish. Just within the weeds in shallow water are the spawning beds, scooped out like great bowls in the clean sand, so that the bass have excellent lurking places for themselves while guarding the beds and their young.

There are two methods of fishing—either row the boat in shallow water and cast over the weeds to the edge of deep water, or to row in deep water and cast up to the edge of weeds. The danger of the first is, that a powerful fish may dart into the weeds when struck, and get the flies entangled before the boat can be get into deep water.

Most fishermen prefer fishing from deep water, as there is less risk of loss. In the excitement of the struggle with a three-pounder, or possibly two, one does not care to take too many chances with rod and tackle.

As a rule, a bass will not rise to the surface for the fly, at the instant it touches the water; sometimes, though rarely, it will rush up and out of the water to meet the dropping fly, and sometimes it will only take the fly beneath the surface, when gently trailed after the cast. Some fishermen put a split shot on the stretcher fly to sink it after the cast, but no one who loves his delicate split bamboo rod and its deft handling will so abuse it.

The flies to be used can only be determined by actual trial, the state of the weather, wind, clouds, sun, and water, and the special food the bass are seeking on the day, all having to be considered. Generally early in the season, when the water is high and discolored, light-colored, white and gray flies, and bright tinsel-bodied flies, like the silver doctor, are the most killing. Later dark brown, black, green and orange-bodied flies are most attractive.

Frequent changes are desirable until the killing fly is found. Then arrange the cast with reference to that fly, and look for your reward. WAVERLY.

SYRACUSE, N. Y., April 12, 1884.

GIGANTIC TURTLE.—Capt. Augustus G. Hall and crew, of the schooner Annie L. Hall, of Gloucester, vouch for the following: On the Grand Bank, March 30, in latitude 44° 10', longitude 33, discovered an immense live trunk turtle, which was first thought to be a vessel bottom up. The schooner passed within 25 feet of the monster, and there was ample opportunity to estimate its dimensions in comparison with the length of the schooner. The turtle was at least 40 feet long, 30 wide, 30 from apex of the back to the bottom of the under shell. The flippers were 20 feet long. It was not deemed advisable to attempt its capture.—*New Bedford Sentinel.*

LONG VS. SHORT FLY-RODS.

Editor Forest and Stream:

Premising that these remarks are confined solely to single-handed rods, may not this problem be analyzed, and at least in part determined by reference to well settled mechanical principles?

It would seem that the excellence of a fly-rod depends on the perfect embodiment of each of the following qualities:

1. Power to cast the fly.

2. Power to control the fish after it is fastened, or "killing power."

3. Ease and comfort in use.

Other qualities of importance there are, but on reflection they seem either to be embodied in, or necessarily to follow one of the above. For instance, elasticity is a necessary concomitant of the first, strength of the second, lightness of the third.

That a fly-rod is a lever is too plain to admit of argument. Whether the rod be lengthened or shortened, but one element of this lever is varied, and that element is the longer arm. To the end of this longer arm, the weight against which the angler must labor, is applied, whether it be the strain of the struggling fish, or the weight of the line and the resistance it encounters from the air and water in casting.

It needs no Sir Isaac Newton to assure us, that with the same weight of line or fish, the muscular effort required from the angler is greater with a long, than with a short rod, since the power he must overcome is applied against him at the end of a longer lever.

The next question in order seems to be to determine, if possible, what sacrifice in this respect each additional foot of length requires.

Using for this purpose the table computed by Mr. William Mitchell of this city (as I am informed from direct experiment), we find the leverage upon a rod:

12 feet long, 9½oz., reel and line 6½oz.... ...leverage 30oz.
11 feet long, 7½oz., reel and line 5 oz. .....leverage 26oz.
10 feet long, 4½oz., reel and line 3½oz... ....leverage 16oz.

Of course the leverage changes with the angle at which the rod is held, but since this affects every length alike, the relative proportions are not varied thereby.

If this table is correct, it would therefore appear that between two individuals, one using a twelve-foot, and the other a ten-foot rod, the former is compelled to do nearly twice as much work as the latter. Though this seems a large difference, still I hardly think it will be questioned by one who tries such rods comparatively, one immediately after the other. At all events such an one will admit that the difference is very marked, and quite sufficient, after some hours' use, considerably to affect the pleasure of an angler of the average endurance of men of sedentary life.

Therefore that the longer rod is under considerable disadvantange in this respect, seems to be certain.

But let us consider the question further; for it may well be that the longer rod offers advantages in other directions, more than sufficient to offset this.

We will then pass to the second consideration—the power to control the fish after he is fastened, which I take to be substantially the same thing as "killing power."

But the same laws of mechanics apply here as well; and from them and the table it necessarily follows that to apply the same strain upon the fish, he who uses a twelve-foot rod must exert nearly double the effort of him who employs one of ten feet. If the relative proportion stated be thought excessive, still it must be admitted that a very considerable difference does exist, and in the direction indicated.

The question may be advantageously viewed from another standpoint. Which has the greater killing and controlling power, a twelve-foot fly-rod, or an eight and a half foot stiff rod such as is employed in salt-water fishing for striped bass? This admits of but one answer; and it therefore seems unquestionable that the killing power of a rod depends on its length, *only* in so far as increase in that respect increases the effort the angler must exert to produce a given effect on the fish; and that consequently the longer rod is again at a disadvantage.

The foregoing seem to rest on established mechanical principles, not to be gainsaid without at the same time controverting rules, recognized as truths in designing every construction of modern engineering skill.

But the first proposition—power to cast the fly—cannot be tested in this way.

Here we stand on fairly debatable ground, for our only appeal seems to be to experience; or, in other words, to the individual opinion which each reader may have formed from the experience he has had. The circumstances under which experience is gained are so important an element in determining the value, and the applicable limit of the teachings derived therefrom, that divergent opinion must necessarily follow. It may well be conceived that he whose angling has been confined to waters where a pound fish is a rare event, and he who habitually fishes where such are regarded as small fish, would differ on many points, perhaps radically.

The writer has for quite a number of consecutive years fished the streams of New York and Pennsylvania and the ponds of Long Island for small trout, as well as the waters of the Rangeley region of Maine for large. He is, therefore, emboldened to express his individual opinion on this branch of the question, and the reasons on which it is based. Many, doubtless, will disagree with his conclusions, in just as firm belief that they are erroneous, as he does that they are sound. We all seek the truth, and only by fair discussion and honest comparison of all sides of this important question can that truth be reached.

Those who at the tournament at Central Park, on Oct. 16, 1883, saw 85 measured feet cast with a 10-foot rod, weighing 4⅜ ounces, will hardly question the ability of a rod of that length, and of say 6½ or 7 ounces in weight, to meet every requirement in this respect. Perhaps the discussion might be rested right here by an appeal to the hundreds who, in common with the writer, witnessed that feat. To such as may be unfamiliar with that event, it may be remarked that the caster stood upon a platform elevated one foot above the water; that the distance was accurately measured from the edge of the platform; that the weight and length of rod were correctly ascertained, and that a possible error of 18 inches in the distance credited to the cast would be a very liberal allowance.

Attention might also be called to the fact that at a similar event in the preceding year—the caster standing three feet above the water—91 feet were reached with an eight-ounce rod 10 feet 4½ inches long, though it must be admitted that this was a "rolling," and not an overhand cast.

These facts would seem pretty decisive; still, let us go into the matter a little further.

At one time the opinion was current, that an increase of one foot in rod length, would be answered by a corresponding increase of five feet in the possible length of the cast. This allowance is now thought by many to be excessive.

But admitting the five-foot standard, we then allow a gain of ten feet in casting distance to the twelve over the ten foot rod.

For some years I have each season been in the way of seeing many excellent and skillful anglers cast day after day, and all day long; and this where there was unlimited space to swing all the line they might wish. In no instance can I recall a single cast in actual fishing that would exceed 65 feet measurement from the caster. I doubt if any would even reach 60; while it is believed to be the general experience, that more than ninety-five out of every hundred casts in actual fly-fishing throughout the length and breadth of the land, will fall within fifty measured feet.

With average skill, 60 to 65 feet can readily be reached with a ten-foot rod.

The question then seems to resolve itself into this: Shall double labor be constantly undergone, and power to control and kill be sacrificed, to attain ten feet increase of cast—an increase seldom or never to be utilized in actual fishing?

It is a question of personal preference, which each must decide for himself; but it seems to me it is "paying rather dear for the whistle."

One advantage, however, should in fairness be accredited to the longer rod, and as far as I can learn from the teachings of theory and practice, it is the only one.

In fishing for the small trout of much-fished waters, so handling the flies that the droppers just drop upon the surface, undoubtedly gives the best result. It is clear the length of cast can be more varied without losing this advantage with a longer than with a shorter rod. Still, by adjusting the flies on the leader at somewhat increased intervals, it is believed that the disadvantage of the shorter rod in this respect becomes slight, and by no means sufficient to offset its other and decided points of superiority.

I seem to recognize a radical change of opinion on this subject within the last few years. At first short rods were only fit for baby-fishing, now their sphere of usefulness is asserted by many to be confined to long-distance casting from the tournament stand.

Beginning with a twelve and a half foot rod, year by year and little by little, I have reduced the length of my rods to ten feet, and even below; after some experience in that region, I confidently believe that with rod of the length last named, the largest trout that swims the Rangeley waters can as readily be enticed, and be more certainly handled and killed, than with a rod of twelve feet.

In advocating a ten-foot rod, I do not wish to be understood necessarily to mean one limited in weight to 4½ ounces. On the contrary, I strongly believe in plenty of backbone in a rod. Have this first, if then the material employed will give the other as well, so much the better. A rod should be flexible to the very handle, but never to such a degree as to prevent absolute command over the upper part of the rod, or even to render this a matter of question.

This, of course, is a mere matter of personal preference and opinion, for I freely admit than in nothing more than in the action of a fly-rod is it true, that "what is one man's meat is another man's poison."

But however this may be when the preferred action is determined on, there is no reason why a fourteen-foot rod and a nine-foot six rod should not have the same action. Not the length alone, but the other proportions as well should be, and usually are, varied. This, it seems to me, has not always been duly considered in the discussion of this subject.

It might be supposed that all would admit that for equal lengths, a heavier material must make a heavier rod—to get the best possible action—than a lighter material; unless the heavier were at the same time the stiffer. But the common practice does not appear to sanction this supposition. The tendency seems to be to sacrifice everything to lightness. It seems to me that the propriety of this may well be questioned; as well as whether in this strife for excessive lightness, the diminution of the timber allowed to a rod has not fully reached, if it has not quite gone beyond, the prudential limit.

One other consideration occurs to me, which to some will seem to have an important bearing on the question in point, if it is not its solution.

After all, what are we after—what is the end in view? It is not merely obtaining possession of the fish, for this result can be had at far less cost, with much greater certainty, with a silver hook in the fish market.

Recreation and amusement are the objects we seek; and therefore is it not reasonable to conclude, that whatever methods and whatever appliances best conduce to these results, are the best in themselves, even though the total catch were a little diminished thereby?

Since this depends solely on the personal preference of each individual angler, it may be claimed that I leave this question just where I found it.

But this I think is scarcely just.

To one escaping but seldom from the weary routine of office work, to swing even a seven-ounce rod all day may become a burden; while to him whose muscles are braced by abundant exercise and robust health, it seems but as a feather's weight. The truth is, that there is in this matter no hard and fast line where dogmatism may take its stand and say, *this is right and that is wrong.* Let each use that rod which to him affords the most pleasure, and for him that rod is the best, whether it be forty feet long or only two.

I have only sought to maintain what I believe to be the truth, that any considerable excess over ten feet in length is attended with an increase of labor, for which no compensating advantage can be found. To some this unnecessary work may be a pleasure, but to many, and those the very persons to whom this diversion is the greatest boon, I know it is a burden. To benefit the latter, if I may be so fortunate, I have said my say. HENRY P. WELLS.

NEW YORK, April 17, 1884.

CALIFORNIA TROUT IN WESTERN NEW YORK.—Olean, April 16.—On May 20 last we put in 30,000 California mountain trout in our streams here, and to-day I have two caught in Wolf Run near here by Burnside, they measure four inches in length. We also put in 15,000 brook trout, and we have an order for more this spring, and we shall keep at the good work until our streams are restocked with the beauties. They were put in by the Olean Sportsmen's Club.—FRED. R. EATON.

LITTLE BROOKS.

ONE day some two or three years ago the Doctor and the writer determined to hunt up a brook laid down on the map, and find out whether there were trout in it or not, and if so, whether they might be caught. After a drive of several miles we turned down a side road, a stony, overgrown track, with bushes on either side that nearly met in the middle, and after following this about half a mile, came out in a little valley. Here was the place, and we began to look for the brook. At last we crossed a small bridge, a mere hole under the road, and concluding that it must be the stream, got out and tied the horse to the fence. Rods in hand we plunged into the bushes, and after struggling through an alder swamp for a quarter of a mile came out into the meadow. Here we found the brook, a mere trickle of ice-cold water from a mass of woodland springs forming a swamp above. I was scarcely a foot wide on the average, and almost entirely covered over with the tall grass. Flies being of no use, we put on good, lively worms, and wherever we could find an opening dropped them in. In this way we fished down the meadow and took sixteen trout, nine inches, just the size for the pan, and much to our surprise, too, for it was a bright, hot afternoon in July. After we had worked down through the meadow, we found that the brook, receiving more water from an open swamp, became larger and formed some fine pools. The first one we came to in the edge of the woods was an ideal trout pool. A little cascade tumbled into it and sent a swirl of water along a huge hemlock log, that for thirty feet formed a mossy embankment along the side.

There were fine lurking places all along under this log. The Doctor, standing well back, dropped his bait into the fall, and let the water roll it along the bottom in front of the log. I waited eagerly. We had had such unexpected luck in the little stream above that I anticipated rare sport in this pool. I saw the Doctor's line tighten. He struck and the next instant was lifting carefully ashore, a large, well-fed—dace. Noticing the expression on his face I said nothing, but leaving him struggling with the fish, which had snarled his line in a bush, I took his place and cast. I had a bite, struck, and lifted ashore—another dace. Well, we stood there ten or twelve minutes and lifted out dace alternately. I put on a cast of flies and caught—dace. We worked down stream to experiment, but it was all dace and no trout, and as the afternoon grew late we retraced our steps, and drove home in time to see our trout smoking on the supper table.

This incident illustrates well some points I wish to make in regard to little brooks. It is, alas, an undeniable fact that the trout in our brooks and streams in the New England and Middle States are every year decreasing in numbers, and deteriorating in size and quality. The cause of this is not difficult to find. It is not so much the illegal taking of the fish by spearing, snaring, netting, and poisoning the pools with lime, though this is bad enough, for trout have stood all this and have not been entirely exterminated; it is not so much the dumping of sawdust, filth and chemicals into the brook, for there are thousands of small streams throughout the country where this has never been done, and yet where trout once swarmed now they are not, but it is by the reckless and injudicious cutting down the woods. I am not now speaking of the wholesale destruction of vast forests, such as is now agitating the public at large; it is a much more simple and every day matter.

Our trout is not a true trout, in one sense of the word, but a char, and like all of the chars, icy cold water is his very life. In the Thames, where his congener, *Salmo fario*, is every year caught of enormous size, our trout could not, probably, thrive at all. Now, that which gives the water of our streams this quality, so necessary to *Salvelinus fontinalis* (does not his very name bespeak it?), is spring water. Every year the farmers, in cutting down woods, lay bare some spring. This may not always be an open one, but there are always indications that it is there. Thus uncovered to the sun, the spring either dries up or its waters become warm and bad. In this manner the brooks, and of necessity the larger streams, gradually become tepid in temperature, and in summer diminished in volume, killing the trout in time, and causing them to decrease in size and quality in the process. At the same time, it favors the spread and growth of coarse, soft-fleshed, inferior fish, which take the food from the trout and devour their spawn. In the incident I have related, the tiny beck which issued from a swampy piece of ground, filled with springs, was alive with trout, because its water, being sheltered at its very source from the fierce July sun, was cold and clear. But as we went lower down, another stream of larger volume joined the little brook. The water of this latter stream came from an open swamp exposed to the midsummer heat, and as a natural sequence we found no trout below its mouth, but dace. Now, had this swamp been covered with a heavy growth of timber, I venture to assert its waters would have been much improved in quality and temperature, and the trout would not have been obliged to leave the main stream and crowd up into the little brook in order not to stifle.

I think that twenty acres of woodland, rightly distributed in protecting the springs and marshy, springy spots, which form the headwaters of the little brooks and their confluents, would be of more value on a farm than fifty acres in one patch left at random, and could this be realized generally we would have less of the shrinkage of water and water power in summer time. Unfortunately, most farmers seem to have no idea of the value of a piece of woods beyond that of some day being able to cut it all down to sell, or use the lumber. They think that a patch of woods is waste ground till it is down, and never realize that it is really, if rightly placed, a vast sponge to store up water which will make their land more fertile and help them out in time of drought. This is well illustrated by one of the correspondents of this paper, who told of the increased fertility and value of his land from having formed a trout pond. The thirsty land by capillary force drew the water many rods inland, and thus improved the crops. There are many little water-courses which run dry in summer, which, if their sources were properly protected, would be little trickles of water even in the hottest weather. These are of untold value to the farmer and the streams. It is, of course, well nigh impossible to get the farmers in the settled parts of the country to do anything radical to improve this matter, but show them it will pay, and the right spirit once aroused, much will be done. In parts still unsettled an ounce of prevention is worth a pound of cure.

As I write, an instance of this thing rises before me, and I feel impelled to give it. I know a stream that once, from its source to its mouth, was a fine trout brook. It is formed by two main branches, and on the map looks like a little Y. Both branches rose in woodland fields, their waters were

clear and cold. A number of years ago the woods which covered the source of the right-hand branch were cut down. Now a miserable bog occupies the site. No trout are to be found any more in this stream, but it is filled with dace, etc. It is a torrent in winter, a mud hole in summer. The land along its course has suffered with it. The other branch has not been injured in this way. It flows with a more even volume, and is filled with trout. It cools the main stream, so that trout are plenty to its mouth, and not a dace is to be found below the fork.

I did not intend to write so much of an agricultural treatise when I started, but as agriculture is more important than sport, let us sportsmen cry commerce and agriculture with all our might. We will be listened to with an infinitely greater amount of attention, and will gain our own ends at the same time. In conclusion I would only say, take care of the little brooks and the streams will take care of themselves.

PERCYVAL.

DACE FISHING.

I SAW an inquiry in your last week's issue in reference to dace rising to a fly. Occasionally in the last few years I have, in default of good trout fishing in Vermont, taken many a dace in fly-fishing. Last summer, in July and August, I had excellent success. My experience is that a medium-sized fly, rather showy than otherwise, is the best, although I found the professor, the brown hackle and the grizzly king very good. Large dace take the minnow in deep pools, but I long ago discarded bait in fresh-water fishing, and can speak of the minnow only from observation and hearsay. The grasshopper in season is very attractive, and along by the first of September fly-fishing is not as successful as earlier. But I had no difficulty in taking enough with a fly.

The residents who fish for count in Vermont make, if their stories are to be believed, prodigious catches of small trout. I was casting for dace in a deep pool last summer, when one of the citizens kindly informed me that I would "never take a dace with that trap," and that I "ought to go up on the mountain where his boy and another one took seven hundred and fifty-three trout in two days." I asked the weight, and was told they would average nearly two ounces each. Just then a dace of one and a half pounds rose and was soon landed. "Well," said the old gentleman, "I never knew there was any such fish as that in this river, and I've lived on it over fifty years."

Last summer my companion and myself took them weighing as high as two and a quarter pounds. We found a long cast most successful, as they are very shy. Very quiet fishing is required; fully as quiet for good-sized fish as for trout. With delicate tackle I found the sport good. But after having fished the "North Shore" and the Nepigon, with trout seldom below two pounds and up to five and a half, I cannot say dace fishing in Vermont is as good sport as angling for trout in those waters.

H.

INDIANAPOLIS, April 14, 1884.

TROUT FISHERMEN AND THEIR RIGHTS.—When in the course of events the snow, which still lies in the woods and on the hills, disappears, the trout season will open actually as it has done legally—and illegally, since several persons went out successfully about a week before the law was off. It is said that there will be a great display of bran new signs along the brooks this season, and that some men in this city can tell about how they were placed. For two or three years there has been considerable of this putting up of signs that have no authority to back them, and which operate merely to keep off fishermen who regard what they suppose to be the law, to the benefit of those who do not, or who have reason to know that the signs mean nothing. For instance, Mr. X of Hartford has some handsome signs painted, reading: "No fishing; trespassers will be prosecuted to the extent of the law," or whatever it may be. He goes out and plants them along some brook that has not been protected and where owners of the land care nothing about the matter or do not care enough to protect the stream. To say the least the scheme is unfair. It is, however, doubtful whether these signs or a great many others that are put up by land owners in good faith, are worth anything legally. A notice that fishing is not allowed should specify to what part of the stream it applies. According to common usage, one or three, or four, stuck up near the road seem to be enough to cover the whole brook which may flow through the land of a dozen or fifty owners, none of whom except the man next the road may have any objection to other people taking trout there. It is not too much to ask that notices should be signed by the owner or lessee of the property, and should state exactly what the tract is to which the protection applies. It is fair too, that there should be a penalty for the unauthorized placing of notices by those who have no right in the property. As to the first two items it is said that although the law is not explicit it really covers the case already, and that no action brought against a person trespassing on land defended only in the way just mentioned can hold good. It is certain at least that when a prominent lawyer was asked by a client what he must do to legally protect certain waters he was told to sign the notices and put up enough to make the warning conspicuous all along the water to be protected. The whole matter might very well come up for action that should at least make the law and penalty clear and leave no doubt of what is required on either hand.—*Hartford, Conn., Courant.*

HALLOCK, Minn., April 10.—The fish are beginning to run up stream, though the ice is only just breaking up. The time for pickerel is not yet, but when they come the youngsters are in high glee. The golden eyes will come with the spring weather; then we expect to try the flies once more. The speckled trout will get a rest this season, for we can find none without taking a long wagon ride of ninety miles, or going up into Queen Vic's dominions to get to Lake of the Woods.—NORMAN.

RAINBOW TROUT IN SALT WATER.—Among a lot of flounders and mixed fish caught in East Bay, a portion of the Great South Bay, Long Island, and sent from Moriches to Mr. Blackford in Fulton Market, last week, was a rainbow trout of half a pound weight. The water there is brackish, and the fish is supposed to be one of those planted in the streams of that vicinity in 1881 by Hon. R. B. Roosevelt.

MIGRATION OF HERRINGS.

Editor Forest and Stream:

The appearance and disappearance of fishes on our salt-water coasts, as intelligently described by Daniel T. Church, in FOREST AND STREAM of Feb. 21, must certainly attract the attention of all who take interest in the harvest of the sea. The "flood and drought" or the coming and going of fishes in their season and in their peculiar way, the cause of which we have little knowledge, must yet be studied out. Man, in addition to other enemies, may cause much destruction of fish life, but nevertheless they appear at times after seeming annihilation in greater numbers than ever before, as is well illustrated in Mr. Church's eleven articles. To add to this experience allow me to make some extracts from L. Lloyd's "Sweden and Norway" accounts of floods and droughts of the herring on the Scandinavian coast during a period of over 250 years, which, perhaps, may interest many of your readers who have not access to the book.

The Swedish herring fisheries were at one time the largest and most flourishing in Europe, but owing to the disappearance of the fish from the coast for the past sixty years, they have dwindled down to almost insignificance, and at the present day there is little to remind one of them except the curing houses and other buildings, now in a state of decay. These fisheries along the coast of Bohus Skärgärd may not be without interest both to those connected with similar establishments and to the naturalist. Though for ages previously herrings had been most plentiful, yet during the first half of the sixteenth century, beyond which it is needless to go back, they in great measure deserted the coast. In 1556, however, there was a "land stötning," as it is called, that is, the fish having emerged from the deeps, their usual place of resort, appeared in incalculable numbers along the shores of the Skager Rack, and they continued until 1587, a space of thirty-one years, when they for the most part once more absented themselves. During the period of glut (flood) from 1556 to 1587, the fisheries are described as having been more productive than at any other on record. We learn from the old chronicles, indeed, that for the space of fifty or sixty miles the shores of the mainland and adjacent islands were studded with curing and salting houses, many of them two and three stories high, and inhabited by vast multitudes of people, who had congregated there from various and distant parts, and whose sole occupation was in connection with the fisheries. "Herring were then so very abundant that thousands of ships came annually from Denmark, Germany, Friesland, Holland, England and France to purchase the fish, of which sufficient were always found for them to carry away to their own and other countries." This would not seem to be an exaggerated account, as from the small town of Marstrand alone some 2,400,000 bushels were yearly exported. The disappearance of the fish from the coast in 1587, which reduced many people to poverty and misery, was attributed solely to witchcraft, which was quite as plenty in those days as herring themselves.

From 1587, the concluding year of the glut (flood), to 1660, a space of seventy-three years, the herring only appeared in small numbers on the Bohus coast; but in 1660 there was another land stötning, though not equal to that of 1556. But as during the dearth of fish most of the people connected with the fisheries had deserted to their distant homes, and the fishing houses had fallen into decay, few beside the inhabitants of the province were enabled to avail themselves of the opportunity, and these men, having now the fish all to themselves, so to say, soon became comparatively rich. This continued until 1675, when the war put an end to the fishery for that time. Subsequently the fish appeared at intervals on the coast, especially in the year 1727; but there being a want of people, and also of proper fishing gear to enable them to take advantage of the opportunity, no very great captures were made. In 1747 there was again a land stötning, though much less abundant that that of 1556, and the same continued until 1808, when the fish once more departed. In this while, a space of sixty-one years, the fisheries were prosecuted with great ardor and success. Herring were so very plentiful during one particular year that four bushels could be purchased on the spot for two shillings, and though the fish were converted to all manner of purposes, people hardly knew what to do with them. One year when the herring were unusually numerous, it was calculated that not less than 3,938,000 barrels were taken; and as each barrel is supposed to contain about 1,000 fish, the aggregate would be something like 2,938,000,000 of herring. During this glut, extending from 1747 to 1808, the Bohus fisheries was considered a second El Dorado; indeed, when in its glory, it was computed that independently of its inhabitants themselves, fifty thousand strangers took part in them. In 1808, as shown, the herring once more left the coast, and have never since visited it in any considerable numbers.

The absence of the herrings from Skärgärd for the past sixty years (this account by Mr. Lloyd was written in 1867) has given rise to a great deal of speculation. The reasons assigned by Swedish naturalists and others who were deputed by the government to investigate the matters, were many and weighty. Among the rest the noise and uproar in the Skärgärd when the fisheries were flourishing, caused by tens of thousands of congregated people, which noise in calm weather, or when the wind was off the land, might be heard miles and miles out at sea; the enormous quantity of refuse of all kinds cast out from the curing and boiling-houses into the sea, which, on sinking, destroyed all submarine vegetation, and masses of which, resembling floating islands and emitting a dreadful stench, might at times be met with far away from land. Another cause! The reduction in the size of the meshes of nets, and lastly, the use of the wad, a drag net of gigantic proportions, which, sweeping the bottom, proved destructive to all the grasses and other plants among which herrings are accustomed to spawn. This wad of 200 fathoms in length and fifteen fathoms in depth, with hauling lines 500 fathoms long, often landed at a single haul 2,000 barrels of herrings, and sometimes inclosed such a multitude of herrings that the men were unable to draw it on shore, consequently thousands were killed and left to rot on the bottom of the sea.

Though the reasons assigned by the learned and others for the absence of the herrings from the Bohus coast are plausible enough. They are not altogether satisfactory. One or more of the nuisances complained of—such as casting the offal of the curing-houses into the sea, and the noise in the Skärgärd, may not improbably have deterred the fish from entering inlets near the shore, but they do not sufficiently account for their altogether absenting themselves from the coast. The cause for this must be sought elsewhere. The herring, as known, is a most capricious fish, seldom remaining long in any one place. There is scarcely a fishing station around the British Isles that has not experienced the great variation, both as to time and numbers in their visits, and that without any assignable reason. Their present absence from the coast of Bohus is owing, perhaps, to some hidden law of nature of which we are ignorant, than to the causes alleged. A good authority, Dr. Culloch, takes a similar view of this subject. He says: "Ordinary philosophy is never content unless it can find a solution for everything, and is satisfied for this reason with imaginary ones. Thus in Long Island, one of the Hebrides, it was asserted the herrings had been driven away by the manufacture of kelp, some imaginary coincidence having been found between their disappearance and the establishment of that business. But the kelp fire did not drive them away from other shores, which they frequent and abandon without regard to this work. It has been a still more favorite and popular fancy that they were driven away by the firing of guns, and hence this is not allowed during the fishing season. A gun has scarcely been fired on the Western Islands or on the west coast since the days of Oliver Cromwell, yet they have changed their places many times in that interval."

In a similar manner and with equal truth, it was said they had been driven from the Baltic by the battle of Copenhagen. It is amusing to see how old theories are revived. This is a very ancient Highlander's hypothesis, with the necessary modification. Before the days of guns and gun powder, the Highlanders held that they quitted the coast where blood had been shed, and thus is ancient philosophy renovated. Steamboats are now supposed to be the culprits since a reason must be found to prove their effects.

Loch Fine, visited by a steamboat daily, is now their favorite haunt, and they have deserted other lochs where steamboats have never yet smoked.

Taking all things into consideration, therefore, and as the herring has on many previous occasions absented itself for years and years together from the Bohus coast, it seems not at all improbable that the inhabitants will some fine day be rejoiced by another "land stötning" of these fish.

DR. E. STERLING.

CLEVELAND, Ohio, March 20.

WHITEFISH RAISED IN CONFINEMENT.—At the display of trout at Mr. Blackford's on April 1, among other fishes sent by Mr. Frank N. Clark, Superintendent of the U. S. hatchery at Northville, Mich., were a number of young whitefish (*Coregonus albus*), one year old, which had been raised in confinement. The specimens were about five inches in length, and attracted a great deal of attention from fishculturists on account of their novelty. These are, we believe, the first whitefish that have been artificially reared.

New Publications.

THE GAME FISH OF THE NORTH.*

IN the preface to his book the author says: "Having always been an enthusiast with the rod and gun, attributing to the sports of the field and stream the retention of good health amid confining and sedentary occupations, I made the preparation of this work a labor of love, and have with time come to be more than ever impressed with the importance of out-door recreations. Inspiration acquired from the woods and streams, and vigor earned by exercise in the pure air of Heaven are good for the soul as well as for the body. I was one of the first to press on the State and National Goverments the importance of establishing fishery commissions, and being myself appointed on that of the State of New York when it was created, in the year 1867, and having remained on it ever since, I have necessarily kept up with the times, and all improvements which have been made either in the science of fishculture or in the tools and methods of fishing. Looking back, and still more I may say, looking forward to what the future will bring forth, I have a right to claim that in aiding the cultivation and protection of the objects of the sportsman's pursuit, and the means of his pleasure, in protesting against their unreasonable and improper slaughter, and in describing the most legitimate and scientific methods, and taking them, I have conferred some advantage upon mankind as well as amused some idle hours."

The work before us is a new edition of the book first published in 1862, and, with the exception of the chapter on fishculture and the appendix, is reprinted verbatim. Mr. Roosevelt is a most entertaining writer and his lines flow pleasantly, enticing the reader to try to finish the book at one sitting. He avoids committing himself on the question of the identity of the sea trout, and there are several questions which have been settled since the first edition of the work which he does notice, such as the classification of the cisco, the federation pike, etc. There has been a steady demand for this book, which has been out of print for some years, and all who own the first edition will certainly want the second, if only to see what changes have been made. The appendix of the new work contains, instead of fish laws, a treatise on flies, rods, reels and lines. This chapter contains much information of a substantial character, but is condensed perhaps too much, and we confess that we do not understand the difference between dying and staining gut, which Mr. Roosevelt says is important, nor do we agree with him that it is essential that a split bamboo rod should be round. No matter what a man writes, it is certain that some one will differ with him. The price of the work is $2.

*The Game Fish of the Northern States and British Provinces, with an account of the salmon and sea trout fishing of Canada and New Brunswick, together with simple directions for tying artificial flies, etc., etc. By Robert Barnwell Roosevelt, author of "Superior Fishing," "The Game Birds of the North," "Five Acres too Much," "Polyanthus," etc., etc. Illustrated. New York: Orange Judd Company, 751 Broadway. 1884.

FIXTURES.

BENCH SHOWS.

May 6, 7, 8 and 9.—The Westminster Kennel Club's Eighth Annual Bench Show, Madison Square Garden. Entries close April 21. Chas. Lincoln, Superintendent. R. C. Cornell, Secretary, 54 William street, New York.

A. K. R.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (25 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **1115.** Volume I., bound in cloth, sent postpaid, $1.50.

A PRIVATE FIELD TRIAL.

SNIPE are on here in limited numbers, but very wild. With warm weather, fair shooting may be had. An interesting match between a dog of unknown pedigree and one of the bluest of the blue is to take place here the last week of the present month on snipe. Both are owned near this place. The match to be run on the low lands bordering the marshes of Lake Erie, where the grounds are of such a character that every movement of the dogs can be seen, and enough mud and water exists as to try the mettle of the best; the dogs to be down four hours and hunted together. Both are fine field dogs. The friends of the stranger think he has the heart to go to the front and the power and action to keep him there. His opponent has also many admirers, and his friends are also very sanguine, and they have certainly no duffer. A lively time is anticipated. I will post you as to the result. The judges selected are practical sportsmen of large experience in the field with dogs, and were chosen not from their social standing in society but from their knowledge of what a dog ought to be in the field, which can be gained only by great experience. Why can't our Canadian neighbors get up a field trial the coming season on some of their preserved grounds, giving moderate purses and making the entrance fee so that people of limited means can enter? Some excellent dogs might be thereby brought to light that under the present arrangement of field trials must forever remain in darkness. Many would enter that I know of, and a good meeting would certainly be the result, as few Northern sportsmen can afford the expense of preparing and running their dogs in the Southern States, where the field trials are now held, and unless prepared there they are handicapped to such an extent as to render success almost impossible, who would readily patronize field trials where accessible to home.

JOHN DAVIDSON.

MONROE, Mich., April 15.

NIMROD.

WE give this week a cut of the red Irish setter dog Nimrod (A.K.R. 631), owned by Dr. J. Frank Perry, Boston, Mass. Nimrod was whelped March 20, 1880, and is by champion Elcho (A.K.R. 295) out of Lorna (A.K.R. 296). He has been shown but twice. At New York, two years ago, he won first in the open class and the special for the best Irish setter in the open classes. At Ottawa last year he won the champion prize, and with Meg the special for the best matched pair of Irish setters. In writing of him, Dr. Jarvis says: "In attempting to describe champion Nimrod, I cannot really do him justice, for he has all through that 'high quality' which cannot be put on paper; he looks very much like Elcho, is about the same size, has the same rangy upstanding build, and the long, lean, narrow head his sire has been noted for. He is strong-boned and well-muscled, with the best of feet and legs; his eyes are brown, soft and loving in expression; his disposition could not be milder. In coat and color, Nimrod is about perfect, the former short and flat, but with good feather; the latter a beautiful deep, rich red mahogany, and dark all through. In brief, he is one of the very best Irish setters to be found anywhere, as his record proves." The cut is from a sketch by Harry Tallman, and is an excellent likeness.

Dr. J. Frank Perry's Champion Red Irish Setter Dog "Nimrod."

A JERSEY FOX CHASE.

MANY a pleasant day's hunt I have had after deer, fox, quail and cotton-tail. Even down here in South Jersey we have some good hunting grounds. True, they are not varied by rugged crags and cliffs, deep cañons and roaring waterfalls; and yet these woods are not without their charms. I have seen on a bright autumn morning the sun's rays dancing through the needle-like boughs of the pine, on which the frosted dewdrops looked like millions of rainbow-tinted diamonds. The air is clear, crisp and bracing. On such a day one forgets all his infirmities. I feel that I have added years to my calendar by frequent visits to these pine woods in search of health and game. Some of our Western hunters may smile, and ask in whose barnyard we find our game. Let such an one come and see, and if he starts into these pines, scrubs and swamps of Atlantic county on a cloudy day, let him take with him an extra day's rations, for he may become so completely lost that he will look about him for a place for a comfortable night's lodging. He will even lose faith in his compass, so completely will his head be turned. This is owing to the perfect similarity of this upland country. Each particular locality looks exactly like the other. Scrubs and saplings everywhere are higher than your head, almost impenetrable, and interspersed with pines. The only extensive view one has is zenithward. There are no mountain ridges nor prominent boulders as guide-posts to direct one on his way.

But I hope that I do not frighten any one from coming here to hunt lest he should be lost in the wilderness. I only wish to have you know that we have genuine hunting grounds, all the more enjoyable because they are wild and unfrequented. I know it is not considered proper by many of the FOREST AND STREAM readers to hound a deer at all in any locality. If this be so, then it is not proper to kill a deer at all here, as in this part of the country the man who does not get a deer until he secures one by stalking, might not live long enough to taste of venison. You can track a deer to twenty paces of where he jumps up, and only hear the bushes rustle, without catching even a glimpse of the game any more than if it had plunged beneath the waters of the ocean.

I want to tell you of a delightful chase, last week, after the gray fox. At 8 o'clock Monday morning last, we stepped down from the Camden and Atlantic train, twenty miles from home, at Ellwood station, slipped the chains from Texas and Trap (they being selected for trailing), while Jack, Sport and Doc, having a propensity for chasing the rabbit, were kept in string until reynard should be up and going. Doc is a short-legged Dutch beagle, fourteen inches high. I mention this because some have asked how about beagles for foxes. The station was not yet out of sight when Texas announced the discovery of a trail, which he kept close to, giving us music as he gave us exhibition of his genius in tracing up the devious route of this sly game to his forest retreat. Now and then he doubled around over his own trail, or walked in the rut of every wagon road that he came to, knowing that the first wagon to pass would cover up the scent and prevent pursuit from his enemies. But it was too early in the morning for the wagon, so on we went two miles from where the trail was first found, to the edge of a dense cedar swamp, when the hurried and excited notes of Texas proclaimed reynard on foot and hastening away.

Quickly all the dogs were unloosed, and away went a full chorus chiming through the forest; what soul-stirring music! It thrilled through the whole frame, and accelerated the throbbing of that important little organ beneath the left side of the vest, and quickened our pace to head off and keep in hearing of the music, which means healthy, energetic exercise. These enlivening strains were kept up until about midday, leading us several miles away. Then the explosion of a cartridge from a No. 16 gun put an end to this chase, and each dog coming up gave the prey a shake of satisfaction, while the little beagle, who was close in at the death, seemed not to be satisfied until he had made the bones crack the full length of the spinal column.

I have often wondered at the seeming bitter antipathy of the hound to the fox. We excuse ourselves here for killing them, as they are plentiful and so destructive of the quail and rabbit. After removing the pelt a fire was built, and seating ourselves on fallen trees, we engaged in that other enjoyable part of a day's hunt—satisfying our sharpened appetites. While thus engaged, the wind suddenly veered around to the north, and came rushing down upon us like a Western blizzard. The snow flew thick and fast, the trees bowed, twisted and squeaked, while the scrubs and bushes seemed to be disturbed as if by a stampeding herd of buffalo; it was wild and grand, and we were happy, for we enjoyed the storm.

On our way out after lunch, we struck another trail, and away went all the dogs pell mell. In a moment they were lost to hearing amid the roar of winds and consequent confusion of sounds. On tracking them to leeward a mile or more, we found they had crossed an immense swamp and nothing more could we hear of them. We waited until it was growing late and our home train must be made at the station we left at 6 o'clock, while we are now four miles away, to make which required a little extra will power brought to bear on the flexors and extensors, we made on close time and returned home. After a good night's rest, the early train was again taken, and we started in search of our lost hounds. The wind was still blowing, and although we searched beyond the great swamp, where last we left their trail, no tidings were had of our lost dogs, so we returned home again without them, and again on Wednesday morning we went in search of them, taking with us two fresh hounds, Sport and Drum. While on our way to the same swamp we struck a fresh trail; away went Sport and Drum to the swamp, giving tongue to the routed fox, until the sound died away far up toward the head of the branch. While we were intently listening after them, we distinguished the sound of running hounds far off in the opposite direction. The fox before the two hounds doubled and came back, was shot and quickly skinned.

We then hastened off to where we last heard other dogs. A walk of a mile and a half brought us in with them, they were our lost dogs still pursuing the fox, their voices so changed we could scarcely recognize them; poor little Doc was so weak he could scarcely make an audible sound. One of the party caught him and while in the effort to get him something to eat from his game bag let go of him and away he slipped, and soon rejoined the others in the chase. The two fresh dogs were put on and of course soon left the tired ones far in the rear. This was probably an unfair thing for us to do, for they were completely thrown out of the chase, but one of the party soon after killed the fox. Texas and Doc were secured, but Sport and Jack must have lain down somewhere on the last round; Texas, a large black and tan, had injured his shoulder and has not been able to walk since, while Doc was blind for three or four days after. Trap was found at a station the same evening ten miles on the way home; a telegram on Saturday informed us of the arrival at Ellwood station of Jack and Sport, appearing in right fair condition. Now what do you think of the beagle for foxes and of the sticking qualities of these dogs? R.

ATLANTIC CITY, N. J.

THE KENNEL HOSPITAL.

RESULTS OF INFLAMMATION.

IN my last article I attempted to show that inflammation was a process taking place in the minute blood vessels of a part, having for its chief accompaniments dilatation of the blood vessels with more or less stagnation of blood within them and blood through them. This condition may simply rise to its height and then gradually abate, or it may cause other changes to take place in the tissues. A pimple on the skin is an inflammation—there is swelling, heat, pain, and redness, due to the changes we have already described. Its simplest termination is to gradually subside, which it does by the blood vessels resuming their healthy tone and the exuded fluids being re-absorbed. When this best of all terminations of an inflammation does not take place, the pimple, which was hard as well as red and swollen, begins to soften in the center, its apex turns white, and if it be punctured a white fluid escapes called matter or pus.

Suppuration, which is the term used to express the formation of matter or pus, is an event of such frequent occurrence that we must devote a little time to its consideration. There are three forms in which we find it. On mucous membranes, such as line the nose, mouth and eyelids, pus is often formed as the result of an inflammation. In ordinary colds in the head and in distemper a purulent discharge from the nose and eyelids is a common symptom. In the case too of wounds and some diseases of the skin a discharge of pus is seen upon the surface of the inflamed part. Under all circumstances pus is produced in the same way, not by any healthy secretion, but by a perverted growth or development of the cellular elements of the part; thus it is that inflammation in some parts is seldom productive of suppuration, whereas in others a very slight degree of inflammation gives rise to copious formation of pus. The morbid process is the same always, but the tissue affected being different, we have different results. Good pus is a harmless, even if not a bland and protective fluid. It should be white, without smell, and thicker than milk. When thin, stinking, and altered in color by assuming either a greenish, blackish, or reddish hue, we look for some cause of decomposition, which may be a diseased condition of bone or ligament at the part, or it may be some constitutional disease affecting the whole system. So long as pus escapes freely from the inflamed surface, it does no harm beyond the drain upon the animal's system. When, however, pus is formed in some part where, instead of escaping from the body, it burrows under or infiltrates other tissues, great danger to the animal ensues. Whenever there is much tissue of a loose texture, such untoward result may be anticipated as the result of suppuration. In the dog the skin of the neck is attached to the body by a lot of loose tissue (connective tissue). No part is so liable as the under part of the neck to be affected by diffuse suppuration as the result of inflammation following bites and tears. Pus formed here is very likely to diffuse itself down the neck and between the muscles and other structures. It rapidly decomposes and causes fatal gangrene. A very common form in which suppuration is found is when it is unable to escape as it is produced or to diffuse itself among surrounding tissues; where, in fact, it is surrounded, and forms a collection known as an abscess.

Abscess.—An abscess is simply a swelling containing matter, the result of inflammation. As the contents of the swelling increase it becomes softer, and the tissues nearest the external surface are by absorption made thinner. The thinning and softening of the skin over an abscess is well known under the popular term of "pointing." If an abscess be not interfered with, it finally bursts at the spot where it is most prominent, and from which the hair usually falls. It is, however, not advantageous to wait for an abscess to burst. As soon as we are sure that a swelling contains matter, it is advisable to open it with a knife, thus allowing the matter to escape and saving the animal further pain. The formation of an abscess is accompanied by great pain; and its treatment should consist of such measures as are likely to allay pain and hasten the development of pus. The application of heat and moisture does this, and may be effected by either warm fomentations or poultices. Such remedies are often abused by being continued after the contents of an abscess have escaped. They then do more harm than good, keeping the parts in an unfavorable condition for healing. When an abscess is emptied, either by bursting or by the judicious use of a lance, no squeezing is requisite; it does no good, and causes great pain. I say judicious use of a lance, because the opening should always be made at the lowest point, and thus permit the contents to escape by gravitation. The treatment of an opened abscess consists merely in cleanliness, the use of mild disinfectants, and, when it has been large, some support to the pendulous lips of the wound by a dry bandage and a pad of carbolized tow. The old practice of filling the cavity of an abscess with ointments or other dressing is quite unnecessary.

Ulceration.—When a sore shows no disposition to heal, or when it gradually spreads, the condition is known as ulceration. This is the result of inflammation still going on in the part, preventing the reproduction at the same time that it is destroying the normal structure of the tissues. Ulceration in the dog is not common. We sometimes see it on the hind limbs of paralyzed animals when the prominences of the hips and thighs are damaged by constantly lying in one position not unfrequently the coat being soaked with dirt and moisture. We find it, too, on the tips of the ears, when some disease causes the dog to constantly bruise the parts by violently shaking the head. Sometimes a simple sore is converted into an ulcer by the dog persistently licking it. In all cases the first thing to do is to find out the cause which keeps up the inflammatory process, and remove it, after which treat as a surface wound.

Mortification, or the death of a part, is not often seen in dogs. As the result of stoppage of the circulation from a tight ligature, I have seen the ear and the limb mortify. A similar result is sometimes seen to follow inversion of the womb, and the bowels are liable to mortification from strangulation or intersusception—the latter statement often traceable to violent remedies employed to remove worms.

TREATMENT OF INFLAMMATION.

In one of Youatt's books the old notion of the nature of inflammation is very tersely put thus—"When the nerves communicate too much energy and the blood vessels consequently act with too much power, inflammation is produced." He then proceeds to say—"If inflammation consists of an increased flow of blood to and through a part, the ready way to abate it is to lessen the quanity of blood. If we take away the fuel, the fire will go out. All other means are comparatively unimportant contrasted with bleeding." There is a plausibility about this line of treatment, and the argument leading to it that has misled many people. It seems logically to fit in with or to follow the statement that inflammation is accompanied by "too much energy" of the nerves, and "too much power" in the blood vessels of a part. Our own sensations of an inflammation (say a whitlow on the finger) also incline us to accept the explanation that extra activity is the essential feature of the disease.

We now know that dilatation of a blood vessel is due to deficient nervous energy, and that if the nerve be paralyzed the vessel is unable to contract or to prevent its contents distending it to its utmost caliber. We know also that the flow of blood in an inflamed part is not active, but retarded. Such facts, of course, quite upset the old theory and all the methods of treatment which were based upon it. They are quite incompatible with the use of remedies whose only action was to depress the system. Fortunately the dog is not so easy to bleed as most animals, and thus often escapes an operation which can never do any good to an inflamed part, and which must always do harm to an animal that has to resist a violent affection of an important organ. There are no cases in which bleeding can remove the stagnating blood from the vessels of an inflamed part. The blood flows from the running stream—from around, not from within the affected center. To directly cut into an inflamed part would only aggravate the mischief. Bleeding, however, not only does no good to an inflammation, but it does much harm to the patient. It causes debility. It renders the blood watery, and thus favors a dangerous accompaniment of inflammation in most organs—viz., exudation. In short, bleeding can never cut short an inflammation; it tends to aggravate the local results of the disease, and it puts the whole body into a condition unfavorable to making a quick recovery.

Other ancient means of abating inflammation, such as the administration of mercury and antimony, must also be discarded, their adoption being simply based upon an erroneous theory. They do no good to the inflamed part, they depress the general system, and often produce disturbance of some organ not implicated by the disease.

Having now cleared the ground by pointing out what is not to be done, let us see what we can do. First, we must endeavor to determine the stage of the inflammatory process; then we must try and guide it to the best possible termination; and, lastly, avoid all complications. The simplest inflammation to treat is one in some external part, such, for instance, as may result from a bruise, sprain, or other injury to a limb. Such a case, in the earliest stages, may properly be treated by cold applications, with a hope that we may be able to limit the quantity of blood in the part by constricting the vessels. If, however, much pain and swelling exist, we do good by cold applications. What we wished to prevent has already taken place, and our aim must be to favor a return to health by other means. We try to relieve pain and to favor reabsorption of the swelling. Warmth and moisture do this. Warm fomentations or poultices may be used. When much pain exists some local sedative may be used, such as decoction of poppies, or it may even be advisable to act upon the whole system by administering such a sedative as morphia or chloroodine. It must be borne in mind that warmth and moisture favors the formation of matter, and that matter is most undesirable in some parts—for instance, near a joint. Nature can always be trusted to do her share in restoring parts to health, and, therefore, we must take care not to unduly press even such apparently simple measures as poulticing or fomenting.

When a superficial inflammation is abating—*i.e.*, when the pain and heat are lessened, but a good deal of swelling remains

—our aim is simply to assist in the absorption of exuded material and in the repair of injured tissue. Stimulating applications are then employed, varying in activity from an ammonia liniment to a blister. Too often these agents are used while inflammation is still going on, and then, instead of effecting a reduction of swelling, we increase it, and, most probably, render it permanent, at the same time that we retard the repair of injured tissues.

In the case of inflammation of internal organs, although our principles of treatment are the same, we have one extra care to take. We have to consider the interference with the special function of the part. When the lungs are inflamed the respiratory functions are affected, and it behoves us to judiciously regulate the admission of air to the animal, to avoid great changes of temperature and all volatile impurities which might aggravate the already overweighted organs. When inflammation of any of the organs of digestion exists the special care is, of course, applied to the judicious selection of food. When the kidneys are inflamed we not only avoid all sources of irritation, but endeavor to relieve them by calling into increased action such other organs as may be able to take upon themselves some part of their function.

Although inflammation is necessarily always a local condition, we can usually do some good by general treatment. The judicious use of aperients is advisable, and sometimes diuretics may be given with advantage. They remove fluids from the body, and thus promote absorption, even if they do not positively retard the exudation at the inflamed spot.

These general principles of treatment will be considered more in detail when we come to apply them to each organ or part. Meanwhile they will not be superfluous if they have the effect of saving some poor dog from injury by causing his owner or doctor to relinquish the old heroic method of attacking inflammation.—*Wm. Hunting in Land and Water.*

NEW YORK DOG SHOW.—The entries for the eighth annual bench show of the Westminster Kennel Club closed last Monday, with a total of over eleven hundred. So many entries were received on Monday and Tuesday that it has been impossible to obtain full particulars regarding them. Enough is known, however, to warrant the belief that the show will excel its predecessors in the quality of the exhibit if not in the number of animals shown. The St. Bernards promise to be the feature of the show. Nearly one hundred are entered, and, with the exception of the show of the St. Bernard Club in England last November, there will be a display of these grand dogs that has never been equaled. Many of the other classes will be well represented, and Mr. Lincoln is confident that this show will be the best that has ever been held.

TRIAL BY JURY.—Cleveland, Ohio.—Abner, the fox hunter, was once brought before the Cuyahoga Court for selling rum at his tavern, on the Euclid cross roads. His lawyer gave him able defense. As the jury retired, he turned to his client, remarking: "Ab., we have lost our case." Abner, with face serene, simply replied: "Not much." "How so, old boy?" Abner, with open hand to his mouth, softly whispered in his attorney's ear, as only a giant can, "There are two fox hunters on that jury." The next day that jury could not agree. The court dismissed them and told them to go home and stay there. Shall the jury system be abolished? That is the question nowadays. The case of Abner is a fact and is on record in our court to-day.—DR. E. STERLING.

THE COLLAR DOG.—It was announced in our issue of March 7 that the dog receiving the number 1,000 in the *American Kennel Register* would be presented with a collar by the Medford Fancy Goods Company, 101 Chambers street, this city; but we have neglected to state what dog received the collar. No. 1,000 was Dr. J. S. Niven's spaniel Niven's Darkey. The *Kennel Register* entry reads: "1000. Niven's Darkey, black dog, whelped Sept. 11, 1883. Breeder and owner, Dr. J. S. Niven. London, Ont. Sire—Frank (A.K.R. 251). Dam—Niven's Nellie (A.K.R. 522). The collar is a handsome affair, made specially for the purpose by the Medford Fancy Goods Company.

ST. BERNARD IMPORTATION.—Mr. E. R. Hearn, Passaic, N. J., has just received from England the rough-coated St. Bernard dog Duke of Leeds, the bitch Rhona, and the smooth-coated dog Don II. and bitch Leila. They were selected for Mr. Hearn by Rev. Arthur Carter, the well-known St. Bernard judge. All of them are exceptionally fine specimens of the breed, and with Bonivard and Gertie, also owned by Mr. Hearn, make the finest kennel of the breed in this country. All of them will be exhibited at the show next month.

THE ST. LOUIS DOG SHOW.—*Special Dispatch to Forest and Stream:* St. Louis, April 22.—The St. Louis Gun Club's dog show opened this morning. There are 265 entries, including many bench show and field trial celebrities. The show is well arranged, and promises to be successful. There is a large entry from Pittsburgh, Pa., but owing to the illness of the attendant none of them were present. The display of pointers and setters is very good. The collies are also out in force, many fine ones being present.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, or breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Duke of Orange. By Mr. Louis B. Wright, New York, for orange and white pointer dog, whelped Sept. 11, 1883, by champion Sensation (A.K.R. 217) out of Seitner's Lass (Sleaford—Dawn).

Grouse, Jr., Jock, Jr., and Dora. By Mr. Jas. T. Walker, Troy, N. Y., for black and tan setters, two dogs and one bitch, whelped Nov. 20, 1883, by Jock (Grouse—Moll) out of his Black Bess (A.K.R. 422).

Glenclaire. By Mr. Jas. T. Walker, Troy, N. Y., for red Irish setter dog, whelped April 10, 1884, by champion Glencho out of his Claire (A.K.R. 233).

Spark. By Mr. A. C. Tufts, Somerville, Mass., for black and tan Gordon setter dog, whelped Feb. 1, 1884, by Bailey's Tom (Dash—Fly) out of Davie's Cute (Don—Nellie).

BRED.

☞ *See instructions at head of this column.*

Domino—London. Mr. W. G. Chisholm's (London, Ont.) English setter bitch Domino (Prince Royal—Nettie) to Mr. J. W. Humpidge's London (Paris—Lill), April 17.

Princess Belle—Colonel Thunder. Dr. G. A. Seaman's (Maryville, Kan.) English setter bitch Princess Belle (Rufus—Rose) to his Colonel Thunder (Thunder—Moll), April 7.

Little Maggie—Grand Duke. Messrs. R. & W. Livingston's (New York) bull-terrier bitch Little Maggie (A.K.R. 525) to their Grand Duke (A.K.R. 524), April 1.

Dido—Skip. The Forest City Kennel's (Portland, Me.) Skye terrier bitch Dido (A.K.R. 889) to their imported Skip, April 9.

Sibyl—Cæsar. The Forest City Kennel's (Portland, Me.) rough-coated St. Bernard bitch Sibyl (A.K.R. 757) to their imported Cæsar (A.K.R. 22), April 19.

Juno—Young Toby. The Forest City Kennel's (Portland, Me.) pug bitch Juno (A.K.R. 406) to the Chequasset Kennel's Young Toby (A.K.R. 473), March 21.

Mollie—Brandy. Mr. H. C. Miller's bull-terrier bitch Mollie (Peter—Rose) to Mr. M. Gifford's Brandy, April 16.

WHELPS.

☞ *See instructions at head of this column.*

Claire. Mr. James T. Walker's (Troy, N. Y.) red Irish setter bitch Claire (A.K.R. 233), April 10, nine (two dogs), by champion Glencho.

Maud. Mr. Max Wenzel's (Hoboken, N. J.) red Irish setter bitch Maud (Larry—Gussie II.), April 5, twelve (six dogs), by his Chief (A.K.R. 238).

Lodin. The Ashmont Kennel's (Boston, Mass.) imported mastiff bitch Lodin, April 8, eleven, by their Diavolo (A.K.R. 543).

Ruby. The Knickerbocker Kennel Club's pointer bitch Ruby (Dick—Fan), April 16, eight (six dogs), by Mr. D. G. Elliot's Scout (A.K.R. 216).

Meta. Mr. A. G. Bloomfield's (New York) collie bitch Meta (Lord Elcho—Margie), Feb. 6, nine (three dogs), by Mr. George R. Krehl's Eclipse (E.K.C.S.B. 12,919).

Collette. Mr. N. Elmore's (Granby, Ct.) beagle bitch Collette (Chanter—Beauty), April 10, six (two dogs), by his Ringwood (Ranter—Beauty); all white, black and tan.

Belle. Mr. D. S. Gregory, Jr., 2d's, pointer bitch Belle (A.K.R. 203), March 27, five (two dogs), by Mr. C. H. Mason's Beaufort (A.K.R. 694); all since dead.

Fancy. Mr. H. C. Miller's (Hudson, N. Y.) pointer bitch Fancy (Croxteth—Royal Fan), April 10, seven (three dogs), by Ducahon (Dan—Lady Sensation); two since dead.

Peg Peg. Mr. H. C. Miller's (Hudson, N. Y.) pointer bitch Peg Peg (A.K.R. 920), April 18, three (two dogs), by champion Knickerbocker (A.K.R. 19).

Brenda. Mr. J. A. S. Gregg's (Fordham, N. Y.) mastiff bitch Brenda, March 4, thirteen (seven dogs), by champion Nevison (Gurth—Juno).

SALES.

☞ *See instructions at head of this column.*

Duke of Orange. Orange and white pointer dog, whelped Sept. 11, 1883 (Sensation—Lass), by Mr. B. F. Seitner, Dayton, O., to Mr. Louis B. Wright, New York.

Landseer. Mastiff dog, whelped March 4, 1884 (Nevison—Brenda), by Mr. J. A. S. Gregg, Fordham, N. Y., to Prof. A. H. Dundon, South Fordham, N. Y.

Cassandra. Fawn mastiff bitch, whelped Jan. 26, 1884 (Diavolo, A.K.R. 543—Madge, A.K.R. 548), by the Ashmont Kennel, Boston, Mass., to Mr. W. D. Peck, New Haven, Ct.

Leicester A. Black, white and tan Edglish setter dog, age not given (Leicester—Nellie), by Mr. J. M. Avent, Hickory Valley, Tenn., to Mr. Samuel Giles, Graniteville, S. C.

Clara. Black and white English setter bitch, age not given (Penn—Pocahontas), by Mr. J. M. Avent, Hickory Valley, Tenn., to Mr. Louis Melcor, Battle Creek, Mich.

Ringwood—Silver whelp. White and black ticked beagle bitch, whelped Nov. 12, 1883, by Mr. N. Elmore, Granby, Ct., to Mr. Casper Lancer, Kenosha, Wis.

Rita. Fawn mastiff bitch, whelped Jan. 26, 1884 (Diavalo, A.K.R. 543—Madge, A.K.R. 548), by the Ashmont Kennel, Boston, Mass., to Mr. F. E. Rogers, Portland, Me.

Dolly Varden. Mastiff bitch (A.K.R. 75), by Mr. W. P. Wright, to Dr. J. Frank Perry, Boston, Mass.

Ringwood—Maida whelp. Beagle bitch, whelped Feb. 3, 1884, by Mr. N. Elmore, Granby, Ct., to Mr. Harry Clark, Utica, N. Y.

Folko. Rough coated St. Bernard dog (A.K.R. 477), by the Chequasset Kennel, Lancaster, Mass., to the Millbrook Kennel, New York.

Nyon. Smooth-coated St. Bernard dog (A.K.R. 804), by the Chequasset Kennel, Lancaster, Mass., to Mr. Robert Elliott, Hannibal, Mo.

Montreux. Smooth coated St. Bernard dog (A.K.R. 800), by the Chequasset Kennel, Lancaster, Mass., to Mr. A. S. Van Winkle, Cleveland, O.

Grouse—Belle whelp. Black and tan Gordon setter dog, whelped Sept. 23, 1883, by Mr. N. Elmore, Granby, Ct., to Mr. F. N. Manross, Forestville, Ct.

Gay—Grace whelp. Lemon and white pointer dog, whelped Sept. 14, 1883, by Mr. N. Elmore, Granby, Ct., to Mr. E. W. Beardsley, Hartford, Ct.

Watts—Skip whelps. Red Irish setter dogs, whelped Feb. 24, 1884, by Mr. Geo. T. Wells, Boston, Mass., one to Mr. W. N. Clark, Burlington, Vt.; one to Mr. H. N. Coon, Burlington, Vt., and one to Mr. E. Sweet, Malden, Mass.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Landseer. Mastiff dog, whelped March 4, 1884 (Nevison—Brenda), by Prof. A. H. Dundon, South Fordham, N. Y., to Mr. Henry T. Edson, Fordham Heights, N. Y.

DEATHS.

☞ *See instructions at head of this column.*

Chiefly. Red Irish setter dog (A.K.R. 966), owner by Mr. H. C. Miller, Hudson, N. Y., Feb. 26, killed by bulldog.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

M. A. D., Newman, Ga.—We fear that the lameness is of too long standing to yield readily to treatment. The best linament that we ever tried in such cases is the following: Two ounces of camphor dissolved in a pint of alcohol, then add a beef gall. This should be well shaken and applied twice a day and well rubbed in; rub with the hair, not against it.

J. H. W., Boston, Mass.—Dew claws are occasionally seen in nearly all breeds of dogs. They can be easily removed when the animal is young. They do not disqualify for the bench show.

PUBLISHER'S DEPARTMENT.

THE power of the pen is incalculable. Its cost is easily known by asking the nearest stationer for Esterbrook's Falcon No. 048 and other numbers.—*Adv.*

FROM the edition of Messrs. Geo. P. Rowell & Co.'s "American Newspaper Directory," now in press, it appears that the newspapers and periodicals of all kinds at present issued in the United States and Canada reach a grand total of 13,402. This is a net gain of precisely 1,600 during the last twelve months, and exhibits an increase of 5,618 over the total number published just ten years since. The increase in 1874 over the total for 1873 was 493. During the past year the dailies have increased from 1,138 to 1,254, the weeklies from 9,062 to 10,028, and the monthlies from 1,091 to 1,499. The greatest increase is in the Western States. Illinois, for instance, now shows 1,009 papers in place of last year's total of 904, while Missouri issues 604 instead of the 523 reported in 1883. Other leading Western States also exhibit a great percentage of increase. The total number of papers in New York State is 1,523, against 1,399 in 1883. Canada has shared in the general increase.

THE A. J. CORCORAN SOLID WHEEL STORM-DEFYING WINDMILL.—One of the comforts of modern civilization in rural districts is a good windmill. To farmer or stockraiser it is a necessity. But there are windmills and windmills. The antique object of Don Quixote's wrath is out of date, but not more inefficient than some of the traps now offered at so-called cheap rates. On the other hand, there are mills which, without fuss or trouble, unobstrusively and diligently get through a vast amount of work. One such, made by A. J. Corcoran, of 76 John street, New York, has for many years supplied three fishponds of six acres each at Pierre Lorillard's famous Rancocus stockfarm. It has been known to raise the ponds an inch in a single night, and has never cost a cent for repairs. The mill is made with a solid wheel, strongly tired like a wagon-wheel, and under heavy wind pressure simply luffs up to the breeze, as it were, and steadily pursues the even tenor of its way. In some other kinds, twenty-five per cent. of the power at least is lost by the action of counterbalancing weights, while the wheel itself, opening in sections, is racked by a blow, and like a lady's watch, is always wanting something to be done to it. This letting the wind blow through the wheel instead of making the wheel turn its feather-edge to the wind is as unphilosophical and unmechanical as it would be unseamanlike to have valves in the middle of a yacht's mainsail to relieve pressure. The Corcoran mills are well known and deserve their great popularity.—*Adv.*

COPY OF A LETTER written by Senator John I. Mitchell to "Nessmuk" in relation to the latter's new book: "Senate Chamber, Washington, March 4, 1884.—*Dear Sir:* I am very glad to know that your book on "Woodcraft" is about to get published. Your life-long experience as a woodsman, and your peculiar gift in this kind of literary work, evidenced by the popularity of your writings, leave no doubt in my mind of complete success in this new undertaking. The book is so compact and full of meat for those who seek the forest and stream for recreation, that it must be well received, and it is so cheap that it appears to me its circulation must be general. I am anxious to see it printed and in covers, and you may depend upon me for twenty-five copies, which I will circulate among my friends.—Very respectfully, JOHN I. MITCHELL."

Rifle and Trap Shooting.

FIXTURES.

May 6 and 7.—Fourth Tournament Southern Illinois Sportsmen's Association, Carbondale, Ill. C. P. Richards, Secretary.

May 20 to 23.—Knoxville Gun Club Second Annual Tournament, Knoxville, Tenn. C. C. Hebbard, Secretary.

May 26 to 31.—First International Clay-Pigeon Tournament, at Chicago, Ill. Managers, Ligowsky Clay-Pigeon Co., P. O. Box 1292, Cincinnati, Ohio.

June 2 to 9.—Annual Tournament Louisville Sportsmen's Association, Louisville, Ky. J. O. Barbour, Secretary, 157 Third avenue, Louisville.

SMALL CALIBER RIFLES.

Editor Forest and Stream:

Being confined to the house by a touch of malaria I will occupy myself by detailing for the benefit of my fellow riflemen some of the recent experiments with the "spiral groove." My practice has been confined to small bores, .28 and .25 cal., and have confined myself to rest shooting at 55 and 100yds., without wiping the rifle between shots. Have experimented with various powders and various weights of powder and lead, also various tempers of bullets. The best results I have obtained so far with the .28cal. have been with Hazard No. 3 duck powder and an 85-gr. bullet about 1 tin to 9 lead. With this cartridge 30-85-gr. I fired 20 consecutive shots in two groups of 10 shots each, the groups measuring from center to center of the widest shots, 2 7-16 and 2⅞in. respectively; or, in other words, it would take circles of these diameters to contain the groups. At the same time I moved the target up to 55yds. and firing 7 shots at this distance without change of sights, I found these grouped but 1in. higher, taking the average of each group, than at the longer distance. In fact, there was but one shot at the shorter distance that struck above the highest shot at the longer distance, and that but ⅛in. As near as I can judge from several similar tests, the bullet from this cartridge rises only about 1½in. at the highest point of the curve in firing at 100yds. In other words, this cartridge will shoot continuously into a 3in. ring at all distances up to 100yds. without any change of sights or allowance for the varying distances within that range.

To show how superior this ammunition is to the ordinary stuff in the market, I wish some rifleman having an ordinary .32-caliber would make a similar test with the ordinary .32-cartridge, care being had to use peep and globe sights, and to see that the average of the group at 100yds. be slightly below the center of bull, as if the average is above the center at the longer distance the group at 55yds. will not show the actual rise. If a ring front sight is used, a proportionately reduced bull should be used at the shorter distance. The average vertical position of the shots should be obtained by measuring to the center of each bull. Of course, if the average is below the center at 100yds. it will be proportionately lower at 55yds.

In practice at 55yds. one day my powder ran short, but wishing to expand another new shell I poured in what I had, filling the shell about one-half full (I had been shooting 30-85 grain cartridges). To my surprise, this half-filled cartridge sent the bullet full 2in. higher on the target. This, I thought, must be a wild shot, but subsequent practice satisfied me that this rifle, a 9lb. Remington Hepburn—the same action in all respects as their long-range rifles have, an action as strong as any in the market and perfectly safe under the heaviest charges—was actually buckling (being depressed at the muzzle) under the strain of my .28-30-85 cartridge. I had long known that rifles using heavy charges would do this, but it was a genuine surprise to find this result with such a cartridge.

I am satisfied from recent experiments that it is impossible to judge of the comparative merits of different powders and bullets by shooting them at any one distance. Nothing but the paper screens or careful practice at two or more distances without change of sights will tell the true story with rifles using over a 20-65 cartridge. It is probable that the test of the Bullard by Mr. Farrow, described by him in your issue of Jan. 17, in which he states that the government cartridge struck the target 24 to 30 inches lower than the 85-295 grains, would look somewhat different had the test been made with screens. I think it would then have been found that the heavier bullet started decidedly lower than the lighter, owing to this buckling of the rifle under the greater strain of the heavier projectile.

I am glad to see a growing dissatisfaction among riflemen with the miserable small-bore ammunition generally in use, but the majority do not yet realize the immense advantage of a flat trajectory, else they would make it warm for the rifle and cartridge makers of this land. For sporting purposes the proportion of powder to lead should never run much below 1 to 3; for target practice at fixed distances almost any proportion will do, so the shooting is accurate, though it is doubtful if it is ever advantageous to run below 1 to 6.

While I am having my growl about small-bore ammunition I may as well relate my experience with the U. S. C. Co.'s .32-19½ c. f. shells. Early in the winter I purchased of the company a small lot of these shells and 1,000 primers to fit same. Found the shells poorly finished, and the primers very sensitive, as many as four to six per cent. exploding in recapping. I managed to get along with them, but recently I received another small lot of same make, length and caliber, but reduced at mouth by Messrs. E. R. & S. to 25-100 bore. The primer pockets of these shells are about 1-32 less in depth, and I have had to drill them deeper before they would fit their own U. S. C. Co. primers, and be reloaded. In trying to use these shells—there being none other of this length in the market—I have exploded several in closing the rifle, the first injuring my finger considerably. Had the rifle been of the rotating breech block kind, the accident would probably have been serious, as in that case I might have received the entire shell instead of the primer only.

Later on I may have something to say of the little .25-bore.

F. J. RABBETH.

Editor Forest and Stream:

Your correspondent "G. H." complains of the popular .22-cartridge, stating that this ammunition is most unsatisfactory. Concerning the short or gallery cartridge I think no complaint should be made. Whether furnished by the Winchester or the U. M. C. Co. the accuracy is all that can be desired. I have frequently seen from seven to ten successive balls go through the same hole at 25yds. At Conlin's gallery may be seen a series of one hundred consecutive shots, of which 99 were bullseyes, made at the distance indicated, the bullseyes being one inch and a quarter in diameter. The cartridge is, however, very sensitive as regards elevation, and is therefore not adapted to even the smallest game except at very short ranges, as no fellow can calculate where to hold for longer distances, except after an interminable series of experiments. If for squirrels and the like, we select the long or extra long .22, we are still worse off, for I have yet to find any brand of cartridges of this size that make even the slightest pretense to accuracy. If manufacturers would take the same pains with these as with their short cartridges, there would be a good demand for them, and sparrow pot-pies would prevail.

GREENHORN.

MORE RIFLE QUERIES.

Editor Forest and Stream:

The communications of "W. M. F." and "E. A. L.," each in its way, has contributed very satisfactorily to the discussion which it was my aim to elicit, and I shall be somewhat relieved from the suspicion of obstrusiveness in offering this second instalment.

1. It is authoritatively stated that the heavier bullet has a longer range, because of the momentum it derives from weight. At shorter range the lighter bullet may have more momentum resulting from velocity. Approximately, what is the distance at which the force of the two bullets will be equal? What of 200 yards?

2. Has it been demonstrated that a bullet driven with extreme velocity is less affected by wind across the line of fire than one moving at a reduced speed?

3. Is there any exact and ascertained ratio between the force of a powder charge on a bullet, and the resistance of the atmosphere in the bore of the rifle? What increase of pressure behind will be more than held in check by the unexpelled air before the bullet? If the relative force of a bullet is lost in any degree within the barrel, can it be regained in the least on its flight outside?

4. The books refer to the drift of a rifle, and describe it as the tendency of a bullet to deviate in the direction of the twist, right or left as the case may be. This deviation is put down as about five inches at 200 yards. Now, in the common practice of sighting rifles, is it found necessary to make allowance for any such variation as is here indicated? In a still atmosphere, if the sights are on a line with the center of the bore, is it not usually found that the bullet strikes the target perpendicularly to the center?

5. Is not the rifling of target rifles, with very shallow grooves, detrimental to even shooting, on account of the bullet being held in too weak grip? The modern system is shallow grooves and hard bullet, and these two conditions match each other; under perfect adjustment they may approximate perfection. But suppose the variation of deeper rifling and the use of a hardened bullet. Should the upset not fully fill the grooves, will not the air-pressure in front of the bullet prevent an escape of gas; and even if slight currents of air mingle with the expanding gas, would the force of the charge thereby be weakened?

6. Many riflemen prefer to use at their option either a patched or a

lubricated bullet. Is there any system of rifling for which manifest superiority can be claimed, taking into account the twofold service indicated? Or are the requisites named so different that they cannot be combined in one weapon?

7. The matter of bullets has only to be mentioned, and innumerable questioners who have gone through hopeful, baffling, disappointing experiments, clamor for answers that will at least give them temporary rest. The leading manufacturers of target rifles are alloying their patched bullets of the same weight and shape in widely different proportions, varying from 1 to 16, to 1 to 40. Is the result of the experience of expert riflemen so different?

If there is any standard authority for the length of a bullet adapted to guns having a short uniform twist, it is three times the measure of its diameter. Yet, it would be interesting to know how arbitrarily this standard is to be adhered to, more especially in the case of difference of caliber, or variation of powder charge. The blunt, pug-nosed bullet seems to have won its way to nearly universal adoption. It has the obvious advantage of being weighty at the point, and thereby aiding the counterpoise of its polarity. It strikes the air so as to leave a larger circular vacuum in which to maintain its rotary motion unimpeded. It is an open, and perhaps urgent question, whether bullets of blunter points than are in general use might not raise the scores of all grades of marksmen. J. J. P.

WORCESTER, Mass.

IGNITION OF THE POWDER CHARGE.

Editor Forest and Stream:

In your issue of April 3 James Duane would have us believe he goes to the bottom of "the distance the flash of a primer permeates the charge of powder." He selects a shell with three holes for the flash of the primer to be divided into. Let him take a shell with a central orifice, so the full force of the primer may go up the middle of the charge; then he must think that the flash burns a hole as it goes in, which it cannot accomplish when entering sand.

The "point," which he also makes, is something out of his province to decide, and he goes a long distance out of his way to put it in, the reason for which I cannot fathom. HOLDING WELL.

CHICAGO, April 15.

Editor Forest and Stream:

My innocent article on powder ignition in a recent issue of your journal has developed such a storm of opposition among my friends that I have undertaken a new series of experiments, substituting a variety of materials, covering a wide range of specific gravities, for the sand used in my first experiment.

I had intended to hold my peace until these experiments were concluded, but your note received this morning, inclosing the comments of "Holding Well," has decided me to speak at once. I hope that this effusion of "Holding Well" will be published in your next issue, that your readers may appreciate the unfair, not to say dishonest tone of his criticism.

In the first place, he says that I "would have us to believe he goes to the bottom," etc. Now, I do not think that my communication warrants any such statement. I made a few experiments to satisfy myself, sent you my results, with a description of my manner of making them, and drew my inferences in all diffidence.

It may be proper to add that my subsequent experiments, made with materials varying in specific gravity from charcoal to shot, confirm my first deductions. Practically non-combustible materials were purposely selected, as the mechanical and not the chemical action of the flash is what we wish to investigate. I find that the depth the flash will penetrate is nearly independent of the specific gravity of the interposed medium, but is greatly influenced by its coarseness of granulation. That is, the larger the grains the larger will be the voids between them, and the less will be the loss of head of the jet of flame due to friction. (I employ a term more applicable to water, but it will serve to illustrate.) The great objection, however, to employing any granulated material, is the difficulty in obtaining uniform granulation.

An admixture of small grains, filling the spaces between the larger ones, will occur in spite of all ordinary care, and will be destructive of uniformity. I have, therefore, devised the following method for testing the relative performance of primers, which, when properly applied, will give practically uniform results. Hold the gun muzzle down, push a bullet a short distance into the barrel from the breech, insert a tube and pour a small quantity of powder through it on top of the bullet, the object being that no powder shall adhere to the sides of the barrel; then insert a primed shell and discharge it.

If the powder is ignited, repeat the experiment, the bullet being pushed in further, and so on until the powder is not ignited. This will give a correct limit to the range of the flash in an air space in each case. [The air space should be of a uniform temperature, as the flash will range further in hot air than in cold.]

For the benefit of "Holding Well," I will state that I have tried this experiment in a .45-cal. gun, with both the Berdan No. 1 and the Winchester No. 2½ primers, with the following results: The Berdan will ignite the powder at an average distance of 3½in., once it did so at 4in., but there was a distinct hang fire, and the result may have been due to grains of powder adhering to the surface of the barrel at less distances than 4in. The Winchester failed to ignite the powder at 2¾in., but did ignite it at 2¼in. Thus we may infer, with "Holding Well's" permission, that the Berdan No. 1 is stronger than the Winchester No. 2½. It will also ignite the charge more thoroughly through its three holes than the Winchester through its one.

"That the flash burns a hole as it goes in" is irrelevant. It ignites the grains with which it comes in contact, these ignite the next, and so on. Thus, if we take a pound of powder and make a train of it several feet long, and apply a match to one end, the match may be said to ignite the further end of one train, but it does so by very indirect means.

Next he comes to the "point" that I made, and considers it something out of my province to decide. I think there are many men who are at least the equals of "Holding Well" on both theoretical and practical gunnery, who will agree with me that my point was well taken, and that I did not "go a long distance out of my way to put it in," as I gave two very pertinent illustrations of my point in this same letter.

Before giving another illustration I wish to assure "Holding Well" that I do not intend to be offensively personal, but that I must be personal to be understood.

To quote Mr. O'Brien, though I do not wish "to revayle to him the fact that I had penethrated his incognitow" I may venture a shrewd guess that he is an off-hand marksman of some note. Thus he is a fair type of a certain class of riflemen who have had considerable experience in a narrow field.

Contrast with him Prof. Francis Bashforth, who may never have fired a gun in his life, and possibly could not hit a barn off-hand at 200yds. Yet Prof. Bashforth could probably give us more points on scientific rifle shooting in a day than a dozen such men as "Holding Well" in the course of their natural lives. JAMES DUANE.

NEW YORK, April 19, 1884.

NEW YORK STATE PRACTICE.—General Orders, No. 7, current series, Adjutant General's office, Albany, promulgates the classification and order of duty in rifle practice for the season of 1884, prescribed by Brigadier-General Charles F. Robbins, G. I. R. P. With the exception of some few modifications the order is identical with that of 1883 in its requirement. The principal change is the doing away with carbine practice, only those troops armed with and using the rifle being required to perform field duty as riflemen. In general practice (class firing by individuals) it is directed that five consecutive shots will be fired at each distance, instead of "five shots only," as formerly. Explicit instructions are laid down to be observed by officers in conducting skirmish drill with ball cartridge. Instead of commencing at 250yds., firing on the advance at such points as they may determine best, ordering the march in retreat at 50yds., and firing two shots while going to the rear, it is directed that "commandants should use discretion and tact, varying the drill according to their ground and targets, commencing at 275yds. in front of the targets, deploying men and taking such distances as target and range will allow, firing on the advance one shot at 250, one at 150 and the third at 50yds. At this point order the march in retreat and fire one shot at 100 and one shot at 200yds." The prizes offered last year to the companies having the largest number and percentage of marksmen and highest figure of merit, based upon an enrolled strength of not less than 60 men, have been dispensed with this year. The practice for the season will close on Saturday, Nov. 8, and no scores made after that date will be recognized. No alteration is made in the conditions attaching to qualifications in matches, and ammunition will be limited to forty rounds for each officer, non-commissioned officer and private enrolled, as per quarterly returns for quarter ending March 31, 1884. Transportation will be furnished by the State only for first general practice to each organization located more than three miles from its range, at the actual cost of the same, but not in any case exceeding fifty cents for each man actually parading. All subsequent practice will be had at the expense of the individual or organization.

NEWARK.—The total scores for the season of six tournaments are as follows, the Frelinghuysen leading. Possible 3,000, 10 men per team, 10 shots per man: Frelinghuysen R. A., 2,797; average, 466 1-6; Essex Avenue R. C., 2,773; average, 443 1-6; Celluloids, 2660; average, 443 1-6; Domestic R. and R. A., 2,645; average, 441; Warren R. C., 2,557; average, 428 1-6; Plymouth R. A., 2,508; average, 418.

THE RIFLES OF TO-DAY.

MARLIN REPEATING RIFLE.

THE Marlin repeating rifle, manufactured by the Marlin Fire Arms Company, New Haven, Conn., is an arm of the "Colt" class, operated by the lever. It has only recently been pushed in the market. There are a number of inventions embodied in it, which were perfected at various times. For a long time before its introduction it was, in the opinion of its manufacturers, apparent that the magazine guns then on the market did not meet the sportsman's practical wants in a number of ways. The .44-40-grain rifle had too little powder and lead to be effective, while the larger calibers used special ammunition not always obtainable readily, and of but poor range and accuracy. This, combined with the call for a gun having fewer pieces, and an action which was not likely to break down through a defective cartridge or rough handling, was the first incentive toward producing the Marlin.

Although a number of other magazine guns have since been put on the market, it still claims the lead for simplicity, strength and accuracy. The fact that the Ballard rifle is made by the same company is guarantee of good workmanship.

The Marlin is made to use the regular .45-70 Government cartridge, copper or brass, also a .40-cal. cartridge with 60grs. of powder and 260 of lead, which is very effective up to 800yds., and possesses an exceedingly flat trajectory. It has obtained the reputation, in some quarters, of being the best cartridge for hunting deer, antelope, and the like, now on the market, and has frequently killed such game with one shot, the animal dropping dead in its tracks and the bullet going clear through the carcass.

As soon as the Marlin became known, the demand was such, it is said, that the factory for over two years could not furnish one gun where ten were ordered. In 1883, the capacity of production was increased three-fold, but still the orders were about three months ahead of the supply all through last fall and winter.

Its special claims are; first, that it has about one-half the number of pieces used in other magazine rifles; second, the solid bolt behind the cartridge, preventing any accident, no matter how effective the ammunition may be, as all strain comes against the former; the receiver is also one solid piece, no lock plates being used; third, the rifling which has obtained its great reputation in the Ballard; fourth, ease of manipulation and of loading; the cartridges can be inserted with the lock either open or closed, and all ten shots have repeatedly been fired in less than five seconds. Dr. Carver found that it was suitable for his rapid and accurate work, and for over a year, the markers assert, he has used no other.

For those who may want a heavier cartridge the .45-cal. is made also to take 80grs. of powder and 300grs. of lead, making in all three sizes, .40-60-260, .45-70-405, .45-80-300. There have been frequent calls for other sizes, but as yet the company cannot make any new ventures, owing to their inability to supply the present demand.

Besides these, a Marlin magazine shotgun is made of the same caliber as the .45 rifle. The shell used is 2¼in. in length, and will hold 40grs. powder and ¾oz. of shot. It holds the same number of cartridges as the rifle and is made in same styles and at same prices, which are as follows:

Octagon or half octagon barrels, 24in., $30; 26 and 28in., $32; 30in., $35, weighing respectively 9, 9¼, 9½, and 11lbs., the latter extra heavy. The sights used are the favorite Rocky Mountain rear and knife-edge front. Double set triggers are $5 additional; 28-in. barrel is the standard size, holding 9 cartridges in the magazine and can be loaded into the barrel, which latter is convenient for patched bullets to be used in target shooting. Half magazines can be furnished at same prices if preferred.

The Marlin, belonging to the sporting class of weapons, has no special target record. From various parts of the country reports have come which show it to have good holding qualities. C. Gove, of Denver, Col., on Jan. 11, 1881, shot a Marlin before a number of spectators. He shot fifty shots in nine minutes twenty seconds, and of this time four minutes were consumed in replenishing the magazine and passing a wet whisk through the barrel after each ten shots. The score at 200yds. off-hand was 220 in the possible 250.

This rifle was entered at the government trial, before a board for selecting a magazine gun in 1881, and was put through the regular tests. In the test for endurance there was an explosion of a cartridge in the magazine. The Board of Officers "were of opinion that the explosion was due to the jolting encountered in feeding down through the magazine and the repeated blow on the base of the cartridge from the column behind it, caused by the recoil of the piece at each shot, and possibly combined with an over-sensitive cartridge." Subsequently the arm fired 500 shots in good order. The dust test was passed in fine style, but the gun was not chosen by the board for provisional issue to the army.

The construction of the weapon may be studied from the cut Fig. 1 representing the completed arm in elevation.

Fig. 2, a cross section of the action closed. A represents the lever; B the bolt, C the extractor, D the carrier block, E the ejector, F the carrier block spring, G the hammer, H the trigger, I the firing pin.

Fig. 3 is the same with the open position. It will be seen that throwing forward the lever A withdraws the firing pin I, unlocks the bolt B, and causes it to recede, carrying with it the extractor C, which extracts the shell of the cartridge just fired, while the ejector E, attached to the lower section of the bolt, ejects the same from the receiver. By the same motion, the carrier block D is raised from its natural position, as in Fig. 1, brings the cartridge with it, and places the same in line with the chamber of the barrel, while the spring F firmly holds the cartridge in place. The hammer G is brought to full cock by the same motion, and held there by the action of the trigger H, entering its full cock notch. Bringing the lever back to its natural position causes the bolt to move forward, pushes the cartridge into the chamber, lowers the carrier block to receive a fresh cartridge, locks the breech mechanism, and leaves the arm ready to fire. The magazine is loaded through an opening in the side of the receiver, which opening is closed by a cover, as shown in Fig. 1.

The manipulative directions for taking the action apart are: First—Take out the lever pin screw, and drive out the lever pin, allowing the lever to be removed. Second—Take out the tang screw (this allows the stock to be removed), hammer screw, and front pin that goes through the trigger strap; now remove the trigger strap with the lock work attacked. Third—The bolt can now be slipped out.

To assemble the action, put the parts into the receiver in reverse order from that in which they were taken out.

RANGE AND GALLERY.

EXPLANATION WANTED.—Succasunna, N. J.—Referring to the two wonderfully good targets in a recent issue published by Mr. A. Armstrong and made by Mr. L. N. Walker, of Ilion, N. Y., will either of the gentlemen tell us how the thing is done? Did Mr. Walker make a six-tenths' inch (6-10in.) bullseye, put it up at 100yds. and fire only ten shots at it, or did he make a larger bullseye and after shooting scribe his 6-10in. circle around the shots? It was stated the weather was cloudy and light poor. How did he manage to see that small dot at that distance with the naked eye? I put that size bullseye at above distance and could but barely see it with both eyes open and not at all through sights. Was a telescope attached?—VAN.

PENNSYLVANIA STATE RIFLE ASSOCIATION.—The regular spring meeting will be held at the Stockton range May 10. The officers recently elected for the year are as follows:

Dr. E. O. Shakespeare, President; Major Joseph H. Burroughs, Vice-President; Henry C. Rushton, Secretary; J. L. Weatherly, Treasurer. The standing committees of the year as made up by the President comprise the following:

Executive Committee—Lancaster Thomas, chairman; Dr. M. Price, C. W. Zieber.

Range Committee—Dr. M. Price, chairman; W. De V. Foulke, J. L. Weatherly.

Prize Committee—Major Joseph H. Burroughs, chairman; C. W. Zieber, G. W. Miles, Dr. M. Price, H. C. Rushton.

Finance Committee—C. W. Zieber, chairman; Wallace Proctor, L. Thomas, J. H. Burroughs, G. W. Miles.

THOMASTON, Conn.—A year ago, a rifle club of about fifteen members was formed in this place. Their range is located about two miles from the village, near Reynold's Bridge, and is named Bridgemoor. Nearly all the members were new at rifle shooting, but some of them made very good scores in the course of the season, some of them making as high as 107 out of a possible 120. Massachusetts ring target. The first shoot of this season was on Good Friday, when the badge was won with a score of 98. The weekly shoots are held every Saturday, P. M., for a very pretty badge. We are fitting up a new range somewhat nearer the village, and more accessible to visiting riflemen. Many new members are now joining. Our shooting is off-hand, distance, 200yds.—FRED A. PERKINS.

BOSTON.—Following are the scores already made in the matches for April at the Mammoth Gallery:

Amateur Match.

A B Loring	46	47	47	45 — 231
B W Gardner	45	45	44	43 — 220
J J Munroe	45	43	43	43 — 218
J A Hills	43	43	42	42 — 216
J H Bird	44	43	43	43 — 216
A B Wilson	43	44	42	43 — 215
A W Johnson	43	43	43	42 — 214
J T Stetson	43	43	42	42 — 212
T Lyman	41	41	43	42 — 209
C H Hamilton	41	42	43	41 — 207

Beginners' Match.

C L Foster	41	41	41	43 — 209
T A Lynch	42	40	40	41 — 201

BOSTON, April 19.—The cold, raw wind prevented a large attendance at Walnut Hill to-day, and those who did attend were prevented by this same reason from making large scores. Following are the scores, all at 200yds.:

Creedmoor Practice Match.—J. A. Frye 46, C. B. Edwards 43, H. Cushing 45, M. R. Jafray 45, A. L. Brackett 43, F. Stetson 42, W. J. Meadows 42, F. C. Shepard (mil.) 41, W. H. Oler 41, B. A. Lappen 41, J. Paysen (mil.) 40, M. J. White 40, W. J. Look 39, A. Darling 38.

Creedmoor Prize Match.—J. P. Bates 45, re-entry 44, J. A. Cobb 42, re-entry 42, B. A. Lappen 41.

Decimal Match.—W. Charles (C.) 86, J. A. Frye (A.) 78, A. C. Adams (C.) 77, re-entry 75, M. J. White (A.) 72, B. A. Lappen (A.) 72, W. J. Look (C.) 70.

BULLSHEAD RIFLE CLUB.—April 10, 12-ring target, possible 120: M. Dorrler 119, A. Lober 119, C. Rein 115, G. Zimmermann 114, J. F. Campbell 111, S. Mehrbach 107, B. Walters 101, S. F. C. Weber 95, Louitzki 89.

PRIMROSE SOCIAL CLUB.—Series of matches at club range, Fourth and Market streets, Camden, N. J. Airgun, 10lbs., 45ft. range:

NAME.	Dec. 6	Dec. 20	Jan 16	Jan. 31	Feb. 14	Feb. 28	March 20	April 3	April 17	Total	Average

WHEELING, W. Va., April 5.—The attendance at the 200yd. range to-day (on the appearance of W. Milton Farrow) was small. The club has not yet recovered from the effects of the flood. A permanent target, with butts for the marker, will soon be in position, when the scoring will be arranged for the Massachusetts target by the favorite watch-dial plan. At present the scoring is very primitive; the marker takes a 7x9in. slate and a piece of chalk, and after the shot is pasted up makes his figures on the slate, which is then held up to be read through a telescope at the firing point. Occasional mistakes are made by the shooters in deciphering the figures, but generally in the right direction; a check on such mistakes, however, is made by keeping the previous shot on the other side of the slate. Thirty shots each were fired, which are divided into strings of 15 shots for convenience. A combination target was used, but the score, to be intelligible to your readers, must be by Massachusetts or Creedmoor count, the former is appended. Mr. Farrow used a Bullard, Mr. Jaeger a Ballard and Mr. Cox a Sharps rifle:

Farrow	10 9 12 9 11 10 10 11 11 12 12 10 10 11 12—158 10 10 11 12 12 8 11 10 11 11 12 11 10 10 11—160	318
Jaeger	12 12 8 12 10 8 10 11 12 8 9 10 12 9 9—152 11 10 10 11 10 9 11 9 8 10 12 10 10 10 12—153	305
Cox	10 10 10 11 10 9 10 12 10 9 10 9 0 12 12—144 10 11 8 10 11 12 11 12 9 11 12 11 10 10 10—158	332

The club entertained the champion at a banquet in the evening, where all the talk was on rifles and bullets.

GARDNER, Mass., April 19.—At the Hackmatack Range yesterday the Gardner Rifle Club shot a match with the Brattleborough Club, exchanging shots by telegraph. Two scores to each on a Massachusetts target with a possible 120. The result was as follows:

Gardner.			Brattleborough.		
G F Ellsworth	109	109—218	Cobb	108	106—214
I N Dodge	110	106—216	Howe	102	109—211
G C Goodale	104	108—212	Nichols	105	103—208
A Mathews	106	103—209	Wood	103	100—203
S B Hildreth	99	109—207	Smith	105	98—203
C A Hinds	105	100—205	Reed	100	101—201
H C Knowlton	99	101—200	Knight	97	98—195
F H Knowlton	97	102—199	Taft	102	94—196
W C Loveland	86	97—183	Nichols	101	72—193
		2047	French	92	98—190
					2014

NEW YORK GALLERY SHOTS.—The All-Comers Match at the Grand Central Rifle Range, No. 5 Vanderbilt avenue, still continues to excite increased interest as it approaches its end. It has shown conclusively by its success that the interest in gallery practice has not altogether died out, and that it needs only the proper stimulus to develop an old time enthusiasm. There have been few changes in the scores of this week. The following are the best: J. H. Brown for record 333, P. G. Fanning 333, H. Oehl 325, G. Zimmerman 322, M. Dorrler 319, L. Bird 319, W. M. Farrow 317, J. Coppersmith 317, C. E. Keater 314, G. I. Seabury 313. W. Simpson 310. H. I. Howlett 308, H. Von Der Linder 307, Dr. Toal 306, W. Klein 303, C. Rein 300.

CUYAHOGA RIFLE CLUB.—At the annual meeting, held at Cleveland, O., April 15, officers were chosen for the year: W. R. Huntington, President; W. J. Akers, Vice-President; F. D. Bosworth, Secretary; P. F. Spenzer, Treasurer. The president appointed Messrs. Sobey, Luehrs and Brunner as Trustees.

DOVER, N. H.—On April 19 Geo. H. Wentworth, of Dover, N. H., while practicing at 200yds., off-hand, made a clean score of 50 points. Out of 15 shots fired, 14 were in the bullseye.

THE TRAP.

THE DUFFER CLUB.

YOUR correspondent has found the champion club of the country, and without malice will set down their doings of one day. Henry Bush is the secretary of the Sippo Gun Club, and with him I went to the shooting ground.

On the way, Hen. Bush explained to me that this was to be a match for the championship of the club, and they were to shoot from a rotating trap with a screen, their first venture at that sort of shooting.

Hen. furthermore stated that the S. G. C. had some thoughts of going to Chicago to participate in the clay-pigeon tournament at that place next May.

After setting the trap and adjusting the screen I held four small twigs in my hand to let the Sippo Club draw and determine the order of shooting. Hen. Bush held the shortest twig, and he immediately grasped his gun and walked up to the mark. Hank Greene, the treasurer of the club, managed the strings, and I was to keep tally. The secretary yelled "Pull," and threw his gun to his shoulder as Hank gave a terrible yank on the same string that he had been revolving the trap with. On seeing no ball fly up, the treasurer got confused and looked around at Hen. in a funny way; but that worthy never budged, but just kept his gun up and his eye along the sights. All at once Hank gave the other and right string a yank, and that ball came up over that screen like a streak of lightning and struck the secretary in the paunch with a dull thud. Hen. dropped, but immediately arose, and while rubbing his stomach managed to claim a foul as he did not see the ball, but he was politely informed that he had scored a miss, and so I tallied it.

Much discomfited Hen. retired and Hank Green next faced the trap, and when the ball flew up in the air, he shut both eyes and pulled the trigger, the ball falling to the ground all safe. When told of this the treasurer appeared dazed and remarked, "Gosh, I had a fine bead on her, but then I always told you that this gun was N. G."

Rad Skinner, the president, next toed the scratch and got a beautiful straight away shot, and after following up and half way down, he surprised us all and himself the most so by breaking the ball. Skinner stepped back with a smile hovering away around behind his ears, not doubting that he already had won the badge.

Tot. Bush, Hen.'s brother, and vice-president of the club, stood up to take his shot, and as he raised his gun a beautiful little drop came in toward him, and when it was almost in the gun, he pulled the trigger and the ball disappeared. On seeing this Skinner's jaw fell and he swore that the ball broke on the gun barrel.

When Hen. stood up for his second ball, he again raised his gun, and as he saw no ball in the air, he just pulled the trigger and jumped sideways.

But this last movement was unnecessary, as the ball, which was going the way of Hen.'s first one, was smashed into a thousand pieces, and in reply to the laughter which greeted his movement, Hen. remarked: "I had her down fine, and only stepped aside to see the pieces fly."

Hank walked up to the mark with blood in his eye and yelled "pull" in a loud tone, and on seeing the ball fly away to the right, he repeated his former movements as regards his eyes, and pulled the trigger. A thundering report was heard, and Hank, after several back somersaults, took a seat on a stump, while his gun writhed in agony on the ground. The poor fellow had pulled two triggers instead of one, but nevertheless he broke his ball.

When the president stood up for his second ball, he saw one go off to the left, and after it had rolled on the ground he sent a load of No. 10s flying after it, but it was too late and he was scored a cipher.

So the fun continued until the fourth round had passed, with all the members tied on one out of four.

Hen. appeared nervous when he faced the trap for his fifth ball, and when it sailed away from him, he banged away at it in a reckless manner and was consequently scored a miss.

Hank got his first incomer for his fifth shot, and it so confused him to see the ball shooting toward him that he dodged, but it was too late, and the ball smacked him on the cranium, and then I suppose cracked itself laughing at Hank's terrible grimace, for it fell to the ground in pieces. Hank retired and joined Hen., both looking downcast.

When Skinner's turn came he took extra precautions to win the medal, and just as he was about to pour in the shot into his gun he called out, "Ain't that a rabbit over there to the left," and as all eyes looked for the rabbit Rad. just let an extra charge of shot slip into the one barrel.

This load might win him the championship, and he was going to run no risks. No rabbit being in sight, the match was proceeded with, and the president stepped up to the scratch full of hope and success. He got a nice one to the left, and covered it in a very cool manner and pulled the trigger. The president's eyes and mouth opened when he was informed that the ball was safe, but when he lowered his gun his hair stood on end, for about 3 ounces of No. 10s rattled out of his gun's undischarged barrel, and piled up on the ground a terrible proof of the president's duplicity.

On seeing the rest of the club's eyes and mouths open, Rad. remarked, "Darned if I didn't forget to put a wad on that other load," and this seemed to satisfy the remainder of the "S. G. C."

Tot Bush now had only to hit his ball to win the medal, and he did it in grand style I must say, and to show us what he could do he emptied his other barrel at a large piece of the same ball, but as it was pretty close to the ground, and as the basket containing the safe balls was in range the entire load struck it, demolishing balls, basket and all. Nevertheless the vice-president dangles the championship medal on his manly breast, while Hen. curses the trap, Hank his gun and Rad. his luck. Following is the score in full:

Hen Bush	0	1	0	0	0—1
R Skinner	1	0	0	0	0—1
H Greene	0	1	0	0	0—1
T Bush	1	0	0	0	1—2

I was asked by Hen. what I thought their chances would be at Chicago, and I told him they would be "good;" but I added, "for the tail end," to myself. If they go I will promise the readers that they will again hear from SIPPO.

MASSILLON, Ohio.

GUN QUERIES.

Editor Forest and Stream:

I will be thankful if some of your readers who have practical knowledge of the subject, will give their views upon the following questions:

Will a 16 or 20-bore, with its proper charge, kill as far as a larger bore gun, both being bored in the same manner? Of course, the chances of hitting are less with small bores than with larger, because the air is not so full of shot, but provided the game is hit, will the killing power or penetration be as great at the same distance?

The second question is, Why are the small-bore barrels made shorter than the larger bores? The 16-bores as a rule are 28 inches, the 12-bore 30, and the 10-bores 30 to 32 inches. If a 16-bore 28-inch barrel will burn all the powder and give all the force, why will not the same length of barrel do the same with the larger bore? Or course, more powder is used in the larger bore, but there is also more space in the barrel for it to consume.

Third—Is there any advantage in having long barrels?

Fourth—Which is the most desirable in a 16 or 20-bore; to have one barrel cylinder and the other choked, or both choked, either full or modified? J. E. W.

VIRGINIA CITY, Nev.

BOSTON GUN CLUB TOURNAMENT.

WELLINGTON, Mass., April 16.—Below find results of the above shoot. A fine day made the meet one of the most successful held, the best shooters of the surrounding clubs being present in full strength. Between 3,000 and 4,000 birds were required to feed the voracious traps. The next two days' shoot, April 30 and May 1, will doubtless be a great day, particularly should weather conditions assist:

First shoot, 7 single birds, 18yds. rise:

T C Field	1100011—4	G C Reed	1111111—7
G A Sampson	0110111—5	C H Gerrish	1111100—5
C H DeRochmont	1111001—5	W S Perry	1110111—6
R F Schaefer	1101100—4	A Houghton	1101010—4
H W Eager	1001110—4	J Clark	1011111—6
W Parker	0011010—3	W J Braley	0100101—3
E T Smith	0011010—3	D Kirkwood	0111011—5
C F Stark	1110001—4	L E Johnson	1110111—6

Winners—Reed first, Clark and Johnson second, Kirkwood and DeRochmont third, Eager and Houghton fourth.

Second shoot, 3 pair doubles, 15yds. rise:

Stark	10 11 01—4	Clark	11 10 00—3
Parker	10 00 00—1	Braley	01 10 00—2
Smith	00 00 10—1	DeRochmont	11 10 10—4
Gerrish	00 10 11—3	Eager	10 11 11—5
Field	10 00 10—2	C F Steele	10 00 11—3
Perry	11 10 11—5	Houghton	11 11 11—6
Sampson	10 11 10—4	Reed	11 10 00—3
Schaefer	01 01 10—3	Kirkwood	00 10 11—3

Winners—Houghton first, Perry second, Stark and Sampson third and Kirkwood fourth.

Third shoot, 7 single, 18yds. rise:

Gerrish	0111101—5	Steele	0100000—1
Sampson	1100111—5	Braley	0010001—2
Kirkwood	1110110—5	Parker	1111011—6
De Rochmont	0101000—2	Perry	1111010—5
Stark	0110100—3	J S Snow	1000100—2
Eager	1111011—6	A T Decker	1101111—6
Clark	1000111—4	A F Cooper	1111110—6
Field	1010100—3	J W Getchell	1111110—6
Reed	0111111—6	E W Law	1110111—6
Schaefer	0111111—6	L E Johnson	1111101—6
Houghton	1110001—4	H White	1111101—6
Smith	0111111—6		

Winners—Decker and Law first, Gerrish second, Clark and Houghton third, Stark and Field fourth.

Fourth shoot, 3 pair doubles, 15yds. rise:

Gerrish	10 00 11—3	Houghton	01 11 11—5
Stark	11 10 10—4	Schaefer	01 11 11—5
Eager	11 11 10—5	Law	11 10 10—4
Perry	00 11 11—4	Decker	01 10 10—3
DeRochmont	00 10 11—3	Cooper	10 11 11—5
Clark	00 10 01—3	Field	00 00 01—1
Parker	01 11 10—4	E W Tinker	10 11 01—4
Kirkwood	11 10 00—3	White	01 10 11—4
Snow	10 00 11—3		

Winners—Eager and Schaefer first, Stark and Parker second, Gerrish, Snow and Kirkwood third, Warren and Field fourth.

Fifth shoot, 7 single birds, 18yds. rise:

Gerrish	1111111—7	Perry	1111111—7
Law	1011001—4	Eager	0111111—6
Schaefer	0101111—5	Smith	1110111—6
DeRochmont	1111111—7	G F Cutting	1111001—5
Reed	0001110—3	Stark	1101111—6
Parker	0011010—3	Houghton	1111001—5
Tinker	1111001—5	Snow	1111010—5
W D Gilman	1101101—5	Field	0111100—4
Warren	0110011—4	Williams	1010001—3
Decker	1110011—5	F Chester	0010101—3
Cooper	1101111—6	Kirkwood	1101111—6
White	0101011—4	Braley	1110101—5
Sampson	0111111—6	J Nichols	1110101—4
Clark	1111111—7	C B Holden	1011110—5

Winners—Perry and Gerrish first, Cooper, Stark and Kirkwood second, Decker, Snow and Holden third, Nichols fourth.

Sixth sweep, 5 single birds, from 5 traps, 18yds. rise:

Gerrish	11001—3	Eager	01111—4
DeRochmont	11010—3	Smith	00101—2
Tinker	00000—0	Decker	00011—2
Parker	11110—4	Perry	11111—5
Stark	11010—3	Sampson	11000—2
Gilman	00101—2	Cooper	11100—3
Snow	00111—3	Reed	11010—3
Schaefer	00110—2	Cutting	00000—0
Houghton	10111—4	Warren	10100—2
Clark	01111—4	Field	11001—3
Williams	10000—1	Braley	00110—2
Law	11001—3	Steele	10001—2
Johnson	01000—1	White	01111—4

Perry first, Houghton and Eager second, Law and DeRochmont third, Smith and Braley fourth.

Seventh shoot, 3-man team, badge match:

Massachusetts Rifle Association, First Team.

	5 Traps.	Doubles.	Single Trap.
DeRochmont	1 0 1 1 1	10 11 11	1111111111—19
Law	0 1 1 1 1	11 11 01	1111011110—17
Schaefer	1 1 0 1 1	10 01 11	1111110111—17—53

Worcester Sportsman's Club, First Team.

Eager	1 0 1 1 0	01 11 10	1011110111—15
Holden	1 1 0 1 1	11 11 11	0111111101—18
Perry	1 1 0 1 1	01 10 11	1111100111—16—49

Exeter Sportsman's Club.

Gerrish	1 1 1 1 0	11 11 10	1100101011—15
Stark	0 1 1 0 1	11 11 11	1000111111—16
Cooper	1 1 1 0 0	10 11 01	0111001011—13—44

Four teams additional shot, ranging from 44 to 35. Winners thus: Massachusetts Rifle Association first, Worcester second, Exeter team third.

Eighth shoot, 7 single birds, 18yds. rise:

Eager	0111111—6	DeRochmont	1111111—7
Gerrish	1111111—7	Law	1111110—6
Williams	0011101—4	Smith	0111110—5
Tinker	1001111—5	Schaefer	1001111—5
Clark	1100111—5	Cutting	0011110—4
Perry	1111011—6	Snow	1111010—5
Sampson	1101110—5	Houghton	0110110—4
Warren	1100101—4	Decker	1111111—7
White	1101110—5	Field	0011001—3
Stark	1101111—6	Parker	0010100—2
Cooper	1001110—4	Nichols	0010000—1
Reed	0010100—2	Holden	1010000—2

Winners—Gerrish, Decker and DeRochmont first, Eager second, Sampson and White third, Cooper and Houghton fourth.

Ninth shot, 5 single birds, 18yds. rise:

Kirkwood	10111—4	White	11111—5
Gerrish	10010—2	Clark	10111—4
W Prentiss	00111—3	DeRochmont	11111—5
Williams	11100—3	Decker	01101—3
Smith	11111—5	Snow	01011—3
Parker	11011—5	Schaefer	10111—4
Steele	11011—4	Braley	00110—2
Perry	01011—3	Cooper	11111—5
Reed	11011—4	Warren	11111—5
Sampson	11011—4	Cutting	11111—5
Stark	11111—5	Field	11111—5
Eager	10111—4	Law	11001—3
Tinker	01111—4		
Holden	11010—3		

Winners—Parker and White first, Steele and Eager second, Holden and Decker third, Gerrish and Braley fourth.

Tenth shoot, 3 pair doubles, 15yds. rise:

Perry	11 10 11—5	Snow	01 01 00—2
DeRochmont	11 11 10—5	Eager	11 11 01—5
Parker	01 11 11—5	Sampson	10 11 01—4
Cooper	11 01 10—4	Stark	11 11 11—5
Gerrish	10 11 01—4	Clark	00 11 01—3
Reed	10 00 10—2	Warren	11 00 11—4
Decker	00 11 01—3	Nichols	10 11 01—4
Law	01 01 10—3	White	11 10 00—3
Prentiss	01 01 11—4	Schaefer	11 10 00—3
Tinker	01 01 10—3		

Winners—DeRochmont first, Prentiss second, Decker and White third, Reed and Snow fourth.

Eleventh shoot, 5 single birds from five traps, 18yds. rise:

Decker	11111—5	Williams	01000—1
Sampson	11110—4	Warren	10110—3
Houghton	11100—3	Cooper	10110—3
Stark	11011—4	DeRochmont	10111—4
Kirkwood	11110—4	Reed	10100—2
Parker	10000—1	Law	11010—3
Steele	10000—1	Gerrish	11011—4
Eager	00010—1	J Lawson	00010—1
Snow	01000—1	Smith	11101—4
L S Bailey	00010—1	Cutting	01001—3
Perry	00111—3	Nichols	10111—4
Clark	11111—5	White	11011—4
Field	01011—3	Prentice	00010—1

Decker and Clark first, Sampson second, Perry third, Reed fourth.

Twelfth shoot, 3 pair doubles, 15yds. rise:

Eager	01 11 11—5	Warren	00 01 01—2
Parker	01 01 11—4	Bailey	10 00 11—3
Perry	11 10 11—5	Decker	10 11 00—3
DeRochmont	11 10 10—4	Stark	11 11 11—6
Law	11 01 01—4	Cooper	01 10 11—4
Prentiss	11 10 10—4	Field	10 11 10—4
Snow	00 11 01—3	Nichols	11 01 00—3
Gerrish	10 10 11—4	White	11 11 10—5

Stark first, Perry second, DeRochmont, Law and Prentiss third, Snow fourth.

Thirteenth shoot, 7 single birds, 18yds. rise:

Perry	1101100—4	White	1100001—3
Eager	0011111—5	Field	1010000—2
Stark	1101110—5	Reed	1001000—2
DeRochmont	1111111—7	Clark	1001111—5
Cooper	1111111—7	Houghton	1111111—7
Sampson	1111111—7	Warren	0001100—2
Kirkwood	1111001—5	Decker	1101111—6
Parker	1011101—5	Law	1011111—6
Gerrish	0101111—5		

Winners—DeRochmont, Cooper, Sampson and Houghton first, Decker and Law second, Stark and Clark third, Perry fourth.

Fourteenth shoot, 5 single birds, 18yds. rise:

Kirkwood	00110—2	Cooper	10111—4
Decker	11111—5	Field	01001—2
Law	01111—4	Parker	01010—2
Cutting	01100—2	Reed	10000—1
DeRochmont	01111—4	Clark	11011—4
Snow	10111—4	Nichols	00001—1
Stark	11011—4	Steele	11111—5
Eager	11101—4		

Decker and Steele first, Clark and Eager second, Parker third, Nichols fourth.

NEWTON, Mass., April 10.—Glass ball and clay-bird shoot. The Newton Rifle Association and Newton Center Gun Club enjoyed friendly matches, which resulted in victory for the Newtons in both. The scores follow:

Newton Rifle Association Team.

	Clay-Pigeons.	Glass Balls.
Pratt	0111101110—7	1111111111—10
Edmunds	1010111111—8	1101111111— 9
Linder	1111001000—4	1111110110— 8
Cole	0111100000—4	0111111100— 7
Hills	1110011111—8—32	1011110111— 8—42

Newton Center Club Team.

	Clay-Pigeons.	Glass Balls.
Brooks	1110111011—8	1110001111—7
Kidder	1100001100—5	1010111011—7
Gilmore	0000011001—3	0111111001—6
Steveps	0010000000—1	1111110101—8
Fowle	0111100000—4—21	1111101001—7—37

It is hoped a return match will be shot soon.—T. A.

PROVIDENCE, R. I., April 3.—At the regular weekly shoot of the Narragansett Gun Club, for the State Badge, the following scores were made out of a possible 25: W. H. Sheldon 22, E. W. Tinker 22, E. S. Luther 20, E. H. Roberts 20, C. B. Potter 18, H. D. Mathewson 18, G. W. Cary 18, H. L. Palmer 18, L. M. Eddy 16, F. O. Wehoskey 16, C. F. Baldwin 15, F. E. Tingley 13, C. M. Sheldon 13, C. C. Gray 12, G. F. Butts 12. Tie between Tinker and Sheldon: Tinker 5, Sheldon 5. Second tie: Tinker 4, Sheldon 4. Third tie: Tinker 1, Sheldon 2. W. H. Sheldon wins badge second time.

Regular shoot of Narragansett Gun Club for state badge, 25 clay-pigeons, 15yds., 5 traps: G. F. Butts 23, W. H. Sheldon 20, W. L. Palmer 20, E. W. Tinker 19, E. H. Roberts 18, C. C. Gray 14, E. S. Luther 22, F. E. Tingley 23, C. B. Potter 20, H. D. Mathewson 18, G. W. Cary 19. G. F. Butts wins badge first time. Sweepstakes same day: First sweep, W. H. Sheldon first, Luther and Roberts second, E. W. Tinker third and L. M. Eddy fourth. Second sweep, E. W. Tinker first, Palmer second, W. H. Sheldon third and Luther and Roberts fourth. —W. H. SHELDON.

WALLINGFORD, Conn., April 9.—Match for State club medal, teams of four men, 25 clay-pigeons each, or 100 each team: New Haven (No. 1), 69; New Haven (No. 2), 55; Wallingford, 66; Meriden, 65; Bridgeport, 60; Milford, 52. Match for individual medal, 50 clay-pigeons each: Goodrich (of Wallingford) 41, Folsom 39, Baker 39, Longdon 38, Nichols 35, Brogden 35, Ives 34, Spencer 33, Fowler 27, Talbot 27, Gard 24, Tousey, Armstrong and Smith withdrew. Next shoot for State medal, New Haven, second Wednesday in May.

CORNELL UNIVERSITY.—Ithaca, N. Y., April 15.—The Cornell University Gun Club is now in a flourishing condition. It was organized in the fall of 1883, and has now about twenty members, of whom several are very good shots. The grounds of the club are located on the lake shore, and we shoot over the water. At a meeting held April 10 the following officers were elected: President, F. G. Scofield, '84; Vice-President, H. C. Taylor, '86; Secretary and Treasurer, A. C. Cogswell, '87. At the regular shoot on Saturday following, the gold medal was won by A. S. White, 13 out of 14. We have a strong trap, with frequently a heavy breeze, but as yet the medal has never been won by a smaller score than 12 out of 15. The gun is becoming popular in other colleges now, and it would be pleasant to have a few intercollegiate contests.—A. C. C.

WELLINGTON, Mass., April 19.—About fifty shooters gathered at the Malden Gun Club's grounds this afternoon, and participated in the various events of the day, with the following results:

Cup match—Adams 7, Goodnow 7, Sawyer 6, Wemyss 5, Buffum 4, Hopkins 4.

First event, five birds—Scott first, Brown second.

Second event, five birds—Brown and Hopkins divided first, Scott and Steele divided second.

Third event, five birds—Pratt first, Chambers and Goodnow divided second. Sawyer and Steele divided third, Sanborn and Brown divided fourth.

Fourth event, five birds—Goodnow first, Hopkins second, Pratt and Adams divided third, Saunders and Scott divided fourth.

Fifth event, five birds—Chambers first, Pratt second, Sawyer and Goodnow divided third, Saunders and Harrold divided fourth.

Sixth event—Saunders first, Chambers second, Goodnow and Brown divided third.

Seventh event, five birds—Brown first, Hopkins second, Scott third.

Eighth event, five birds—Goodnow first, Sawyer second, Hopkins third.

Ninth event, five balls—Sawyer and Hopkins divided first, Hunter and Brown divided second, Pratt and Adams divided third.

Tenth event, five birds—Adams first, Brown and Goodnow divided second, Saunders third.

Eleventh event, five birds—Saunders first, Hopkins second, Brown third.

Twelfth event, five birds—Sawyer first, Hopkins and Brown second, Hunter third.

SOUTHBRIDGE, Mass., April 16—The Southbridge Rod and Gun Club have recently held their annual shoot, with the following results:

	Balls.	Pigeons.
Ellis	0111111110—8	1111100111—8
Campbell	1110001111—7	1110111011—8
Marble	1011011111—8	1111010110—7
Bradford	1101011010—6	1111100111—8
Pocci	0011011111—7	1100111101—7
Phillips	1011110111—8	1010010011—5
Howe	1110101000—5	0011101111—7
Williams	0111010011—6	1110110001—6
Harrington	1010110011—6	1011000110—5
Brown	1011000011—5	0100011010—4
Metcalf	0000011101—4	0011001101—5

The following is the result of the shooting to settle ties:

Campbell	1 1 1 0 0—3	0 1—1
Marble	0 1 1 0 1—3	1 1—2
Brown	0 0 0 1 1—2	1
Metcalf	1 0 1 0 0—2	0

Sweepstakes: First, 7 balls, Marble first, Howe second, Metcalf third, Phillips fourth. Second, 7 pigeons: Pocci first, Phillips and Ellis divide second, Brown third, Howe fourth. Third, 5 balls: Harrington first, Phillips and Bradford second, Howe third, Pocci fourth. Fourth, 2-men team, 5 balls per man: Howe and Harrington first, Williams and Phillips second.

WEBSTER, Mass., April 18.—The officers of the Rod and Gun Club for the ensuing year are: President, Henry J. Bates; Vice-President and Secretary, Alexander Graham; Treasurer, John F. Hinds. The club have a shoot on Memorial Day, arrangements to be completed next week.

CLAY-PIGEON PATENTS.—We have received from a Tennessee correspondent a communication in reference to the clay-pigeon patents. The writer assumes that the original patent does not cover the manufacture of the pigeon, as it is now made, and gives it as his opinion that an imitation of the device would not be held by the courts to be an infringement. We judge that the writer's examination of the Ligowsky patents has been incomplete; and a reference to the patents issued since the one he quotes will probably show that all the changes in the pigeon are covered. The numbers are (original patent) No. 231,919, No. 246,401, No. 256,227 (re-issue), No. 10,122, No. 248,302, and four more are pending. Those named relate to the target. No. 246,401 relates to the process by which the disc is made. This, we believe, the Ligowsky Company consider the most valuable of their patents, for by this process clay-pigeons (and other pottery) can be made cheaper than by any other method now in use. This has been tested by a Canadian firm, who some time ago began the manufacture of clay-pigeons, and found that even with their import duty of 25 per cent., they could buy of the American manufacturers cheaper than they could make the article themselves.

THE CLAY-PIGEON DIAMOND PIN, which is to be given at the Chicago tournament, is now on exhibition at the manufacturers', Messrs. Tiffany & Co., this city.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

MR. E. HOUGH will oblige us by sending his address to this office.

P. A. H., Paterson, N. J.—The open brook trout season in New Jersey is March 1—Oct. 1. No law on pickerel.

J. P. H., St. Martinsville, La.—You may procure a wire scratch brush from any one of the firms dealing in firearms in this city.

H. B. O., Minnesota.—The rifle will be described in the series of illustrated articles now in course of publication in our rifle columns.

W. E. H., Fort A. D. Russel, Wy.—1. The rubber dealers furnish a cement for repairing rubber goods. 2. To glue cloth to metal use stratena.

F. A. H., Westminster, Vt.—We do not know where the traps are made, but you can procure them by writing to any of the dealers in firearms.

J. H. B., Boston.—Is there any book or directory published which gives the names and addresses of all the rifle clubs in the country; also the officers of each club? Ans. No.

E. H. C., New Orleans.—How can I whiten the feathers of pigeons for mounting? Ans. Suspend the skins in a barrel, set bottom up, and burn some brimstone under it. Let them smoke for a day or two.

IDLEWILD, Newcastle, Del.—1. We know of no firm making a specialty of sporting pictures, except Currier & Ives, of New York. 2. Try the Lyman sight. 3. Apply to the National Rifle Association, New York.

B. W. S., Detroit, Mich.—The English setter generally arrives at maturity when about a year and a half old. Some of them develop earlier than this, and some are not full grown until two or two and a half years old.

READER.—Please state where I would be likely to find good bass fishing in New York State. Would I be likely to find good fishing and camping grounds on either Cayuga or Seneca Lake? Ans. The bass fishing on Hemlock Lake is probably as good as any in Western New York. You can find good camping grounds there. There are bass in Cayuga, and also other good fishing, but we do not think that Seneca Lake is as good. We should go to Hemlock, Honeoye, Canadice, or to Canandaigua Lake in preference to Seneca.

A. M. B.—Ordinary paint, mixed with linseed oil and turpentine, will answer for fresh water. For salt water there are a number of anti-fouling compositions to be had of ship chandlers in all seaport towns. They are all applied with an ordinary paint brush.

J. C. C., Charlotte Harbor, Fla.—Is there another name for the poisonous lizard called *Heloderma?* What is the length and color of the lizard, and where is it found? Ans. The *Heloderma suspectum*, or Gila monster. Sometimes four or five feet in length. Found in the Southwest.

W. H. K., Philadelphia.—There are deer and partridge in the Bushkill (Pa.) region, with many excellent trout streams, or streams that were formerly good for fishing. The inclosure to which you refer is probably that of the Blooming Grove Park, which is some distance from Bushkill.

PITTICUS.—Where can I go to fish near New York and return the same day, and what fish can I catch? Ans. Take ferry to Staten Island or go to Gravesend Bay and catch striped bass, weakfish, etc., in season. For fresh water try Lake Ronkonkoma for black bass, or go to Croton Lake.

REMUS, Rochester, N. Y.—I forward you a tree toad, which I have caught in this vicinity. Please give me some information about it. Will it develop into any other form? Ans. The specimen is one of the little "peepers" so often heard in early spring in wet places. It has attained its full development and will change no more. Your specimen appears to be *Chorophilus triseriatus*. It belongs to the family *Hylidæ*, or tree frogs.

W. A. W., Virginia.—The compilation entitled "Frank Forester's Fugitive Sporting Sketches" contains the following papers: "The Game of North America (Woodcock and Quail)," "Among the Mountains," "A Blaze at Barnegat," "The American Bittern," "The Death of the Stag," "The Red Fox," "A Trip to Chateau Reiher, or Snipe Shooting on the St. Lawrence," "Spring Snipe—a Rambling Paper," "Domestication of Game Birds."

M. H. P.—1. Where can we find good lines for a cruising sneakbox for a crew of two? 2. We have a light practice boat which we wish to provide with seats, rowlocks and oars; where can we obtain correct information as to the relative positions and dimensions of the same? Ans. 1. We will publish the lines later on. Do not know where you can find them. 2. In ordinary rowboats the thwarts are placed 7½in. below the gunwale, and the rowlocks about 9in. from after edge of thwart. The thwarts should be placed so that the boat will trim with one, two, or more in her, allowing sufficient room between them for the legs when extended.

Aug. 2.—Kingston, Ont., Open Matches.
Aug. 2.—Hull Y. C., First Championship Match.
Aug. 7.—Bay of Quinte Y. C., Open Matches.
Aug. 9.—Boston Y. C., Open Matches, all clubs.
Aug. 16.—Hull Y. C., Annual Open Matches.
Aug. 16.—Beverly Y. C., Swampscott, Third Championship.
Aug. 23.—Beverly Y. C., Marblehead, Open Matches.
Aug. 23.—Boston Y. C., Third Club Match.
Aug. 30.—Hull Y. C., Second Championship Match.
Sept. 6—Hull Y. C., Third Championship Match.
Sept. 6.—Beverly Y. C., Marblehead, Special Matches.
Sept. 13.—Boston Y. C., Second Ladies' Day.

THE HAND OF THE BOURBONS.

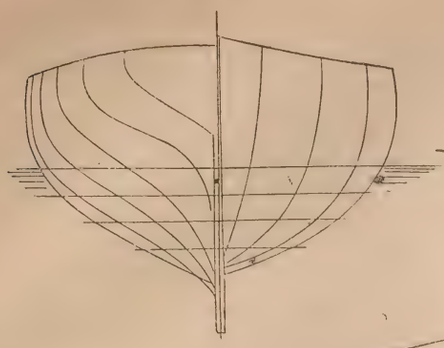
A MOTION was made and promptly sat down upon recently in one of the principal yacht clubs of New York to have the lines of winning yachts taken off and kept on file as club property to further interest and instruction. A similar rule is already enforced in another club, and the parent institution insists upon the deposit of every yacht's model in the club before granting permission to race. The reasons, if they can be dignified as such, why the motion in this particular club failed to pass, are as thoroughly stupid and benighted as other customs for which the Bourbon and retrograde element in yachting affairs is responsible. It was argued that builders spent a life time in perfecting their models, and their success should not be paraded for the profit of others. In other words, the less we know and the less chance we are given to find out, so much the better. Hide your light, little penny dips at that, under a thimble, lest some one might catch a stray ray from the feeble glim of bungling, blundering stumbling upon the truths a yacht club is supposed to organize to further in accord with the terms of its charter. The ridiculous aspect of this opposition from the Bourbons is truly laughable. Nine yachts out of every ten to be seen off Bay Ridge are more or less hideous, misshapen boxes and traps no knowing man would deign to look at twice, and the single exception in the ten is scarce equal to mediocrity in most cases. The builders and owners of those yachts could not reproduce the same vessels themselves if they tried. They are clumsily set up from rough, unfair whittled chunks not within many inches of the boats supposed to be copies of the elegant kindling wood furnished the owners to play with, and upon which are based the sapient opinions of people who have never been off soundings, who would not bet heavily upon the tack they are sailing, and to whom a grommet or an Irish splice are conundrums unfathomed, and accurate knowledge of the principles of construction in theory or practice as much of a mystery as the proper keyhole to a belated citizen among a row of tenement houses. To throw safeguards around the brains the majority of yachts represent, lest some deluded subject try to steal their horrible forms and execrable sail plans, is carrying the selfishness of "protection" to a preposterous exaggeration. The plans of the famous schooner America have been published broadcast the world over. How many copies of the America have been attempted in this country or in Europe during the quarter century those plans have been accessible to the public? And the same can be said of the Sappho, the Mischief, and countless other vessels. If these, with their international reputations, have never been filched or even approximated in a single case, what are the chances of any one's stealing the travesties and dugouts which concentrate about Bay Ridge? The mere vanity of the supposition is grotesque. Is there a man living who would copy the Grayling, the Comet, the Gracie, or such an arch trap as the Crocodile, needing only a breeze and inadvertence at the wheel to tumble over, fast as such boats have shown themselves to be in smooth water? Was not the notable Columbia radically altered upon recent rebuilding in spite of her record? Are we not all learning every day, that any one should care to perpetuate the mistakes and follies of the past? Does any one think of duplicating the Gleam, with near one hundred and fifty per cent. of her loadline squared in sail? Has the owner of the Crocodile, who built several yachts in succession, all fast in moderate weather, stuck to the same set of lines all through? Was any one known to build an exact reproduction of any yacht? Least of all, any of the great mass of tubs and machines which were once so highly adored and are now not quite so highly adored any longer? Protect the builders indeed! One would think most of those interested scarce displayed enough talent to go round in the shape of a little free advertising. The squelching of this motion is a measure of the Bourbons and little bits of suburban minds which can be stowed by the score in a peanut shell. Does a club which refuses to aid and promote knowledge in the matter of yacht building live up to the terms of its charter, or is it not a fit concern for the repeal of its corporate existence? A policy of suppression in these days is sure to be rewarded with internal dry rot in the future. It is on a par with the obstruction to reform in measurement rules, for fear the ancient ideas may have to strike colors to the new. It is a repetition of that perverse want of common sense which proclaims two feet of overhang useful only as a mainsheet outrigger and measuring a little more than a hatful, the equivalent of one foot of body with half a ton of displacement and three feet of freeboard. It is natural enough to find two such bits of choice Bourbon legislation sailing hand in hand under the same colors.

GREAT BATTLES PROSPECTIVE.

THE coming season gives promise of being the hottest on record. Innumerable cups are waiting to be captured and ocean races will form the feature in the many events announced. More than ever before will popular interest be riveted upon the great fight between cutter and sloop, for preparations are being made for contests which are destined to have a vast influence upon the course of the sport and yacht construction in the future. The stately Bedouin, who vanquished the redoubtable Gracie last fall, has been hauled out at Newburgh and has had her lead keel rounded down in the latest fashion. She is to come out with four feet more hoist and tackle her adversaries for once without the handicap of being under-rigged. She proved herself good company for the best last year. Who will say that, with a rig she can easily carry, her share of the mugs will not be lifted this summer from the light displacement of old? Wenonah, the most precious pearl of naval construction in America to-day, has had ten tons more lead bolted up below, so she can swing her big rig to best advantage, and as she is already known as a flyer of the first water, with four firsts out of five matches sailed last season, we look for a goodly string of winning flags from her masthead by the time the ice again drives her into winter quarters. These two clippers, with the new Ileen thrown in as a dark horsee, will make up a trio destined to "create revolutions" in our yacht-building history. It will be a queer day, indeed, when one of them does not do the piloting for the fleet.

Then there are great hopes for Oriva, in the hands of an adept Corinthian, after the splendid manner in which she settled Vixen, in the Seawanhaka match last fall. Maggie, the nobby little fighting cock of the East, has also been receiving attention in the way of more lead on the keel, and we learn is likewise to bend a bigger fit of dimity. This cutter is a notable pincher on a turn up, and was good enough for all hands last year, excepting the sloop Vixen. If the improvements turn out as well as hoped, she may yet be able to score from the fastest sloop ever launched or likely to be launched this side of the Atlantic. She failed to foot with Vixen, but with more rig she is certain to do better. How much of course remains to be seen. Then we have another dark horse in Isis, Mr. Canfield's new cutter, and we learn that two ten-ton clippers are to be shipped to this country from England in the spring. Recent letters from abroad likewise have it that common rumor about Liverpool has picked out a forty-ton cutter to pay us a visit of a friendly character, to try on our skimming dishes, such as are left of that dying tribe of smooth-water drifters. Add to this the début of the numerous small fleet of new cutters, the Merlin, the Rajah, the Rondina, the imported Daisy, and lots of smaller shavers, and it can easily be seen that the history of the season will pivot upon the performance of the cutters. That in view of the past, now that they will get something like a fair show, the records will wind up with the cutters well up to the top of the tree, we venture in prognostication of the fighting soon to be started, and that the winter ahead will see further additions to the ever growing family of cutters in our waters, we also consider as good as a foregone conclusion.

AN OLD HAND ON DECK.

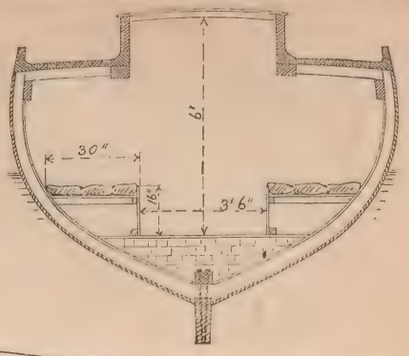


Editor Forest and Stream:

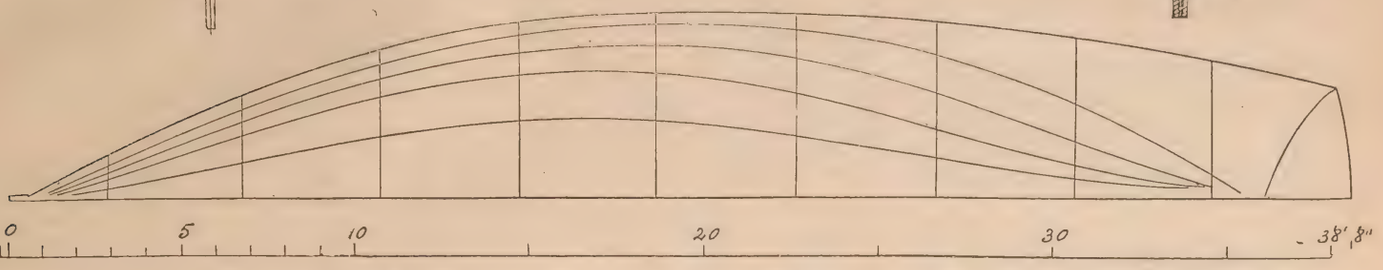
It is with great reluctance I write you upon the subject of yachts and yachting in this great country of ours. While I am to the manor born, an American, yet I cannot help but see some good in my fellow men in other parts of the world, I, for one at least, feel as if there was something yet to learn from them. I have had some experience, both as a close observer of the building as well as modeling of yachts, for a number of years, dating back to the time when Commodore Stevens proudly walked the deck of the then wonder of New York, the old sloop Maria, with her great hollow boom, and was also acquainted with that genius Steers, who first carried war into the British Lion's kingdom with the grand old America. Scarcely has there been a yacht of any note, but I have seen started from keel up until proudly floated upon the bosom of the waters, the admiration and hope of thousands. I have sat down in the ship yards and chatted both with builders, modellers and owners, and last but not least, have read with great interest the criticisms of our daily journals, until I arrive at this late day and for the first time in the history of yachting, find one journal which has the manliness to frankly tell us that we were going to sleep while the wagon wheel ran in the same old rut. All hail to FOREST AND STREAM, which first gave us some hints that we were behind the age. Until it sprang into life, we never saw a cutter drawing like those so well portrayed in your entertaining journal. Let us look at the past and then at the present, and see whether any great improvement has been made. It has long been asserted that the American yacht was a dish bottom. Now I hold to the contrary. There are men, and the writer was one of them, who have for the last thirty years argued in their private capacity against the shoal flat boat as a seagoing pleasure craft, and contended that beam without depth was faulty, and likewise depth without form. At this day I still so contend. The great trouble is, I think, first, that we are really infants in the business as yet; second, that nine out of ten who either buy or build know nothing at all, and do not realize the purpose they intend their yacht for. The first word to the builder is, "I want a yacht to go," and the next, "I do not want her to cost too much." And what is the natural result? A lot of slip-shod built craft, with a board fence for bulwarks and many other parts of the mechanical work in keeping. We want a vessel built. We first consult some of the so-called naval architects, and they make a lot of pretty lines upon paper, beautifully showing great qualities and ample room. Now for a builder, or more properly, contractor. He lumps the job for so much. Of course he must have his profits, and he has taken the work so low that he must sublet the getting out of the frame. The planking is also let out, as well as the ceiling and joiner work, and the fastening, boring, and treenailing, which are all sublet. Now how are you going to get a first-class job under such circumstances? Last, but not least, is the caulking. It is done by the job. Not that all builders do this, but the greater part, and it can be proven. The result is, as some of our wealthy yacht owners can testify, in one year the yacht must be hauled out in the winter, and we read in the papers that Mr. Jenkins has his yacht on Mr. Pinkey's ways undergoing extensive repairs for the next season—another bill of $5,000 or more; and so it goes, until Mr. Ignoramus is sick, and sells out and goes out of yachting. As the Frenchman would say, it is "one pig humbug." We look with pride upon our yachts upon a calm June regatta day as a sight to be proud of, yet how many do you find outside of those entered for the great cups who dare poke their noses outside of the Hook if it should happen to blow a single reef breeze? Look at the record of the regatta of '82, when the Montauk made her maiden and successful race. A nice full-sail breeze and only one schooner yacht at the lightship to see them turn, and large steam yachts making one dive to see how deep it was, and then turn back for the sheltered waters of the Horseshoe and call it yachting. Some of the large schooners had great trouble to get there with foresail stowed, and diving out of sight. Now, what is the trouble? There must be faulty construction and oversparring. Think of it, ye bold yachtsmen, a little 40ft. clam sloop, coming up the beach in the month of March, decks to, with perfect safety, and not a yacht of her size dare poke her nose outside for Hampton Roads. Yet we read and see continually of our cousins across the water cruising up the Mediterranean or up the coast of Norway in a boat of similar size. I am not going to condemn our yachts by any means as being all wrong. We have some good boats which it will be hard to beat, inside or out, but you can almost count them on your fingers' ends. Go on with your good work is my advice to FOREST AND STREAM. What we need are safe, able and comfortable boats, which, if it comes on to blow, can stay there, and not have to run for the first harbor that is close by.

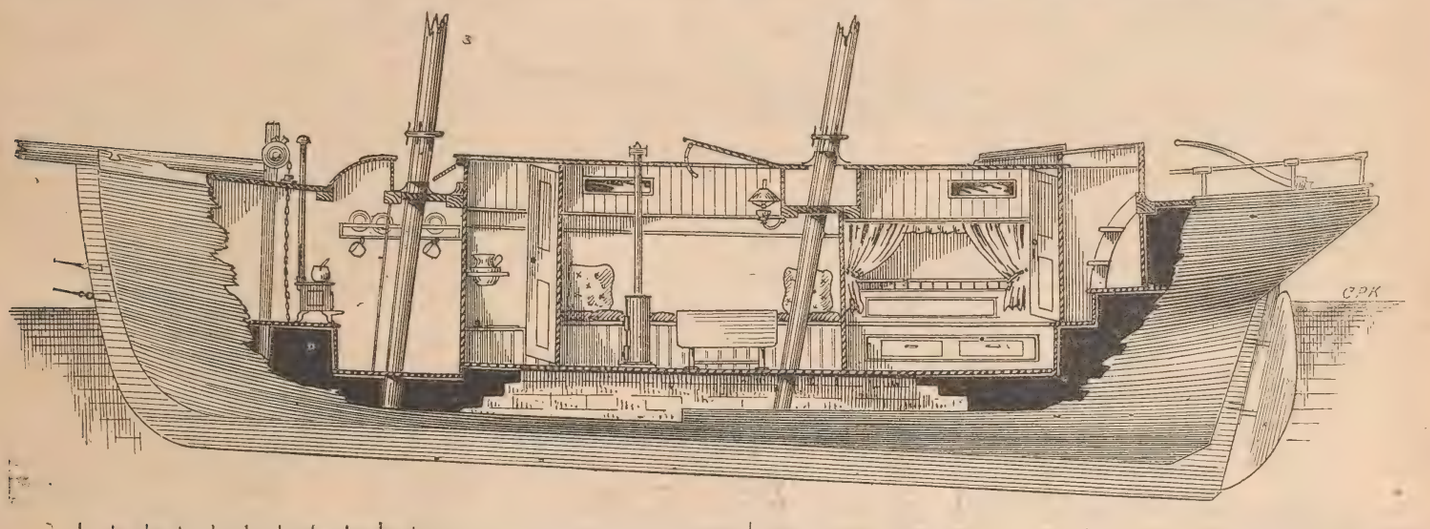
As to model, at another time I will intrude upon your space, and have something to say. EZEKIEL.

OPINIONS AGAINST FACTS.

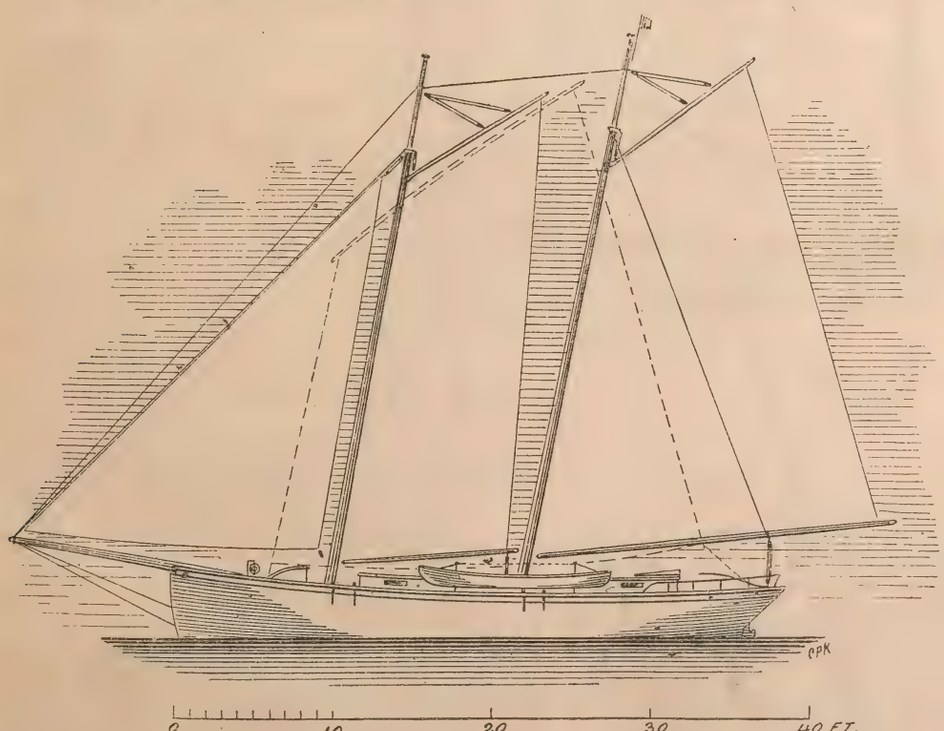


ADVICES from England inform us that during his recent visit to Liverpool Mr. Busk, owner of the Mischief, "ridiculed the idea of cutters ever becoming popular in America." There are in New York and Boston just three large racing sloops representing the extent to which such boats have become popular during the development of yachting since the war which closed twenty years ago. During the past three years only a like number of large cutters have been built, so that at this day they enjoy at least equal recognition from the public. When Mr. Busk sails East next season and looks about at any general meeting of the fleet he will discover cutters in every direction, more than he will be able to count. If Mr. Busk had read the papers he would also have known that over twenty cutters have been constructed this winter. If he were as well situated as we are to judge of the public pulse, he would know that hundreds of people





GAETINA



—SCHOONER YACHT—

35 FEET L.W.L.

A CRUISING SCHOONER.

LAST spring Mr. W. O'Sullivan Dimpfel, C. E., of Baltimore, built a small schooner on lines similar to those of the Penzance lugger for all-the-year cruising in Chesapeake Bay. After giving the yacht twelve months' trial her owner reports favorably concerning her behavior and general adaptability to his purpose. The Gaetina exhibits in her waterlines a close likeness to the Penzance fishing craft, but she was given 1ft. of extra depth to her benefit. She has been found quite fast in her own waters, very easy, dry and comfortable, with liberal arrangements below, as the illustrations indicate. With iron ballast stowed in blocks under the cabin floor and a pole mast rig she was also very economical in first cost. The sail plan shows a large lug on the fore in dotted lines. This sail the owner devised for light winds, and under this and jib she can be sailed with mainsail in the gaskets. The splicing of her rigging is "metallic" all through. For hard weather also a trysail and storm jib, which have both been brought into requisition in the lower half of the Chesapeake, which is more of a sea than a bay. The Gaetina is especially good in light winds and airs in spite of her draft and thirteen tons of displacement, much to the astonishment of local critics, who prophesied her failure on that account. Her owner often sails her singlehanded between Baltimore and his residence in the country, near the mouth of the Choptank, a distance of sixty miles.

While building, the old school critics foresaw the usual dire calamities. Could not sail because so deep. Would fall over. Slow in light winds "lugging" so much ballast, etc. She was something of a departure to Baltimore critics, though here we have got used to such depth long ago, and with the exception of the juvenile conceptions of some provencial lights, no one would take exception on the score of draft and weight. The accommodations include a small steerage with the companion aft, leading into an after state cabin 7ft. long with a berth on each side. The saloon is reached from this through doors, and is 9ft. long, with extra wide sofas of 30in., having 3ft. 6in. of floor between, and 6ft. under beams. Between cabin and forepeak are retiring room and panty. A hammock can be swung from foremast to the eyes for the paid hand, who has access to the deck by means of an iron ladder and quadrant hatch overhead. The chief elements are as follows:

Length over all	38ft. 8in.
Length on L.W.L.	35ft.
Beam extreme	11ft. 3in.
Draft at heel	6ft.
Least freeboard	2ft. 10in.
Displacement	13 short tons
Ballast	6 short tons
Area lower sails	950sq. ft.
Hoist of mainsail	25ft.
Hoist of foresail	24ft.
Mainboom	23ft.
Bowsprit outboard	10ft.

are anxious to own cutters as soon as an opportunity is presented to acquire such property. If he were to consult with builders or persons who keep posted he would learn that all the variations made upon the pristine sloop trap are in a direction which, step by step, is assimilating our fleet to the English cutters. If he were possessed of acute logical faculties he could draw the true conclusion that only time is required to pass through the period of transition and that there is a strong likelihood of the regular sloop disappearing altogether, and that, whether she be displaced by cutters of more beam than the latest English racers or whether in some instances we follow our cousins into the last inch of the extreme, is perfectly immaterial to the main issue on the question. Instead of its being "ridiculous" to look for popular approval of cutters in this country, it is extremely ridiculous for a gentleman like Mr. Busk to be ready with a sweeping opinion and at the same time perfectly oblivicus to plain facts. The cutter is already popular in America, witness the large fleet of such yachts built in three short years in spite of the most strenuous opposition from Bourbon sources. But, Mr. Busk owns a sloop, and his own little world and limited horizon is bounded by that sloop's rail, hence his mistaken notion that all the world is a counterpart of Mr. Busk. He is simply behind the times and chooses to ignore what is passing under his nose.

MOSQUITO Y. C.—Sailed first match last Saturday in Dorchester Bay. Wind from E.N.E., steady. Single gun, or rather whistle, start. Two classes, over and under 13ft. Judges, J. Winniatt, R. Wallace, John Page. Finish as under, Wizard, Lizzie, Clyde and Mascot were the winners:

FIRST CLASS.

	Length.	Actual.
Wizard, James Barton	13	4 21 15
Lizzie, H. McDonough	13.3	4 26 48
Vishnu, J. McIntyre	14	not taken.

SECOND CLASS.

Clyde, J. Page	12.9	4 23 5
Mascot, F. Whitman	12.2	4 25 4
Herald, C. Smith	12	4 27 28
Waif, R. B. Bibber	12.6	4 41 20
Egeria, W. Condon	11.9	not taken

SOUTH BOSTON Y. C.—Has issued circular governing the open races fixed for May 30. Start at 1:30 P. M. Classes 28 to 40ft., 22 to 28ft., 18 to 22ft., 15 to 18ft., and special keel class 15 to 22ft. Two prizes for boards and keels in first two classes, $25 and $10. Three prizes, $15, $10 and $5 in third and fourth, and $15 and $5 in special class. Two yachts to compete. Three for a second prize, four for a third prize. Courses, 14 miles first class, 9 miles second, third and special, and 6 miles for fourth class. No restrictions on sails. Measurement waterline plus one-third overhang. One hand per five feet length and fraction thereof. First and second will come into line between flags marked One. Third and special between flags marked Two. Fourth between flags marked Three. All start from single guns with no allowance for crossing. First and second class go at 2 P. M. gun. Third and special at gun 2:05 P. M., and fourth at 2:10 P. M. Entries to R. V. King, 43 Milk street, Boston, cloe 2 P. M., May 29. Regatta Committee, John Bertram, C. McKenna, H. J. McKee, F. G. Cooley, J. E. Chandler, R. V. King, S. A. Crowell. Judges, E. G. Robinson, W. Hutchinson, G. Conant, T. Christian, W. Morris.

REAL YACHTING.—Schooner Fortuna, from Hampton Roads last, has arrived in this harbor. Schooner Wanderer, Mr. Geo. W. Will, arrived off Hamilton, Bermuda, April 15, five days out from New Bedford. Had strong northwesterly weather, and was hove to twenty-five hours. Sailed April 17 for Norfolk.

"YACHT AND BOAT SAILING."

WE have received from Mr. Dixon Kemp the fourth edition of his popular and comprehensive work, "Yacht and Boat Sailing." Excellent as the third edition was, this new issue is a vast improvement even upon its predecessors. Not only has the book been materially enlarged, but the chapters added are of such an interesting nature that we reserve a more complete review till next week. It is enough at present to say that new topics have been introduced relating notably to small yachts and to steam yachting, while the branch of canoeing has likewise been more fully covered. Especially commendable are the numerous examples of the latest English practice in the designing of small craft from three to ten tons, and accommodation plans of steamers of various sizes. The book is not only of value to amateurs, but ought to be in the hands of all our builders and professional people, who can study its teeming pages with advantage to their interests. The book is excellent proof of the wide range of experiment and diversity with which English yachtsmen and constructors have made themselves familiar during recent years. There is scarcely a conceivable type of boat from one extreme to the other, keel or centerboard, which has not a fitting representation in this volume, which will be hailed by all hands as a prize precious to every yachting interest under the sun. Published by Horace Cox, *Field* office, London. Price in England, $5. To be ordered through newsdealers or news agents in this country.

SOME CORINTHIAN RULES.—The Cheshire Y. C., of England, has a rule prohibiting lead ballast to restrict the cost of small yachts. The club has 150 members devoted to small craft, the racing class being composed of 5-tonners. Six matches are arranged for the year, including a "Channel Race," distance 45 miles. Last year this big race was won by a 3½-ton yawl. That kind of thing looks like real business and not like the ten-mile smooth water play of our own small boats. Why should we not race yachts of 25 to 30ft. at sea just as well as large vessels? It would be ten times the sport and infinitely more instructive, useful and dignified in its results than the boyish make-believe in sheltered waters.

DETROIT NOTES.—Mr. E. B. Wendell has designed a new schooner for Mr. H. C. Hart to be used on the St. Clair flats. Length over all 68ft., on deck 66ft. 8in., on waterline 53ft., beam 20ft. 8in., draft 2ft. 10in. without board. Frame 5×7 at heel, and 5×5 at head. Keel 14×14, board 19ft. long, plank 2in. oak, sides tumble home 2½in. The same designer has also struck in a steam launch 35ft.×8ft. 6in., which is now in frame. A deep boat 18ft. long, sharp ends, has been added to the Detroit fleet. She is said to be very fast. The Jennie June will be lengthened and receive a 3-ton iron keel and hardwood cabin 13ft. long.

LAKE Y. R. A.—A gentleman writes that it was proposed to send a reply to the contemporary we took to task last week for its reflections upon the judgment of the Association in choosing sail area measurement, but that it was not deemed worth while to give that publication any attention, as it is without influence around the lakes. Before the Toronto meeting the subject of measurement had been thoroughly canvassed, and the Seawanhaka rule was found to be the fairest to all classes of boats; hence its adoption.

AMERICAN Y. C.—Has presented colors to the Arctic expedition vessels, Thetis and Bear, to be given up to club upon return. The following officers of the expedition have been elected honorary members: Commander W. S. Schley, Executive Lieutenant U. Sebree and Chief Engineer George W. Melville, of the Thetis; Lieutenant W. H. Emory and Executive Officer T. H. Crosby, of the Bear, and Commander S. W. Coffin and Executive Officer C. J. Badger, of the Alert.

BOSTON Y. C.—Has 200 members, 23 schooners, 20 sloops, 9 cutters, 12 cats, 12 steamers, 1 yawl. One of the schooners is Steers's old sloop Silvie, built in 1851, now belonging to Mr. C. C. Maubury. Silvie crossed to Cowes in the fifties, but was handily beaten by the old time cutters. Three cutters were added to the fleet this yaar, Saracen, Edna and Beetle, also Mr. Bryant's semi-cutter Thetis. Club owns property worth $15,000. Next meeting at club house April 30.

THE NEW HERA—Will spread 2,000sq. ft. in lower sails. Mast, 53ft. 6in., topmast 30ft., mainboom 38ft., maingaff said to be 27ft., bowsprit outboard 22ft. 6in., which is a whacking big rig on 36ft. loadline, but the boat is very powerful, and needs a lot to drive her.

SOUP ON THE TABLE.—At the last London Fisheries Exhibition, some crockery for yachts was displayed, having a rubber bead round the base to prevent slipping from the cabin table. This is a good idea where "swing tables" are not adopted.

SAN FRANCISCO Y. C.—Officers for the year: Commodore, C. H. Harrison, yawl Frolic; Vice-Commodore, W. Letts Oliver, yawl Emerald; Secretary, Chas. G. Yale; Measurer, Matthew Turner, shipbuilder; Treasurer, F. Bangs.

THE SAIL AREA RULE—Is steadily gaining ground abroad. The Royal Portsmouth Corinthian Y. C., the Corinthian Y. C. and the Junior Thames Y. C., will sail their amateur Channel matches under the new rule this season.

THE WHITE CAP.—Mr. Wesley Webber has finished a handsome and lifelike oil painting of the yawl White Cap, off Hull Gut, which Rear-Commodore David Hall Rice has presented to the Hull Y. C.

SARACEN.—Mr. Fowles's little cutter has been on a trial. Looks smart and sails well. Lawleys are putting up two steam launches, said to be for New York *Herald* shipping news service.

SOUTHWARK Y. C.—Officers for the year: Commodore, H. D. Baizley; Vice-Commodore, A. J. Fox; Rear-Commodore, J. Rutter; Secretary, Francis George; Treasurer, Isaac Sharp.

NEW CLUB.—Rockport, Cape Ann, is going to organize a new club. Seems to us consolidations among small clubs would be better policy. Little local enterprises never amount to much.

MOHEGAN.—Mr. Henry D. Burnham's new schooner was launched April 19, from Palmer's yard, Noank. Dimensions in our last issue. John Lyvere will skipper the new one.

FOR EXPORT.—Higgins & Gifford, of Gloucester, have turned out a batch of six deep sloops 31ft. long for the West Indies. They are 12ft. beam and 4½ft. depth of hold.

PETREL.—The lines of this cutter have been much admired by our English readers, but they object to the transom stern and would spin her out into an archboard finish.

SINGLEHANDERS IN FRANCE.—The Sport Nautique de l'Ouest has included in its programme some races for amateurs in singlehand yachts to be sailed in June.

CAPSIZED.—Friday last a sailboat was picked up in the Narrows bottom up. Three persons drowned: Samuel Hopkins, Stoddard Hopkins and Samuel West.

NEW CUTTER.—The 36ft. cutter built by the Lawleys during winter, has been bought by Mr. E. M. Tylor, Boston Y. C. and Hull Y. C.

NEW CUTTER.—The owner of the Hattie G., of Gloucester, is reported as intending to build a cutter, having sold his former boat.

THE NEW IDEA.—Sloop Vidette will rip out board and change to keel, with 600-pound iron shoe. She is 20ft. long.

IRON KEEL.—Miller, of City Point, has got out a keel sloop 26ft. 8in. long, with 1,000lbs. of iron on keel.

WANTED.—Address of Michael Horton, who is building a 25ft. cutter at East Boston.

NEW CUTTER.—Mr. A. P. Thayer, Hull Y. C., is building a 21ft. cutter in Boston.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

May 30 and 31.—Spring Meet at Newburg.
May 30 and 31.—Spring Meet on Connecticut River.

A NEW CANOE SAIL.

A SAIL has long been in demand which combines the short boom and reefing possibilities of the balance lug with the simplicity and short mast of the Lord Ross lateen. On any sail that could be

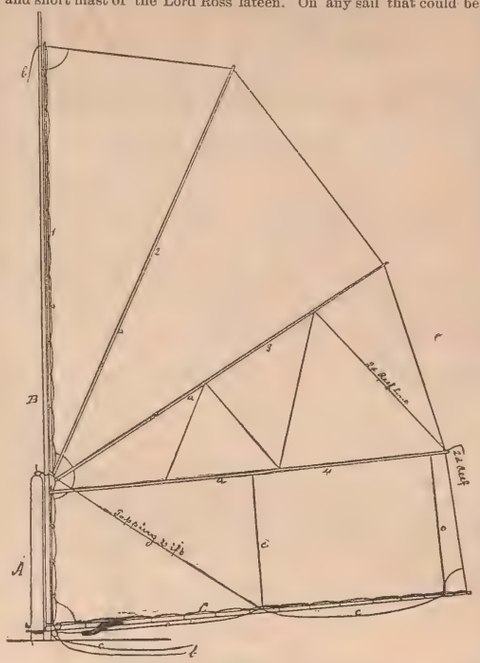


FIG. A.—"MOHICAN" SAIL.

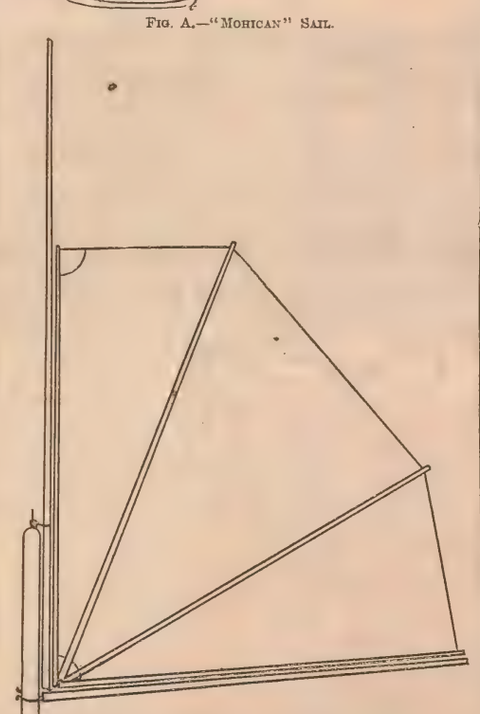

FIG. B.—SINGLE REEF.

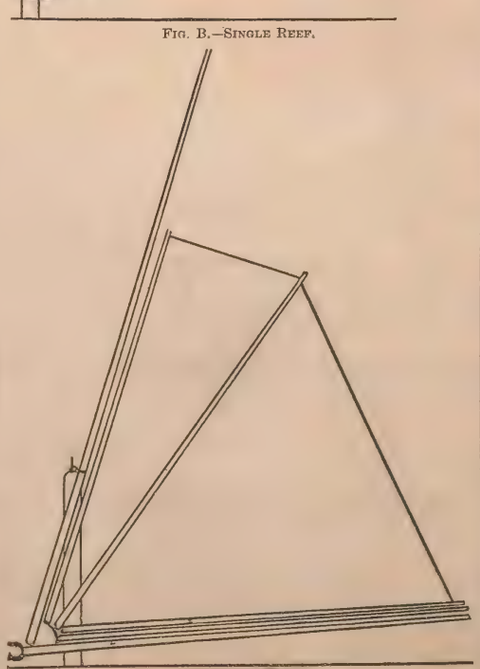

FIG. C.—DOUBLE REEF.

devised to lower or reef when the boom is out of reach of the hand, there must be, as a minimum, at least a halliard and reefing line to hand. Granting this point, I believe that the "Mohican" sail, submitted herewith, "fills the bill."

Fig. A represents the sail set. The short mast with pin, and the spars toggled together of the Ross lateen, are used with the addition of a jaw at the end of boom. The sail is set in the usual lateen manner, and the spar, B, becomes virtually a high mast and is treated as such. Four very light bamboo battens are put in the sail to increase the area, and the sail is attached to the spar, B, as far up as the ring, and from that point to a batten (*a*), and this batten is attached to B by halliard, *b*, which passes through block to foot and back to hand. The sail can be lowered by halliard (*b*) or taken off mast, A, in the usual manner of lateens.

The first reef is taken by letting go halliard and pulling in reef line (one being the continuation of the other) until batten touches boom. The Dot's reefing gear is used in this instance, and works admirably. The second reef is taken by unshipping boom C from mast A and hooking it again to A by the jaw. Batten No. 2 drops to No. 4, and the slack is taken up by reef line, as shown, and the sail becomes an ordinary lateen. The halliard and reef line may be made fast on boom, and should be so when sail is stowed away.

I claim that this sail can be unshipped and stowed exactly as the lateen, and with the same advantages. We always stow our sails on deck, made fast to side of coaming; that it has the reefing advantages of the balance lug, the short boom, and the heighth to catch light winds, with none of the disadvantages as to many ropes and high masts.

A is the jaw; B, the spar or topmast; C, the boom; E, block for reef line; F, block for halliard; G, hook for second reef.

Fig. B shows sail with one reef and Fig. C with two. First reef can be taken in before the wind; second reef cannot, unless first reef is repeated with a parallel batten.

In case leg o' mutton form of sail is used the area is much reduced, but all but No. 4 batten may be omitted, and the sail made fast to spar B by rings, and hoisted and lowered as in ordinary leg o' mutton sails. It has been tried both ways successfully.

ROBERT SHAW OLIVER, A. C. A.

THE LOG BOOK.

VII.—THE EAST COAST OF FLORIDA.—CRUISE OF THE ALLIGATOR.

ON Feb. 5, 1884, three of us, my wife, who is an honorary member of the A. C. A., and myself, in the sneakbox Alligator, and Mr. Hugh Willoughby, A. C. A., in the canoe Windward, left St. Augustine for a cruise down the eastern coast of Florida.

We had prepared for an early start, but as our course was due south, and as a strong wind with heavy sea came directly from that quarter all day, we delayed our departure until afternoon, hoping for a change of wind or a lull. As neither came, we finally decided to make a start, and at least establish a camp somewhere beyond the city limits. After four hours of hard work with oars and paddle we reached a point on Anastasia Island about five miles from the city, where we established Camp No. 1. There was no fresh water at this camp, but we had brought plenty with us, and no wood for a fire; but with our alcohol lamps we soon had supper prepared, and were comfortably fixed for the night.

On the second day a beam wind led us to hope for a good run, but our hopes were dashed by the centerboard of the Alligator which, swollen by water, refused to move into its box, and it as well as our hopes were frequently dashed in emphatic language. After making a few miles under oars, with the Windward sailing ahead and waiting by turns, we landed, unloaded the "box," turned her bottom side up, and spent three hours in planing the centerboard down with an axe.

Finally got under way again late in the evening and ran until after dark among marshes that afforded no camping ground, until we came to a bit of low beach raised but a few inches above the water on which we landed and made ourselves as comfortable as circumstances permitted.

The water was so shoal here and the flats so extended that an hour after we landed the falling tide had left us nearly half a mile inland. Our only chance of escape was to take advantage of the next high tide, which necessitated our starting before daylight in a dense cold fog next morning.

Soon after sunrise we landed on a wooded point, dried our tents and blankets and cooked breakfast, but were forced to make a hurried departure by the rapidly receding tide which threatened to leave us high and dry. At noon we passed the old Spanish ruins of Fort Matanzas and the Matanzas Inlet from the ocean, out on the bar of which we could see the great rollers combing in an unbroken line of foam. We made a pleasant camp that night in a grove of cedars near plenty of wood and water.

The following morning we entered the canal that is being cut to connect the Matanzas and Halifax rivers, and thus establish unbroken water communication along the entire coast, and about noon reached the dredge at the head of the cut. Here a carry of six miles confronted us, and as but one team could be obtained, Willoughby decided to retrace his route about five miles to another point, from which the carry could be made, although from there it would be much longer.

We separated, after appointing a rendezvous on the Halifax, and late that evening the Alligator and her crew were deposited beside "the basin" on the headwaters of Smith Creek, which flows sluggishly into the Halifax.

The following day being Sunday, we rested quietly in camp, and on Monday descended Smith Creek to its junction with Bulow Creek, below which the two streams are called Halifax Creek, in reality the head of Halifax River. This was where we were to have met the Windward; but instead we found only a roll of charts and a note from Willoughby, forwarded by special messenger, which stated that he had been taken ill after leaving us at the dredge, and had deemed it best to return to St. Augustine.

From here the Alligator cruised alone down the Halifax past Ormond, Holly Hill and Daytona, making a three days' stay at the last named place; past Mosquito Inlet, where a new lighthouse is in prospect of erection, into the Hillsboro River, past New Smyrna, where we found letters, and through the tortuous windings amid the beautiful mangrove islands of the Hillsboro into Mosquito Lagoon to Oak Hill. This is a sportsman's paradise, and here is the Atlantic House, the best kept and most popular sportsman's hotel in the State.

From Oak Hill a run of twelve miles before a brisk norther took us to the "Haulover," which is really a narrow and shallow canal about 300 yards long, connecting the waters of Mosquito Lagoon and the Indian River. A mile from the Indian River end of the Haulover is the Dummit orange grove, the most famous grove in Florida, and here we lingered so long picking, eating and filling every vacant space in our boat with the delicious fruit that it wanted but an hour of sundown before we started on the ten-mile run to Titusville, on the western bank of Indian River, which was our objective point for that night. The river at this point is between seven and eight miles wide, and is known as the Bay of Biscay.

The long-continued northers had raised a tremendous sea in the bay, and the heavily-laden Alligator had all she could do to hold her own amid the angry waters, although two reefs left but a small show of sail. Sunset found us still far from land, and the darkness which almost immediately followed, rendered the situation extremely unpleasant, not to say dangerous. After an hour of the most anxious sailing we reached the coast, and whirling around Sand Point, amid a smother of white water on its long bar, reached the comparatively quiet water beyond, and were soon comfortably housed in the Titusville Hotel.

For the next hundred and fifty miles we had a delightful run down the broad expanse of Indian River, taking advantage of favorable winds, and camping, sometimes for days at a time, and exploring the surrounding country, when they were ahead. On this run we stopped at Eau Gallie, Melbourne, Malabar, the St. Sebastian River, Fort Capron, and the mouth of St. Lucie, ever getting further from civilization, until at length the first of March found us camped near Jupiter Light, at the extreme southern end of the Indian River.

We were now in the land of cocoanuts, bananas and pineapples, where the mangrove attains tree-like proportions. Here perpetual summer reigns, and only the sensitive convolvuli showed trails of the slight frost that had been felt twice during the winter. At this point we were fired with the ambition to go still farther south and penetrate the beautiful but little known region of Lake Worth.

From Jupiter two routes lay open to us, the outside via Jupiter Inlet, through the breakers, and down the coast ten miles to Lake Worth Inlet, and the inside, through a series of the most bewildering creeks, penetrating the vast saw grass swamps that lie between the coast and Lake Okeechobee. With a breeze from the west or northwest the outside passage could be easily and safely made; but at this season the southeast trades that blow so steadily all summer had almost set in and it seemed impossible for the wind to blow from any other direction.

Another boat containing two men was about to attempt the labyrinthine passage of the saw grass, and we decided to accompany it. The distance was fifteen miles, and after three days of desperate work, and two nights spent in our boats, amid the wild solitudes of the saw grass, we accomplished it, and reached our goal, Lake Worth, the most beautiful spot in Florida.

Here the lightest frost, the faintest breath of winter, is unknown. Here the India rubber tree grows in stately luxuriance, cocoa nuts, pineapples, guavas, sapodillas, mangoes, and an infinity of tropical fruits, are among the ordinary products of the soil. The surrounding forests abound in game, the lake teems with the finest fish, among which the toothsome pompano is pre-eminent, and the ocean beach

s strewn with such a variety of tropical shells as would drive a conchologist wild with delight.

Here we camped and revelled in tropical surroundings for two weeks. Then we left the Alligator with our tent and all our camp outfit in readiness for next year's cruise, and on board the schooner that makes bi-weekly trips between Lake Worth and Jacksonville returned to our point of departure well satisfied with our winter's work.

A point definitely and satisfactorily settled by the crew of the Alligator on this cruise is that at least one honorary lady member of the A. C. A. enters into the pleasures and endures the hardships of genuine camping and small-boat cruising with as much zest, heartiness and pluck as her more masculine associates, and she makes solemn declaration that she will never be left at home again when a similar expedition is to be undertaken by her husband.

O. K. CHOBEE.

THE CHART LOCKER.

VI.—WINNIPISEOGEE AND MERRIMACK RIVERS.

"W. H. N." will find plenty of water in both of these rivers any time in June. But look out for logs, as the annual drive is due about that time. The Winnipiseogee is obstructed by innumerable dams, and the wise canoeist will transport his craft from Tilton four miles across country to Franklin, where the Pemigewasset and Winnipiseogee unite to form the Merrimack. Sewall's Falls, above Concord, easily run; Garvin's Falls, three miles below, are the worst on the river, half mile carry; short carry around Hooksett dam, then nine miles slack water to Manchester; look out for Amoskeag dam above bridge; carry through city; five miles of rapids to Goff's Falls; can be run, but care must be used; run Reed's and Cromwell's Falls; clear water Nashua to Lowell; canal through city, or better, carry around Pawtucket dam and rapids below; Hun'ts Falls, a half-mile series of easy rapids, below city; take canal through Lawrence; strong current, passing through Mitchell's Falls to Haverhill at the head of tide water, then broad and open water to the sea at Newburyport. The lower half of the Merrimack is the prettiest for cruising, and some of the choicest bits are found between Lowell and Lawrence, where it is proposed to hold a local meet for Eastern canoeists early in June. Don't miss it.

CLYTIE.

THE GALLEY FIRE.

CANOE AND CAMP COOKERY.

II.—SOUPS.

FOR the canoeist the canned soups are the handiest, and can be prepared in a very short time by following the directions printed on every can. But for the general camper, whose room for luggage is not limited to a boat 14x30, I submit a few instructions on soups that may be useful.

The time given for cooking soups in the recipes below may seem unnecessarily long, but if it is done in a less time, it is at a loss in the flavor. Fast boiling drives off considerable of the aroma of the ingredients used, the water evaporates fast and requires constant replenishing with boiling water, which compels the cook to have an additional vessel always on the fire. Constant skimming is necessary, and an occasional slight stirring will prevent any of the vegetables from burning on the pot where but little water is used. Campers do not commonly have fresh meat in camp, unless in a portion of the country where venison, buffalo or bear meat form a part of the larder. With any one of these, or with beef, we can make what I will call

Meat Soup.—Use one pound of lean meat to a quart of water. Put on the fire with the water cold, and let it heat gradually and simmer rather than boil, skimming it constantly and keeping the cover on the pot when this operation is not being performed. If any cooked meat or bones are to be added, this should be done after the soup has cooked three-quarters of an hour. From five and a half to six hours are necessary for the soup to cook. Just before it is done, season with salt and pepper. If made in an iron pot it should be transferred as soon as done to a tin or earthen vessel. In cold weather this soup may be kept fresh and sweet for a week, and "warmed over" as long as it lasts.

Vegetable Soup.—Onions, potatoes, carrots, turnips, beats, parsnips, cabbage, cauliflower, pumpkins, squash, etc., should be picked over, washed, pared, and cut into small pieces from a quarter to a half inch thick, put into a pan of cold water, rinsed and drained. Tomatoes should be scalded, peeled and sliced. Prepare a meat soup as above, and when it has cooked four hours put in all your vegetables except potatoes, which should be put in only about thirty minutes before the soup is done. Stir the soup occasionally to prevent the vegetables from scorching or sticking to the bottom of the pot, and skim frequently. When done take out the vegetables, mash and return them to the soup, boil one minute, season and serve. Canned corn or tomatoes may be used in this soup the same as fresh vegetables.

Deer's Head Soup.—Skin the head and split it in pieces, remove the eyes and brains and wash thoroughly in cold water. Then cook same as in meat soup. Squirels, rabbits, and small game generally can be cleaned and split and made into soup as above. When vegetables are added to soup made of small game, the latter should be removed and strained, and the good meat returned to the pot just before the vegetables are put in, leaving out all the bones, skin, gristle, etc.

Tomato Soup.—Mix one tablespoonful of flour and a piece of butter the size of an egg into a smooth paste, and chop one onion fine. Prepare three pounds of tomatoes as for vegetable soup (the same amount of canned tomatoes may be used) and put all the ingredients with a teaspoonful of salt into three pints of cold water. Boil gently for an hour, stirring frequently enough to dissolve the tomatoes and prevent burning, then stir in one pint of boiled milk, and let it come again to a boil, constantly stirring. Season and serve.

Rice Soup.—Make a meat soup, with the addition of one sliced onion. Prepare the rice (one-half pound to a gallon of water) by picking it over, washing and draining, and stir it into the soup half an hour before it is done, stirring frequently to prevent burning.

Bean Soup.—Pick over two quarts of beans, wash, and soak them over night in cold water. Scrape clean one pound of salt pork, and cut into thin slices. Drain the beans, put them into six quarts of cold water, with one tablespoonful of soda, and let them boil gently for half an hour, skimming constantly. Then drain off all the water and put in the same amount of fresh boiling water. Boil slowly for an hour and a half, stirring frequently; then put in the pork. When the beans have become tender enough to crack, take out the pork and mash the beans into a paste with a wooden masher or the bottom of a large bottle. Then put all back and boil slowly an hour longer. If no soda is used, longer boiling will be necessary. Bean soup will burn if not constantly stirred. Not much salt, but plenty of pepper should be used for seasoning.

Pea Soup.—Treat the peas exactly the same as the beans in the above recipe, except as to the preliminary boiling in water with soda. Make the same way as bean soup. Pea soup cools and thickens rapidly, therefore if squares of fried bread are thrown upon the surface before serving, it should be done quickly and while the bread is hot. Use more salt than with the bean soup for seasoning, and boil gently or it will surely burn.

Onion Soup.—Put three tablespoonfuls of butter in a frying-pan, cut six large onions in slices, and stir them into the butter over the fire till they begin to cook. Then cover tight and set them where they will simmer slowly for half an hour. Put a quart of milk with a tablespoonful of butter on to boil, and while this is doing stir into the onions a tablespoonful of flour while they are simmering. Turn the mixture into the boiling milk and cook quarter of an hour, seasoning with salt and pepper. If an old tin pan is handy that you can use for the purpose, the soup will be improved by knocking small holes in the bottom of the pan, thus making a colander, and straining the soup through it, afterward adding the well-beaten yolks of four eggs and cooking three minutes longer.

Oyster Soup.—Put a gallon of milk and half a pound of butter into the pot and heat gradually. When hot, stir in the strained liquor of two quarts of oysters, very gradually, to prevent the milk from curdling, then one pound of crushed crackers or bread crumbs. When it has come to a boil put in the oysters (two quarts), and let it cook till the edges of the oysters curl up, when it should be seasoned and served.

Clam Soup.—Exactly the same as above, using clams instead of oysters.

Mud Turtle Soup.—At Lake View Point, Onondaga Lake, I was once regaled with an excellent soup made of fresh-water tortoises, or "mud turtles." Unfortunately I did not obtain the recipe, but I have written to a friend who may be able to get it of the cook, "French Fred" Ganier, and if obtained, it will be given in a future paper.

Next week's discourse dietetic will be on the subject of "Fish."

SENECA.

THAT SNEAKBOX AGAIN.

Editor Forest and Stream:

If I can possibly have a 12×4 sneakbox in stock at the time of the A. C. A. meet in August, I will have it at the Thousand Islands, and give the "boys" a chance to compare it with the canoe if we get wind enough.

I have heard that they will live where nothing else can, and I know the canoe will live where much larger craft dare not venture. I have been under paddle in a 10½ft.×26in. canoe, where it troubled an 18ft.×4ft. Whitehall open boat to keep free from water.

Call Dr. Heighway as the next witness; he took a very rough sail down Lake Ontario in a 16ft.×31in. Princess two years ago, and I think found out just about how much wind and water such a canoe could live in.

J. H. RUSHTON.

CANTON, N. Y.

PELICAN C. C.—Twenty gentlemen met at Young's Hotel, Boston, on the 16th of April, and organized the Pelican C. C., owning ten canoes. The following officers were elected: Commodore, Wayne H. North, Boston; Vice-Commodore, C. C. Osgood, Georgetown, Mass.; Secretary, B. J. Bowen, Boston; Treasurer, C. E. Symms, Medford, Mass.; Directors, William P. McMullan, Biddeford, Me., Arthur Y. King, Boston; G. A. Holland, Medford, Mass. The club burgee adopted was white maltese cross on red ground, its size 11x20in. One of the most enjoyable features of the evening was a banquet, the center piece on the table being a small canoe of birch bark filled with beautiful flowers. This was floating on a miniature lake with banks of flowers. A canoe of ice was served resting on a sea of spun sugar, and was very palatable as well as artistic. Committees were appointed to lay out cruises, etc.

THE ROCHESTER C. C.—At the annual meeting, held April 8, elected the following officers for the ensuing year: Captain, Frank F. Andrews; Mate, Edwin M. Gilmore; Purser, Matt Angle; Executive Committee, Geo. H. Harris, Herbert J. Wilson, Fred W. Storms, The constitution was amended, abolishing the cumbersome titles of commodore, vice-commodore and secretary-treasurer, and substituting captain, mate and purser in their place. The new club house on Irondequoit Bay, a two-story structure, 16x34, will be occupied early in May. Several new canoes are being built for the fleet. It is the intention of the club to hold a regatta when warm weather sets in. Communications have passed between the Toronto Club and the Rochesters, looking toward a local meet.—MATT ANGLE.

N. Y. Y. C.—Mr. Stokes, in the Will o' the Wisp, in company with Mr. Taylor, in the Hiawatha, made the first trip of the season—a run around Staten Island—leaving the club house at 6 A. M. on Saturday and reaching West Brighton at 7:30 P. M., having sailed down the Bay and paddled against tide and wind up from Perth Amboy.

NEW YORK STILL AHEAD.—The secretary of the Knickerbocker C. C. writes under date of April 14: "Had the pleasure of lugging one of our men from the (semi) briny depth of the Hudson on Friday last, after the first upset of the season." The N. Y. C. C. had their first upset on Thursday, April 10. Try again, Knickerbockers.

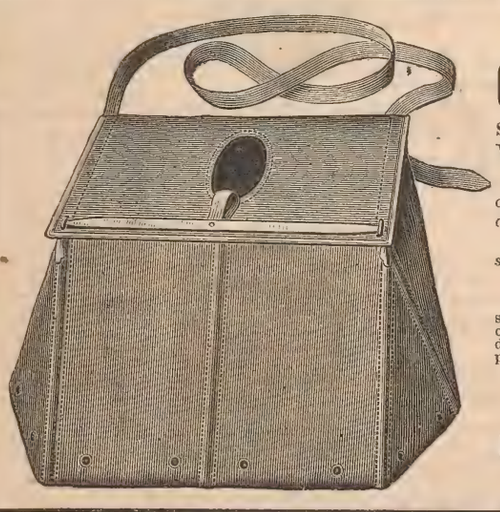
CAPT. FARRAR'S NEW BOOK.—We are informed that Capt. Charles A. J. Farrar, well known to many of our readers, has a new book in press, entitled "Wild Woods Life; or, A Trip to Parmachenee," which will be published early in May by Lee & Shepard, Boston. The story is written in the same pleasant style that characterizes all of the Captain's works. The retail price of the book will be $1.50, and orders for it may be sent to this office, which will be filled as soon as the books are out of the bindery.

HUMPHREYS' HOMEOPATHIC VETERINARY SPECIFICS

FOR THE CURE OF ALL DISEASES OF Horses, Cattle, Sheep, Dogs, Hogs & Poultry.

For Twenty Years Humphreys' Veterinary Specifics have been used by Farmers, Stockbreeders, Horse R. R., Travel'g Hippodromes Menageries and others with perfect success.

LIST OF SPECIFICS.



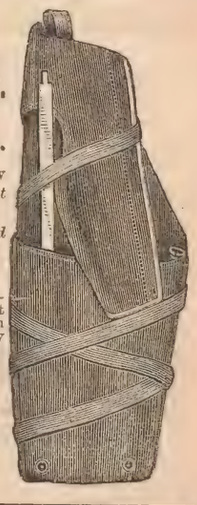
A.A. Cures Fevers and Inflammation, Milk Fever, Spinal Meningitis, Hog Cholera, 75c.
B.B. Cures Founder, Spavin, Stiffness, 75c.
C.C. Cures Distemper, Nasal Discharges, 75c.
D.D. Cures Bots or Grubs, Worms, - - - 75c.
E.E. Cures Cough, Heaves, Pneumonia, 75c.
F.F. Cures Colic or Gripes, Bellyache, 75c.
G.G. Prevents Abortion, - - - - - - 75c.
H.H. Cures all Urinary Diseases, - - - 75c.
I.I. Cures Eruptive Diseases, Mange, &c. 75c.
J.J. Cures all Diseases of Digestion, - - 75c.
Veterinary Case (black walnut) with Veterinary Manual, (330 pp.), 10 bottles of Medicine, and Medicator, - - - - - $8.00
Medicator, - - - - - - - - - - 35

☞ These Veterinary Cases are sent free to any address on receipt of the price, or any order for Veterinary Medicine to the amount of $5 or more.

Humphrey's Veterinary Manual (330 pp.) sent free by mail on receipt of price, 50 cents.

☞ Pamphlets sent free on application.

HUMPHREYS HOMEOPATHIC MED. CO. 109 Fulton Street, New York.



PATENT FOLDING CANVAS FISH AND GAME BAG.

Sizes	A	B	C	
Will hold	9	12	20	lbs. of fish.

A great improvement on the old-fashioned willow creel. When not in use *can be folded as shown in cut and carried in pocket.*

Is waterproof, and can be kept perfectly *clean and sweet.*

Retail customers will save us a great deal of unnecessary correspondence, if they will remember our rule, that orders received from persons residing in cities in which dealers keep a full line of our goods will not be filled at any price.

ABBEY & IMBRIE,

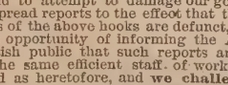
Manufacturers of Every Description of

Fine Fishing Tackle,

48 Maiden Lane, N. Y.

SILK WORM GUT.

F. LATASA, 35 Broadway, N. Y.,



Calls the attention of the trade and dealers in fishing tackle to his extensive assortment of Valencia Silk Worm Gut in all grades, long and extra long, and from Extra Heavy Salmon Gut to Extra Fine. Sample thousand, 10 different grades, from extra heavy to fine, $5.00.

For price list address

F. LATASA, 81 New St., Rooms 43 & 45, N. Y.

Harrison's Celebrated Fish Hook.

Registered.

Trade  Mark.

Whereas, It having come to our notice that some unprincipled house, to gain their own unworthy ends, and to attempt to damage our good name having spread reports to the effect that the manufacturers of the above hooks are defunct, we now take this opportunity of informing the American and British public that such reports are utterly false. The same efficient staff of workpeople is employed as heretofore, and we challenge the world to produce a fish hook for excellence of temper, beauty and finish in any way to approach ours, which are to be obtained from the most respectable wholesale houses in the trade.

Signed, R. HARRISON, BARTLEET & CO., Sole manufacturers of Harrison's Celebrated Fish Hooks, Redditch, England. (December, 1882.)

Manufacturers also of Fishing Tackle of every description. Sewing and Sewing Machine Needles.

Buy Allen's Brass-Shell Swage.

You can swage a shell to its original size in one minute. Price $1. No more tight shells. No more profanity. For sale by the trade, and by F. A. ALLEN, Monmouth, Ill.

Fishing Tackle.

Rods, Reels, Lines, Artificial Baits

OF EVERY DESCRIPTION.

Flies for all Waters.

Special patterns tied to order.

APPLETON & LITCHFIELD,

304 Washington St., Boston, Mass.

JAS. F. MARSTERS,

55 Court Street, Brooklyn.

MANUFACTURER AND DEALER OF

Fine Fishing Tackle.

First Quality Goods at lower prices than any other house in America.

Brass Multiplying Reels with Balance Handles, first quality and fine finish, 75ft., $1.00; 120ft., $1.25; 180ft., $1.50; 240ft., $1.75; 300ft., $2.00; 450ft., $2.25; 600ft., $2.50. Any of the above Reels with Drags, 25 cts. extra; nickel plated; 50 cts. extra. Brass Click Reels, 20yds., 50 cts.; 30yds., 75 cts.; 60yds., $1.00; nickel plated, 50 cts. extra. Marster's celebrated Hooks snelled on gut, Limerick, Kirby Limerick, Sproat, Carlisle, Chestertown, O'Shaughnessy, Kinsey, Aberdeeen, Sneak Bent, and all other hooks. Single gut, 12 cts. per doz.; double, 20 cts. per doz.; treble, 30 cts. per doz.; put up one-half dozen in a package. Established 20 years. Open Evenings. J. F. MARSTERS, 55 Court St., Brooklyn.

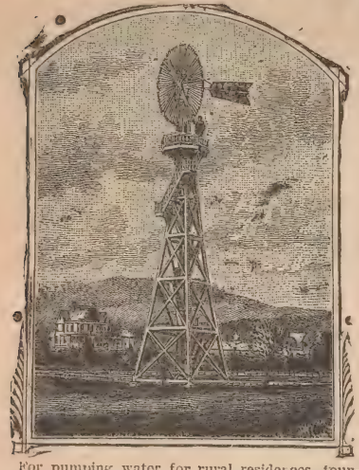
KYNOCH'S

Patent "Perfect" Brass Shells,

MANUFACTURED BY



KYNOCH & CO., Birmingham, Eng.

These shells are made of extra fine thin pliable metal, with reinforced base; are adapted to either Winchester or Wesson No. 2 primers. Can be reloaded as often as any of the thicker makes. Cost only about half as much. Weight less than paper shells. They shoot stronger and closer, and admit of a heavier charge, as owing to the thin metal, inside diameter is nearly two gauges larger. Load same as any brass shells, using wads say two sizes larger than gauge of shells. Or can be effectually crimped with tool and straighten out to original shape when discharged. The crimping tool also acts as a reducer, an advantage which will be appreciated by all experienced sportsmen. Sample shells will be mailed (without charge) to any sportsmen's club or dealer, and prices quoted to the trade only. For sale in any quantity by gun dealers generally, or shells in case lots only, (2,000), and crimpers not less than one dozen, by

HERMANN BOKER & CO., Sole American Agents,

101 & 103 Duane Street, New York.

STORM-DEFYING WINDMILL.

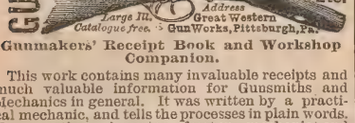
For pumping water for rural residences, fountains and fish ponds. A. J. CORCORAN, 16 John street, New York City.

SOMETHING NEW.

Sportsman's Fishing or Camping Tents

WITH AWNING.

And if desired, a portable curtain to close tent at night, or in storms. These tents are made of best waterproof goods, rendered mildew-proof at slight extra cost. Also tents of all kinds, flags, banners, etc. Yacht and boat sails. Send for illustrated circular. Address S. HEMMENWAY, 60 South street. Factory, 39 South street, New York City.



Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.,

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

Gunmakers' Receipt Book and Workshop Companion.

This work contains many invaluable receipts and much valuable information for Gunsmiths and Mechanics in general. It was written by a practical mechanic, and tells the processes in plain words. Every artisan, inventor, farmer, mechanic and tradesman should have a copy. Browning, staining, varnishing, tempering, annealing, blueing, case-hardening, soldering, tinning, brazing, plating, laquering, etc., and a great many new and original processes never before put in print.

The Book is Worth its Weight in Gold.

PRICE, 75 CENTS, POSTPAID.

For sale only by J. H. JOHNSTON, Great Western Gun Works, Pittsburgh, Pa.

Gunsmiths and Dealers should send for our Gunmakers' Material list.

SOLD by watchmakers. By mail 25c. Circulars free. J. G. Birch & Co., 43 Dey St., N. Y.

OUR NEW MODEL THREE BARREL GUN.

PRICE, $75 TO $250.

Send for Illustrated Catalogue.

This gun is light and compact, from 9 to 10 lbs. weight. The rifle is perfectly accurate.

L. C. SMITH, Maker, Syracuse, N. Y.

Antelope and Deer of America.

—BY—

JOHN DEAN CATON, LL.D.

This work is the most important publication ever printed on the subject.

The subject is a capital one. These animals are the most interesting of all our American game.

It takes a deer hunter to write of deer; and he must bring to the work the same enthusiasm that prompts him to carry the rifle day in and day out in pursuit of the game. There is no need of Judge Caton's telling us in the preface that deer hunting has always been his favorite diversion, for the reading of his book shows us that.

The characteristic of the book is that it is, all the way through, a statement of facts which have been learned by the most patient and industrious study of these animals. Judge Caton has for many years kept in domestication the American antelope and all of the American deer, save the moose and the two species of the caribou. The chapters are devoted to the following: The Antelope, Moose, Elk, Woodland Caribou, Reindeer, Mule Deer, Columbia Black-tailed Deer, Virginia Deer, Barren-ground Caribou, Reindeer, Acapulco Deer.

"The Antelope and Deer of America" is a large volume of 426 pages, illustrated with more than fifty illustrations (most of them from photographs), bound in cloth. The former publishers sold the book for $4.00.

We have reduced the price from $4 to $2.50.

Forest and Stream Publishing Co., 39 Park Row, New York.

TARGET BALLS AND BALL PIGEONS.

New and Superior to all others.

Sample barrel of the **New Ball** and a handsome silver badge sent to any address for $3.00. The **Moyer "Ball Pigeon"** and trap will be ready about April 15. Trap, $15; Pigeons, $18 per M. Any club desiring to test the new ball thoroughly we will send 1000 for $5, after which the regular price will be inflexible at $9 per M. **Card's** latest ball trap, the only one we guarantee and recommend, and 1000 balls for $14. The trap in exchange for your old ball trap and $6.50.

Send for circular. TARGET BALL AND BALL PIGEON CO., Lockport, N. Y.

EXCELSIOR BAIT PAIL.

(Patented). **The Fisherman's Friend.**

There is an inside pail which can be removed and placed in the water the same as a "fish car," thus keeping the bait alive for an indefinite time. The pan which fits in the inside pail can be raised and lowered, thus affording an easy selection of bait without wetting the hand. The bait is kept alive during transportation (the critical time) by the continuous flowing of the water through the perforations, thus causing a never failing supply of fresh air. For sale by all dealers, or will be sent on receipt of price. 8 Quarts, $2.50 each; 12 Quarts, $3.25 each. Manufactured only by DE LA VERGNE & CO., 176 Chambers street, New York.

The English "Fishing Gazette."

Devoted to angling, river, lake and sea fishing, and fishculture.

Every Friday, 16 pages, folio, price 2d.

Volume VI. commenced with the number for January 7, 1882.

EDITOR—R. B. MARSTON

Free by post for one year for 12s. 6d. (say $3.20) to any address in the United States.

Sent direct from the office for any portion of a year at the above rate. U. S. postage stamps can be remitted, or money order payable to Sampson, Low, Marston & Co., the proprietors.

Contains special articles on all fresh and salt water fish and fishing; reports of the state of the rivers; reports from angling clubs; fishculture and natural history; where to fish; angling notes and queries; angling exchange column; notices of fishing tackle, books, &c., and other features.

A copy of the current number can be had (post free by sending six cents in stamps to R. B. Marston, the FISHING GAZETTE office, 12 and 13, Fetter-lane, London.

The FISHING GAZETTE circulates extensively among anglers and country gentlemen in all parts of the Empire.

"There is a large public interest in fishing. . . An excellent class organ."—*World.*

"One of the best authorities on these and kindred subjects."—*Truth.*

"A brighter and gayer little paper is not published."—*Mayfair.*

The FISHING GAZETTE is quoted by the *Times* and all the best papers.

One of the best mediums for

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, MAY 1, 1884.

VOL. XXII.—No. 14. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. American newsdealers should order through the American News Company, those in England, Scotland and Ireland, through Messrs. Macfarlane and Co., 40 Charing Cross, London, England.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices $1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

Address all communications,

ANSWERS TO CORRESPONDENTS.

YACHT MEASUREMENT IN THE EAST.

A CORRESPONDENT informs us that the sentiment among the representatives of the New England Y. R. A. was in favor of the Seawanhaka sail area and length rule for the measurement of large yachts. But the greater simplicity of gauging by plain length was considered inducement enough to apply that method to the small boats, which constitute the great majority of the racers in Eastern waters, where many of the entries still are "open boats." The association also realized the necessity of proposing a rule which would not cause dissension at the outset, hence the recommendation of the plan hitherto generally followed by the various local clubs in their individual capacity. This is well enough, perhaps, for the time being, though we had wished for reformatory legislation at the outset. As the average tonnage of racing yachts is destined to grow very fast all over the country, the association may in the future see fit to proclaim the sail area and length rule for the larger classes and confine simple length measurement to open boats, as it ought to. If this aspect of the matter is kept in view, the association may be trusted to introduce the desired modification when the proper time arrives in its opinion. The danger we foresee in such a course is the liability to crystallize a makeshift into a permanent custom, as even large yachts built under a plain length rule will be so big on their loadline and so heavily sparred that vested interests in the future may become too strong to be forced to a return of an equitable policy under which other styles shall receive justice, and that in effect racing yachts will become such expensive and unwieldy affairs as to steadily differentiate the huge racer from the economically-formed cruiser more and more every year, much to the detriment of the whole sport. When that time arrives, as it is sure to do, no one can blame us for not having clearly pointed out the drift events are bound to take in ample time to head off the consequences. Only one particular style of yacht can flourish under length measurement, and we question the policy of forcing experiment and custom into one narrow rut by prejudicial legislation.

DEFEAT OF THE NEW ENGLAND BILL.

THE defeat of the proposed game law by the Massachusetts House of Representatives is disgraceful from the position in which it puts that State with the rest of New England. A convention was held early in the season in Boston, and it was well attended by delegates representing the best fish and game protective interests of the other New England States. A code of game laws was decided upon as best fitting the wants of New England, and delegates agreed that if Massachusetts would lead off and adopt the new code, they would see that each of their own States did the same. The bill passed the Massachusetts Senate without opposition, and its chances were just as good in the House.

But the market interest in Boston predominates. The shrewd Yankees under Faneuil Hall and in and about Faneuil Hall Market, would willingly see the last quail, the last woodcock, the last partridge or deer that the woods were ever to bestow, brought to their doors, provided the chance appeared to make a dime or a dollar upon it. Indeed, these tradesmen are greatly disturbed because the game laws of Maine have stopped their selfish traffic from that direction. The proposed universal game law for New England—one of the best game bills ever drafted—frightened them. They tried dining and wining the members of the committee and of the Senate. Here they failed; but there were members of the House found to be more readily gullible. A good dinner, a theater ticket, a bunch of cigars or a glass of beer went a good ways in these members' notions. They came into the House and voted squarely against a game law designed to protect their own interests—their own property—to please fifty marketmen, whose only object is to make a dollar. But the question is not dead yet. There is a growing public sentiment, and Boston market as "the dumping ground" for the last relics of the fish and game of New England will yet be dammed up by some good, wholesome legislation.

DYNAMITE GUNS.

RECENT experiments in the neighborhood of this city seem to indicate that the use of dynamite introduced into missiles will soon become general. The difficulty heretofore has been, that the cartridge containing this powerful explosive at the front end, when fired with the ordinary gunpowder charge, was sure to compel the dynamite to explode simultaneously with the ignition of the powder. This, of course, was a vital objection, and in place of having the destructive effect a mile or more away, the tearing apart was upon the gun itself. Many devices were arranged to meet this difficulty, and a very fair result was obtained by the use of compressed air as a motor, in place of the ordinary black powder. The air was compressed in machines constructed for the purpose, and then introduced into the weapons behind the peculiarly devised cartridge, which carried a very destructive charge of dynamite at its head.

The results of many trials showed that the question of the use of the nitro-glycerine explosive has been answered in a certain manner. The gun used was, however, a very unwieldy contrivance, and there were other objections. To meet these came further inventive effort, and in a short time a company of experts were invited to witness the trial of a compound cartridge which was inserted in an ordinary Rodman gun and fired with a charge of ordinary gunnery powder, when away went the cartridge head with a two-pound charge of dynamite snugly tucked within it, off over the meadows to delve a great cellar pit in the earth a mile away. The method of so taking off the suddenness of the start, which had been the stumbling block in previous trials, was in the use of a rubber buffer wad. This seemed to answer every one of the demands of such a weapon, and so moderated the suddenness of the impact of the powder gas upon the dynamite-charged ball that they were enabled to fire repeated charges.

This simplification of the methods of using the dynamite, suggests at once the question of how soon this powerful agent of destruction may be adapted to the smaller class of arms, and the rifleman of the near future be prepared to use a bullet, beside which the express bullets of to-day will be comparatively harmless, against certain classes of game or wild animals where the important point is to kill surely and swiftly. To put into the body of a wolf a bullet which shall create a general destruction of the animal's interior will be an important point, and if this can be done with as much safety to the marksman as though he were using the present form of cartridge, there would doubtless be a large demand for such an article.

In warfare the use even of the larger form of dynamite cartridge will produce very marked results, and add one more to the other important changes brought about by the introduction of this modern agent. When the use extends to the small arms the change will be forced at a rapid gait. With two armies facing each other and each provided with weapons so surely destructive as these dynamite bullets may be made, war will become too certainly deadly for future pursuit and the dream of the peace disciples be brought to a reality by the very perfection of the weapons of destruction. If to the accuracy which already marks the small arm of to-day be added the terrible destructiveness which would come with the use of this new cartridge, to go to war would be little less than a deliberate suicide, and the determined bravery and gathered skill of the most hardy of veterans will be set at naught by the force of a mere mob in whose hands this new missile was placed.

The grimy black powder of the past centuries should make way for something which more exactly represents the knowledge of modern time in chemical and mechanical sciences. The day will come when a rifle magazine of the ordinary size will contain as many times more than the present supply of cartridges, and their destructive power will be increased in inverse ratio to the space saved. The possibilities of the future in the matter of changes in ammunition are very great, and the army of inventors now busy upon the problem of how best to apply the discoveries recently made to the demands of the hour, cannot be expected much longer to fail in their endeavors and aims. How far the methods of sportsmen will be affected is at present only an interesting speculation, but the time is rife for change, and the alterations will come in the near future.

AMERICAN ORNITHOLOGISTS will be interested in learning that Dr. Elliott Coues is about to visit England. It will be remembered that some years ago Dr. Coues received a memorial, signed by most of the leading scientific men of Great Britain, inviting him to visit Europe for the purpose of consulting foreign libraries in furtherance of his great work, the "Bibliography of Ornithology," and it will be a matter of congratulation among ornithologists everywhere that the author of this important undertaking is now able to avail himself of this invitation. The trip is undertaken ostensibly for health and recreation, but those who know the energy with which Dr. Coues works, will be slow to believe that this summer vacation will be spent in idleness. The use of trinomials in ornithological nomenclature has become pretty well established in America, and is now agitating the British mind; and Dr. Coues, as vice-president of the A. O. U., will no doubt give much attention to enlightening our English friends on this and kindred points. There are already signs that the "American idea" of trinomials is taking root in England, and it would not be surprising if a speedy alliance were brought about between the American and British schools of ornithology. The question is certainly of very great interest, and one upon which substantial agreement among English-speaking naturalists is greatly to be desired. Dr. Coues expects to sail May 24 on the Guion steamer Oregon.

A FUND FOR LONG ISLAND.—In another column appears a circular, of interest to Long Island sportsmen. That the game laws cannot be enforced without men or money is a proposition which meets general acceptance, and this appeal from Game Protector Whitaker deserves the careful consideration of those who visit Long Island to shoot or fish. The gentlemen named in the circular have consented to receive the money contributed and to supervise its expenditure, and the movement, if carried on with energy, cannot fail to be productive of good. We have consented, at the request of Mr. Whitaker, to receive subscriptions to this fund, which we will hand over to the committee as fast as received. Long Island, from its geographical position, offers an excellent field for this experiment, which, if successful here, may be extended to other regions.

RAINBOW TROUT.—We would call attention to the paragraph in our notice of the report of the New York Fish Commission concerning these fish. It is beginning to be learned that they are migratory, and do not remain in brooks. We have never been much in favor of this fish, because we have known, what is not popularly known, that the fish is strongly suspected to be a salmon. There is no difference that an ichthyologist can find between the *Salmo iridea* and the salmon known as "steelhead," "hardhead," and "salmon trout" on the Pacific coast, the *Salmo gairdneri*. Although this is the case, and the species *iridea* is a doubt-

ful one, yet it has been thought best not to combine them for the present. We have been waiting and watching the habits of this alleged trout with great interest in order to learn if its habits might not show it to be in some respect different from the steelhead. The evidence of the Commission tends to show that it is a migratory fish, and if so it may escape to sea and be lost, as the other California salmon was. We believe that Mr. Roosevelt has not seen the rainbows which he planted in streams emptying into Great South Bay, Long Island, since they were yearlings.

AN ELK HUNT.

MOST things are relative, they say,
Some put it in a stronger way;
But sure I am in 'Sixty-three,
When Meade and Hooker fought with Lee,
When for the rights of States or slaves
Brave thousands slept in bloody graves;
When by the dun Missouri's stream
Still flashed the Pawnee camp-fires' gleam,
And bison 'round the Rocky chain
Shook with their march the darkened plain,
The world was younger. I don't mean
Some twenty years. That's quickly seen.
Nor in a geologic sense,
Where dreary ages yawn immense,
But that the human race we'll say
Was twice as young as 'tis to-day.
I own I have a friend who winks
When I say this, and clearly thinks
That the world's age, by my account,
Tallies quite closely in amount
With my own wrinkles. Nay, declares
The youngest man the planet bears,
After a year of Kansas chills,
Can patronize the eternal hills.
But one fact surely's not in me,
For all observers must agree
That since the 'Sixties, noble game
Is much less plenty, and less tame;
Yet every hunter knows that ground,
Where over night great droves were found,
May be for months silent, forlorn,
Unvisited by hoof or horn.
This truth some prospectors once proved:
It seemed that all the game had moved,
Warned by the autumn winds that blow,
Loud threats of high-piled smothering snow;
Their cabin rose among the hills,
Where, gathering up a thousand rills,
With every streamlet gaining force,
The Yampa speeds its headlong course.
Hastes to the Green with eager leaps,
Joins with the Grand and onward sweeps,
Down through the deep-split, rock-walled gash,
Where Colorado's currents dash.
Their food was gone, and all around,
A wide, white waste. No living sound,
Save when on swirling wind-gusts float,
The yelpings of the far coyote.
But two brave comrades volunteer
To hunt once more some God-sent deer,
And so start out in swinging tramp,
To feed the starving, freezing camp.
The web-shoed wanderers plod along,
Feeble in limb, in purpose strong,
To the low foothills, spreading wide
Around a rugged mountain's side,
Channelled by storm, and seamed with scar,
Called, from the top that showed afar
Its steep black ridge's lowering frown,
"The mountain of the iron crown."

Warm from his bed the elk arose.
Though nested 'mid November snows,
His long, thick coat, and mighty heart
Defied the ice-king's sharpest dart.
He swelled his neck, sniffed the light breeze,
And starting downward through the trees,
With horns thrown backward to his haunch,
Sixfoot long points on either branch,
Struck out in reaching trot, where grow
The aspen thickets far below.
On fragrant twigs the dainty beast,
Still makes his aromatic feast,
When grass lies deep beneath the sheet
Of frozen drifts and crusted sleet.

The hunters spy the fresh-made track,
Their hearts beat fast, their strength comes back:
Panting, they strive, though stiff and lame,
To get to leeward of the game.
At last their caution gets its due,
And the great victim stands in view,
Feeding below them at his ease,
Among the leafless aspen trees.
A breathless pause; then, with firm rest
On an old log that topped the crest,
The hunters pull. The rifles crack,
And the bull throws his antlers back,
Jumps wildly to the dizzy edge
Of a steep boulder-breasted ledge,
Where wind-bared rocks showed sharp and brown,
Goes clattering, sliding, crashing down.
Far, far they traced the trail of blood,
Till in the depths of a dark wood,
Whose crowded pine boughs scarce let through
A glimpse of heaven's upper blue,
They found the great brown graceful form,
Amid the trampled snow, still warm,
While the gored wolf that lay beside,
Showed how in brave defense he died.

So fell the elk, and back again,
With meat to feed the hungry men,
The hunters toiled, and thought the road
Seemed shorter for the welcome load.
The mountain monarch's antlered head
Still guards the memory of the dead,
Showing, where glasses shine and clink,
Where thirsty miners crowd to drink,
And sodden vice and folly lurk,
The majesty of nature's work.

H. G. DULOG.

The Sportsman Tourist.

CHARLESTON TO CAPE ROMAN.

A BARREN mud flat, with standing pools of water, in and around which plover and curlew are standing and feeding. A solitary diver, softly whistling, a few rods off, high and dry, with a list to one side, a tug, on the deck of which, in various attitudes, is a group of men, sprawled out in sleep, while over and around all is a canopy of dense thick fog. At the stern, with his number eights, and about a foot of his legs projecting over the side, lying with a satchel for a pillow and the deck for a bed, was Deerslayer, dreaming of the manner in which he would seal up the ends of his legs, which he imagined were cut off, and hesitating between sealing wax and rosin as the remedy. On the port side, some six feet and a half off, humanity was stretching its length with a capacity for hominy and butter simply stupendous, and from its cavernous mouth came, ever and anon, gentle, tender murmurings, that made one think of purling rivulets in spring time, or some other time.

On the starboard side, with his genial face looking up to the skies, was our pilot and quondam host, owing to whose skill and guidance we were now tranquilly resting upon the oozy bosom of Palmetto Flat, in Bull's Bay, South Carolina, on a cold morning in mid-December, 1883.

In the boiler room was the engineer; curled up below deck in the bow was Jenkins, our colored boy, whom I would back to get into more trouble and do more things wrong in a given time than any one of his inches in the country.

Forward of the boiler and below decks, Ollie and Jack were lying spoon fashion, the first our Captain, the latter our shifting ballast, while wedged between the afterbitts and the house, with his head in a basket and his feet on the rails, was the writer. This comprised the party, and this would have been the scene presented could an observer have reached the spot on the morning of Dec. 20.

It may be wondered why we did not go into the pilot house or cabin to take our interviews with the dream god. Alas! her cabin was the hold and boiler room, her pilot house was but a sham, four feet wide by about the same in length.

No bulwarks protected her, and it were hazardous, indeed, for one to pass another on her decks without holding on to the rail that graced the house covering the boiler and engines.

She was no beauty, but well had served the purpose required of her, and had towed many hundred thousand feet of timber during the past year from its home on the Wando River down to the island where rest the bones of Osceola, whence it went to be hidden from human sight forever beneath the waves of the Atlantic that roll their surges over Charleston Bar.

It had been a long talked of and cherished plan with my partner and myself that when our works were completed we should take a trip by the inland route from Charleston up to Cape Roman and the South Santee on one of our tugs, but the larger ones drawing too much water for the passage we were compelled to fall back on the little Bull River, with the spacious accommodations described.

We had invited one of the county officers and a friend of his, who was to bring four hounds, to join us, but at 11 o'clock the night previous to our start we received word that business of importance would compel him to go to Columbia to represent his county's interests, and that neither his friend nor himself would be able to go.

We determined to go, however, and as the sun was beginning to rise over the distant sandhills, steamed away from our wharf, filled with brightest anticipations of the most glorious sport among the ducks and deer, but with a feeling of disappointment that our expected guests could not be with us.

As we entered the creek that wound its way tortuously among the marshes, we left behind us the beautiful harbor of Charleston, its forts, its beacons, and its historic and romantic interest.

Opposite the Catholic church on Sullivan Island we catch a glimpse of Fort Moultrie, under the shadow of whose walls lies a marble slab with the simple legend "Osceola, Patriot and Warrior," and next his grave a plain wooden railing incloses the spot where rest the bones of several sailors and soldiers who were sunk in their ships in the harbor during the war.

It was there that Marion, the Swamp-Fox, once held command, and there it was that General Sherman held his first commission, and on his hunting trips from that place gained such valuable knowledge of the country.

Game ahead!

Thoughts of generals, conquests, romance and beauty vanish.

The gun is seized, and, as a bunch of ducks go whizzing by, one is picked out, and with the report still goes whizzing on, leaving a very much astonished gunner; not astonished at the miss—used to that sort of thing too long—but the old gun, after years of steady use, had gone back on me and flew open. This was a cheerful prospect for my partner, who was not used to my Lefevre hammerless, and had elected to use my hammer gun, as more to his taste.

Rubber bands around the barrels failed to prevent the gun opening, so it became virtually a single barrel gun, as the second barrel was almost invariably useless. The fault was afterward discovered to be caused by the wearing of the bolt.

After making three consecutive misses, flinching every time, I changed guns, and then made a twenty-five cent "pot" on shots. My record was unimproved for some time, but at last I retrieved my reputation and stopped even.

Passing Long Island and Swinton's, we at length reached Deweese's Inlet, where on a pleasant day last May Deerslayer Ollie and I caught fifty-seven splendid sheepshead in about four hours, and as two of us, at least, were novices at landing the crafty bait-stealers, we felt very proud of our record.

Saluting old Mr. Jones, whose hospitality we had enjoyed on previous trips, with three blasts of the whistle, we passed back of the island, and there I succeeded in killing a loon with my Winchester, intending to use his breast as the cover to a chair bottom; but neglecting to skin it that day, the next saw it a subject for the buzzards, and an odor pervaded the air that might have even moved a New York City Board of Health officer.

As we steamed along we started up great flocks of cormorants, or as they are here called, "nigger geese," but they were very wild, and we did not succeed in stopping any with either shot or rifle, though I wanted one for my collection and did my best to secure a specimen.

Hearing a sigh from Deerslayer, and inquiring the cause, it seemed that his fingers were cut at every discharge of the gun, and were fast swelling out of shape, for as his avoirdupois is something over two hundred and eighty, with fingers in proportion, there was not a superabundance of room between guard and flesh.

With fingers lame and bleeding, and a gun that opened continually, poor Deerslayer was becoming rapidly discouraged, and as all the ducks we saw were so wild that they speedily put as much space between themselves and the tug as was possible, it began to dawn on us that our duck supper would be more a matter of fancy than reality.

After a discussion between the engineer and captain as to the proper channel to select of the many that opened to view, one was chosen which the captain had tried before and knew to have sufficient water, although the distance was greater than by one that was much less crooked, but in which, on a shrinking tide, we would be more than liable to be stranded on an oyster bank.

Trying an occasional shot with the rifle at great blue herons, or "Po' Joes," as the darkies call them, taking snap shots at helldivers as they ducked from sight, occasionally getting one as it rose from the water, watching the buzzards as they rose and circled above the distant land, and with a thorough enjoyment of our position, but not of our luck, we wound our way through the narrow channel, now and then meeting great lumbering-looking sloops, loaded almost to the guards with rice going to the Charleston market, the boats propelled along with poles when the wind was ahead and the course too narrow to tack.

After an hour more we reached the upper end of Capers Island, and on the wharf found Mr. Magwood, who had invited us to be his guests.

Dropping anchor in the stream we went ashore in one of our small boats and received a most hearty welcome.

Learning that we had brought no dogs, he dispatched one of his servants to the mainland to borrow two of Mr. Whiteside's hounds, in order that we might have a run on Capers the next morning.

The house where we were entertained was on an oyster reef with marsh land around it, the inlet from the sea on one side, and a deep creek separating it from Capers on the other, while a walk elevated on short piles led to the wharf.

The house itself consisted of two rooms with a half-loft overhead. In one room a table and some stools comprised the furniture, and a broad fire-place, in which fat pine knots were blazing, added a cheerful aspect to the whole. The other contained a bed and a stand.

This house was used by the men engaged in planting and watching the oyster beds belonging to Mr. Magwood.

After a hearty lunch, in which roast oysters, fresh from their beds, played the principal part, I crossed the inlet to Bulls Island with Mr. M.'s brother, who makes his home there and attends to the stock and superintends the business of getting out palmetto logs, making them into rafts and shipping them to Charleston, which destination they reach by poling and drifting with the tides, it sometimes taking ten days or more to make the trip.

I went to Bull's for a still-hunt, having been told that there were plenty of deer and that they were very seldom hunted. Having never been on the island before I knew nothing of the lay of the land, but first tried a hammock (a word whose spelling has been discussed in FOREST AND STREAM, I think). Although sign was plenty and the ground carefully gone over, nothing was started, and a ridge was explored with the result of starting up a wild sow with a litter of pigs, which ran off with grunts and squeals, but the old lady, with a bristling back and a regular whistle, charged with fire in her eye, and reminded me very much of a similar charge made on me by an old bear, whose cub I had killed, in the Adirondacks. The Magwood brothers have a large number of hogs that run semi-wild, and I was uncertain whether this was a wild one or one of theirs, so held my fire, mentally resolving that if the sow came any nearer than a sapling about twenty feet off, to let the Winchester talk, for both gentlemen had cautioned me not to let either boars or sows come too near, as they were often very dangerous when startled, and only the week before two men had been treed for over an hour by an enraged boar. As if warned by intuition, she stopped as her nose reached the sapling, just as my finger was pressing the trigger, and with a snort tore off through the bushes at a great rate, leaving me somewhat relieved, as I had come for venison, not pork.

A heavy wind springing up, and as the creeping vines, the brush and saw palmetto was almost impenetrable, I decided to return to Capers and hunt there with the dogs and reserve my still-hunt until I was more familiar with the island and could learn where one would be most liable to find the game.

A still-hunt in a Southern jungle is vastly different from one in our Adirondack forests, for the thickest cedar swamp cannot compare with the density of some of the thickets I tried and which were a perfect net work of perplexities, where sound would have to avail more than sight, but having been told that the deer resorted to them during the heat of the day, and that when "jumped" sought the more open land, or the sandhills, I resolved to get them out if there were any there.

After tumbles innumerable, hopeless tangles with vines and creepers, and having made more noise than a train of cars, and raised row enough to paralize any deer in his right senses, I made my way out and concluded that as a still-hunter in that sort of place, "Onondaga" was not a success.

Thanking Mr. Magwood for his proffered hospitality and bidding him adieu, a brisk walk of some four miles brought me to the inlet where a couple of shots from the rifle brought a boat from the other shore, where boiling coffee and steaming oysters awaited me.

After a short game of "draw" we all sought sleep, and some found it, as the rolling thunders of heavy rest proclaimed, that two at least, had ears unmoved by sound.

For medicinal purposes Deeslayer had placed in his satchel a bottle of gin, and before going to rest thought he would take a "wee sma' drop," but hard was the luck, for the cork had come out and his extra trousers held in solution a quart of the choicest Holland, and he was left the choice of chewing a piece of his breeches or sleeping without his toddy.

At early dawn the next day we were all assigned stands on Capers Island, by universal vote giving Deerslayer what was thought to be the best, for be it known that he had earned the illustrious title by five years' hunting, and as yet had never had a shot at a deer, but with a true hunter's patience said his turn must come in time.

The weather was cold and dry and but one hound was to be had, the other having slipped his collar and tried a lone hunt of his own on the mainland the night before.

Our drive was not a success, for after spending six hours without a deer being seen, we returned to the oyster house

and prepared for an early morning start for the South Santee River.

During the afternoon and early evening a few sheldrakes and divers were killed, but not a single good duck was killed. While sitting in a bateau and trying to drift within gunshot of a bunch of scaup ducks, a killdee plover lit on the seat of the boat within five feet of me, and without fear, after cocking his head and eyeing me as much as to say, "You look like a man, but you must be a stump," began to preen his feathers, but a wink of the eye or an involuntary move of the hand sent him circling round the boat, but even then he did not seem in the least frightened, and essayed to alight twice or three times afterward.

Leaving Capers Island, we steamed along without incident back of Bull's Island and out into Bull's Bay.

There was not a breath of air stirring, so we tried to take a short cut across the flats, as we had a good tide to give plenty of water under our keel.

All went well until we were within a mile of completing the crossing, when a sudden lurch to one side, a scraping below, and a sudden stop showed we were aground, and so hard and fast, too, that no amount of backing or kedging availed us, and we had no choice left but to wait for the next high tide, which would be at midnight.

To pass away the time the bateaux were rowed to the nearest islands and the decoys set out, but not a duck came near them, and a pair of curlew and three oyster catchers was the result of the afternoon's shooting.

A little after sunset Mr. Magwood filled his Jack with light wood knots, and stowing away a bag of the same in the bateau, invited me to try an hour or two graining for trout and bass, as Bull's Bay is fairly teeming with both. It was my first experience with the grains, but I was fairly successful, as but six or seven were missed of the thirty odd that I struck at. The smoke from the Jack made my eyes smart and run torrents of tears, until a faint breeze bore the smoke to leeward, but of the other effects it produced it is enough to say that when we reached Cape Roman light, having floated the tug off the flat at high water, the light-house keeper thought I was the negro servant, and ordered me to bring in an armful of wood for the fire. When I looked in the glass I was not surprised at his mistake, for a sootier-looking individual never walked than the one who had spent three hours behind a light-wood jack that night.

The keeper's apologies were profuse, but no offense could possibly have been taken, for the hue was Ethiopian.

We reached the lighthouse at about 1:30 A. M., and were most hospitably received by the second assistant keeper, Nelson, a Swede by birth, the other keepers being on watch or asleep. We were soon asleep in his quarters, but at 4:30 were roused up, and found a heaping dish of fried bass and trout, boiled potatoes and steaming coffee ready on the table.

Half an hour later we were all on the way to our blinds; McPherson, a tawny-haired Scot, as guide to Deerslayer and Jack, Magwood and Walker following them, while Nelson acted as my guide and adviser.

Landing in the mud and both boots remaining fast, the natural result was an overthrow, so Nelson packed me ashore on his back and then returned and pulled out the rubber boots which had remained behind, standing like forlorn sentinels amid a waste of ooze.

The weather was too fine and the ducks must have been in the rice fields, for the total bag of the whole party was one cormorant, four divers, two shelldrakes and a pair of avocets, the last falling to my lot.

The supply of wood being short, it was decided to return across Bull's Bay that night and hunt deer on Bull's Island next morning, so despite the warning of the keepers, we made a start at 10 o'clock that night, Mr. Magwood acting as pilot, for none of the party knew the course save him. Everything was lovely until high tide, and we were congratulating ourselves that the worst was over, when with a bump we stopped, and there we stuck. We backed, and we poled, and we kedged; we put Deerslayer and Jack on the bow, then they moved to the stern. All hands were put in the boats except the engineer and Ollie. It was no use. We were doomed to spend another twelve hours on the bank, and to cap the climax, a thick, heavy fog set in, and blotted out every landmark.

We made the best of the inevitable, and after drawing the fires, each sought a place for sleep. No watch was needed, for by the time the fires were drawn, the water was less than two feet deep alongside, and two hours more we knew would leave us high and dry, and high and dry we were; when, crawling from between the afterbitts at dawn, the scene presented itself to me that I have tried to describe at the opening of this article.

A few yells and whoops brought every one to a realizing sense of where they were. Deerslayer examined his legs and was immeasurably relieved to find they did not need sealing-wax. Steve, the engineer, ceased waging a war, in dreams, with bursting boilers and dire collisions.

Jack had no time to rake in the pot on the royal flush he held, nor was Ollie carried down with the mat he was sinking on the bar.

Walters moaned at the thought of the feast before him when the Onondaga cry tore him from his first juicy mouthful.

Magwood's dream must have been of making a double, for he first exclaimed, "I have 'em both!"

All were stiff and sore and damp, and as an invigorator we all took a good swallow of tomato catsup, there being nothing stronger on board except the above-mentioned pants of Deerslayer.

Breakfast was cooked over a fire made in the fishing jack, and then Mr. Magwood and I took a row off in the fog to get our bearings, while the engineer made steam to be all ready for a start when the tide would be high enough to float us.

By good luck Mr. Magwood found one of the stakes marking the channel, and with a pocket compass we got the direction of the tug and then returned, and three of the party amused themselves with penny ante poker until the tug had floated almost clear of the bottom, when the three heavy weights got in one of the boats, and after some backing and starting the Bull's River was once more headed in her proper course.

The delay in starting caused a fearful reduction in our supply of fuel, and we only reached Bull's Island by sacrificing every box, board and movable piece of wood on board, the bunker planks and even the stools being given up, and the three boats in tow were turned loose, each with an occupant, when half a mile from the landing, which was reached with barely steam enough to turn the screw over.

After a dinner at Mr. Magwood's house we were all given stands on the road, and two darkies and a dog were sent into the hammock to drive.

Mr. Magwood had the first shot, but did not kill, and then it was that Deerslayer covered himself with glory, killing a magnificent buck in splendid style with never a quake of buck fever, and although the deer was on a keen run he stopped dead in his tracks at over fifty yards.

I saw a large doe, but she was too far off for buckshot, and I had put the Winchester aside by request, as it was feared it might carry too far, and possibly wound a driver.

We all congratulated Deerslayer, of course, and as I had killed the most deer of any one in the party, to me was given the task of decorating him a "Knight of the Forest," in true Southern style, and an Indian in his war paint would have turned green with envy could he have seen his gory ornamentation after he had been duly sworn in.

A good wash, a hearty meal, a chat around the blazing fire and then what a glorious sleep we had in the first bed we had occupied in nearly a week.

The next morning a cart carried the deer to the inlet, which place we reached on foot and found the tug ready, with steam up, awaiting us, as she had preceded us to Capers Island the night before.

A hearty shake of the hand all around, a few coins of the bird of freedom to the drivers and darkies, and we were homeward bound, with only pleasant memories of the manner in which we had been entertained by the Messrs. Magwood, and the kind reception given us at Cape Roman Light by Chief Robinson and his two assistants, McLellan and Nelson, all of whom did everything in their power to add to our comfort and enjoyment.

We reached Sullivan's Island too late for me to catch the last boat to the city, so bidding good-bye to Deerslayer the trip was made in one of our yawls propelled by four lusty pair of arms, and as the negro melodies from the rowers' voices floated out over the waters under the starlight, so soothing was the music I dropped asleep.

When I awoke we were at the market wharf, and a few hours later I was speeding northward to receive my Christmas greeting beneath the snow-clad hills of ONONDAGA.

MAY PORT, Fla., February, 1884.

WHERE THE BUNG TREE GROWS.

[CONCLUDED FROM PAGE 243.]

"PROFESSOR, suppose we try the dam to-day?"

"No use; plenty of fish there, but you can't catch them."

I merely nodded and blew a wreath of smoke from my pipe, and rising from my chair, shortly returned with a book of flies. The Professor winked at our host, and watched me while I selected a half dozen or so.

"Now, John, jump into that buckboard with me, and if I don't show you a mess of trout to-night that will make you green with envy, I'll own up beat."

A ride of an hour brought us to the dam. The water was pouring over it to a depth of six inches. Rather high for good fishing, thought I, but we're in for it. The water falling on the immense apron of the dam, sent the spray rising in clouds, while the pool at the foot thereof looked so inviting we could not restrain an exclamation of delight. We found a party of English fishermen already on the ground before us, who were vigorously whipping the water, but on inquiry, discovered they had not caught anything; and upon presenting ourselves armed cap-a-pie for the fray, they withdrew to watch the Yankees "yank 'em out," by they didn't yank.

We found our companions at the dam a party of jolly good fellows, and passed a most delightful day in their company, but we, none of us, caught any fish. I say none, I must demur from that remark, all but myself had withdrawn in disgust, to a little country store near by, and were regaling themselves on crackers and cheese, while I sat on a large rock near the pool smoking. A small boy, the ubiquitous small boy, with pole to which the bark yet adhered, the proverbial small boy, with bare feet, one suspender, and a cotton line, crept along the slippery apron of the dam, crept along, with a fat grasshopper for bait, and looked exultingly across at me, and in less than a half minute he had a whopper upon the apron. The fish dropped off the hook just as he got him up, and then began a struggle on the slippery apron, pitch and toss; first the boy would have the best of it, then the trout, and finally, after a hard fight, the boy fell flat on his face, in a vain endeavor to crush his adversary, coming near going over the edge into the pool as he did so, but the trout was one too many for him, and shooting to one side escaped. The boy was wet, of course, from head to foot, and looked both disappointed and crestfallen as he met my gaze. I beckoned to him and he came around to where I sat, "'Twas too bad, bub, wasn't it?" I questioned him, while he examined my rod, line, and flies, in amazement. Finally, after preventing him with two or three flies and some hooks, he became very confidential, told me he had played "hookey" from school that day, and was afraid his "dad" would flog him if he went home, especially as he had no fish; "but," says he, "if you give me half what you ketch I'll show you where you can get—oh, lots."

I could eulogize that boy, but I won't. I could have hugged him then and there, but I didn't. I gave him a quarter, divided my lunch with him, and he let me into a secret. Let a boy alone for finding out where the big trout rendezvous. "Mister, do you see that alder bush over there 'tother side o' the dam, where the water is still and quiet like? Well, right in there is a spring hole, you can't see it now for it's all covered up by the water flowin' over the dam, but when the water is drawed down you kin; now you jest creep round there with me and I'll show 'em to you, more'n a bushel," and sure enough there they were, as I found upon investigation. While my companions were munching their crackers and cheese in the little grocery I amused myself and delighted the small boy by taking out from there about thirty of as handsome trout as I ever saw taken from one pool. The boy went on his way rejoicing over his luck and the prospect of appeasing the wrath of a stern parent, and I strolled up to the store to witness the discomfiture of my companions. I can't make the Professor believe but those fish were bought and *cached* expressly for this occasion.

The Professor made a discovery of a wonderful "fungus" growth encircling a tree in the forest; hear him:

"Yes, I was following up a small stream, which enters the main stream, just below the wash out, when above the noise of the water, I heard a peculiar sound—now pitched on a high treble, now in the middle octave, again basso profundo, what could it be? My cogitations as to its cause were soon brought to a termination, as I discovered the most wonderful growth of fungus on a tree over head. Stepping forward to more clearly observe this marvel of the wilderness, the noise before mentioned grew decidedly louder, and I could see immense numbers of flies buzzing around it; but, gentlemen, those were not flies, they were real old-fashioned bald hornets. I made tracks out of there, just about as fast as my legs could carry me—why if that swarm had taken after me I'd never reached home alive." And he wouldn't, for we afterward together inspected the hornets' nest at a safe distance, and it was a most wonderful curiosity, and big as a clothes hamper.

Berry's was some ten miles from where we were stopping, and consisted of a one-story cabin, weather-beaten and forlorn, like its owner; but he and his wife were good-hearted people, who lived in this isolated spot, eking out a scanty living for themselves. We knew the accommodations were very primitive and the capacity of the house such that we need not build our expectations too high. Still, we concluded to take things as we found them, and this is how we found them. On our arrival at the Berry mansion, we rapped on the small red front door for admission, but getting no response we concluded nobody was at home. Going back of the house, we found evidences of feminine occupancy in the shape of several Berry pies, which had but recently been placed outside, on a covered shelf, to cool, and whose warmth showed a recent proximity to the oven and a comparatively recent proximity of the cook. We still further investigated and discovered a can of milk in the spring, whose icy coldness had been communicated to it by a long immersion, and as they evidently expected company we thought we would register, so John made his mark on one of the pies and I followed suit; the milk helped wash it down. The pie was good and so was the milk, and when we stopped registering we had absorbed half a pie and a quart of milk.

Shortly a dog made his appearance; he approached us, scented around, acted in a familiar manner toward John's fish-basket, got a kick from the Professor, who don't like dogs, and finally made friends through the medium of a piece of imported bologna brought with us. We strolled around in front of the house where our horse was tied; we smoked, we whistled, told stories, sung songs, and suddenly the door opened and a frightened apparition in red calico appeared standing therein; she evidently came in through one of the rear windows, and had "fixed up" for the occasion.

"Good afternoon, mam, can you accommodate us over night?"

"Wall, yis, if you'll be civil."

"Well, mem, we'll try to be," and the Professor's face wore its most winning smile.

"Wall, then, if you kin put up with what we kin give you, you kin stay an' welcome."

Our room was furnished with a husk bed on which the few martyrs who visited that region might seek repose, and an hour-glass pillow. I designate it an hour-glass pillow because of its shape when in use, and because I counted the hours while using it. The bed had not been occupied since the last time the room was cleaned, and the two were evidently both accomplished at the same remote period.

The room was tenanted by wasps, they were there in colonies. Now if there is anything I do absolutely detest it is a wasp. Wasps! Horrors! I went to bed that night with such a crawling sense of nervousness as I never before experienced, and as I hope may never experience again. Cold chills crept up and down my back like a man with the ague, the Professor was snoring by my side, and I was waiting, waiting for what? Waiting for one of the varmints to drop from the ceiling on to my pillow. I had not long to wait, for a sharp tap on my pillow near my left ear, accompanied with an angry buzz, gave token that my cherished expectations were realized, and I waited in agony for the piercing of the epidermis, which I felt assured must speedily follow. The perspiration was oozing out from top to toe, and the tortures of suspense was only aggravated by the pertinacity of the Professor's attempts to sound double G. Each second was magnified into moments, and the attempts to reach the bottom of the sonorous gamut ended in a howl and a kick of the bed clothes which sent them flying over the footboard of the bed, and the Professor sprang on the floor, leaping clear of his bed fellow. While the Professor was executing a double shuffle, I lit the candle, and we began an onslaught on the wasps, burned them out, smoked them out, and we crushed them till we crushed them out.

A hearty meal the evening before retiring, of fried salt pork, had made my throat dry as a nutmeg grater, but I forgot my thirst in my dread of the wasps. Now the wasps having been exterminated, I began to feel a return of it, and I suddenly discovered that I wanted a drink. I had noticed a pail of water sitting on a chair near our bedroom door, just before retiring, and hanging on the wall just above it a tin dipper. I stood the intolerable thirst as long as I could, consideration for John kept me from rising for fear of disturbing him, but now I rose very quietly, creeping out of bed as softly as a mouse, refraining from lighting a match, lest I disturb the Berrys, whose sonorous breathing greeted my ear as I opened the door leading into their apartment. The pail of water sat on a chair to the right of the door, and of course I could put my hand right on it; passing through the door and turning to the right I groped along, 'twas pitch dark. Strange, surely the pail sat just about here, and the dipper hung right here. I placed my hands on the wall, as I thus soliloquized, and felt for the dipper. My hand came in contact with something of a metallic nature, and the next instant Mrs. Berry's big bread pan came thundering down. Rolling to the middle of the apartment it began the most infernal waltz; round and round, and round and round on the hard board flooring in the stillness of the night it spun, giving out a peculiar tinny roar, now soft, now loud, as it turned from edge to edge; round and round, as though some demon of the night was urging it on faster and faster apparently, until it began to wobble. A titter from a woman and loud guffaw from a man proceeded from some undistinguishable quarter from out the Cimmerian darkness, startled me, and caused me to realize the ludicrous position I was in, while the man's voice directed me to the left of the door for the drink I sought.

The fishing we had on the morrow made amends for all the tribulations of the night preceding, and we had such sport as I never had before, and took back a beautiful display of trout.

This ended our fishing, and our return to the land of civilization was uneventful. To all those ardent followers of the rod, who love sport for sport's sake, I cordially recommend a trip to the forests and streams of the land where the "bung" tree grows.

C. A. M.

KENTUCKY.—Mill Springs, April 21.—Birds wintered well, and a favorable nesting season is all that is necessary to an abundant crop of game next fall. Young squirrels are ready for the table.—KENTUCKIAN.

Natural History.

APPLICATION OF TRINOMIAL NOMENCLATURE TO ZOOLOGY.

BY DR. ELLIOTT COUES.

[Spoken before the National Academy of Sciences at the stated session held in Washington, April 15-18, 1884, and stenographically reported by C. D. Gedney of the U. S. Coast Survey.]

Mr. President and Gentlemen of the Academy:

I have no formal paper to present to-day* on the subject of the Application of Trinomial Nomenclature to Zoology; but speaking off-hand, I wish to offer a few remarks upon a subject at the present time attracting much attention—upon a matter which has come up within the last few years, and which bids fair to effect a very decided change in our system of naming objects in biology. In former years I have not thought it necessary to bring the matter to the notice of the National Academy of Sciences, because it had not then assumed a status or position which appeared to warrant such a course. Now, however, it seems probable that a decided innovation upon a system of nomenclature which has been in vogue for a century and a quarter is likely to be made, at least in one department of zoology. The question is, therefore, whether that innovation is desirable or not—whether the change is to be accepted or rejected; and, if accepted, how far it is likely to be applicable to other departments of zoology, as well as to ornithology.

As is well known to you all, since Linnæus established a binomial system of nomenclature in which each organism should be known by two terms, generic and specific—since 1758, when that system was first consistently and systematically applied to zoology, there has been until the last few years no formal or decided change in that Linnæan method; it has become ingrained in the study of biology, and is, in a sense, supposed to be essential to a methodic system of zoology. But it will be remembered that in the long period which has ensued since the time of which I speak, the idea of what constitutes a species in zoology, and, I may add, in botany, has radically and entirely changed. It seems probable, therefore, that a system of nomenclature perfectly adequate and applicable to a former status of zoological thought, may become, in the course of time, inapplicable to the later stage of science. And such appears to be the case. In former years, a species was supposed to be a more or less distinct creation. It was, moreover, supposed to be possible to say of a given organism whether it was or was not specifically distinct from another given organism. At the present day, largely through the influence of the Darwinian Theory of Evolution, which has become established within the last quarter of a century, we know that one animal may not be specifically distinct from another, and yet be sufficiently different to require recognition in some manner, which a system of nomenclature, to be valid and adequate, must provide for. The question is, therefore, how shall we recognize it? That is a subject which has long occupied the attention of zoologists, and they have been working up to the present state of trinomialism by virtue of what may be termed subterfuges. That is to say, a given organism not sufficiently distinct from another to receive a specific name, has been called a "variety," a "sub-species," a "con-species," a "geographical race," or a "climatic variation." Various terms of this sort have gradually crept into the nomenclature of zoology to indicate the still imperfectly differentiated, still incompletely segregated forms, but always with the intervention of some sign or other, as the sign "var.," or with the letters of the alphabet, "a," "b," "c," or with the abbreviation "subsp.," etc., intervening between the binomial name of the creature, and the varietal designation which follows; as *Turdus migratorius* for the robin, *Turdus migratorius* var. *propinquus* for its Western variety, and so on, whatever the given case may be.

This has long seemed to me an entirely unnecessary, superfluous, somewhat awkward and cumbersome method of dealing with the nomenclatural technique of our science, and it has recently come to pass that this needlessly intervening term or sign has been entirely done away with by the leading ornithologists of this country. The latest lists of our birds discard it altogether, and present a decided and radical innovation upon any binomial nomenclature, by employing the three terms consecutively without the intervention of any sign whatever, as, *Turdus migratorius propinquus*. This method, moreover, as used by competent ornithologists, has a meaning and significance of its own. It is not simply a question of recognizing any variation, any abnormality, any sport, as I may call it, any variety in the old sense of the word; for we proceed upon a perfectly definite, well-understood and recognized principle of variation, viz., variation according to conditions of physical environment, using this term in the largest sense, to cover all those exterior influences which exert a modifying influence upon animal organisms.

From our study of North American birds, which are perhaps better known than the same number of birds of any other portion of the world, we have so exactly traced their geographical variations, that we are enabled in some cases to positively foretell what will be the characteristics of a given bird in a given geographical area. In one case at least, within my knowledge, before any specimens were received, a given set of sub-specific characters were hypothetically assigned to a bird [*Junco connectens* Coues] from a particular region; and, upon receipt of specimens, the hypothetical characters of the presumed sub-species were confirmed.

Here is the definite principle and rule of action in the application of such trinomials: That the third term of the technical name is given to climatic or geographical races varying according to known conditions, as latitude, elevation, temperature, moisture and conditions of all sorts. The practice, therefore, has a logical basis, a consistent possibility of strict scientific application. It appears to me to be a simple, natural and easy way of disposing of a large number of intermediate forms which have not become specifically distinct from their respective nearest allies. It is quite true that the recognition of this result of climatic conditions is largely a matter of tact and judgment, and that it is not always possible to say whether a given organism is or is not "specifically" distinct from another.

There is in this use of trinomials, as you perceive, a principle of practicable application entirely different from the more arbitrary naming of varieties, such as sports and abnormalties. And the question is, what status is this principle likely to obtain in biology? The status that trinomialism has already acquired in ornithology is this: that it is likely in the near future to receive the sanction of the entire body of the American Ornithologists' Union, and is already in use by ornithologists almost without exception in this country. Likewise, in Europe, the trinomial system is beginning to be employed in the very stronghold of British conservatism, in the British Ornithologists' Union—one of the leading ornithologists in that country having recently published some monographs of birds, in which that system is applied. Trinomialism is known as the "American school" of ornithology, and the central idea is the "American idea" of ornithology. It is in general use in this country.

Under these circumstances, speaking as one who is largely responsible for the growth and spread of trinomial nomenclature, I have no hesitation in laying the matter before the Academy, for an expression of the views of members present, as to its applicability to other branches of biology, and to inquire whether it seems likely to become a permanent feature of biological science.

DISCUSSION.

In the discussion which followed upon this communication, Dr. Theo. Gill said that the question so well discussed by Dr. Coues was one of terminology, but not only one of terminology. It was well known to all how much these terminological appliances had accelerated and facilitated research. The views expressed were almost a necessary result of profound study of our bird fauna, and the logical application of the doctrine of evolution.

In a time when belief in the creation of animals was practically universal, the name given to any species indicated the condition of things under which an animal was supposed to have come into existence. Had the animals of this country alone been studied, we would ultimately have been led to believe in the doctrine of evolution. No one could take up the study of the birds or other animals of this country without seeing that between certain extremes, the differences are so radical that differentiation into species would be necessary. Such had been the history of ornithology. In early times we knew simply the birds of the Eastern slope. Then we named them as species with limited range of variation. Later, numbers of forms were obtained in the West, and these forms, although somewhat alike, were also differentiated as species, distinct from those found in the East, and were so named. But still later, large collections were gradually amassed from the intervening regions of the great interior, and these were elaborately studied (in collections sometimes of hundreds), and many were the Eastern and Western so-called species thereby connected. But then it became evident that something more should be done than merely lock together into one heterogeneous fold forms so different. Then it was that this trinomial system came into use as a very convenient tool for the distinction of the various intermediate forms. Ultimately a philosophy became the result of study and practice, so that now we can at once, by the inspection of a catalogue, approximately ascertain whether the forms are radically distinct, what variation existed between the extremes of form, and by the trinomial names, whether a given species was variable and whether it was manifest under a number of modifications.

In this trinomial system we have an example of a scheme by which we can become cognizant of the amount, to a certain extent, of variation in a given group. By this convenient means we are also enabled to differentiate the characters, and to give at once to the mind of the reader or student some idea of the range of characters that may be deemed to prevail in a certain group.

Turning to Dr. Coues's request for information with regard to other groups, Dr. Gill said that it was true that we have in other groups a similar applicability of these principles. A number of examples are afforded in the case of the fishes, insects and mollusks, where the naturalist is compelled to degrade some forms and admit them as simple variations and sub-species. This scheme would also come in as a convenient tool for the differentiation of recent from fossil forms, there being a number of extinct forms very much like those now existing, which are regarded by some as conspecific and by others as different, receiving different names.

Prof. Wm. H. Brewer remarked that, as a matter of convenience, this was about the only way that we could scientifically describe many varieties of cultivated plants and breeds of domesticated animals, which differ from one another much as species do, the differences, however, being less constant. Already some agricultural writers, who have knowledge of natural history, are beginning to adopt this method in the description of cultivated plants, both useful and ornamental.

Dr. Gill said in regard to this question: "We have had a condition of things which must appeal to the sense of the ludicrous. In former times there was an undivided belief in creation, and yet we had before us our domesticated animals and cultivated vegetables, exhibiting these excessive variations—so great, that if seen in nature, they would be differentiated not only into species, but different genera. Take the dog. We were told the dog was a species—by some said to be created for the use of man. What is the dog? It is not a species in any sense of the word; it is simply a conjugation of forms, derivatives from a number of wild species. The dog is not a species; it is the result under cultivation and domestication of the off-spring of half a dozen different species. It is a composite which itself shows the processes of development in a marked degree, so that we have in what is popularly known as the dog, a combination of species and even genera."

Dr. Coues said it gave him great pleasure to note the extent of the indorsement given to this system; but that he had expected that some one would have put forward the objections which might be raised. As none appeared to be forthcoming, he would venture to state some of them himself. The purpose of the trinomial system, the Doctor continued, is an obvious one, yet that system is so sharp a tool that without great care in handling, one is apt to cut his fingers with it. It is of such pliability and elasticity, and lends itself so readily to little things, that in naming forms, one is tempted to push discriminations beyond reasonable and due bounds. It gives one an opportunity—even a temptation—to enter into faunal catalogues and lists of animals an almost indefinite number of very slightly differentiated forms in any department of zoology—forms which perhaps only the eye trained in that special line is able to satisfactorily discriminate. We therefore have in our lists a number of so-called geographic and climatic races which no one but their discoverer or describer is able to recognize or appreciate. This is the real difficulty—the real objection to the system—its abuse in the hands of immature specialists. Dr. Coues said with some emphasis, that since he had ventured to bring the matter to the attention of the Academy, he would not conclude without adding the word of caution, that the trinomial system must not be pushed too far; otherwise, almost immediately, our catalogues would be insufferably overburdened with nominal sub-species, too slightly differentiated to require any formal recognition by name.

[NOTE.—In the business meeting of the Academy, which ensued after the public session, Dr. Coues introduced a resolution, which was referred to the Council, that a committee of five be appointed to investigate the subject of zoological nomenclature, with reference to the establishment of a more uniform system.]

*April 18.

DEER IN THE ADIRONDACKS.

BY C. H. MERRIAM, M.D.

[From advance sheets of the Transactions of the Linnean Society of New York.]

Cariacus Virginianus (Bodd.) Gray.

COMMON DEER; VIRGINIA DEER; RED DEER; WHITE-TAILED DEER.

Antlers.

THE branching and gracefully curved antlers which adorn the heads of the bucks, and contribute so largely to the elegant appearance of the animal, are shed and renewed every year. Their growth is so rapid that the full size is usually reached in about three months, and they fall off about four months afterward. They are first seen with us, as a rule, about the middle of May, appearing as soft, dark-colored and rapidly-elongating vascular excrescences. They harden from below upward, and by the time the growth is complete all but the tips is well ossified. The soft, skin-like material, called the velvet, with which they are covered, now begins to peel off in irregular strips and shreds, and by the early part or middle of September the horns are generally clean. The velvet does not come away of itself, but is rubbed and scraped off against shrubs and small trees, as if the antlers itched at the period of maturity. The Hon. Judge Caton, of Ottawa, Ill., whose facilities for observation in this field have rarely been equalled, makes the following statement, which will, by many, be received with surprise: "The evidence, derived from a very great multitude of observations, made through a course of years, is conclusive that nature prompts the animal to denude its antlers of their covering, at a certain period of its growth, while yet the blood has as free access to that covering as it ever had."*

Seasonal Changes in Pelage.

Descriptions of the pelages of our mammals do not fall within the scope of the present work; but the seasonal changes in the coat of the deer have so much to do with its life history that a brief glance at the distinctive features of these changes is necessary. Our deer shed their coats twice each year, in June and September; and, from the general appearance of the pelage, are said to be in the red coat in summer, and in the blue or gray coat during the rest of the year. The gray is merely the blue after it has become old and worn, for in maturing it loses the handsome blue appearance that characterizes the first few weeks of its growth. These seasonal changes are not confined to color alone, for there is an equally radical difference in the length and texture of the hair. In summer it is fine and short, and lacks the wavy look that is always noticeable at other times. In winter it is long and coarse, has a crinkled appearance, and the individual hairs are so large and light that the animal will float in water.†

Judge Caton, whose spacious deer parks and carefully recorded observations have contributed so largely to our knowledge of this species, has published the most accurate, detailed and complete account of the changes of pelage, that has ever appeared in print. From his extended remarks upon this subject I quote the following brief passages: "The change from the summer to the winter coat is gradual, the new displacing the old by dislodging the hairs promiscuously, till they become so thin that the new coat is seen through the old. This is not simultaneous over the whole animal, for the neck and shoulders may be clothed entirely with the new dress, while the old still prevails on the thighs and rump; or the winter coat may have replaced the old on the back, while the belly still shows only the summer pelage. When the winter has replaced the summer garb, the hairs are short, fine and soft; but they rapidly grow in length and diameter, and undergo the changes of color peculiar to the species. At first they lie down smoothly, but presently the diameter becomes so great that they force each other up to a more vertical position, or at right angles to the skin. As the diameters increase, the cavities within enlarge and become filled with a very light pith, and they become brittle and lose their elasticity, so that the integrity of the walls is destroyed when sharply bent, and they remain in the given position."‡

The exact period of shedding and of renewal of the coat varies somewhat from year to year; and it does not always take place at the same time in all the deer of the region, during the same season. It evidently depends in great measure, if not wholly, upon the condition of the animal at the time of the moult, and this is determined mainly by the way the deer wintered. After severe winters many are poor and ill-conditioned, and they do not put on the red coat till late in June, or even till the first of July—the blue being correspondingly delayed. If, on the other hand, the winter has been a mild one, and the supply of beechnuts large, the deer have probably wintered well, and come out fat and healthy in the spring. In this case they shed the old gray coats early, and the red may be seen covering a large part of the animal by the middle of June, or even earlier. These deer assume the blue coat very early, and the change may be well advanced by the last of August.

Deer rut in November, the season commonly extending from the latter part of October till the first week in December. As this period approaches, the necks of the bucks become enormously enlarged,‖ and their whole demeanor is changed. Instead of treading cautiously through the forest they now rush wildly about, tracking the does by the scent; and when two or more bucks meet, fierce conflicts ensue.

In these engagements their antlers sometimes become interlocked, so that the combatants cannot free themselves, and both most inevitably perish. My father has a set of locked horns that were found, with the carcasses attached, frozen in the ice on Pine Creek, in Lewis county, several winters

*The Antelope and Deer of America. By John Dean Caton, LL. D., 1877, p. 152.

†It must not be forgotten, however, that deer are commonly poor in summer and fat in autumn and early winter. Hence, the later in the season the more nearly will the specific gravity of the animal approach that of water. Consequently, a much smaller amount of buoyant material will suffice to float the animal in October and November than in July, August and September.

‡Antelope and Deer of America, pp. 129-7.

‖As early as the last week in October I measured the neck of a buck that was 30 inches (762mm.) in circumference, only 10 inches behind the ears. The maximum development is attained about the middle of November.

ago. The body of the larger buck was in fair condition, while that of the smaller was much emaciated, showing that the larger and more powerful had succeeded in forcing his adversary's head to one side so that he could browse a little.

Audubon and Bachman state that they once saw three pairs of horns thus interlocked. What a wretched trio this must have been, slowly starving in the midst of plenty!

At this season the bucks not only fight among themselves, but occasionally attack man, and more than one unfortunate person has been gored to death by them. In battle they make use of their horns and also of their forefect, whose sharp hoofs are capable of inflicting terrible wounds. I was once sitting quietly on a log in a deer park when a buck approached, and, making a sudden spring, dealt me such a powerful blow on the head, with the hoofs of his forefeet, as to render me unconscious. No sooner was I thrown upon the ground than the vicious beast sprang upon me, and would doubtless have killed me outright had it not been for the intervention of a man who rushed at him with a club and finally drove him off. Both my father and myself have been knocked flat upon the ground by being struck in the abdomen by the forefeet of a very harmless-looking doe.

As a rule, two fawns are born at a time, one being the exception. Most of them are brought forth in May, a few being dropped as early as the latter part of April, while others are postponed until the first week in June. They are at first spotted, the spots usually remaining about four months and disappearing in September, when both old and young change their coats. Before the moult takes place they may be fairly regarded as one of the most beautiful of North American mammals, and their graceful and sprightly movements cannot fail to elicit admiration.

The clear white spots are set in a ground of rich bay, and the contrast is heightened, to use the language of Judge Caton, by the animal's "exceedingly bright eye, erect attitude, elastic movement, and vivacious appearance. * * * The highest perfection of graceful motion is seen in the fawn of but a month or two old, after it has commenced following its mother through the grounds. It is naturally very timid, and is alarmed at the sight of man, and when it sees its dam go boldly up to him and take food from his hand it manifests both apprehension and surprise, and sometimes something akin to displeasure. I have seen one standing a few rods away, face me boldly and stamp his little foot, in a fierce and threatening way, as if he would say, 'If you hurt my mother I will avenge the insult on the spot.' Ordinarily it will stand with its head elevated to the utmost; its ears erect and projecting somewhat forward; its eyes flashing, and raise one forefoot and suspend it for a few moments, and then trot off and around at a safe distance with a measured pace, which is not flight, and with a grace and elasticity which must be seen to be appreciated, for it quite defies verbal description. A foot is raised from the ground so quickly that you hardly see it, it seems poised in the air for an instant and is then so quietly and even tenderly dropped and again so instantly raised, that you are in doubt whether it even touched the ground, and if it did, you are sure it would not crush the violet on which it fell."§

Fawns are readily tamed, in fact become tame of themselves, if much handled, in an astonishingly short time; and I have known one to follow its keeper, and even bleat for him, when out of sight, within three or four days after its capture. At this tender age they display neither judgment nor common sense in the selection of food, devouring almost anything that fails in their way which they are able to swallow. Bits of newspapers, old rags, and pieces of boots and shoes are seized and disposed of with as much apparent eagerness as bread and butter or lily-pads; and I once saw a fawn eat a box of chewing tobacco given it by an unprincipled visitor. It died next day.

The flesh of the deer is juicy, tender, and well flavored, and is the most easily digested of meats. Its good qualities are too well known to require further comment.

The hide is put to a variety of uses, the most important, with us, being the manufacture of gloves and moccasins.

Our deer are much larger than those of the South and Southwest, adult well-conditioned bucks averaging from 200 to 225 pounds avoirdupois in weight, and exceptionally large ones being much heavier. Hence the Adirondack deer is more than double the size and weight of the same species in Florida.

I have taken great pains to ascertain, approximately, the number of deer annually slain in this Wilderness, but with indifferent success. It is a low estimate to state that from five to eight hundred have been killed here yearly for the past ten years. How much longer their numbers can withstand this enormous drain, is an open question.

On the 3d of July, 1609, Samuel de Champlain ascended the river Richelieu, and entered the lake that now bears his name. In his narrative of this memorable journey, he speaks thus of the animals found upon the island at the foot of the lake: "Here are a number of beautiful, but low islands, filled with very fine woods and prairies, a quantity of game and wild animals, such as stags, deer, fawns, roebucks, bears, and other sorts of animals that come from the mainland to the said islands. We caught a quantity of them. There is also quite a number of beavers, as well in the river as in several other streams which fall into it. These parts, though agreeable, are not inhabited by any Indians, in consequence of their wars."

Pennant says, that 25,027 hides were exported from New York and Pennsylvania in the sale of 1764. (Arctic Zoology, Vol. I, 1792, p. 33).

[TO BE CONTINUED.]

¶Documentary History of New York, Vol. III., p. 5.

BIRD ARRIVALS AT CLEVELAND, OHIO.—We are having quite a cool spring, but the birds are coming at about their usual time. Following is a list of the arrivals thus far this spring: Bluebirds, Feb. 19; robins, Feb. 24; crows, March 1; purple grackle, March 20; meadow lark, March 20; red-winged blackbird, March 22; yellow-shafted flicker, March 24; cowbirds, March 25; Wilson's snipe, March 29; woodcock, March 29; green heron, March 29; chipping sparrow, April 1; mourning dove, April 7; grassfinch, April 11; wood pewee, April 12; brown creeper, April 13; barn swallow, April 19; kingfisher, April 21; yellow-bellied woodpecker, April 23.—SRI.

BRANCHING OUT.—Readers of this journal who are going abroad will be glad to know that we have just completed arrangements to have the paper placed for sale on all railroad newsstands of Great Britain. Readers who stay home are informed that a growing subscription list and steady advertising patronage (both on a cash basis) will enable us to continue to furnish the paper at $4 per year.

Game Bag and Gun.

THE WOODCOCK.

[A paper read before the New Hampshire Fish and Game League by Dr. Wm. Jarvis.]

IN the list of birds pursued with dog and gun there is one that has a lasting claim upon the affections of the sportsmen, both on account of its beauty and the mystery that surrounds its ways. A bird of nightly wanderings, and daily rest; a bird with eyes so dark and deep that the glories of an autumnal sky and landscape are reflected in miniature from their depths; a bird with the magic power to turn a sportsman from all other feathered game if he once hears the whistle of its wings or sees its form glide stealthily down the glade. Its plumage above is mottled with rufous, slate and black, while below upon its shapely breast, there is a tinge of pink that fades toward the tail to a paler hue. Its legs are of moderate length and almost flesh-colored, while the feet have a brownish cast. Its bill is dark in color and very long, and its eyes are set near the top of its head, that it may the more safely push its earthy investigations without injury to its eyesight. Its weight is from five to eight ounces, the latter found more generally among the females. Such is the woodcock, a bird once known never to be forgotten. It has, too, a claim upon the epicure, as well as sportsmen, and from those days when the Pontine marshes furnished woodcock in such numbers that the Romans feasted off their tongues, until the present time, this bird has been regarded as one of the daintiest morsels ever tasted by mortal man.

Of woodcock we have but one variety inhabiting Eastern North America, and breeding in various sections throughout the United States, called by ornithologists *Philohela minor*, to distinguish it in a learned and scientific manner from its cousin, the woodcock of Europe, a bird differing from ours in shape of wings, in being perhaps a third larger, and in general markings. However, it is not in my province to offer an elaborate or extended article upon this bird, but merely to bring forth a few notes concerning the tribe as I have found it in New England while wandering through our glens in the early season and in autumn months, "beating" the hillsides with dog and gun. And yet the woodcock is about the same sort of a bird wherever you find it, and woodcock shooting is much the same sport throughout the length and breadth of our land. Interspersed here and there can be found many a stream trickling from among the hills and winding through the lowlands of New England, upon whose banks of deep, rich loam, woodcock love to feed, and amid whose alder-covered environs they nest and rear their broods.

Their arrival in the northern latitude varies with the season; but it is not long after the bluebirds and robins have returned, and the loam along the brooksides has been softened by the sunny days. Soon after mating, for the male bird, unlike the ruffed grouse, is satisfied with a single love, they build upon the ground their nest of leaves and twigs, not very wonderful however as specimens of bird architecture. And then the female lays her eggs, four or five in number, quite round in form, of a dull, clay color, covered with brownish spots, and in size corresponding to the pigeon's. The male bird assists in incubation, and if all goes well, soon the little family of longbills are waddling about on their slender legs, the funniest little crowd one ever sees in all the woodland. They tumble about in their efforts at locomotion like a troop of tyro acrobats, and their bills seem to be always in the way. However, they grow apace, and in about four weeks are able to fly, though they are by no means easy in their flight.

The parent birds are very solicitous of their little ones, and when mankind encroaches upon their domain, endeavor, by all the arts known to birdland, to attract attention to themselves in order to give these downy chicks a chance to hide beneath leaf and twig. They sometimes even convey their young bodily through the air to a place of safety. There is no other bird family of all our fields and forests so peculiar in their ways, none of whose ways are so hard to study, consequently none so little understood; and the reason is very plain. The woodcock does not fly about during the day for either food or pleasure, scarcely ever taking wing unless disturbed, but keeps all the day long from vulgar eyes, and when the sun has set and most good birds retire to rest starts out for its feeding grounds. And often in the gloaming of summer evenings have I seen them dart across my path like spirits, noiseless and swift, in their journeys to favorite dells. They seem to know by intuition what loam contains the fattest, sweetest worms, what bog contains the choicest loam, and by their borings leave for us, otherwise unsophisticated in woodcock logic, indications of their feeding grounds. However, I must confess that they are not wholly birds of the night, neither are their deeds evil, that they do feed while the sun is shining, though not where it shines. I know of this, for I have caught them at their borings where a dark morass was clothed with pools margined with deep, rich loam, and the alders were so thick that the sunlight could not reach the earth beneath, where, low upon the earth, all was dark and still, save the hum of insect life and the purling of the brook; and once, one hot August day, while creeping through a meadow cornfield in my efforts at stalking an upland plover which was standing alert, just outside in a short patch of clover, I found a woodcock busy at his mid-day feast, probing the rich, moist soil beneath the shadows of the tall, thick corn. I watched him some time, until either suspicious of my presence or satiated with his feast, he walked from my sight with bobbing head. It was his last feast, as I soon flushed and shot him. I have often wondered if they act the same by night as day, and what could be their ways as they feed on stormy nights beneath the cover of overhanging tree-lined banks, if they are as solemn then as when feeding in the daytime. But I have no doubt they pass many a night in revelry by the margin of some favorite pool, whose mirrored surface reflects the starlit zenith, the moon high above them for their chandelier, the wind anthems through the treetops for their music. If they do not often pass the night in high carnival why are they such quiet birds by daylight? Why are they not found running about like the lordly grouse or the upland plover? It is only one of the many mysteries that surround a tribe whose complete history is not yet written. However, in my rambling lines I must not forget the love notes of the male bird, for to do that would be to do him rank injustice. It is a sweeter song by far than that of many a famous songster, and I have no doubt sounds as sweetly to his lady bird down in the ferns beneath as did ever song of troubadour to his lady love in "ye olden times." It is during the twilight that the woodcock utters his love notes. He gives a prelude to his song upon the ground, then circles up in flight through the treetops till lost to sight. You hear his murmuring high in air, and in his downward flight you catch the full melody of his love song as he approaches the place he started from, near which without doubt his female is awaiting him. This song of the woodcock may be new to many, but it is one once listened to you will not soon forget.

Woodcock are a riddle to the sportsman who knows them best, while to those without the pale of field sports they are known only as the name is seen upon some bill of fare, or as they are brought upon the table served with the highest culinary skill. To the rustic lad and farmer upon whose land amid the swamps and glades they breed, they are unseen, unknown, or if seen, known only as mudhens or by some other low-born title, and should you inquire for woodcock you would most likely be directed to the old trees in the orchard or upon the hillside, but not often, I'll warrant, to the alder-covered lowlands, for the farmer is not so familiar with these bird tenants of his freehold as with the ruffed grouse and several others of the feathered race. There was formerly much mystery in regard to the disappearance of woodcocks during August and early September, and various have been the ideas advanced, but to go into all these theories would take too long. That they do, to a certain extent, vanish, or at all events are not to be found in any great numbers in their breeding places is well known, yet there is no black art in all this. A few remain in their old haunts, some go to the cornfields, others to the hills; in short, they simply scatter. It is the time of breaking off their family ties, for it is their moulting period, and being not pleasant to look upon, or plump of body, or smooth and glossy of feather, they have a lady's pride, and so withdraw to some private, sylvan boudoir, there to nurse their strength till nature shall have worked her course, and they may once more present themselves in all their gorgeous beauty, the sportsman's pride and glory. Summer woodcock shooting ought to be abolished for the welfare of the tribe, not that they are any easier to bag then than later on, at least I have never found them so, but that they are not in so good form for either gun or table, and furthermore, it is disastrous to the ruffed grouse, for, as the law stands in New Hampshire, many a fledgling grouse helps to fill the bag during August days, when "shooting woodcock," by men who never shoot them later and have no dogs suitable for the sport, is an excuse for being in the covers with dog and gun. The law for both birds should be the same, then, my word upon it, there would be better shooting among the hills.

It is during the cool, moonlight nights of September, that golden month of the harvest moon, that woodcocks leave their hermit life and visit the southern hillsides, sunny glades and tinted brakes, there to linger till the colder frosts shall warn them to be on their journey ere the winter snows fly among the naked trees and cover the brown ferns and meadows. How the whistle of a flushed woodcock on an autumn morning stirs one's blood! What a thrill it sends dancing along one's nerves! No other in all the list can excel it; not even the ruffed grouse of our woodland as he cleaves the low grown treetops, nor the grouse of the Western plains as he rushes from the stubble, nor the quail as he whirs from the sedge and cornfield, nor yet the snipe as he twists away upon the wind. I have shot them all in season, so write from my own experience. The woodcock, too, is unlike them in the manner of its flight. When flushed they are up and away, you may be right sure of that, but the woodcock, with all its vagaries, is almost as likely to come into one's face as to go elsewhere, yet it is no dullard, but as great a rascal as ever flushed before a gun. In fact, you can place no dependence whatever upon its flight, and that very uncertainty is, perhaps, one of the magic links which bind us to its pursuit. It will often pitch headlong at the report of the gun down into a bunch of brakes or tuft of grass, even if caught on the open hillside, thereby giving to the uninitiated the idea that it is killed or badly wounded. It often, too, rises straight from before you as though impelled by some hidden spring, then, taking in its flight a ride over the alder tops, pitches just behind, not two rods from where you flushed it. Or, if you have no dog to catch the scent, it may wait till you have passed it by, then, when your back is turned, steal away like a thief, without even a note of warning. It is truly wonderful how the woodcock directs its flight, for no matter how thick the trees and branches to mar your aim, it skillfully avoids them in its flight, and leaves you wondering how in the name of flesh and blood it ever escaped their network.

Though September brings back woodcock from their moult, yet it is when October's scenes are full upon us, and their beauty reigns not elsewhere as it does here in New Hampshire, by the dashing streams, among the woodlands and along the furrowed hillsides, that the finest woodcock shooting is enjoyed throughout New England. And what, pray you, can excel an October day, when the morning is clear and fresh, and the frost of the night before, harbinger of the woodcock's flight, whitens the fence-tops and fallen trees, and hangs sparkling and dripping from the lichen-covered tree trunks, from every leaf and twig, and the rank herbage is a mass of fretted silver; or that when the mid-day sun casts over land and water that misty veil so peculiar to autumnal months, giving to the pine and hemlock a softer hue than at any other season, and to the swamp maple and the oak a deeper tinge, especially when in contact with the golden orange of the birch and beech? Or what can surpass the setter's work, the eager, swift, yet cautious pace, the quick turn on scent of game, the poise so staunch and true, as the odor comes in warm gusts to the sensitive nostrils; or what again the active roading of the cocker spaniel and his merry yelp when the bird is flushed? Truly these are glorious days, golden links between heated summer and cold winter, and never to be forgotten scenes.

Of all who love these days the woodcocks seem to love them most and are not loth to take advantage of them amid our sunny glades and hillsides as they wing their way to southern grounds. In their autumn flights some choose the slopes covered with brakes and sapling pines, some the knolls covered with birches, others the alder patch and willow covered interval. I have found them on the highest, dryest hills, and in the lowest covers, under hemlocks, near large woods, amid the rocks on a river's bank and among the briers in the open pasture. Verily, the woodcock is a bird of strange caprice, and I well remember the antics I caught one at one autumn day some thirteen years ago, when, with a friend, I was beating a high hilltop for ruffed grouse. Our setter came to a point toward a clump of pines and we expected to hear the rush of the startled grouse, but not a sound. We peered beneath the trees, and there, upon the carpet of pine needles, saw a woodcock strutting about like a turkey cock in miniature, with tail erect spread like a

fan, and drooping wings. He would nod his head in time to the movement of his feet, as though listening to music we could not hear. It was a scene droll, at the same time picturesque, the tall green pines above their carpeting of red brown needles, a red dog standing like a statue with outstretched neck, and glaring eye, a small, long-billed, dark-eyed, mottled bird, marching back and forth with all the pomp of a grenadier, and two sportsmen on their knees as silent spectators.

Woodcock, in their migrations south, are sure to give the best of sport, for though one shoots a favorite cover clean, two or three frosty nights will bring others to inhabit it again. But when the cold blasts of November whistle through the leafless trees, and the cold nights freeze the loam too hard for a woodcock's bill, then they bid adieu to our northern ken, and are off for a warmer clime, leaving the ruffed grouse the only game bird of our woodlands.

THE PERFORMANCE OF SHOTGUNS.

Editor Forest and Stream:

Practical men in every branch of sport, are unanimously calling for an all-around type, be it a yacht, a canoe, or a rod. While excellency of special types has been, in late years, eagerly sought and fairly attained, the all-around types have been sadly neglected, almost unthought of. In firearms, for instance, we have the far-killing 10-gauge choke-bore for waterfowl, the 12 gauge modified choke for field birds, the wonderfully fast and effective rifle repeater for deer and grizzlies. But what has yet the inventive skill of gunsmiths done to put into the hands of the woodsman a suitable weapon to meet the daily emergencies of his adventurous journey through forests and streams?

The woodsman, for safety as well as for food, wants a weapon with which he can kill anything, either fur or feather, which chance may throw across his path. With a shotgun he cannot succeed in killing large game, while a rifle will not afford him any opportunity to bag birds. To this I hear the interested manufacturer reply: "Let him take both." When the woodsman, burdened with his canoe and supplies, is carrying over the mountainous range, creeping under the fallen tree, walking knee deep in the swampy path, his muscles strained, sweating and breathless, how comforting and refreshing it should be to throw another ten pounds on the weary man's back!

A combination of the rifle and shotgun in a single, safe, effective, compact, fast-shooting and light weapon is then a desideratum; and, from the intense interest this question has raised every time it was mentioned, the gunsmith who will furnish it, I am sure, will be handsomely repaid.

While it would be unfair not to acknowledge what has already been accomplished in this way by two very meritorious productions—Mr. Shelton's auxiliary rifle and Mr. Baker's three-barrel gun (whose success should induce competition)—it is, at the same time, only justice to say that neither weapon fills the bill in such a way that no further improvement should be looked for.

The auxiliary rifle cannot be so adjusted as to be perfectly accurate, and it is obvious why. The adjusting piece is a lead collar around the rifle barrel at its muzzle end, which has to be reduced to the gauge of the gun at the head of the chamber, through which it is shoved into the gun barrel; from the head of the chamber up to the choke the bore of the gun is gradually widening, so that when this centering collar has reached its resting point it fits loose, thus causing vibrations which seriously impair the accuracy of the shooting.

After much trouble and many trials, however, by getting solder put around the muzzle end of the foul-protector which screws on this rifle, to have it fit exactly the inside of my gun's muzzle, I have succeeded in partially remedying this defect. In a gunsmith's shop at Montreal, I was shown another auxiliary, left there by a friend of mine for the object of correcting the same fault. Whether he was successful or not I am not aware.

The three-barrel gun is a very accurate, powerful and well finished weapon, each barrel, shot and rifle, doing exactly what the maker claims; but a very serious drawback to it, as far as my own experience goes, is the complication resulting from the connection of the rifle and left gun locks. "To operate the rifle hammer, cock the left hand shotgun lock, and then push forward the thumb piece A of rifle hammer, which will cause the hook C to engage with the pin E, which is attached to the tumbler of the left hand lock; then by pulling the back trigger, the rifle hammer will be caused to strike the firing pin at B and stop, thus not allowing the left hand hammer to go quite far enough to reach its firing pin. After firing the rifle, cocking the left hand hammer throws the rifle lock out of gear, then the shotgun locks are entirely independent of the rifle lock." This extract from the maker's instructions how to use his gun shows that it is altogether too complicated to be really effective, on the ground, where nine times out of ten success depends on quick action. I have always wondered why the inventor has not adopted an independent self-cocking rifle lock, with a safety catch, as that used in the hammerless? This would undoubtedly add much value to his gun.

As to its selling price, I may say also that the manufacturer is making us pay rather too high for his patent. Of two guns exactly the same grade, the double barrel he sells for $45, the treble barrel $75, making for the rifle barrel and lock alone $30, the full price of the best repeaters on the market, representing three times the labor and material and surely no less ingenuity.

Both the auxiliary and the three-barrel, and this is my capital objection, are, like all breechloaders, too slow extracting, reloading and recocking to compare in effectiveness with the repeater. They are unquestionably worthy improvements on the general gun, yet not fully what is required.

My object in writing this paper is not to detract from the real merits of these two weapons, both of which I am glad to possess and use, as the best all-around guns yet produced, I insist on their defects and insufficiency only to show the urgency of improvements, and to induce inventors to search for something still better.

The woodsman's gun must be single barrel and repeater, capable of shooting both bullet and shot—in other words, a modification of the present repeating rifle. As for details, I will mention: Barrel, cylindrical smoothbore, about .65 rifle caliber or 18 gun gauge, 27 or 28 inches long, three distinct metal cartridges, round bullet, buck shot and fine shot, lever action, acting at will as repeater or singleloader, weight 8 pounds.

The repeater is indispensable, as rarely a single shot will finish large or dangerous game, and as more than one may be shot at. The half magazine, with 5 or 6 cartridges, is quite sufficient to meet any emergency; and to avoid complication in the action, it should be used to store only bullet cartridges, the repeating being hardly required with the shot, the shot cartridges might be used by operating the gun as singleloader, while the contents of the magazine would be held in reserve.

The caliber of the barrel, $\frac{65}{100}$ inch, is a sufficient compromise of the rifle and shotgun to secure efficiency in shooting both bullet and shot. The cylinder bore is necessary to make the bullet accurate, while small-gauged guns need no choking to give hard and close shot shooting.

The round or spherical bullet dispenses with the rifling, which would make the barrel unfit to shoot shot. And it must not be forgotten that the round ball, large caliber, is the most effective form in which the same weight of lead can be cast (Van Dyke, "Still Hunter," pp. 342, 345), also that the round ball will make seventy or eighty yards or more in half the time the other does, and therefore make much less of a curve (Idem, p. 347). In fact, up to 100 and 150 yards (which are about the longest ranges a practical hunter expects to kill) the round bullet has a flatter trajectory and a greater penetration and killing power than that of any other shape, while its comparative lightness requiring less powder lessens the recoil. It would also allow making a shorter and more compact cartridge. The Indians in this country never use in their hunting any other than the round bullet.

It is useless to add that this bullet must fit exactly the bore of the barrel. I would further suggest, to secure the full propelling power through the whole length of the barrel, the insertion in the shell of a thick concave felt wad, to nest the bullet in, over the powder, this shape preventing any upsetting of the wad by the force of explosion, and thereby loss of gases.

As to the action, that of any of the leading American magazine rifles would do, with but slight alterations in size, and some improvement, perhaps, to make the singleloading more handy and quicker, the Hotchkiss being, I believe, the most perfect on this point.

The weight of the projected weapon is also a matter of importance; so telling it is on the woodsman's shoulder in a day's tramp, that any unnecessary ounces of this item should be dispensed with. What is strictly consistent with strength and steadiness only should be allowed. Owing to the comparative lightness, both in lead and powder, of the cartridge, I should think eight pounds quite enough. The actual weight of repeating rifles on the market, ranges from 8½ to 11 pounds. As the thickness of their barrel goes a great way in that weight, why not build the barrel of this with same material as the shotgun, twist or Damascus, giving much more strength to same bulk?

The above covers about all the points claimed by me at the outset for the projected weapon. Not being a specialist, I don't assume, of course, to be strictly correct on all the details; but, feeling that the idea I am making myself the humble exponent of, is, in the whole, practical and useful to the craft, I repectfully invite discussion on it by more competent men than myself, confident it will more effectively bring out the all-around gun in the best shape it can be produced.

And I trust American makers, whose rare ingenuity has so wonderfully developed excellency of firearms in a variety of styles, will soon give us the suggested weapon, with the same degree of perfection attained in others.

SOREL, P. Q., April, 1884. J. B. BROUSSEAU.

Following is the table of charges for shotguns, drawn up by Maj. H. W. Merrill:

Gauge Numbers.	Diameters of Bores.	Areas of Bores.	Ratios of Areas.	Loads Powder Nearly.	Loads of Shot Nearly
4	1.08	9137	2.45	7½d	2 7-16oz.
5	.99	7693	2.06	6 1-5d	2 1-16oz.
6	.93	6782	1.82	5½d	1⅞oz.
7	.89	6277	1.67	5d	1 13-16oz.
8	.85	5052	1.51	4½d	1½oz.
9	.82	5275	1.41	4¼d	1 7-16oz.
10	.79	4398	1.31	4d	1 5-16oz.
11	.76	4521	1 21	3⅔d	1 3-16oz.
12	.73	4176	1.12	3½d	1⅛oz.
13	.71	3936	1.06	3 1-5d	1 1-16oz.
14	.69	3736	1.00	3d	1oz.
15	.67	3516	0.94	2 4-5d	.15-16oz.
16	.65	3328	0.86	2 3-5d	.14-16oz.

NOTE.—The unit of measure is three drams of powder and one ounce of shot for a No. 14 gun. Tatham's standard shot, No. 6.

MICHIGAN NOTES.

THE duck shooting has been excellent during the last two or three weeks. The early spring shooting, however, was a dead failure. Those who started to meet the first flights and shoot over air holes while the ice was solid, were woefully disappointed. One well-known shot, who made the arduous trip upon the ice from New Baltimore to the house of the Lake St. Clair Fishing and Shooting Club, averaged one-quarter of a duck a day. He was gone twelve days, and all told, in the twelve days, he killed three ducks. He believes firmly in the saying that spring duck shooting is indeed a lottery. Just now the shooting is at its best. Not many redheads have been killed, but the bluebills have been killed by the thousands. And they are hard to dispose of—the dead ones, I mean—for who likes spring ducks? Bah! I don't. Tough, thin, fishy, not any in mine, thank you, I'll wait till October.

The shooting at the St. Clair flats during the last ten days has been especially fine. So, also, it has been along the Lake Erie marshes. I can but think that the good results of prohibiting battery shooting are now being reaped in the increased numbers of ducks.

As yet snipe have been found in no great numbers, although bags of from eight to fifteen have been made just outside the city limits. Should we soon have a warm rain the birds will come in greater numbers.

Messrs. Harrington & Richardson are to be congratulated upon having secured the services of Mr. John E. Long, who now travels in the interests of their excellent gun. I know of no one better fitted to represent such a worthy arm. John E. (I hate to call a gentleman Johnny) has the enthusiasm we all like to see; a long experience in fire-arms such as few can boast of, and he is moreover as complete a sportsmen as ever trod a field of Michigan in quest of grouse, or quail, or snipe.

Quail wintered nicely notwithstanding a long, severe winter. I have heard of none that were frozen. An old farmer a few miles out tells me of a lively bevy that by some wonderful chance escaped the hordes of hunters who beat the fields about Detroit incessantly. May that bevy live long and prosper and multiply. DELTA.

DETROIT, Mich., April 26.

LIFE SAVING CREW GUNNERS.

Editor Forest and Stream:

It is generally supposed that the crews of the different life saving stations on our coast are not allowed to be out of hailing distance from their headquarters from the 1st of September until the 1st of May, the period for which their services are engaged by the United States Government. Indeed, if I am not mistaken, there is a special rule to this effect, yet many of the members of these crews, especially those on the New Jersey coast, spend almost the entire portion of the day at a great distance from the station houses behind their decoys, with their guns at same point or in some cove during the ducking season.

Some years ago $40 per month from the 1st of November until the 1st of April was the amount paid each member of the crew, while the captain drew more from the Government. The monthly salary paid them now has since been raised to $45 per month, and again to $50, and the commandant's $75. While many lives have been saved by this branch of the Government service, complaint has been raised this season that should a vessel run ashore during daylight it would be difficult at many points to get the crews quickly together in order to render prompt assistance; indeed one instance has lately occurred where a schooner, in broad daylight, in entering one of the important inlets of the New Jersey coast went aground owing to poor pilotage, not one of the life saving crew being on hand to do the work as was wanted. After running aground, baymen, not of the life saving crew, had to be employed to aid in getting the vessel off, the crew of the station being off in the bay shooting.

Again, while those not engaged at the stations are endeavoring to eke out a livelihood during the dull season of the year, with their guns, the stationmen, well paid by the Government, occupy the best points of the ducking grounds and greatly interfere with the amateur, who visits these sections seeking a day's enjoyment. I am writing in a general way but could be more specific in relating the complaints that have reached my ears. It would seem to me that the life saving crews should be compelled to obey the rules under which they were made members of this service, and not be allowed to carry on market shooting. Their pay is good, yet when a point is occupied by a city sportsmen and his bayman, and fowl are flying, these station men push directly in alongside of them, throw out their decoys, and claim a part of the shooting or else go somewhere directly to leeward and ruin the sport for both parties. ARTICHOKE.

CONCERNING ROBINS.

Editor Forest and Stream:

In your issue of March 13, "A. T. S." writes that he used the following language to a Floridian who had been guilty of shooting robins: "Fortunate for you, sir, that you live in the South; if you were seen in the North with that bag of song birds in your possession you would be lynched, and your carcass given to the crows." The indignation of "A. T. S." was just, but if it be true that those who shoot robins in the North are lynched, then a certain eminent man, a writer whose books most of us love, is in great danger. Mr. John Burroughs lives, I believe, on the banks of the Hudson, near New York City, and yet Mr. Burroughs, in a charming sketch published in *Scribner's Monthly* for December, 1880, unblushingly states that he hunted robins. Says Mr. Burroughs: "In the afternoon, remembering the robins, and that robins are game when one's larder is low, I set out alone for the pine bottoms, a mile or more distant." In literary matters Mr. Burroughs is quite an authority, and if we allow also that he is to be heard on the question of what is and what is not lawful game, and take for true his statement "that robins are game when one's larder is low," then we must certainly acquit the Floridian; for his reply to "A. T. S." "O, them's mighty fine eating," shows that he only shot them to eat and not for the mere sport of killing.

But it is likely that Mr. Burroughs, charming writer and learned critic that he is, is not yet an authority on questions of game and shooting, and that he and the Floridian are both in the wrong. It is evident to me that if Mr. Burroughs is a sportsman at all he is remarkable both for want of success and for strict truthfulness. In the sketch above mentioned, after stating that one of his companions was "an old ducker," he says of himself: "For my part I had never killed a duck—except with an ax—nor have I yet." Now would any sportsman kill a duck with an ax? Perhaps "his larder was low," but even then would any sportsman make the damaging confession against himself that he had never killed a duck in any other way? However, the object of this communication is not to settle the status of Mr. Burroughs as a sportsman, but to call the attention of "A. T. S." to the fact that, as you, Mr. Editor stated, the Floridians are not the only people guilty of the offense of which he complains. In the case of Mr. Burroughs the offense is somewhat aggravated by the fact that the robin has been to him a source of much inspiration, the title to one of his earliest books being "Wake Robin."

Let no one think that I wish any of the missionaries of whom "A. T. S." speaks, sent to correct Mr. Burroughs from his error of robin hunting, still less that I have called attention to this matter in order to have him lynched. In his favor it can be said that his hunting does but little hurt to game or birds of any kind, and I doubt if even the robins would wish it prohibited.

Unlike most sportsmen he does not measure the success of his hunting by the amount of animal life destroyed. Going to hunt robins and finding none, he comes back satisfied, because he had seen a wild turkey. "I found no robins," says he, "but went back satisfied with having seen the turkey, and having had an experience that I knew would stir up the envy and disgust of my companions." To show how little dependent upon the mere shooting is his enjoyment of the hunt, read the following from the same sketch:

"The ducks flew quite briskly that night; I could hear the whistle of their wings as I stood upon the shore indulging myself in listening. The ear loves a good field as well as the eye, and the night is the best time to listen, to put your ear to nature's keyhole and see what the whisperings and the preparations mean. I overheard some muskrats engage in a very gentle and affectionate jabber beneath a rude pier of brush and earth upon which I was standing. The old, old story was evidently being rehearsed under there, but the occasional splashing of the ice-cold water made it seem like very chilling business; still we all know it is not."

During a three days' stay they bagged but one duck, yet Mr. Burroughs seems to have counted it a successful hunt. "With our one duck, but with many pleasant remembrances we returned to Washington that afternoon."

Happy Mr. Burroughs! we could better lynch a better sportsman. J. E. RIDDICK.

GAINESVILLE, Ark., April 17.

LONG ISLAND GAME PROTECTION.

FROM Mr. George W. Whitaker, the game protector for the district of the Long Island counties, we have received a copy of the following circular, which is self-explanatory:

SOUTHAMPTON, April 18, 1884.

To the South Side Sportsmen's Club of Long Island, the Game and Fish Protective Association of Richmond County, the Staten Island Gun Club, the Fountain Gun Club, the Washington Gun Club, the Long Island Shooting Club, the Long Island Forester Club, the Prospect Gun Club, the Garden City Gun Club, the Coney Island Rod and Gun Club, and the Glenmore Rod and Gun Club:

I have, upon inquiry, been given the names of the above clubs, and I appeal to them to render me, the undersigned, State Game and Fish Protector of the First District, comprising Suffolk, Kings, Queens and Richmond counties, their assistance.

The district is too extensive for a Game Protector to personally act as a game keeper in any one locality, but he can supervise the whole district, which is what, I suppose, his appointment means.

What he requires is a detective. He can from time to time obtain and furnish such information to a detective as will enable him to obtain evidence sufficient for him to prosecute, whereas the Protector, being personally known, could not obtain such evidence.

The Brooklyn Gun Club has already voted a sum of $25 to be used for this purpose, and others have promised assistance.

What is desired is, that some persons be named to receive the money, not only from any club, but also from sportsmen generally who may wish to contribute for such a purpose, the receivers to have full power to employ and pay such a detective.

In such case it is confidently believed that such assistance rendered the Game Protector will enable him to put a stop to the snaring and trapping of quail and partridge, and other breaches of the law. I would suggest that Mr. Francis Endicott, the president of the Richmond Game and Fish Protective Association, and Mr. Gustave Walter, of the Brooklyn Gun Club, act as receivers of any such subscription, trusting that these gentlemen will consent to act as such receivers, and thereby render the community of sportsmen a further obligation by being the means of the further preservation of game.

I will at an early date personally see or communicate by letter with the officers of each club. I will also see Messrs. Walter and Endicott, and will insert an article in the FOREST AND STREAM, the result of my applications.

GEO. W. WHITAKER,
State Game Protector of Kings, Queens, Suffolk and Richmond Counties.

MAJOR JOSEPH VERITY.

SOME OF HIS SPORTING ADVENTURES, AS MODESTLY SET FORTH BY HIS OWN HAND.

Chapter IX.

I BELIEVE that I promised, long ago, to tell of a rather remarkable shot I once made, and I will not longer defer it. The shot was only remarkable because it was delivered at just the right instant, and that by it I secured more animals than I saw at this time, or intended to get. It happened in this wise:

I was still hunting on the first snow, which that season fell late for Adironda, it being then about the middle of September. I had tracked a fine buck, as I knew by the size of his footprints, only about twenty miles one morning, when I came upon him lying down to rest under a great hemlock. He was one of the largest I ever saw, and I stood a moment admiring his graceful pose and noble proportions before I should send the leaden messenger of death to lay him low, and must confess that I hesitated to speed it on its murderous errand. What sportsman worthy of the name has not at times, even in the ardor of the chase, had an almost overpowering softness of heart come upon him, a pity for the poor hunted object of his pursuit, a questioning of his conscience as to what right he has to take the life of a creature vastly his superior in innocence and harmlessness? Thus for a short space I stood, almost wishing that the buck were not so entirely at my mercy; but there were short commons in camp, and I had the butt of my rifle almost at my shoulder when somehow my attention was drawn to the great hemlock by a slight stir of a branch. Looking closer I saw an enormous panther crouching there, just ready for a spring upon the deer lying all unconscious of the two-fold danger lurking so near him. Now I saw the way out of my shedding the blood of the buck. How many of us are willing enough to see another commit, without lifting a hand to prevent, an act of cruelty we shrink from doing ourselves, and then holding ourselves conscience-free?

As the panther, assured of his aim, sprang out of the screen of evergreen branches in a great curve, I fired at his heart, and he fell upon the deer, crushing him beneath his weight, and rending the remaining life out of him in his terrible death-throes. I rushed forward to give the panther a finishing shot, but it was not needed, for the first had done its work completly, and the giant cat lay dead stretched upon his intended prey. As I stood looking with some pride upon my handsome morning's work, my attention was called to a violent commotion in the undergrowth a little beyond, and going to see the cause of it, I found it to be a fine doe, whose back had been broken by the same bullet which killed the panther. Dispatching her with my knife, and turning her over to disembowel her, I found a grouse that, having burrowed in the snow, had been killed by the doe in her floundcrings, and presently I stumbled over a hare that had been frightened to death by the noise, and the bloody scene which had been so suddenly enacted before him.

Now, of course all this, except the killing of the panther and the subsequent death of the buck, was purely fortuitous, and I claim no credit but for the well timed shot, yet I think it has seldom happened that one shot has brought one so much game, large and small, as did this.

This mention of deer reminds me that the salt lake of which I have told, is, or was, a great resort for these animals, its shores affording them an immense lick, and I have seen these shores so crowded by them that there was not room for another to stand, and many were pushed into the water, and would have been drowned (as there was no room for them to land), but for the extreme density of the saline fluid, upon which they were buoyed so lightly that no more than their legs and bellies were wet. Here were chances for such murderous pot-shots, as would delight the bowels of some who now resort to Adironda for what they call sport. But such a shot I was never guilty of, nor would I permit my companions to be, even were they so disposed.

A few words more concerning fishing. I was always satisfied that fish are not attracted to artificial flies by hunger or by mistaking them for any winged things which they ever feed upon, but only by curiosity or rage at beholding such palpable shams offered them. To further strengthen my conviction—which we are always fonder of fortifying than of weakening—once when the lake of the singing fishes was just frozen enough to bear my weight, and the ice was transparent as the limpid water, I tied a gaudy fly upon a length of gut without a hook, and going out upon the lake cast it with no great skill—for I never sought to acquire that art—not many yards from me. Then, bump! as I anticipated, came a great singing fish against the ice beneath with such force that he was quite stunned, and so remained till I chopped him out with my hatchet, which I had brought, expecting such use for it. I took many more so, and in so doing had sport which gratified then my experimental mood, and afterward my stomach, for these fish were excellent eating. Now and then where the ice was thinnest, and an uncommonly large and vigorous, curious or enraged fish dashed at the fly, he would burst quite through the film of congealed water and fall on top of it.

Now let me ask the intelligent reader if it is reasonable to suppose that any fish could be so silly as to expect to see any fly that he had ever been accustomed to feed upon, flitting over the frozen surface of his native waters, or be fooled by the cunningest imitation of such insects at this season?

As I threw my fish upon the ice till I had done fishing, the first caught were frozen stiff by that time. That night in camp I was almost shocked when I was awakened by sweet strains of music arising from the bucket of water in which the benumbed aquatic minstrels had been put to thaw preparatory to dressing. I was reminded of the fabulous death song of the swan, and I own that my feeling were painfully touched. But under the influence of the melody I soon fell asleep again, and in the morning the fish were all dead.

AIR RESISTANCE.

Editor Forest and Stream:

Had Mr. James Duane studied Bashforth's "On the Motion of Projectiles" as consentaneously as the importance of the subject demanded, he would not have fallen into the error he has, and discovered, apparently, a huge "mare's nest," as indicated by the following quotation from an article in your issue of August 9, "Muzzle vs. Breech": "Your correspondent 'P.' would seem to be a rifleman of great practical experience, and one whose opinions are entitled to much weight. Any error, therefore, committed by such a man is likely to do considerable harm if allowed to go unchallenged. In his interesting and otherwise instructive article of July 12, he says: 'Taking the element of velocity into account, the air resistance, proved from these experiments (the Bashforth experiments) to be the greatest between velocities from 1,100 f.s. to 1,350 f.s.'"

He then goes on to prove by Professor Bashforth himself what every casual student of that valuable work "On the Motion of Projectiles," will readily admit he does mean, and what will be admitted was my meaning, by the quotation above made, by any one reading over whatever has been written by myself on this subject. In my opinion there can be but one view of its proper construction by those well posted on the subject. In this quotation the same nomenclature has been used, as in numerous instances has been been adopted by the learned Professor himself; that is, using the term "resistance of the air" as synonymous with "co-efficients of air resistance," as will appear from the following references, among others from the above mentioned work. Page 31: "Does the resistance of the air vary as the cube of the velocity, for all practical velocities of the projectile?" etc. Page 69: "Inasmuch as the resistance of the air does not vary strictly as the cube of the velocity," etc. So also in "Reports of Experiments," etc., 1878–79, etc., page 4, he says: "If these values of K (the co-efficients of air resistance determined on) may be relied on, the resistance of the air varies as the square of the velocity for velocities 430 to 830 f.s., and as the cube of the velocity from 830 to 1,000 f.s." In his "Final Report of Experiments," 1878–80, page 4, he says: "The resistance of the air varied as the cube of the velocity for velocities between 1,000 f.s. and 830 f.s., and approximately as the square of the velocity for velocities below 830 f.s." So other quotations could be inserted were it necessary. So Major Sloden, who was his principal assistant and pupil during these experiments, in his "Principles of Gunnery," uses these terms as synonymous, page 63. So does Captain Mackinlay, in his later and equally as valuable work, "Text-Book of Gunnery, 1884," page 77.

I say in the above quotation, "The resistance of the air proved greatest," between certain velocities. Why? Evidently because between those velocities the resistance of the air varied as the cube of the velocity, whereas, at velocities above and below those velocities, it varied as the square of the velocity. As the cube of a quantity is greater than the square, my use of the term "greatest" in connection with the former term was correct. Any other construction, to me would seem absurd.

The subject of air resistance has been studied a great deal by the writer within the past few years, as the columns of the sportsmen's press bear witness; but there has been nothing written by me that, in the remotest manner, can bear the construction that a ball, for instance, at 1,000 f.s. has greater resistance in pounds avoirdupois than the same ball at 2,000 f.s., for it is very evident that, at the latter velocity, its actual resistance in pounds is eight times greater than at the former velocity.

I take it for granted Mr. James Duane has read some of the discussions, in which I have been engaged on this very subject, within the past two years, as it is observed in a late number of FOREST AND STREAM, he is now engaged in firing off at Mr T. S. Van Dyke some of the same ammunition that was used by myself within the past two years in combatting theories that appeared to me very impracticable.

"Air resistance" is irrespective of the weight of the projectile, and is expressed in pounds, avoirdupois, by the formula:

$$R = \frac{d2}{g} K \left(\frac{V}{1000}\right)^3$$

"Retardation" is very different, and varies inversely as the weight of the projectile, and is expressed in loss of velocity, in feet per second. "Retardation is negative acceleration; it is subject to the same laws, but is opposite in sign." It is expressed by the formula:

$$F = \frac{d2}{w} K \left(\frac{V}{1000}\right)^3$$

Take the 405-grain .45-caliber bullet—for 1,000 f.s. its air resistance is R=0.472lbs. avoirdupois; for 2,000 f.s. R=3.776lbs.

I am perfectly willing to leave to more competent philologists the question as to whether Prof. Bashforth and the other authorities quoted are technically right in using the term "resistance of the air" as synonymous with the "co-efficient of air resistance." His name is high in authority, whether in mathematics or literature. To him is justly due the high distinction of having first mastered the problem of "the resistance of the air to the motion of projectiles," that had occupied the study and thought of the most distinguished mathematicians and scientists of the world for nearly 200 years.

The most elaborate experiments had been made by some of the European governments with the ballistic pendulum, but without any practical result. The advent of the electric telegraph stimulated this channel of thought, and was followed by the invention of numerous chronographs, some of great merit, but none of these measured more than one interval of time. It was then that the Rev. Francis Bashforth, a clergyman of the Church of England, "chalked out" in his mind the solution of this intricate and much studied problem, and with that end in view invented his "clock chronograph," intended to measure the time of the passage of successive intervals of space by the same projectile. This was to be done by firing the projectile through a succession of wire screens placed at intervals of 25yds. and sometimes 50yds., and by having each screen connected by the electric wire with the main instrument, the exact time of the projectile passing each screen was accurately recorded upon a revolving cylinder. In this way the retardation in velocity at the time of passing each screen could be carefully and accurately ascertained. The constants thus determined, combined in the proper formula, gave numerical values for the co-efficients of air resistance, which, again combined in other formulæ, resulted in the formation of tables by which, with muzzle velocities and weight of bullets known, their flight through the air could be traced with remarkable accuracy. As with all important inventions, its introduction met with difficulties. Having been, however, once tested by the British Ordnance Department, its practical applicability to the design of the inventor was fully established, and the series of experiments, under his supervision, to determine the true theory of "the resistance of the air to the motion of projectiles" were commenced, which, with the necessary calculations and delays incident to a new invention, occupied a space of sixteen years—1865–1880. Every detail of these experiments, with the formulæ used, as also the calculations in detail, were published to the world, and the criticisms of mathematicians invited. As far as my information goes, there were no adverse criticisms, but the contrary, and to-day the co-efficients of air resistance, as determined by these experiments, as well as his methods and tables for their practical application for the determination of the flight of the ball, are of recognized high authority among the scientific men of the world.

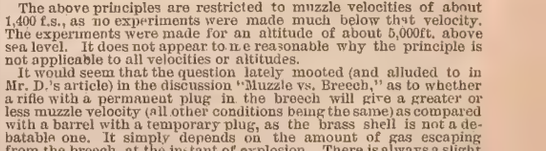
Though these experiments were made both with the spherical and ogival-headed shells of from three to nine inches diameter, they were afterward found equally applicable to those of the small arms caliber; as will be seen by the extract following from a paper by Major McClintock, Royal Artillery, and assistant superintendent of the Royal Small Arms Factory, Enfield Dock, published in the *Field* (London) Sept. 8, 1883: "The accuracy of rifle bullet trajectories, calculated by means of Prof. Bashforth's tables, has been tested by firing a large number of rounds through paper screens, placed at different points along the range. The rifle used in the experiment was the Martini-Henry (.45-cal.), and the screens were erected at intervals along a 500yds. and 1,000yds. range. The results of the experiment was most satisfactory, the mean heights of the bullet holes in the screens agreeing closely with the heights found by calculation."

The writer was the first, as far as my information extends, to call attention in an American journal to the importance of the results of these experiments, some two years since, with an expression of belief, from his own experiments, of their applicability to the smaller calibers, conclusions proven conclusively by the above extract, which bears the impress of the British Ordnance Department.

It is, indeed, a matter of surprise that Her Britannic Majesty's government, usually so prompt to recognize distinction, whether in science, literature, the arts, arms, or the church, should not have rewarded such distinguished services ere this. The value of the results of these experiments, not only in the design and manufacture of artillery and small arms, but in the use of these arms against the public enemy, can scarcely be over-estimated. It is even intimated that this distinguished professor was very inadequately paid for his time and science during the experiments.

During the time these experiments were being made, Professor Helie, a distinguished mathematician in the service of the French government, was making experiments with a view to the same end by means of the Boulengé chronograph measuring, however, only one interval of time. The results of these experiments were consequently not so satisfactory, nor did they embrace a very extended range of velocities. His experiments embraced velocities between 1,100 f.s. and 1,500 f.s. it is understood that fairly coincided with the results of the Bashforth experiments, and which for practical purposes were embodied in the formula:

$$V' = \frac{V}{1+C\,V\,X}$$



C is a constant, however, that was dependent for its value on another constant *b*, which had to be determined by experiment for each particular ball. This formula has been used a great deal by the officers of the U. S. Ordnance Department, the value of *b* having been determined for the service bullet by careful experiment. It is plain this formula is not of general application, on account of the constant *b*, being indeterminate, except by careful experiment, which few have the means of undertaking; whereas the Bashforth methods and tables are applicable for any diameter and weight of projectile and for all practical velocities, and whether for spherical or ogival-headed projectiles, and can be practically used by any one conversant with the ordinary principles of mathematics. As above related, their application has been practically tested by numerous experiments.

I was very glad to notice in the FOREST AND STREAM of Oct. 11, 1883, the report of some experiments by Mr. Duane for ascertaining rifle trajectories, and it is to be hoped, he and others will continue such experiments. It is, however, suggested that they be made over a 200yds. range; or, if a less range, that it should be some multiple of 25yds., so that the results can be compared with those that have been and may, hereafter, be made on each side of the ocean.

My object in alluding to them at this time, however, is to call his attention to a serious error, judging from my own experience, he has fallen into, as will more fully appear from the quotation following. Speaking of the target being 24ft. higher than the firing point, he says: "This will make the trajectory 2in. higher (theoretically) than for a level range, but as it would operate about equally on all bullets, it was not considered of much importance." He is in error, and it is hoped he will not consider me unnecessarily critical or a mere quibbler, in pointing it out, as it lies at the foundation of successful shooting in a mountainous country.

In hunting mountain sheep, there are times when, as was my experience last fall, the game may be 200 to 250yds. vertically, either above or below you, and in firing, the axis of the bore of the rifle may make an angle of 70°, with the horizontal plane passing through the muzzle. He, who in either case aims according to the direct distance to the game, will miss every time. So, proportionately, with smaller angles of elevation. On my first advent in mountain hunting, in 1876–77, my attention was first called to the subject, after wasting a good many excellent shots at game above and below me, and experiment, the best guide out of such difficulties, was resorted to for a solution of the difficulty. Ranges were measured on steep slopes of the mountains accessible, the vertical elevation having been measured carefully by a pocket level, and the horizontal distance with a tape line and plumb-line, the hypothenuse or direct distance having been calculated. The result was, for all practical purposes, satisfactory to myself, and appeared a correct solution of the problem. The conclusion arrived at was that in aiming at objects above or below you, be governed by the horizontal distance. For instance, if the object is 140yds. on the slope of the mountain, either above or beneath you, and 100yds. away on the horizontal, aim with the sight that will go to the spot on the level range of 100yds. In other words, the angle of elevation of the sight varies as the cosine of the angle of departure (the angle between the axis of the bore and the horizontal plane passing through the muzzle). In one of the issues of FOREST AND STREAM of the spring of 1878 will be found a short article from myself embodying this experience, accompanied by an explanatory diagram. It was headed "Problem in Mountain Hunting," but when published this was changed to "How to Aim." I have not the scrap book containing this piece, but the proper back number will contain it. Criticism was invited from those well up in the calculus, but no one appeared to have the courage to tackle a problem that combined so many elements of discord. Subsequent experiment at longer ranges and higher angles of departure, with further thought on the subject, so far confirmed me that the first solution arrived at was approximately correct (sufficiently so for the purpose of hunting) that a solution by means of the calculus has never been attempted by me.

To apply the foregoing principles to the quotation given above from Mr. Duane's article. It is understood he measured the range on the slope A C (see his diagram), and firing from A to C it is understood he means that the trajectory made by the ball above the line of sight is higher by 2in. than were the target placed 24ft. below C in the horizontal plane passing through A, and 204yds. from the latter point. He is in error there. Instead of the trajectory being higher by 2in., it will be flatter than were the range horizontal, the amount depending on the muzzle velocity and weight and caliber of bullet. In this example, however, there will be a very slight difference between the two trajectories, the co-sine of the angle of departure being very little less than the direct range, say 6in.

The above principles are restricted to muzzle velocities of about 1,400 f.s., as no experiments were made much below that velocity. The experiments were made for an altitude of about 5,000ft. above sea level. It does not appear to me reasonable why the principle is not applicable to all velocities or altitudes.

It would seem that the question lately mooted (and alluded to in Mr. D.'s article) in the discussion "Muzzle vs. Breech," as to whether a rifle with a permanent plug in the breech will give a greater or less muzzle velocity (all other conditions being the same) as compared with a barrel with a temporary plug, as the brass shell is not a debatable one. It simply depends on the amount of gas escaping from the breech, at the instant of explosion. There is always a slight escape of gas from the shell, under the most favorable circumstances. So there is always more or less escape of gas from the tube of the muzzleloaner by the raising of the hammer. Formerly each muzzle-loading rifle was provided with a small vent hole on the base of the tube to facilitate a slight escape of gas to reduce the strain on the breech. So that the relative muzzle velocities attainable by the two arms is dependent entirely on the foregoing conditions, which vary so little in each case as to make very little difference between them in this regard; like causes producing like effects.

I do not understand Major Merrill as contending that the muzzle-loader, *per se*, will give a flatter trajectory than the breechloader, but that on account of its adaptibility for increasing or decreasing the powder charge or weight of ball a flatter curve could be had when desirable for the longer ranges by increasing both the charge and ball, whereas in the breechloader you are limited to a certain amount of powder in the shell.

This discussion of the relative merits of the two systems has not been barren of results, as some seem to intimate. It has been the means of showing up some of the defects of the present American breechloader, and it is to be hoped that it will be kept up until these defects are corrected as far as is practicable. My understanding of Major Merrill's preference for the muzzleloader is that on account of certain advantages it possesses in certain details, its shooting is much steadier, the ball passing from its seat over the powder charge throughout the barrel without any obstruction, a condition that does not obtain with the breechloader, as every observant rifleman must admit. Were these, among other defects, corrected, his preferences would be for the breechloader on account of its rapidity of fire. It is to be hoped Major Merrill will continue to hammer away in the same direction until these defects are corrected, or the attempt made for their correction as far as is practicable. He will always have my hearty support and good wishes in the task.

P.

MARCH 24, 1884.

PATERSON, N. Y., April 25.—The Passaic County Fish and Game Protective Association held a regular meeting last night in the new hall in the Vandevoort Building. The first feature of interest was the announcement by the secretary that he had received a check for $100 from Mr. Jacob S. Rogers for the association. The principal feature of the organization which Mr. Rogers approved of was the intention of the association to protect song birds. The association will see to it that the State law is enforced relative to the shooting of songsters by persons who indulge in that practice principally out of sheer wantonness. The Board of Aldermen has been requested to pass an ordinance imposing a heavy fine for the killing of song birds within the city limits, and the ordinance will in all probability pass, as there is no opposition to it and a great deal may be said in its favor. Mr. Rogers's generous gift was accepted and he was tendered a vote of thanks. The constitution and by-laws of the association were then adopted and ordered printed, so that persons desiring to join the association may know its objects. In some way or other an impression has gone abroad that this association is nothing but a mere club, which will have rooms open every evening where the members can spend their evenings. Nothing is further from the intention of the association. It was formed for the purpose of protecting game, game fish and American song birds, and the by-laws provide regular machinery for the prosecution of all persons who offend against the laws. The association will hold monthly meetings and a committee was instructed to procure a room for that purpose. The counsel of the association, Senator Griggs, was requested to draw up a certificate of incorporation, which will be filed with the County Clerk and recorded, so that the association will enjoy all the privileges of incorporated bodies.

FROM A FARMER'S POINT OF VIEW.—"My Dear Sir: You are fortunate in having it in your power to go where game is. But few of us farmers can do so unless the game is near by, for we have not the means nor the time to make long and expensive trips in quest of sport. If we had the means, at the season when such a trip should be made, we have not the time to spare. A farmer's days of leisure fall in winter mostly. A day now and then in summer for fishing, and in fall for shooting, is about the extent of his pleasant weather play days. And so to no one more than the ordinary farmer, who loves field sports, is the preservation and protection of fish and game in his home streams and woods important and desirable. I, for one of them, am almost hopeless of any effective protection in my day. There is such apathy and such 'cussedness' and selfishness among those who should be most active and generous in the good work, that it is enough to dishearten the faithful few. And yet we must do what we can, and hope for the awakening of a better spirit in the masses."

THE ELASTIC HEEL-PLATE, described and illustrated in our issue of Aug. 23, 1883, has been put upon the market, and an advertisement of it will be found elsewhere. The purpose of the rubber is to serve as a recoil pad, and it does this very successfully. One of the veterans at the Parker gun works, the other day, after firing a heavily-loaded gun without and with the elastic heel-plate, compared the first recoil to the kick of a mule and the second to a blow with a soft boxing glove. The new heel-plate will add much to the pleasure of a day's shooting.

Sea and River Fishing.

OPENING OF THE MAINE SEASON.

THE opening of the season in Maine, May 1, will be propitious, though the snow still lingers on the mountains and in the woods, and the lakes and ponds are frozen over. But the rapid streams and lower rivers are clear of ice. They have been cleared earlier than usual by a great rise of water, which has been kept up by the copious rains and melting snow. Such a state of the streams is very favorable for trout. As soon as let out from their ice prison of the winter, a great abundance of food is washed within their reach, or they are permitted to visit parts of the shores in search of worms and insects where low water would never permit them to go, and hence by catching time they are well fed and fat after their winter fasting. Besides, their progress from winter quarters in the deep pools to the swift running rapids, where they delight to spend the sunny May and leafy June, is greatly facilitated by high waters. One of the best trouting spring seasons ever noted on the Richardson Lake, one of the Androscoggin chain, followed the late extra flowage of thirteen feet, put on by the Union Water Power Company, in the fall of 1881. Trout were caught near the shores where dry land existed only a year before, actually caught in the woods with their maws full of ants and wood worms.

The ice is not expected to move from the Androscoggin lakes before the 10th of May, possibly not till the 15th. Last year Richardson Lake cleared on the 12th, followed by Mooseluemaguntic the 13th, and Rangeley about the same time. Four parties of Boston merchants, six in each, will start for these lakes about as soon as the ice is out. The artists, Messrs. Griggs and Hollingsworth, will start for the Upper Dam as soon as the ice is out of Richardson Lake. At Lewiston, Maine, the usual early spring parties have their tackle all in order, and they will be followed by Portland sportsmen and parties from South Paris, Norway and Bethel. The spring trolling usually brings out some large fish—six, eight, and even ten-pound brook trout.

A strong pull is to be made for Sebago land-locked salmon this spring, in both Sebago Lake and Long Lake above. Commissioner Stanley will take his spring fishing trip to these waters this year, instead of to the Androscoggin lakes as usual. The finding of those enormous specimens of the land-locked salmon in Rodgers Brook, a tributary of Long Lake, last November, has convinced sportsmen that some noble fish exist in the Sebago waters, and a determined effort will be made to capture them with rod and reel this spring. Commissioner Stanley, who has been very successful with these fish, recommends that sportsmen give them a fair trial this year. He recommends casting the fly for them in the night as well as the daytime. It is altogether likely that success will be achieved by somebody with these beautiful fish at the end of the line. The specimen which was found stranded on the shores of Rodgers Brook last fall measured thirty eight inches in length by nine inches in depth, and weighed twenty-five pounds. The female land-locked salmon found in the same brook a few days previous, alive and on the spawning bed, was taken out and measured and returned to the water. She was exactly twice the length of a two-foot pocket rule. It will be remembered also that the detectives discovered in the cellar of a poacher, who lives on the shore of Songo River, in the fall of 1882, a land-locked salmon, which must have weighed thirty pounds. It, with several smaller specimens, had been pitched out of the Songo, the connecting river of Sebago and Long lakes, with a pitchfork. Protection, then begun in earnest, has now stopped such poaching, and hundreds of such noble fish are now alive in the Sebago waters, which had, previous to 1882, been pitched off from the spawning beds by the worthless poacher. It is believed that anglers in open season will begin to reap the benefits of such protection this spring. The Maine waters will doubtless be fished more than ever this season, but they have been better protected for the past two years, and there will be more fish for the honest angler. The non-transportation fish and game law has effectually stopped market fishing for trout and land-locked salmon in that State, and the fish are left for the angler, who is satisfied with a reasonable creel. SPECIAL.

BOSTON.

FOR NEW YORK ANGLERS.

A WORD ament some good trouting ground. At Henryville, Monroe county, Pa., on the Delaware, Lackawanna & Western Railroad, close to Stroudsburg and the Delaware Gap, are good fishing and excellent accommodations. I was there ten days ago and was surprised to see such fish. Although an invalid, unable to wade, I caught fair messes every day; but I saw catches that amazed me. Looked into one creel and saw a lot of *Salvelinus fontinalis* taken with a fly that were worth traveling to see. Weight eleven pounds; average less than four to the pound, with three fifteen-inch fish. Another mess, caught with bait, numbered sixty; weight sixteen and a half pounds. Twenty-five of the fish were over fifteen inches long. Parson Knight caught a fine mess with the fly. The place has a record of one four-and-a-half-pound trout and one four-pound trout.

The streams are the West Brodhead, the Big Brodhead, Paradise Creek, Saw Creek, the Big Bushkill and a dozen others, and are within eleven miles of the streams that flow off High Knob, at the point where Wayne, Pike and Monroe counties meet. West Brodhead and Paradise creeks have the purest spring water I ever saw. W. E. Henry, postmaster at Parkside, one-third of a mile from Henryville station, is the angler's "guide, philosopher and friend."

AMATEUR.

DOWELS AND REEL-SEATS.

Editor Forest and Stream:

I have read with much interest the discussions in your paper regarding dowel questions. I agree with Mr. Wells that dowels on a rod are not only useless but also weaken the rod. I have never built a rod with dowel pins where I have been allowed to use my own judgment, but if a customer insisted on having them I would put them on with the understanding that I did not consider the workmanship perfect and would not warrant the rod against breakage at the ferrule. If cylinder ferrules are used and fitted on over the wood without shoulder and are wrapped at the end of the ferrule with silk, there is little danger of breakage at this point.

I notice that some of your correspondents advocate swelled ferrules as preferable to cylinder ones, on account of the increased strength of the wood at the large end of the ferrule preventing the rod from breaking at this point. If some of the advocates of this principle will rise and explain, it will enlighten a rod maker, who is very much in the dark, and at present writing has no hope of ever seeing the light on this point. I claim that in order to make a fishing rod perfect it is necessary that the ferrule should be made perfectly waterproof. In order to do this a metal disc should be fastened in the inside center of outside ferrule, also metal cap on the end of the inside ferrule. I prefer to fasten them with soft solder, as it makes a perfect job, and if necessary can be removed without trouble; this prevents moisture from getting at the wood, and preserves the wood at the ferrules sound for all time.

I am very much in favor of banding the lip of the female ferrule, particularly when light ferrules are used, as it prevents the female ferrule from swaging open by careless jointing of the rod, and adds much to the finish of the ferrule.

I also think a rod should be mounted with a solid metal reel-plate, as it prevents the reel from getting stuck fast by the swelling of the wood, which is very liable to occur when reel-bands are used.

I also think that when manufacturers of rod mountings settle on some standard size of reel-seat, and reel makers make their reel bases to conform to the reel-seats, a step will be taken in the right direction. EDWARD SMITH.

PITTSFORD, Vt., April 21.

DRAINING THE ANDROSCOGGINS.

Editor Forest and Stream:

The future of the Rangeley Lakes, so far as trout fishing is concerned, is, from the present outlook, rather dubious. That remarkable species of the *Salmo* family, which has been the pride and making of the Rangeley region, is doomed to speedy extermination if the existing condition of affairs is allowed to continue. As the matter now stands it is the interests of a corporation against the fishing interests of the region; but that corporation is a wealthy one, and what can a few hotel keepers and guides accomplish against it? The habitués of this famous fishing locality are scattered throughout our broad Union, and to nearly all of them the FOREST AND STREAM comes laden with the news and doings at all the sporting localities of the known world, and to them this wail from the forests of Northern Maine should go.

The case stands about thus: A few years ago the Water Power Company, of Lewiston, on the Androscoggin River, bought or acquired the right to use the Umbagog, Welokenebacook, Molechunkamunk, Mooseluckmaguntic and Cupsuptic lakes for storage of water, and proceeded to raise the dams and overflow the banks of these lakes, spoiling the beauty of the shores by covering up the beautiful beaches and scenes of many a "noonday roast," sending the waters back into the woods and marring the view generally. This they probably had a right to do, and so far it was an offense against the eye only.

A year or two later they acquired the same rights in Rangeley Lake and raised the water as in the other lakes, but, that not sufficing, they, during the past winter, have gone to the other extreme and have drained the Rangeley Lake to such an extent as to lay bare the best spawning beds, thereby slaughtering spawn by wholesale. To accomplish this I understand they have dredged the stream at the outlet to the depth of about five feet. Yet this is not the extent of the enormity. Last summer, when the gates of Middle Dam were open and the stream below full of water and fish (a favorite resort), I am informed that the gates would be suddenly shut tight, stranding and destroying multitudes of fish at each operation.

This occurs in a State where one year ago the most stringent laws were enacted for the protection of fish, and the amount of fish each sportsman could take away was limited by law. Then, at great expense to the State, the Commissioners carry on their artificial propagation in these waters, turn their few handfuls of fry into the stream, and prosecute vigorously any offender to the extent of a fish or two, and stand idly by and witness this wholesale slaughter, without, so far as I have yet heard, any remonstrance.

Do they permit this enormity because they have not the will to stop it, or because they have not the power? If the latter, why keep up the farce of hatching houses, stringent laws, commissioners and fish wardens.

Can a water power company acquire the rights of absolute proprietorship in these lakes to the exclusion of all rights of the fishing public? is now the mooted question.

ALB. BOLEYN.

FLY-BOOKS.

Editor Forest and Stream:

Now that our pioneer, Mr. Wells, has cleared out the way, and called our attention to that "long felt want," a discussion through your columns of the advantages and disadvantages connected with our tools, I wish to direct the attention of some of our experts to the many miserable, useless fly-books, which are annually foisted on innocent novices, and which a great many who are not novices in the art of fly-fishing, are compelled perforce to use.

These abominations are of several kinds, the greatest of which is the parchment, or as it is generally made, paper book, with several thicknesses in the leaves, forming several—generally three—pockets on each page. These can only be used to carry the old style of flies, with the long, coiled snells, and were well enough in their day, when the long snells were used, and the angler was content to spend five minutes every time he changed his fly in straightening the snell. Now, however, all good flies are made with short snells, which can easily be carried at full length, in a book which will not be of inconvenient size. To keep up with the times, and provide some means of carrying the short pressed flies at full length, the manufacturers have devised a book with parchment pages, and a row of small hooks at one end, or (as some are made) at one end with a band, at the other end to slip the loop of the fly under.

These, however, do not meet the situation, for the reason that, if there are hooks at each end, the snells are of course not exactly of the right length and the flies will not stay on the hooks; and if the hooks are on one end and a band on the other, about the same difficulty is presented.

Another style which I have seen was a slight improvement on the last-named, inasmuch as three of the hooks on one end of each page were replaced by very small coil wire springs, about half an inch long, which kept the snells stretched out at full length.

As there were only about five pages in the book, however, this arrangement only allowed of fifteen flies being carried in this manner, and the modest price asked for this book was ten dollars. Now, it seems to me that a fly-book might be made which would combine cheapness with utility, and such an one I would make something as follows:

I would have the book contain about eight pages, made of some stiff material, for instance, leather stiffened with steel or brass bands along the end. Each page should have, say, six small coil wire springs on one end and a fixed hook for each spring at the other end.

This arrangement would accommodate six flies on each page, and hold them firmly in place at full length. The book would hold four dozen flies, and would also contain pockets for leaders and extra flies. This book need not be bulky, and would be about the thing in my opinion. Something of this sort may be now manufactured. If so I would like to know about it.

For my part I have adopted the plan of keeping my flies in envelopes and find it works very well. I use a book with eight compartments, and use small envelopes opening on the end, five inches long and two and one-half inches wide. These I label on the end conspicuously, putting one or two varieties in each envelope. As my flies all have short snells, they go in at full length and are always straight. This method is superior to any other in my estimation, but there are of course many who prefer to have the flies in sight, and it is for their possible benefit that I make these suggestions.

GOVERNOR.

SEATTLE, Washington Ter., April 5.

THE SIGN IS NOT RIGHT.—Mill Spring, Ky., April 21.—The oldest weather wizards have not stumbled on an adjective satisfactorily expressive of the unprecedented winter and spring of 1884 up to now, nor does the oldest manipulator of red worms recall so few opportunities to indulge deferment of a few chores to a half day's recuperation from spring fever. In fact, there have been but two or three days suggestive of an attack and the necessity of medication, and only the fortunate resident, convenient to the mouth of some of the larger tributaries to our rivers, has enjoyed a cast. Last year I began taking pike-perch the last day of February, and by this date had strung, with numerous others, six pike-perch and one pike, which aggregated fifty pounds by the scales, and without the addition of numerous odd ounces at each draft. Three times I have had a bucket of minnows caught for the next proper stage of water, and as often that proper stage was not. To-day was anxiously anticipated, as the dogwood is in bloom and the mercury soared into the 70s yesterday and the day before, but an infantile blizzard from the east last night is followed by an unceasing rain from that quarter to-day, and when the wind is from the east our ordinarily inspired weather prophets give it up. Our aquiferous apparatus has been unaccountably deranged since the snow. Some farmers have concluded that Mother Shipton's calculations should have figured out 1884.—KENTUCKIAN.

TROUTING IN WYOMING.—South Fork of Stinking Water, April 18.—Trout are very numerous in this beautiful mountain country, and yesterday I took twenty fine ones in an hour. Game is abundant also, and B. T. Rogers, better known as "Curley" Rogers, is preparing to furnish pack outfits and guide parties in the mountains. The trout average a good size and rise freely.—BILLINGS.

HENRY IRVING AS AN ANGLER.—The English *Fishing Gazette* says that Mr. Henry Irving, the actor, is an enthusiastic angler, and an accomplished artist with the fly-rod; and it is no secret that he owes much of his success on the stage to those quiet days on the trout stream, when the study of Shakespeare and the killing of trout alternately occupied his attention. Another great exponent of Shakespeare on the stage, the late Mr. Phelps, spent most of his spare time in fly-fishing for trout in the Darenth, at Farningham.

FISH PROTECTION IN NEW JERSEY.—The Governor has appointed Mr. Henry Keenan, of No. 140 Mill street, Paterson, N. J., the Fish Warden of Greenwood Lake, in place of Elias Sindle, whose term has expired. Mr. Keenan is also the Fish Warden of the Passaic County Fish and Game Protective Society, and is said to be an energetic man as well as an enthusiastic angler.

A HERMAPHRODITE SHAD.—Mr. E. G. Blackford reports that there was a shad in Fulton Market recently which was a true hermaphrodite, containing on one side an ovary and on the other a spermary, or roe and milt as they are called. The fish was sent to Professor Baird, who pronounces it to be a well-developed case of hermaphroditism.

NATIONAL ROD AND REEL ASSOCIATION.—There will be a meeting of the Association at the Metropolitan Hotel, on Tuesday, May 6, at 5 o'clock P. M. Arrangements for the next tournament will be discussed and the date fixed. Members may remit the annual dues ($3) to the secretary, Fred Mather, Cold Spring Harbor, New York.

STURGEON HOOKS.—Delaware City, Del., April 23.—*Editor Forest and Stream:* Will "Verax," or some other reader, please give exact size of hooks used for catching sturgeon with bait and line. I wish to try it on the Delaware, as no one has ever fished for them here with line and hooks.—C. VON CULIN.

Fishculture.

THE NEW YORK FISH COMMISSION.

WE have received the thirteenth report of the New York Fishery Commission, being a biennial report, transmitted to the Legislature Feb. 1, 1884. It is a very valuable one, in fact the best of the series, and shows that the Commission is an active and progressive one. It comprises 131 octavo pages, and is filled with readable matter and embellished with several new cuts. The frontispiece shows the new hatchery at Caledonia, which is a substantial building. The report covers so much ground and is so well written in every part that it is difficult to condense it or to select extracts.

Since the establishment of the Commission in 1869, there has been planted from the Caledonia station, 55,534,300 young shad, 12,519,000 lake trout, 6,909,200 brook trout, 4,499,000 rainbow trout, 45,300 hybrid trout, 2,000 Kennebeck salmon, 678,000 California salmon, 18,000 land-locked salmon, 2,480,000 whitefish, 900,000 frost fish, 34,920 black bass, 3,004 pike-perch, 2,655 yellow perch, 5,825 bullheads, 155,000 sturgeon, 93,000 eels, and 610 German carp.

From Cold Spring Harbor, in 1883, there was planted 62,000 brook trout, 600,000 whitefish, 26,200 rainbow trout, 85,000 land-locked salmon and 295,000 Penobscot salmon, the latter on account of the U. S. Fish Commission. In the work at Cold Spring Harbor the Commissioners have received valuable aid from the U. S. Commission, of which Commissioner Spencer F. Baird is the efficient head. Commissioner Baird has furnished this station with most of its spawn. He has also given it useful apparatus, and last year, during the hatching season, paid the salary of the superintendent. All the fish hatched at the station were deposited in New York waters.

The production of shad, owing to the total barring of the lower Hudson by nets, and thus preventing spawn-bearing fish from ascending to shoal water, has latterly much diminished. The Commission recommend that, in order to allow the fish to have a little show for their free passage up the river, a law be passed requiring that all nets be taken up each Saturday night, remaining up until Monday morning, which would in a measure increase the facilities for hatching this most valuable food fish. An interesting description of the hatching and work of the Commission is given under this head. Ten millions of fry should be floated yearly to keep up the market supply, and unless some means are taken by the Legislature whereby more fish may be secured for stripping, shad must cease to be an article of food for the many and take rank among those costly fish which are classed as luxuries.

Next in importance to the shad supply in the Hudson the Commission places the maintenance of the stock of salmon trout in the inland lakes. But for the stocking of the Commission during the past ten years, these waters would have been practically barren of this valuable fish, which for size and quality can claim rank next to the salmon. The salmon trout is a fish which has a fondness for deep, pure and cold water. Indeed, he will live in no other, and though his food is mainly fish, it is cleanly, and where it exists in abundance the growth is rapid. After the second year the progress is at a rate equaled by no other fresh-water fish of his quality. He is caught with sufficient facility by fair methods for reasonable market supply, bears transportation well and retains his quality, under proper conditions, a fair time after his capture. While the chief supply for the markets of the State come from the great Northwestern lakes, the liberal stocking of the lakes in New York will, in the absence of netting, soon provide an available stock from inland sources of a superior quality of fish. The supply of spawn this year is sufficient to enable the Commission to distribute double the amount of fry of previous years. A gratifying indication of the advance in public sentiment regarding fishculture is shown by the fact that, where a few years ago it was found difficult to place the fish, and the State was forced to bear the expense of transportation, now the only difficulty is to supply the demands. The efforts of the Commission to increase the supply of this fish have, in some of the larger waters, been retarded by violators of the law who, with spears or other greedy devices, destroy myriads of the salmon trout when rich with spawn and ready to contribute a thousandfold to the stock. Such action cannot be too greatly deprecated nor too severely punished. The Commission will hereafter refuse to stock any waters where the public sentiment is not honest or brave enough to protect the fish from these selfish and greedy murderers.

Of brook trout, the report says: "This peerless beauty, with his gold-flecked sides, his game qualities and his delicious flesh, ranks foremost among the fresh-water fish. This prince among the finny tribes deserves more than passing mention. Like all great luxuries, he is costly. He cannot be produced in overstock by nature, for he is the object of constant pursuit from the time he becomes a fingerling till he succumbs to the fisherman's line. Nor a prolific spawner like the hard-rayed fish, careless of his seed after it has been cast in the waters, and not scrupling to satisfy his appetite by the consumption of his own kind when other food is not at hand, the stock, in places accessible to his captors, cannot be kept up by natural means, and but for the art of pisciculture many waters in which he formerly existed in abundance would know him no longer. The process of hatching and rearing fish of the trout family is slower and more costly than that of other fishes. The stock fish must be kept and fed the year around in order to obtain the spawn. The fry, too, after hatching, must be fed, after the absorption of the yolk sac, till they are deposited in the waters they are thereafter to inhabit. The rearing of brook and salmon trout forms the larger share of the expenses of the Caledonia hatchery. The law granting the appropriation for hatching brook trout was passed in 1875, and an average of 1,000,000 fry have been hatched and distributed annually since. The result has been eminently successful."

By a clerical error the European brook trout received from Germany is spoken of as the saibling. The latter is a charr, *Salmo salvelinus*, inhabiting deep lakes only. The fish referred to were *Salmo fario*. With this correction we quote the report as follows: "Last year there were hatched at Caledonia and at Cold Spring a few thousand saibling—the brook trout of Germany. These are the same kind of fish known in England as the *Salmo fario*—a fish in its structure more nearly resembling the salmon than it does our brook trout. The scientists now call the latter charr, to distinguish it from its English and California rival. Some English writers hold that the *Salmo fario* is the better fish. Their judgment, however, is based upon comparison with American fish that have been placed in English waters, where, on account of the sluggish flow and the higher temperature, they could not reach their best development. If there is a better fish than the brook trout of the American Atlantic coast, in its native waters, it is yet to be found in depths to which the angler's hook has not penetrated. The quality of any fish is largely affected by the quality of the water it inhabits, and there is no water in the world that can excel in coolness and purity the pure crystal currents that flow oceanward from North American mountains.

The saibling at Caledonia have done well, but are not yet old enough to show of what service they may become in our waters. It is probable that the latter, being better than the water whence the stock came, the fish will be better than those in their native streams. Thus far they have shown a tendency to rapid and vigorous growth. Those at Cold Spring Harbor, from causes explained in the report of Superintendent Mather, have not done as well. The spawn were a complimentary gift to Mr. Mather from Mr. F. von Behr, of Berlin, whose writings in Europe, republished in English translations here, have been so valuable an addition to the literature of fishculture.

The rainbow trout have shown remarkable vitality and fecundity. At Caledonia, they grow more rapidly than our native brook trout in the same water. The stream that supplies this hatchery is strongly impregnated with lime. We have observed that at Cold Spring Harbor, where a few thousand were hatched last year, from spawn obtained at Caledonia, that the growth in the soft water of Long Island was much more rapid than in the hard water of Caledonia creek; the rate of growth in six months at Cold Spring being quite equal to one year's growth at Caledonia. There is a difference also in the growth of our native brook trout at the two places; the fish developing more rapidly in the soft water than in the hard; but the difference in the case of the brook trout is not as great as in the rainbow species. This tends to show that the latter will thrive much the best in soft water.

A good deal is to be learned yet respecting temperature and other local conditions affecting fish. Till the past year not enough had been done in stocking with rainbow trout to warrant a judgment of their ultimate success in waters on the Atlantic side. Their time of spawning occurring at a different season from that of the native brook trout, it would not seem to be policy to plant them in waters inhabited by that fish. The protective seasons would need to be different, and inhabiting the same waters one kind might be taken often when the other was fished for, and thus unintended violations would be liable to occur. An obstacle to their ready success in our waters presents itself in the circumstance that at the season the fry are ready to plant, all other fish are greedily feeding, and consequently a considerable share of the fry are liable to be nipped in the bud. This, however, may be avoided by providing places where the fry can be free from the presence of predatory enemies till they are able to look after their own safety.

From the circumstance that they have not been readily found always, in the second year, where the plants have been made, it has been surmised that they are a migratory fish—working their way, as soon as they attain any considerable growth, down stream toward the ocean. Their disappearance, however, may be accounted for by the other cause stated. Further experiments will be necessary to solve all the problems connected with their establishment in Eastern waters; but the promise continues to be that they will prove themselves a fish of great value in stocking large streams whose temperature is too high for brook trout. As to the quality of this fish, the Commissioners reiterate their judgment expressed in their last report, that under the same conditions of water and food, they will be found not inferior to the native brook trout.

The hybridizing of trout is much practiced at Caledonia and is claimed to produce good results. It is of doubtful utility, however, as it has been tried for years in Germany, and has not met with much favor. It will produce a larger fish than the brook trout by crossing it with the lake trout, but its habits are uncertain.

Land-locked salmon have done well in Adirondack waters, notably in Woodhull Lake, and the planting will be continued. The eggs come from the U. S. hatchery at Grand Lake Stream, Maine. This fish has been distributed with success by the Commission in Woodhull Lake, Blood River, South Lake, and in the waters of the Fulton chain. Of the first deposit in Woodhull Lake, the larger number, when their spawning season arrived, true to instinct, took advantage of the open gates to descend and spawn in the beds of the stream below. Of these a number went still further down the stream to a smaller lake several miles below, passing on their way through two intervening lakes and their connecting streams. It is thought that fish from this stock will eventually work through to Lake Ontario. The fish in Woodhull Lake in 1883 ranged from two to four pounds, a remarkable size for four years old. In the Fulton lakes they will thrive and eventually become very abundant.

No part of the work of the Commissioners has given more thoroughly satisfactory results than the distribution of black bass. This fish was originally unknown to waters other than those directly connected with the great lakes; now they are perhaps the most numerous and widely distributed of game fish. The Erie Canal was the first medium of communication between Lake Erie, the stock farm of the bass, to the interior streams. The business of increasing and multiplying their race has been attended to by the fish themselves. A dozen pairs of mature fish, protected from netting, is sufficient to lay the foundation of an imperishable colony. The "Western wide waters" at Rochester is the source of the State's supply. There are two distinct varieties of this prince of finny fellows, the small-mouth, who claims the lead in quality and who affects rock bottom, and the large-mouth, by whom a mucky or grassy bottom is preferred. To the skillful angler a rise to a fly by a black bass of any weight is not exceeded by any other sport.

The pike-perch, known to many as the wall-eyed perch, is, like the bass, a voracious but clean feeder. He takes his food alive, and consequently does not partake of tainted substances. He is a game fish, too, as many an angler knows who has had the pleasure of hooking him. As a table fish he is one of the best in fresh water. He is a rapid and hearty breeder, and needs no artificial help to sustain his stock.

The summary of work regarding the food and breeding seasons of some of the sea fishes and the artificial propagation of the oyster, by Prof. H. J. Rice, is an exceedingly valuable paper, and is illustrated with cuts of the apparatus devised by him in his experiments in breeding oysters in the Fulton Market laboratory. We would refer those interested to the report itself.

The salt-water work at Cold Spring Harbor promises to be of the greatest value, while much good work in the fresh-water department has been done, The superintendent, in his report to the Commissioners, says:

"I have a firm belief in the value of this station for any work at present done in fishculture, except shad, which requires river and not spring water, and as for the salt-water department the possibilities are beyond my calculation.

"The facilities for oyster breeding are exceptionally fine, and the place has been examined by Prof. H. J. Rice, whose valuable experiments in hatching oysters are well known, and he is of the opinion that the grounds are well adapted to oysture culture, should the Commission wish to undertake it. The oyster industry here is a large one and seed is scarce.

"There seems practically no limit to what may be done in the cultivation of salt-water fishes, except the supply of eggs. The water we have of proper density and very pure, in an unlimited quantity. Give us the eggs and we will turn out the fish."

The appendices contain encouraging letters to Supt. Green, of the Caledonia hatchery, and the record of distributions, which, if they were in the form of tables, would show to better advantage, the distribution of carp by the U. S. Fish Commission in the State, through State Commissioner Blackford, and an account of the salmon breeding establishment in Maine, followed by an article on salmon, by Walter M. Brackett.

We regard the report as not only the best one issued by this Commission, but as superior to that of any State report which we have yet seen. It shows advancement in every department and is instructive and therefore readable on every page.

AMERICAN FISHCULTURAL ASSOCIATOIN.

THE thirteenth annual meeting of the American Fishcultural Association will be held in the lecture hall of the National Museum, on Tuesday, Wednesday and Thursday, May 13, 14 and 15.

The Hon. Theodore Lyman of Massachusetts will deliver an address before the Association, and a number of important papers will be presented by prominent fishculturists and fishery experts. It is requested that members of the Association desirous of presenting communications will forward titles of their papers at once to R. Edward Earll, chairman of the Committee on Programme, Smithsonian Institution, in order that the full programme may be announced in advance.

At the time of the meeting the shad fisheries of the Potomac will be at their height, and the central station of the U. S. Fish Commission, in Washington, will be in full operation, exhibiting on a large scale the methods and apparatus now in use for hatching and distributing shad. The regents of the Smithsonian Institution have placed at the disposal of the Association the lecture hall of the National Museum, and Professor Baird has tendered the use of one of the Fish Commission steamers for an excursion to the large fishing shores of the Potomac. Those in attendance at the meeting will thus have an opportunity to observe the methods of collecting shad eggs, and transporting them to the hatching station.

The new fisheries section of the National Museum will be opened to the public during the progress of the meeting, and the Association will have the opportunity of examining the collections so successfully exhibited by our Government at the International Fisheries Exhibitions of Berlin and London.

The United States Commissioner of Fish and Fisheries has invited the Commissioners of the several States to meet in conference with him the day following the adjournment of the meeting.

This circular is sent to many persons not members of the Association, who are known to be interested in fishculture, in the hope that the occasion will induce them to attend the meeting and assist in advancing the great interests which the American Fishcultural Association was organized to promote.

The Local Executive Committee will esteem it a favor if you will at your earliest convenience inform them whether or not you will be able to attend.

MARSHALL MCDONALD,
Chairman of Local Executive Committee.

Programme.—First Day—Morning Session, 10 to 12:30.—Annual address by the president; secretary's report of last meeting; proposals for membership; reading and discussion of papers; recess. Afternoon session, 1:30 to 3:30—Election of officers for the ensuing year; reading and discussion of papers; visit so Government carp ponds. Evening session, 8—Address by the Hon. Theodore Lyman, of Massachusetts.

Second Day—Morning Session, 10 to 12:30.—Proposals for membership; reading and discussion of papers; election of members by acclamation; recess. Afternoon session, 1:30 to 3:30—Report of Treasurer of the Association; reading and discussion of papers; visit to Central Hatching Station of United States Fish Commission. In the evening, the Association will be invited to attend the formal opening of fisheries section of the United States National Museum.

Third Day—Morning Session, 10 to 12:30.—Reading and discussion of papers; adjournment. In the afternoon, the members of the Association will be invited to visit several of the larger fishing stations of the Potomac; one of the Fish Commission steamers being placed at their disposal for the purpose.

A circular has been issued to Commissioners of Fisheries, in which Prof. Spencer F. Baird says: "The Local Executive Committee is making a special effort to secure a very general attendance from all sections of the country on that occasion, and the meeting promises to be one of unusual interest. Since many of the State Fish Commissioners are members of the Association, this seems an opportune time to call a meeting of the Commissioners for the purpose of conference on matters connected with fishculture. It has been decided to hold this conference May 16, the day following the adjournment of the Fishcultural Association. Permit me to express the hope that you will find it convenient to attend the meeting."

FISHCULTURE IN COLORADO.

A FEW days ago I again visited the State fish hatchery, about eight miles down the Platte River from this city, and will report briefly to FOREST AND STREAM past progress and present condition of the establishment. The hatching house, water supply and situation have been before described, but it may be well to state briefly the work thus far accomplished. Dec. 28, 1881, the first trout spawn were received, 100,000, from Plymouth, Mass. About a week later there came another 100,000, and at the end of another week a third lot of the same number. Of these 300,000, 99¾ per cent. were successfully hatched. This result was determined by actual count of the spoiled eggs withdrawn, and is not guess work. About 285,000 of the young fry were, in the months of April, May and June, distributed to various streams of the State. In the fall of the same year specimens of them were frequently taken with the fly of from six to eight inches in length. The few thousands retained at the hatchery, having been well fed and cared for, were considerably larger, and many of them cast spawn in the ditches where confined.

The next year's spawn was not received until after the 1st of January, 1883, when 150,000 came from Plymouth, Mass. They were laid down and hatched about as well as the year before. Is is proper to state that all the spawn received from Plymouth was "eyed," had been carefully picked over before shipment, and was in first-class condition, which accounts

measurably for the exceptionally large percentage of the hatching. After the first shipment early in January, 1883, something happened to the Plymouth establishment which prevented getting any more spawn from there, and 175,000 eggs were then ordered from Cedar Rapids, Iowa, and they came, but in very bad order. The loss in hatching these was very great. Later 25,000 eggs were ordered from Caledonia Springs, New York, which came in good order and hatched well. As in the year before, most of the young fry were distributed to various streams throughout the State; only ten or twelve thousand being kept for breeding purposes.

On Nov. 15, 1883, Mr. Bogart, who has had charge of the hatchery from the beginning, began taking spawn from the fish hatched in January and February, 1882, then about twenty-one months old. He continued taking spawn from time to time up to Feb. 10, reaching about 500,000 in quantity, which, he says, might have been increased to 1,000,000. Of this spawn 50,000 were sold to a party on Gunnison River, whose hatchery failed to work. He then placed them in a spring brook, and lost them all. The other 450,000 were laid down in the hatchery from time to time, and turned out from eighty to eighty-five per cent. of fry from the gross product of spawn. They are all hatched now, and the young are in excellent condition.

The "two-year-olds" are now being marketed, and will all be killed, except a few for experiment and observation. Among them are many of two pounds weight each, and a greater number that will weigh one and a half pounds each. The great majority, however, range between half a pound and one pound in weight. These weights are not guessed at, but proved by the scales, and in the presence of myself and others. The pound and a half and two-pound fish are about twenty-two months old, and are New England brook trout. Mr. Bogart says, however, that he can pick out no less than four varieties of types among them. Next year's spawn will be taken from the fish that are now yearlings.

In the spring of 1882 there were also obtained 10,000 spawn of the California rainbow trout. They hatched well but have not grown as rapidly as the Eastern variety. The largest specimens, now a little under two years' old, probably do not exceed a pound and a quarter each. They are now spawning, and fighting viciously over their spawning beds in the common preserve of the "two-year-olds." If present care is maintained in the future, this hatchery and its preserves will furnish much valuable information relative to the growth of trout. Mr. Bogart says it is the most favorable place to hatch, and that the trout grow faster than in any other place he has ever known.

There are some carp at the hatchery in ponds provided for them, ranging up to six pounds weight, but the day being cloudy there was little chance to see them.

Half a mile further down the river is the farm of J. M. Broadwell. He has the same kind of water supply (from springs) as the State hatchery, and has entered somewhat into trout culture. He began some years ago with native brook trout, but suffered many disasters and much discouragement, chief of which was the destruction of his fish by muskrats. One spring they destroyed over 20,000 fry, and he finally killed one of the animals in the act of entering the hatching box. For some days before the droppings of muskrats had been found in the troughs along with dead fry and fragments of the same. Three or four hundred muskrats and a few minks have been killed about the State hatchery since its establishment, but the persistent use of traps and dogs prevent the pests from doing much harm. The last two years Mr. Broadwell has purchased fry from the hatchery. He is now marketing two-year-old trout at seventy-five cents per pound.

Gordon Land, a fishculturist of long experience, who has in the last few years started a number of private preserves for various parties in this State, some months ago pre-empted a small sheet of water high up on the eastern slope of the Blue River Mountains, in Summit county, this State, known as Cataract Lake. It was naturally well stocked with native trout. On the bank of the lake are springs supplying water very favorable for hatching purposes, and he has arranged properly for their use. Last season he took spawn from wild fish and in a letter recently received from him he says: "My young *S. fontinalis* have done exceedingly well; I will have a trifle over 225,000 to place in the lake as soon as it opens. There are quite a number of albinos, or white trout among them. I kept eleven young trout of last year's hatching in one of my vacant troughs where they could get no food except such minute particles as that afforded by a stream passing through a quarter inch augur hole, until they were a year old. Nine of the eleven survived, and were of perfect form; the largest one being 1⅝ inches and the smallest 1⅛ inches in length. I had at another place a few of the same age that had been regularly fed at least once each day during the same period, of which the largest weighed 7½ and the smallest a trifle over 4 ounces, actual weight, not fisherman's weight. From all of which I infer that an abundance of food has much to do with the size of trout. I can grow all the native trout in the summer that this lake will sustain and they are good enough."

W. N. B.

DENVER, Colorado, April 16.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. P. F., New York.—We suggest that you advertise the volumes of FOREST AND STREAM.

H. P. O., Boston, Mass.—It is not uncommon to see pure white puppies. As they grow older they will show other color.

J. H. M., Wooster, O.—Farrar's Rupert was by Shot (Bruce—La Reine) and out of Rhona (Ruben—Nell). Fan was by Dick and out of Fan.

SENEX, Troy, N. Y.—I have a silk fly-line which I had laid aside after oiling and has become stiff. How can I restore it to its former condition for use? Ans. We should soak it again in the same kind of oil, and then wipe it as dry as possible.

C. H., Sibley, Iowa.—I would be glad if you would inform me whether a pickerel may be correctly called a small pike? 2. Whether a pickerel is a pike? Ans. Yes, take the letter c from pickerel and you will see its derivation. 2. Yes, but in places where the "wall-eye" is called "pickerel," as in Canada, it is not. Pike is the old name for *Esox lucius*, called pickerel in New York and some other places. We are not sure whether you refer to the true pike or to the "wall-eye," or pike-perch, the names are so mixed in different localities.

WHAT THEY SAY ABOUT IT.

THE Philadelphia *Times* (April 26) says: "The average book on camping out and the rod and gun business is apt to be too enthusiastic or cranky for sober enjoyment or any real guide to the uninitiated; but a little pocket volume called 'Woodcraft,' by Nessmuk, issued by the Forest and Stream Publishing Company, New York, is as full of sense and snap and fresh air as it is of valuable and practical information. Unexperienced young men contemplating fishing or gunning excursions the coming season could not well do better than read 'Woodcraft' till the breezy spirit of the author and some of his well-told experiences had well fastened themselves in their minds.

The Boston *Courier* (April 27) recommends it as a book "to teach the traveler how to journey through the wilderness with ease."

The New York *Evening Post* says: "Those who are looking forward to an outing the coming season will find in 'Woodcraft' full directions by a veteran sportsman. It aims to reduce the annoyances of camp-life for the experienced to a minimum."

DESTITUTE FAMILIES are saddeningly plentiful; but they would be much fewer if the fathers while living had invested a few dollars in the life and accident policies of the Travelers, of Hartford, Conn.—*Adv.*

BENCH SHOWS.

May 6, 7, 8 and 9.—The Westminster Kennel Club' s Eighth Annual Bench Show, Madison Square Garden. Entries close April 21. Chas. Lincoln, Superintendent. R. C. Cornell, Secretary, 54 William street, New York.

June 10, 11, 12 and 13.—The Second Annual International Bench Show, Chicago, Ill. Mr. Charles Lincoln, Superintendent.

A. K. R.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (25 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **1213.** Volume I., bound in cloth, sent postpaid, $1.50.

NON-SPORTING DOGS.

Editor Forest and Stream:

The idea proposed by the Clovernook Kennel of a non-sporting show to be held in New York this fall, meets with my most hearty concurrence. May we not hope that non-sporting fanciers will take the idea up at once and make it a grand success. As things are, our shows are all crowded in the spring, because the sporting dogs are engaged during other parts of the year, and a more miserable time than a lot of dogs have at a show in the raw weather of our springs is hard to imagine. Boston and Cleveland were capable of killing both dogs and owners by the weather they furnished at the last shows they had. Besides, with all deference to our setter and pointer friends, we are about tired of furnishing the interest that really draws the public to a show, and then have the cream go to them, leaving us the skim milk. How well both dogs and owners will enjoy a show in the bracing weather of October. I have written most of the non-sporting fanciers I know, and all are heartily in favor of the proposal.

W. WADE.

PITTSBURGH, Pa.

AMERICAN ENGLISH BEAGLE CLUB.

Editor Forest and Stream:

I wish to say to the members of our club through your paper that it is hoped as many of them will attend the Westminster bench show as possible, for we would like to meet all interested in our little hound. I would name Wednesday, May 7, for those who will not be able to spare more than one day. It may be possible that the judging will be done then, as it has been formerly (on that day). W. H. ASHBURNER.

Editor Forest and Stream:

In accordance with a request of the president, I take this means of informing the members of the American English Beagle Club that Mr. L. D. Sloan, who has been elected by this club as judge of the beagle classes at the coming New York bench show, has not been accepted as judge by the managers of the Westminster Kennel Club show, they already having appointed Mr. Mortimer for judge of these classes. But Mr. Sloan will be permitted to judge the beagles for the special prizes offered by the American English Beagle Club only.

A. C. KRUEGER, Sec'y and Treas.

WRIGHTSVILLE, Pa., April 25, 1884.

RETRIEVERS.

Editor Forest and Stream:

Among the many attractions that the Westminster Kennel Club will offer to the public at its coming bench show, by no means the least will be the presence of a pair of very fine English retrievers, entered by Capt. McMurdo.

The importation of fine specimens of this breed is very opportune, considering the interest which is now manifested in retrievers, as shown more especially by the demand for Chesapeake Bay dogs, and as a desirable strain to cross with them the brown-coated English retriever seems unequalled. As far as winter duck and goose shooting goes, our Chesapeakes cannot be surpassed, but when it comes to general shooting, a less bulky, lighter and more elegant dog might be more desirable. The most enthusiastic admirer of the Chesapeakes (and I am one of them), must acknowledge that they are not handsome, unless we accept the matter of fact definition of beauty, that a thing is beautiful in proportion to its adaptability for performing its function or end. I do not think there is any doubt but what the English retriever and the Chesapeake are, both of them, the result of breeding for a similar purpose, and that the means taken to accomplish this purpose were about the same in both cases, *i. e.*, a crossing of the setter or spaniel, to get nose, with the Newfoundland or Labrador dog, to get the adaptability to work in the water.

As might be expected, the Chesapeake gunner cared little or nothing for the beauty of his dog, breeding simply for working quality, while the English breeders, while not neglecting useful quality, kept the looks of their dogs in view. The large landed estates that are, in England, handed down from father to son, make possible the maintenance of kennels bred on certain rules; hence such kennels as the Castle Gordon, the Clumber and Blenheim spaniels, etc. That retrievers will ever come into general use with us, in upland shooting, I very much doubt, but it is not only with quail, woodcock and grouse, that a pleasant and healthy day's recreation and rest may be had, and certainly for duck shooting a good retriever is invaluable. Nobody who has not tried it can know how the monotony of sitting in a blind on a hot day in August, with decoys set out to call the flocks of waders and plover that pass down our seaboard, is alleviated by the companionship of an intelligent retriever, to chase the cripples and bring in the dead. With such an one at heel, even the bagging of a couple of dozen of fat peep and ringnecks along the beach, or on the salt marsh, gives an enjoyment beyond the anticipation of the savory pie into which they are to be consigned. The gray squirrel knocked off the top branches of a chestnut tree with a small-bore rifle, or the rabbit whose hind leg has been crippled, and who manages to scuttle into a thick briery swamp to die a lingering death if not retrieved, will be put into the game bag with all the more satisfaction from having been brought carefully to you by your sure-nosed retriever. Some setters will do this work, but they do it under protest. I never shall forget the first beach bird I sent my old Ned (a cross between a Gordon and a native) to retrieve. He was one of the best retrievers I ever saw, and were it not for the fact that I saw he would be crippled with rheumatism, I should not have asked for a better duck dog. He went for the dead bird, a yellow leg, I believe, smelt of it, poked it over with his nose, and then turned on his back and rolled on it, just as if it were carrion. After that he would retrieve anything, from a peep to a sicke bill curlew, but he invariably would curl up his upper lip as though saying, "how nasty."

There is one reason why it may be an important matter to pick out the best strain of blood to cross with our Chesapeakes, and that is that very few kennels were preserved in their purity through the general upsetting of that part of our country during the late civil war. In looking over the breeding of almost every Chesapeake to-day it will be seen that the blood of the kennels of Dr. Keener, Messrs. Jenkins, Bidwell, Foulkes, etc., is the source from which they sprung. I do not say that the time has come yet, but come it will as sure as fate, when the curse of inbreeding will begin to crop out, in the way of runts, blinkers and gun-shy puppies, and half of them going off with distemper. I individually shall, certainly for the present, breed straight; but I must confess that in spite of the old saw, handsome is as handsome does, I should like to have my reliable Ripple a little more elegant and high bred in appearance.

I am looking forward with great interest to seeing Capt. McMurdo's dogs, and think that we ought to feel grateful to him for going to the expense and trouble of bringing them on, especially, as there being no class for them, the only reward he can get will be the knowledge of the pleasure he has given the public in exhibiting them. They are mother and daughter, of the brown, curly-coated breed, and the mother has taken four prizes in England, among them being a second at the Crystal Palace. The daughter was imported in utero, and their breeding is from King Coffee who, I believe, has carried everything before him on the bench. If any field trials for retrievers can be arranged for next autumn, I think the Captain will be there with the young dog, and I only wish I could be there to see.

MIC MAC.

BOSTON, April 28.

'WARE THE BEAGLE!

IN a late issue of FOREST AND STREAM, "Sportsman" kindly referred to me as a champion of the beagle, and so I am, in a modest way, but I do not feel as if I ought to step to the fore, as if I were the only one to sound his praise, or to advance his interests. I do wish to see this fearless little hound take his proper place at bench shows and in the estimation of dog lovers, and under the fostering care of the American English Beagle Club; I am quite sure he will, and the better he is known the more will he be appreciated, both as a companion and pet, and for field use. As a member of the club I am heartily glad that the standard has been made so absolute as to the size of this hound, and I hope judges and breeders will "govern themselves accordingly." My thirteen months old dog Guy of Warwick (whose sire is my friend Elmore's Ringwood) is just within the limit of fifteen inches high, and is a fine specimen of his type, but my preference and pride is the diminutive "basket" beagle, and my advice to breeders and fanciers is to breed to this type, and to keep the strain pure. We do not want hairiers in our beagle kennels.

I hope that the English correspondent of FOREST AND STREAM, "Lillibulero," who writes so pleasantly of kennel matters in dear old England, will soon give us on this side of the water some "notes" upon the beagle, where he is native "and to the manner born." We need a little fresh blood here, so that it is blue enough. I hold the FOREST AND STREAM also to a long-standing promise to give an article on the beagle, and it is high time that we had some illustration of this breed in its pages.

I here repeat the suggestion I made last year, that as soon as practicable the A. E. B. C. promote the holding of a bench show limited to hounds, preference being given, of course, to its foster pet, the English beagle.

It is to be hoped that the exhibit of beagles at the approaching show in New York may be large and indicative of what we may expect in the future.

With hearty good will, I propose the health of the "coming" dog—the English beagle.

O. W. R.

THE NEW YORK DOG SHOW.

FOLLOWING is a list of the special prizes offered for the eighth annual bench show of the Westminster Kennel Club, to be held in Madison Square Garden next week:

The Eastern Field Trials Club offer a club medal, suitably engraved, for the best pointer dog, pointer bitch. English setter dog, English setter bitch, Irish setter dog, Irish setter bitch, and black and tan setter that have been placed at any of the field trials that have been held in America.

The Westminster Kennel Club offer a club medal, suitably engraved, for the best kennels of large-sized pointers, small-sized pointers, English setters, Irish setters and black and tan setters. Each kennel to consist of not less than five. Also to the best black English setter, best setter or pointer that retrieves in the most stylish and obedient manner, fastest greyhound, to be decided by heats, highest leaping greyhound, best Clumber spaniel, best basket beagle under 12 inches, best champion bull bitch, best three bulldogs and best trick dog, best collection of five pugs owned by one exhibitor, $10.

Members of the club offer for the best pointer dog the get of Sensation, $15; for the best bitch, $10; best five St. Bernards, rough or smooth coated, $25. Silver cup, value $100, for best fox-terrier, dog or bitch, in the show. Silver cup, value $100, for best pair of bulldogs. $10 cash or silver medal for best collie dog, sired by champion Robin Adair or Tweed II. $10 cash for best collie bitch, sired by champion Robin Adair or Tweed II. $25 cash for best-looking setter dog or bitch, placed in field trial in England or America, the Westminster Kennel Club to be allowed to compete. $25 cash for best-looking pointer, dog or bitch, placed in field trial in America or England, the Westminster Kennel Club to be allowed to compete. Large framed photograph from Mr. J. M. Tracy's picture, "The Eastern Field Trials," for best pair of pointers. Large framed photograph from Mr. J. M. Tracy's picture of "Dog Talk," for best brace of English setters. Silver medal for best brace of Irish setter puppies of same litter. For best English setter dog or bitch, over twelve and under eighteen months old, a valuable solid silver flask, suitably engraved. $20 cash for the best trained setter or pointer, which has been trained by the methods laid down in "Training vs. Breaking." $10 cash for the best fox-terrier got by the stud dogs or bred in the kennel of the Messrs. Rutherford. $10 cash for the best deerhound dog, $10 cash for the best deerhound bitch. Silver medal for the best pointer puppy, the get of Bang Bang. Silver medal for the best pointer dog under 12 months old, sired by Sensation. Silver medal for the best white poodle. $10, for the best cocker spaniel dog, to be judged by the standard of the American Cocker Spaniel Club, open to members only; $10 for the best cocker spaniel bitch, same conditions. Cup for the best kennel of greyhounds, three or more. Cup for the best stud pointer to be shown with one or more of his get. Cup for the second best beagle, owned by a member or the American English Beagle Club. Cup for the best pointer the get of Bow or Faust. Five dollars for the fastest greyhound. Five dollars for the highest leaping greyhound. Cup for the best pointer sired by Beaufort. Collar for the best Yorkshire terrier under 9 months old. Silver medal for the setter or pointer puppy best trained to retrieve. Cup for the best imported English setter under 12 months old.

The Medford Fancy Goods Company offer a double leash for the best brace of greyhounds, a collar and harness for the best pug dog, and suitable collars for the best pointer dog, pointer bitch, English setter, Irish setter, greyhound dog, greyhound bitch St. Bernard, mastiff, bulldog and collie.

The AmericanEnglish Beagle Club offer a silver medal, suitably engraved, for the best beagle hound, dog, bitch or puppy, and a silver cup for the best beagle, dog, bitch or puppy, owned by a member of the club.

SWEEPSTAKE PRIZES.

There will be a sweepstake for large pointer dogs, English setter dogs and Irish setter dogs, entry fee $10, all the money in each class to the winner, with a piece of plate added by the club. The winner to be known as the champion of America; the Westminster Kennel Club to be permitted to compete. Entries close at 12 o'clock noon, on Tuesday, May 6.

ENGLISH KENNEL NOTES.

THE pitiful union of "green pleasure and gray grief" was revealed with painful irony on the 28th of March, when the Prince of Wales stood on the course watching the Grand National Steeplechase, with the unopened telegram in his hand that announced his brother's death.

It was quite lately chronicled as a serious item of news that Her Majesty's favorite dog Noble was ill, and that Mr. Rotherham, the well-known veterinary surgeon, had been summoned to the palace to prescribe for his ailment, a serious one—old age.

Noble is a collie from Lord Charles Ennes-Ker's kennel. Her Majesty has also a pair of handsome Skye terriers and several other dogs.

When the Prince of Wales is at home a couple of collies frolic on the staircase of Marlborough House, and are watched with celestial disdain by the Princess's Chinese dog who, poking his head through the bannisters, "glowers, amazed and curious, as the mirth and fun grow fast and furious."

Because the Princess has one, Mrs. De Tomkyns, Smythe and Robinsonne are ransacking zoological collections for copies, but they are not good companions, like their infamous countrymen, their ways are "vain and peculiar," and they are snappish. In appearance they resemble a red Pomeranian, and have, like all Chinese dogs, black tongues.

The Prince has a valuable kennel of various breeds at Sandringham. The kennel is considered one of the sights of the place, and I was told by one of the Prince's guests that what interested him most was a litter of bassets, the offspring, he was told, of a couple given to his royal highness by Mr. Krehl, who I believe has a small pack of them for hare hunting.

I regret to record the death of a very promising young collie, Malcolm III., who won first prize at the last Birmingham show. He was exhibited at the Crystal Palace in January, but met a better class of dogs, and was also not in good condition. During the show he was missed from the bench, and his disappearance has never been satisfactorily explained. On his return home he showed signs of distemper, and eventually succumbed to its fatal course.

This fell disease is making such sad havoc in our kennels, and one is likely to become confused in the multitude of specifics advertised and recommended. I cannot believe that a panacea exists, though many treatments are heralded forth to the public with this pretension. Rockham's balls (of Norwich) are used by many breeders for their convenience; but even more handy is the powder sold in little bottles by the Duke of Rutland's huntsman, Frank Gillard. The bottle is sold with a small gilt spoon which holds a dose. You have only to open the dog's mouth and throw it in. Then there are Hedge's (of Dale End, Birmingham) distemper balls. These last are much in favor with some fanciers, who are never without them and promptly administer one on the slightest suspicion.

I could mention many similar patent medicines (Spratt's blue powders, Hind's pills, etc., etc.) each regarded as infallible by their believers, but I am assured on the authority of a very eminent breeder of several varieties that no one remedy can be of use for the multifarious forms of distemper. The last time I was down South an old-fashioned dealer gravely informed me that the proper cure for distemper was "keep the dog alive, when he gets weak pour beef tea into him, and arrowroot and port wine, brandy and eggs, but keep him alive. Give him also anything that will encourage the discharge, or as he phrased it, "Blow it out of his head." If he cough much, resort to opium, and when he is convalescent, quinine and cod liver oil, sunshine and happiness.

I find a note in my common-place book about cod liver oil capsules, this is a simple method of administering a dirty medicine. I will try to find out where they can be had.

On my book-shelf stand most of the published works on the dog, the oldest and newest, but the book that is the dirtiest, raggedest, must thumb-marked, and dog-eared, is Dalziels "Diseases of the Dog." That is my sheet anchor. It is a small one-shilling, one-volume affair treating all the ills that dog-flesh is heir to, in a plain, intelligible form, to be understood of the multitude, no erudite diagnoses nor complex remedies, no mystification of strange signs that only a chemist can unravel.

Instead of signs, I read grains, ounces, drams, teaspoons and dessert-spoonfuls so that I can take up my own set of kennel scales and weigh out the prescriptions myself. This is a great saving in a big kennel, because the ingredients cost nothing, it is the mixing the apothecary charges for. My advice is the reverse of that given in "Madame Favart," I "always mix" my own recipes.

Our M. F. H. tells me his huntsman always sews up the distemper patients in flannel, leaving the head, etc., free. He says the warmth and comfort this infuses are more than half the battle.

Here is a remedy given to me by a French sportsman: "Keep the dog warm, and plenty of black coffee; if there should be much discharge from eyes and nose, pass a seton, if, on the contrary, the illness falls on the lungs, clip the hair off on each side of the chest and rub gently with one drop of creton oil and seven drops of common oil. Give strengthening food, but above all, keep him warm." These are his own words, but I don't know whether the coffee is to be given internally or applied as a lotion, and creton oil is also outside my philosophy.

The Bulldog Club will hold their next show at the Crystal Palace in May. One of their own members has been selected to judge. As Mr. Jackson combines with a knowledge of the breed a phlegmatic disposition that will be proof against the audible asides of the æsthetic exhibitors from the Ratcliff Highway, the East End and St. Giles, I prophesy him a success on his debut in the ring.

Stolid coolness is a most desirable quality in a judge, and it is certain that Mr. Jackson will not be flattered into mistakes, and he owes it to the forgetfulness of nature that whatever may happen he will be six foot four above the snarls of the disappointed exhibitor.

I imagine it was by Mr. Jackson's assistance that the club secured the Crystal Palace for their show. The Palace is much to be preferred to the cowshed at the back of a public house in the East End, where the fixture last took place. The locality was regarded as a happy thought by the aristocratic members of the club, who thought that dogs would show up better in suitable surroundings, and though the "gate" was small and the freedom excessive, yet the company was high—as overhung venison.

The bulldog is our national breed, and I am glad to see no signs of its degenerating, but still I could wish that its admirers did not live up and dress up to their fancy quite so much. To take one's walk abroad with a bulldog there must be no middle course in your "get up," you must dress quietly and well, or you must don the attire of the stage rat catcher.

Smasher, who had such a phenomenally good time of it in the ring while the property of Mr. Vero Shaw, and such inexplicable ill-luck with his last owner, has joined the majority. He was a most gentlemanly bulldog. Mr. Benjamin is consoled for his loss by the possession of the hideously perfect Britomartis. This bitch is a near relation of the invincible Monarch, whose equal in head properties, bone and massiveness I have never seen.

The boarhound Jupiter, late Joubert, whose size, price and ownership have been persistently advertised of late, is dead. *De mortuis nil nisi bonum* is all very well when applied to men, but if you speak out plainly about the living dog, you must expect to be charged with interested motives, and be prepared to enjoy the lifelong malignity of the owner.

This is not a prelude to a disparagement of Jupiter, but I must confess that I never believed his published measurements. I liked not his light body nor the shape of his head. I do not pretend to be a connoisseur of these Danish dogs, and never owned nor wished to own one, but these parts were pointed out to me by a German gentleman who had seen the dog. I shall post myself up a bit in the breed, and give my readers the benefit of it in time. They have come to the fore with a rush, and the lucky dealers first in the field are gathering in the golden harvest that usually accompanies the latest fashion in caninity.

I do not see what we gain by their introduction, surely whoever likes a large dog of this shape could be content with our old English mastiff or the Scotch deerhound. Is not Crown Prince more massive and dignified, and Mr. Joplin's Chieftain more elegant and picturesque than a boarhound?

I think we might leave the Germans their boarhounds, they are not too rich in canine varieties. Warwick will open its show on the 16th, with the significant entry of 1,200. Fox-terriers have most, of course, and next to them come collies with 164. Newfoundlands number 34, which beats the Palace record. There are 18 Great Danes. I wish I could be there myself, but I hope to get a few notes from a friend who is going.

One of our actors, Mr. Clayton, has been getting into trouble with his St. Bernard. The dog attacked a man in the street, who went before the magistrate for redress, and received heavy compensation. Keep your guard on Rector, Mr. Emmet. The drama patronizes the saintly breed. Monsieur Marius, when on his provincial tour last year, was accompanied by a noble St. Bernard that he called Tiny. Mr. Wilson Barrett and Mr. John Hare have also been bitten with the holy "fancy."

Mr. Hare's beautiful self-colored dog is a son of Dr. Maurier's famous Chang, with whose majestic dimensions the readers of *Punch* have become familiar from his frequent presence in the artist's clever society sketches. LILLIBULERO.

APRIL 8, 1884.

ST. LOUIS DOG SHOW.

THE St. Louis bench show just over was called the First Grand International not because no dog show has preceded it, but in the fond hope that it will have successors. It may be considered that the exhibition holds out such promise, as though it cannot be termed a success either in point of number or over-generous attendance, it has at least taught the people here that it is not necessary to be a millionaire to be a dog breeder. The large sums sunk here in previous years in such purchases as those of Faust, Bow, Berkely or Erin led the bulk of dog lovers to blind themselves to the utility of breeding anything but pointers or setters, and secondly, to the theory that none but capitalists have any right to dabble in the latter. The show has the further benefit of teaching people that their own canine crows are not the blackest, that there is such a thing as a standard for judging each and every breed, and that it at least behooves an owner to ascertain that his dog somewhat resembles the standard of the class for which he enters him. This remark is rendered almost necessary by the extraordinary mistakes made in the toy classes. Charm a judge never so wisely, he could not persuade the fair owner of a silky-coated nondescript that it was not a Skye, and the number of pets, bred without respect to the obligations of caste, far exceeded those who could laugh at the insinuation of a bar sinister of their 'scutcheon.

Really fathered by the managers of the Natatorium as a profitable means of filling the hiatus between roller skating and swimming, the whole work of the show fell at first hand on Mr. J. W. Munson, who was lucky enough to secure an able assistant in Mr. Chas. Gardiner. It is no depreciation of the value of Chas. Lincoln's services to say that these two gentlemen got the show very well on without him, and hostile criticism of the arrangements is really difficult. There is no building in the United States better adapted for a dog show than is the St. Louis Natatorium. A first-class carpenter did the kennel work well, the water is from a natural spring, and the location of the building is the most central in the city. It cannot be said that the public of St. Louis did not look to the number of dogs as unattractive, for though 265 entries may be very few in other places, they mean a great stride in this, hitherto, generally, un-doggy city. The causes of but poor attendances have therefore to be looked for elsewhere. The show, which opened on Wednesday and closed on Friday last, was cursed with the most horrible weather for the first three days, and to add to this, the attraction of Cole's circus, just across the road, worked doubly to the disadvantage of the bench show. Many people who could afford but one outing, took in the greater, while many people wandered into Cole's by mistake, and came out wondering, "Where in blazes has he stuffed the dogs?" Others thought the affair a side show of the circus, for which Cole had no right to charge so exorbitantly as fifty cents.

To come to immediate business, a slap of a mild kind may be taken at Mr. Munson for the order of numbering the classes. Programmes ought by this time to be schemed out perfectly, and it seems ridiculous to draw up a premium list on the simple score of height, as is so generally done. It is no reason that because other shows do so, that St. Louis should begin with mastiffs and wade through the breeds highest at the withers down to sporting dogs, continuing the process down till toys are reached, for this principle not only gives trouble in handling the programme, but offends the eye as the dogs are being studied. Considering, also, that a suggestion has been strongly urged from here to at once come to a system of judging whereby a beaten champion will be forced to submit to the word ex being prefixed to his title, it might have been well to have introduced some champion of the champion class, which would have left not only a lasting halo on each dog so winning here, but also on St. Louis, as the place where a bench show decisively established such an innovation.

It is as well to admit, flat-foocted, that the show, as a show, was just saved, its saviours being pointers, Irish setters, English setters, and Irish water spaniels, in that order. A few of the fox-terriers were good, the beagles were a good, small, class, collies were fair and pugs were plenty; but without the breeds first named the whole affair would have been most stale and unprofitable. Here and there was to be found a dog which would do credit to his class anywhere, the most notable instance of such being the hard-haired Scotch terriers Heather and Tam Glen, shown by John H. Naylor, of Chicago, and which left for the New York show at the conclusion of that under notice.

The judging was satisfactory, fewer remarks being heard from disappointed owners than is generally the case. Kicks were, of course, made here and there, but were so exceptional as to be almost complimentary. The gentlemen weak enough to occupy these invidious distinctions were Major Taylor, of Lexington, Ky., for sporting dogs; R. Henry, J. A. Long, and Dr. Voerster, of St. Louis. The latter gentleman had, for his sins, accepted the task of judging the bull-terriers and ladies' dogs, and fell terribly into the bad books of the owners of both before he had got through. Dog fighters objected to the Doctor's strictures on any color but white, and to his penalizing for mutilation. This gathered on his awarding but a third prize to the class, which was really a very fair one, and the muttered discontent of the boxing fancy was rewarded by a re-opening of the issue by the management, when three prizes were awarded. The ladies also went for the Medico, who, in their view, should judge by the same number of standards as there were pets exhibited.

A decidedly moderate mastiff puppy was the sole entry in that class. The St. Bernards were a moderate and a well-mixed lot. One of them had the luck to die an hour after being kenneled, probably, as it was remarked, on the Ananias principle, at the mere idea of being called a St. Bernard. A Japanese spaniel, pig fat, and a cross-bred retriever also adorned this part of the show, and were classed as St. Bernards. The first premium went to W. A. Hobbs, of the *Post-Dispatch*, with Marco, a moderate dog, that would have no show East. Of the six Newfoundlands shown, D. O'Shea, of London, Canada, had decidedly the best in the yearling Nellie, although Miss Lillie Munson's Prince Albert is a pup that will grow into a very handsome animal. A great mistake was made in awarding first in the greyhound class to Bob, a local dog, who would never be near enough to wrench a hare turned to him by Lady Vinem, a bitch belonging to Dr. G. Irwin Royce, of Topeka, Kan. This bitch is unfashionably colored, white, with mouse markings, but is of rare quality, and should be looked after by California breeders. Of the Scotch deerhounds, the local dog had clearly greyhound strain, while Mr. Taylor's Dick, from Lexington, Ky., is a noble animal, of the Custer breed, which Col. C. L. Hunt was lucky enough to purchase before Major Taylor left the city.

Mr. W. J. Crawford, Memphis, Tenn., showed Gath; P. H. Bryson, Gladstone (for exhibition only) and W. H. Wells, Chatham, Ontario, Mingo for the champion English setter prize. After careful examination, the judge tacked the blue ribbon on to Gath, who was at the time the better dog of Gladstone or the others. The old dog shows no weakness, but the signs of age are coming over him, and though every one must wish him a green old age, his days of a "has been" are at hand and, like the rest of us, he will have to make way for his juniors. The Brysons showed Peep o' Day, Major Taylor, Lit (for exhibition only), and D. O'Shea Nellie May in the champion English setter bitch class, in which old Peep looked a class away from her company. Although she and all the Tennessee dogs show signs of late doings with the quail, it is doubtful whether this grand bitch ever was in better fettle than she was last week. Seventeen competed for the premiums for English setter dogs, the winners being Paul Gladstone, owned by William B. Gates, Memphis, Tenn., Bryson's Stanton second and John A McDonough, of St. Louis, obtained third with Count Glickstone, A. C. Waddell's Laverack Chief and W. B. Mallory's Pink B. were vhc. Will Davidson, Chatham, Ontario, was hc. with Rake, and F. H. Westmann, of St. Louis, scored a c. with Lady Pembroke's Boy.

Nineteen bitches paraded for the setter bitch prizes: J. M. Avent, Hickory Valley, Tenn., took first with Bessie A.; A. C. Waddell was second with Countess Blythe, and Richards & Fox, of Jerseyville, Ill., took third with Truth. John Drees, of Little Rock, Ark., was hc. with Princess Royal, J. B. Lucas, of St. Louis, with Countess Rake, Mart & Dorwart, Jacksonville, Ill., with Nettie D., and W. R. Faribault's Bonnie Dimple was c. Seven English setter puppies under 12 months are a most promising class, the winner of which was Gladstone's Image, owned by J. M. Avent, Hickory Valley, Tenn. P. B. Spence, Newport, Ky., was second with Dan Vorhees, and J. W. Murnan, Keeling, Tenn., took third with Sportsman. A. C. Waddell's Prince was vhc., and D. O'Shea's Dido hc.

No champion Gordons showed, and in the ordinary Gordon class Major Taylor made award of but a second prize among the three entered, the taker being Grouse, a bitch owned by John W. Umberline, of St. Louis. Were she judged by the Malcolm standard this bitch is up to the best form.

IRISH SETTERS.

Of the five entries for champion Irish setters, the best was judged to be Norwood, owned by Henry Overman, of Cincinnati. Fann, owned by W. H. Pierce, Glencho Kennels, Peekskill, N. Y., beat the Emporia Kennel's Irish Faith for the champion setter bitch prize, no others being entered. Although twelve put in appearance for the Irish setter dog prize, Major Taylor thought nothing good enough for first, second going to Dr. Chas. E. Michell's (St. Louis) Blarney, and third to Chas. H. Peck's Elcho. Jack, the property of R. E. Farris, St. Louis, and the Emporia Kennel's Irish Ranger were vhc. Of the nine Irish setter bitches, J. A. Sullivan's Effie took first to Cincinnati. Two St. Louis animals took second and third, these being Chas. Steismeier's Elsa and J. B. C. Lucas's Biddy II. Daisy Patti and Irish Maud were hc. In the Irish setter puppy class the Emporia Kennel were first and second with Irish Lilly and her sister, Irish Maud. L. A. Moffitt, of St. Louis, was third with Hallie.

POINTERS.

Nothing could be more interesting to the scientific dog breeder than the sight of Meteor and Faust, cheek by jowl to each other in adjoining kennels. Faust preserves wonderfully, and seems almost as limber and spry as ever, despite the grizzling of his mask. He was well honored at this show through his progeny, and looks healthy enough to keep on leaving his noble marks on the litters of many a day to come. He was, however, withdrawn from competition, and the moot point of supremacy between him and Meteor was, therefore, still left undecided. The latter is a grand dog that, with all the quality the strictest judges may insist on, has all the stoutness so desirable in a stud dog. It would be nearly as useful a job to set to work to gild gold as to try to pick holes in Meteor, who, with all the dogs in the Munson kennel, showed up in splendid order, thanks to the care bestowed on them by his English kennelman, Tom Lake. After Meteor had walked over as the champion dog, four sweet bitches mounted the platform to be studied over for the championship of their sex. The award was foregone after Munson's Vanity, imported, was seen. Munson's imported Maxim, litter brother to Meteor, was an easy first in the 55-pound pointer dog class, A. C. Waddell being second with Jim and third with Clipper. Munson's Bang, imported, was vhc., and Geo. A. Castleman's Blucher c. There were ten competitors. For the small pointer dog class of eight entries, but two awards were made, A. C. Waddell being first with Prince, and W. H. Stafford second with Major Croxteth. John W. Munson was first and second in the open pointer bitches with Spinaway and Flash III. Waddell's Fan II. was third. Munson's Modesty and Robert Labadie's (St Louis) Jessie were vhc. John Henderson's (Jacksonsonville, Ill.) Maggie V., Joe Mest's Patts and John Nolde's Flora hc., the two last being owned in St. Louis. The best of the six puppies under 12 months was judged to be Geo. J. Nook's Jake, owned in St. Louis and pedigree unknown. W. H. Stafford of Trenton, Tenn., took third with Bonnie Bang.

SPANIELS.

John D. Olcott, of Milwaukee, was first and second in a really excellent class of Irish water spaniels, with Barney and Fly. C. B. Rhodes, of Moberly, Mo., was third, with King Marsh. A. C. Waddell was awarded a second for Doctor, a black and tan, in the field spaniel class. D. O'Shea took first and second in the 28-pound class, with the blacks Rosey and Bene. Geo. W. Schenck, Burlington, Ia., was third, with the black, Bengal. D. O'Shea also captured the 23-pound cocker prize, with the black, Bessie, to whom Dr. E. C. Franklin's Flossie, liver and white, was second. Here it may be fair to ask why there is so strong a tendency to breed black cockers, when the great bulk of American sportsmen won't look at an English retriever, because, they claim, his black color scares wildfowl.

D. O'Shea took first and third in the foxhound class of six, with Ringwood and Forester II., of the English type, the second going to Fritz Thome, of St. Louis, with the black and tan Driver. Arthur Mittleberg's Queen was vhc. Nine really good beagles were headed, after judgment was passed, by D. O'Shea's Rattler and Music II., a very good couple of dwarf beagles. Wilson P. Hunt, of Normandy, Wis., showed three couple of the larger sort, imported, but failed to get nearer than third, which he landed with Fanny, his John being vhc., and his Warrior, Jr., and Maid hc. The only dachshund entered was the moderate Gertrude, to whom a second was given. Mrs. S. A. Kay's Tipsy, a neat imported bitch, took the champion fox-terrier prize. An excellent specimen, Sam Sam, belonging to the Emporia Kennel Club, being first in the open dog class, S. A. Kay's Sting II., second, and Col. C. L. Hunt's April Jim, third. The same owner's Rhadama took the bitch prize from one competitor. The two last mentioned dogs owe their names to the fact that the one has assumed

sentry duty over the race horse April Fool, while the other mounts guard over a two year old filly, named Rhadama, of the Colonel's. In the fox-terrier puppy class a new style of dog was seen in two white and brindled specimens, Alex and William Bennett, just imported. They are both good looking. Alex took the premium. The three collie prizes were won locally by Joseph Campbell's Scott, F. M. Anderson's Bruno and Ben. McColloch's Bruce. Rob Roy, a stud dog, owned by J. A. Long, of St. Louis, on exhibition only, was one of the handsomest dogs at the show. Of the seven bitches competing the winners were Thomas C. Johnson's Meg II., Joseph Campbell's Madge Wildfire and John K. Yore's Fannie. Searing Marsh's Daisy was vhc.—all are owned in St. Louis. No bulldog was shown, and the judge at first refused to award any prize but a third (to Tom Kelly's Paddy) to any of the seven bull-terriers. The close-cropped fraternity were, however, afterward made happy, Jim Busby's Billy, imported, a really excellent dog, being first. William A. Ross's (Fort Worth, Tex.) Napper second, and Tom Kelly, the ex-prize fighter, third with Paddy. Michael Rohan took a second with Flora in the over 7 pounds black and tans, and D. O'Shea was first and second with the Bedlingtons Sting II. and Wasp II. Not a prize was awarded to a Skye, though vhc. was given George Fehl's Frank and a c. to Harry Passmore's Boxer. There were five in the class. Heather Tam Glen, noted above, were the only hard-haired Scotch and terriers worth a second look. D. O'Shea was first and second with the Irish terriers Erin and Garryowen, and a solitary c. to Mrs. J. E. Rowland's Box was the only award a hard-hearted judge would make to a lot of (so-called) Yorkshire terriers. Mrs. George H. Hill, of Cincinnati, scored well with Joe as the champion pug. In the open pugs, whose kennels were got up in the most gorgeous way by their fair owners, a second was gained by Miss Emma Bailey's Punch, and third by Mrs. Isabelle Chapman's Fritz, both owned in St. Louis. Mrs. Samuel A. Gaylord's Sadie, a very beautiful 2¼ pound blue and silver little lady took first. Mrs. T. Joell's Tiney second, and G. Lamar Collins's Dude third in the indefinite terrier list, for which most of those in the other terrier classes might well have entered. Major Taylor gave a second to the well felt-coated but too light-colored Chesapeake Jumbo, owned by A. F. Shapleigh, C. de St. Aubyn's Diane being third. None contested with these local dogs. C. C. Carroll was alone in his glory with two coach or plum-pudding dogs Dash and Captain Jinks. In the miscellaneous class an immense Ulm dog, Jumbo, mouse-colored and horrible to look at, won first for Peter Zimmer, Joe Schiller coming next with a Russian retriever, Russ. Eleven Italian greyhounds composed the last class, the winner, Beppo, the property of Hon. P. Kirby, of Jacksonville, Ill., being a very handsome specimen. Mrs. E. P. Roberts, of Alton, Ill., who entered the balance, took second with Petkins, her dogs, though neat, being so finely in-bred that they have in the highest the shivering qualities which make this breed so objectionable to many.

SPECIAL PRIZES.

St. Louis did itself fairly proud in the special prize line. John Munson won a $150 dog collar, donated by J. B. McCullagh, editor of the *Globe-Democrat*, for the best pointer, with Meteor. Peep o' Day took a handsome bronze as the best setter. Munson's Vanity took a silver cup, given by Charles H. Mason, of New York, to Bang's best daughter. John Henderson took a prize donated by himself, for the best pointer bitch with pups. Henry Overman, of Cincinnati, won, with Norwood, the Ligowsky prize of a trap and clay-pigeons, for the best red Irish setter. Olcott's Barney and Fly took a pipe for the best brace of spaniels, the former also winning a wading suit. Bessie captured a silver cup, for cockers, and Miss Lillie Munson, a Smyrna rug, given for the best dog owned by a lady, with her Newfoundland pup Prince Albert. Joe took an umbrella and a silver cup given for that breed, while Miss Emma Dailey walks off with a Langtry bang, by help of her pug Punch. Madge Wildfire won a clock, for collies, and Meg II., silver goblets for that breed. W. A. Hobbs is plus a silk hat, thanks to his St. Bernard Marco. Tipsy II. took a box of cigars, and a case of claret goes to Emporia, Kas. through Irish Lilly. Miss Munson's Newfoundland further obtained her a basket of flowers, Peep o' Day got a dressing case for Mr. Bryson, W. B. Wells received $25 in cash for the excellence of his English setter Mingo, and D. O'Shea's Bedlington, Sting II., obtained him $15 as the best terrier from Canada.

Following is a full list of the

AWARDS.

Class 55. Italian Greyhounds.—1st, E. P. Kirby's Beppo, fawn, 3yrs., Rex—Italia; 2d, Mrs. E. P. Roberts's Petkins, fawn, 3yrs., Pet—Dotty Dimple.

BREEDING FOR COLOR.—*Editor Forest and Stream:* For the benefit of your readers who breed dogs, and who desire certain markings and certain colored pups, the following may prove of some advantage to them. I have often read of breeders experimenting with bitches for sex in pups, but never heard of any one claiming to have the means to have whelps of any color they see fit to choose. A short time ago a laboring man from the Old Sod let out a secret which, he says, works with a certainty, and he says he has often seen it tried on both bitches and mares, and worked well every time. The secret and mode of operation is this: First, you procure a piece of sheet tin, about six inches long by four wide, and on this tin draw the image of a dog; then cut this out the exact shape as near as possible of the image, and paint this image the color you wish the pups to be; then place this tin image in the drinking cup immediately after the bitch has been lined, and the pups are sure to be of that color. Since I have not experimented or tried the above plan, I cannot say much about it either way; but I am positive my informant believes in it thoroughly. Since a number of breeders are trying for a black (all black) Llewellin pup, probably they would do well to give this plan a try, at least. I know a gentleman trying a number of experiments now with bitches, as regards the color of whelps, and he is pretty confident he can foretell their colors. If I can get him to publish them in FOREST AND STREAM I am certain they will be read with much interest by the dog men in general.—16-BORE.

EASTERN FIELD TRIALS CLUB.—There will be a quarterly meeting in conjunction with the regular Board of Governors' meeting, held at Delmonico's, Fifth avenue, corner of Twenty-sixth street, New York City, on Tuesday evening, May 6, 1884, at 8 P. M., for the discussion and promotion of subjects relative to the welfare of the future of trials and the club. Also, as a social reunion of all members and interchange of past experiences on the development and improvement of dogs and shooting afield. All members, resident and non-resident, who are in attendance on the dog show, are cordially requested to attend.—WASHINGTON A. COSTER, Secretary and Treasurer.

SETTER IMPORTATION.—Mr. Joseph Lewis, Cannonsburg, Pa., has received from the kennel of Dr. Walter Iliffe, Kendal, Eng., the English setter bitch Nellie Laverack. She is three years old, and is by Llewellin's Count Dan and out of Floss (Blue Prince—Flash). She is in whelp to champion Royal Rock.

THE CHICAGO DOG SHOW.—The second annual International Bench Show at Chicago, will be held at the armory of Battery D, on June 10, 11, 12 and 13. Major J. M. Taylor will judge the setters and pointers. The other judges will be announced at an early date. The premium list will be ready next week.

NEW YORK DOG SHOW.—*Editor Forest and Stream:* In case of any misunderstanding in regard to the sweepstake prizes, I desire to say that the managers decided a month ago that the judging could best be done jointly by the regular judges of Irish and English setters. For pointer and English setter sweepstakes, the regular judges in the setter classes. These gentlemen to select a third judge to act with them. The judges kindly agreed to this proposition, which was duly announced through the papers. Entries for these sweepstakes will close on Tuesday, May 6, at 12 M.—CHAS. LINCOLN, Supt.

THE LAVERACK MEMORIAL FUND.—New York, April 25.—*Editor Forest and Stream:* Nearly two years ago I contributed to the fund for the erection of a monument over the remains of the late Mr. Edward Laverack. Not having seen any account of the disposal of the fund, I write to know if you can throw any light upon the subject.—PONTO. [We are unable to give the desired information. Mr. E. A. Herzberg, who collected and forwarded the funds, may be able to do so.]

CLOVER BELLE.—The Clovernook Kennels have returned to the managers of the Cincinnati bench show the prize which was won by their fox-terrier puppy Clover Belle, and it has been awarded to Mr. H. G. Groesbek's Judge. An explanation of the mistake may be found in our issue of March 27.

GREYHOUND IMPORTATION.—Mr. H. W. Huntington, Brooklyn, N. Y., received on Friday last from Mr. William Graham, Belfast, Ireland, three very fine black greyhounds, Bouncing Boy, Begonia and School Girl. They will be exhibited at the show next week.

SETTERS FOR SALE.—Any one in want of a well-bred setter, will do well to correspond with Mr. Hatheway, whose advertisement will be found in another column. There is no better working blood in the country.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

Blue Frisk for Dashing Money. Mr. J. M. Avent, Hickory Valley,

Tenn., has exchanged with Mr. I. Yearsley, Jr., Coatesville, Pa., the black, white and tan English setter bitch Blue Frisk, whelped Aug. 29, 1883, by Rush Gladstone (Gladstone—Donna J.) out of Clara (Penn—Pocahontas), for the lemon and white English setter dog Dashing Money, whelped May 18, 1883, by Dashing Monarch out of Armida (Leicester—Pocahontas).

DEATHS.

☞ *See instructions at head of this column.*

Dorothée. Black greyhound bitch (A.K.R. 72), owned by Mr. H. W. Huntington, Brooklyn, N. Y., April 22, from poison.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. A. S., Berwick, Pa.—See answer to "D. H.," this week. Do not give calomel.

J. D. S., Rahway, N. J.—We have never tried Little's soluble phenyle. We have heard it highly spoken of by those who have used it.

C. S. J., Washingtonville.—The tail can be safely cut at the joint nearest the injury. We would not advise this unless it should prove to be unsightly after healing.

T. W. P., Providence, R. I.—Your dog probably has distemper. The best advice that we can give is to nurse him carefully, and keep him in a well ventilated dog kennel.

A. O. F., New Bedford, Mass.—Your description is too vague, the dog may have some foreign substance in his throat, or an abscess may be forming which may be determined by a careful examination.

G. A. B., Washington, D. C.—You neglect to state whether the canker of your dog's ear is external or internal. If the latter, use equal parts of bromo chloralum and laudanum diluted with six times their bulk of water, fill the ear and gently knead the base for a short time. One or two applications should effect a cure unless the case is of long standing.

D. H., Clinton, Conn.—Your puppy has chorea, which is often a sequence of distemper. The treatment of this disease is not satisfactory. Young dogs very often outgrow it if well cared for. The diet should be nutritious, with abundant out-door exercise. Would advise one grain sulphate of zinc and one grain extract of gentian twice a day for a week; also give a tablespoonful of cod liver oil once or twice a day.

Rifle and Trap Shooting.

FIXTURES.

May 6 and 7.—Fourth Tournament Southern Illinois Sportsmen's Association, Carbondale, Ill. C. P. Richards, Secretary.

May 20 to 23.—Knoxville Gun Club Second Annual Tournament, Knoxville, Tenn. C. C. Hebbard, Secretary.

May 26 to 31.—First International Clay-Pigeon Tournament, at Chicago, Ill. Managers, Ligowsky Clay-Pigeon Co., P. O. Box 1292, Cincinnati, Ohio.

June 2 to 9.—Annual Tournament Louisville Sportsmen's Association, Louisville, Ky. J. O. Barbour, Secretary, 157 Third avenue, Louisville.

RANGE AND GALLERY.

GARDNER, Mass., April 23.—At Hackmatack Range to-day, the Gardner Rifle Club shot a match with the Saratoga, N. Y. Club, the score being exchanged by telegraph. There were two scores, with a possible 120, on Massachusetts target. The totals were as follows: Gardner team 2,978, Saratoga team 2,892. The detailed score of the Gardner team was as follows:

G C Goodale	106	107—213	G R Pratt	98	100—198
Chester Hinds	105	106—211	Frank Nichols	99	99—198
G F Ellsworth	106	105—211	W C Loveland	99	97—196
I N Dodge	105	104—209	L Walker	103	90—193
S B Hildreth	103	102—204	F H Knowlton	94	97—191
C O Bent	108	95—203	H C Knowlton	94	91—185
J Newton	99	102—201	C Shumway	79	86—165
A Matthews	100	100—200			

After the match there was shooting by members of the club on the American decimal target, distance 200yds., shooting off-hand, with a possible score of 100. The totals were as follows: G. F. Ellsworth 95, G. E. Fordyce 95, H. C. Knowlton 85, G. C. Goodale 85, A. Matthews 84, I. N. Dodge 83, Chester Hinds 83, S. B. Hildreth 81, L. Walker 80, W. C. Loveland 77, Fred H. Knowlton 72, G. R. Pratt 67.

BULL'S HEAD RIFLE CLUB, New York, April 17.—12-ring targets, possible 120: C. Rein 117, A. Lober 117, G. Zimmermann 116, H. Hackmann 116, M. Dorrier 115, J. Schrarder 113, J. F. Schneider 113, H. Gunther 112, W. Ross 112, S. F. C. Weber 108, J. Jordon 106, D. Holland 106, G. D. Johnson 105, G. Wendelken 104, J. F. Campbell 102, H. H. Wasmuth 101, H. Zubiller 98, D. Louitzki 97.

BOSTON, April 26.—The shooting men hereabout, and there is a very large battalion of them, had a very bad day of it, but the scoring went on as usual. There was a very slim attendance at Walnut Hill, and they were considerably bothered by the strong wind from the northeast. The records made are appended:

Creedmoor Practice Match.

W Charles	4	4	5	4	5	5	5	4	5	4—45
A S Brackett	4	4	4	4	4	4	4	4	5	4—41

Creedmoor Prize Match.

H Cushing	4	5	5	4	5	4	5	4	4	5—45

Rest Match.

C B Edwards	10	9	9	9	8	10	10	10	10	9—94

S W Lincoln	10	7	7	9	5	8	10	7	7	8—78
G F Maxwell	7	9	10	7	6	10	8	6	7	7—77

At the fifth and last competition by the members of the Harvard Shooting Club for the Walnut Hill cup, held on Friday, April 25, at Watertown, the cup was won for the third time by W. H. Slocum, '86, and therefore becomes his property. W. L. Allen, '86, and C. C. Foster, '87, had won it once each, and are tied for second place, for which a silver medal was offered. The tie will be shot off at the next match.

The East Boston Schuetzen Corps held its weekly shoot at Oak Island to-day, and some fine shooting was done, although the wind blew a gale from the northeast, and was hard to contend with. The corps will open a new match on the man target, which is new in this part of the country. The best scores of the day were as follows:

Creedmoor Practice Match—Capt. Garney 45, C. Gertze, 44, F. Gray 44, C. M. Gueth 43, M. Crist 43, C. Muller 43, G. H. Wilfert 40, J. Wissil 39.

Creedmoor Prize Match—Capt. Garney 45, F. Kline 44, C. Becker 44, N. Woods 37.

Rest Match—N. Woods 77, N. Woodbury 75, F. Kline 66.

THE ILION TARGETS.—Ilion, N. Y., April 26.—*Editor Forest and Stream:* "Van" calls for explanation in your paper of 24th inst. relative to my targets, shown in your paper of a previous issue. Target was 5½ or 6in. bullseye, first shot being taken for center of group and all subsequent shots being engineered for that purpose. No telescope was used, peep and open bead being the sights used.—L. N. WALKER.

CARLISLE, Pa.—The Cumberland Valley Rifle Association will open a grand shoot on its grounds May 20, and a prize list aggregating $850. Entry, $2, and re-entries $1. The rules of the match provide: Five shots shall constitute a score. Ties shall be shot off with 3 shots. No person will be allowed more than one original entry and five re-entries. No ticket-holder shall be entitled to more than one prize. Ticket-holders not desiring to shoot for themselves may select another to shoot for them. Persons shooting for two or more ticket-holders will not be allowed to know who they are shooting for when called upon the stand. The target used shall be a combined Creedmoor and ring target, 4in. bullseye with 2in. center, and the distance 100yds., off-hand. Any rifle and any sights (except rifles with hair triggers and telescope sights) may be used. Persons holding ties on more than one prize shall shoot off on the highest, and if successful their interest in the balance of the ties shall cease and determine. If, however, they are not successful, they shall shoot off their next highest tie; provided, however, that they cannot use the score made on a higher prize for their benefit on a lower one, and so on throughout the list of prizes. Ticket-holders cannot surrender their right to a higher score for the purpose of gaining advantage on a lower one. Ties shall be shot off by marksmen making the original score. The match shall commence at 9 o'clock A. M. and continue till 12 o'clock, noon; again at 1 o'clock P. M. and shall continue until dusk, and shall be continued from day to day until completed. The range will be open at 7 o'clock A. M., and marksmen will be allowed to test their rifles until 9 o'clock A. M.; also between the hours of 12 M. and 1 P. M. The range will be open to all marksmen for practice for two weeks before the match. The Range Committee, with the president of the association, shall have power to close the original entries at any time after the first day's shooting.

NEWARK, N. J., April 23.—The closing meeting of the Newark Rifle Association was held to-night, all clubs being represented. Prizes offered in the tournament were presented to the successful clubs in order as follows: Frelinghuysen, Essex, Celluloid and Domestic. The total number of points made by each during the six matches were: Frelinghuysen, 2,797; Essex, 2,780; Celluloid, 2,659; Domestic, 2,645; Warren, 2,557; Plymouth, 2,508. The individual positions of members connected with the several clubs in the tournament show following averages:

Six Matches.—Ed. Neil, 48 1-6; A. C. Neumann, 47 5-6; G. Williams, 47⅔; Wm. McLeod, 47½; Geo. Weigman, 47⅓; J. Coppersmith, 47⅓; J. Dainty, 47; A. Walters, 47; F. Brant, 47; Wm. Watts, 46⅔; R. Westerman, 36⅓; E. O. Chase, 46 1-6; Jefferys, 45 5-6; W. Coe, 45⅔; J. Bayer, 45⅓; S. Shackelford, 45 1-6; T. Miller, 45 1-6; Wm. Nunley, 45; C. H. Townsend, 44 5-6; T. L. Sommers, 44⅔; S. Simmonds, 44⅓; Vreeland, 44⅓; Wadams, 44 1-6; C. F. Jackson, 44; J. Velsor, 43 5-6; Willzey, 43 5-6; Babbit, 43⅓; A. Erhard, 43 1-6; Burns, 42 5-6; E. J. Pollard, 42 5-6; Puder, 42 1-6; G. M. Townsend, 42; Greire, 41⅔.

Five Matches.—Pahls, 47; Smelling, 46 2-5; Wm. Felts, 46 1-5; G. Zimmer, 46 1-5; Leibe, 46; J. L. Tobin, 46; J. K. Walsh, 45 4-5; Reynolds, 45; C. Waag, 44 3-5; Alexander, 44; P. L. Sommers, 43 3-5; E. Coe, 43 2-5; J. Wolf, 43 1-5; G. Freche, 43; Leibe, 40 1-5.

Four Matches.—J. McCullum, 45¼; Valentine, 43¼; J. McConnell, 42¼; McGunness, 42¼.

Three Matches.—B. Germayne, 46⅓; W. F. Lynn, 46; A. A. Baldwin, 45⅔; Keenan, 45⅔; S. M. Brade, 43⅔; Shafer, 42⅔; Millworth, 42⅔; Cheeseman, 39; Kinney, 37.

GALLEERY SHOOTING.—At the Grand Central Range on Vanderbilt avenue, the current match closed with scores as follows: Mr. L. V. Sone made during the last week of the match in practice 67, 67, 67, 67, 66, 334, while J. H. Brown made 67, 67, 67, 66, 66, 333. The scores stood:

P Fenning	68	67	67	66	65—333
A Oehl	68	65	65	64	63—325
G Zimmermann	65	65	65	64	61—323
H Vonder Linden	65	65	64	64	64—322
L Bird	67	64	64	63	63—321
J Coppersmith	66	64	64	63	63—320
M Dorrier	64	64	64	63	62—317
W M Farrow	66	63	63	64	62—317
G J Seabury	64	63	63	53	61—315
C E Keator	64	64	62	62	52—314
Dr Toal	75	65	63	60	59—312
A J Howlett	63	63	63	61	61—310
Wm Simpson	63	63	62	62	62—310
E Neil	63	61	61	61	69—306
G Snellen	63	63	62	59	58—305

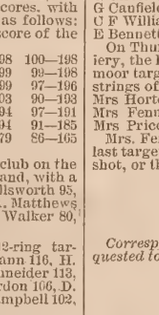
JAMESTOWN, N. Y., April 26.—At our regular medal match yesterday, the following scores were made; 200yds., Creedmoor target; wind heavy from 10 to 2 o'clock:

H V Perry	4545554445—45	A. F. Warner	4445333444—39
R H Burns	4544455454—44	H D DeLisle	4444442344—37
J R Moore	4444434444—39	A F Ward	3050435445—38

THOMASTON, Conn., April 26.—At our weekly shoot Saturday, the 19th, F. Carr won the badge with a score of 90 out of a possible 120, Massachusetts ring target. The weather and light were unfavorable for high scores, the match being shot during an April shower. To-day the shoot was over the new range, though the range is incomplete as yet, it will be formally opened with an open to all shoot in May. W. Dunbar won the badge with a score of 107 with his new Ballard P. G. The other scores made were:

G Gilbert, Ballard .38-cal	100	F Carr, Remington .40-cal	88
G Canfield, Ballard .40-cal	98	C Alling, Ballard .38-cal	85
C F Williams, Ballard P. G	96	Fox, Winchester .44-cal	72
E Bennett, Ballard .40-cal	91		

On Thursday, the 24th, the B. B. Social Club met at Burns's gallery, the ladies to shoot for a prize (a bangle charm) using a Creedmoor target, the inner half of bull to count six each, to shoot two strings of four shots each:



Mrs Horton	18	20—38	Mrs Reed 17 17—34
Mrs Fenner	16	19—37	Mrs Bush 17 17—34
Mrs Price	18	17—35	Mrs Fenton 18 14—32

Mrs. Fenton accidently discharged the gun the first shot on the last target, and the terms of the match did not allow her another shot, or the result might have been different.—R. H. BURNS.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CLAY-PIGEON BADGE.

HEREWITH is given an illustration of the beautiful diamond badge which is to be presented as a prize to the individual making the highest score at the coming Clay-Pigeon Tournament at Chicago in May. The Ligowsky Clay-Pigeon Company announced that the value of the badge would be $250, and we understand that the actual cost has slightly exceeded that sum. The execution of the design is by Tiffany & Co., of this city, at whose establishment the badge is now on exhibition. The prize will be awarded to the shooter whose score shall be the highest, irrespective of his belonging to the winning team. It will be his personal property. The question just now is, where will the badge go to after the tournament is over? We know of several clubs who think that they can give a very definite answer, but it is at best only conjecture.

BROOKLYN.—The regular monthly shoot of the Unknown Gun Club took place at Dexter's, on Thursday, April 24, for three regular and three extra prizes. Handicap rise, gun below the elbow, club rule, and classified with the following results:

Plate, 24yds	1111111—7	Layton, 21yds	1100110—4
Moller, 22yds	1111011—6	A Harned, 23yds	1011010—4
Vogelsang, 23yds	1011111—6	Stillwell, 23yds	0100111—4
Schroder, 25yds	1111101—6	Cahill, 21yds	0110110—4
Rathjen, 25yds	1111011—6	Detlifsen, 25yds	0111010—4
Van Staden, Sr., 23yds	1101101—5	W Harned, 23yds	1001010—3
Smith, 22yds	0011111—5	Doyle, 21yds	0000111—3
Pope, 24yds	1011011—5	Van Staden, Jr., 25yds	0010101—3
Knebel, 25yds	1111100—5	Muller, 24yds	0011010—3
Tomford, 25yds	0111110—5	Brandenberg, 21yds	0010000—1
Monsees, 24yds	0101110—4		

On account of scarcity of birds the ties divided; 7 first, 6 second and 5 third prize.

Of the extra prizes, counting two shoots out of three, Vogelsang, Plate, Rathjen, Knebel, Pope and Smith divided first, Van Staden, Sr., Tomford, Muller, Monsees, Detlifsen, Stillwell, Schroder, Layton and Muller second, Cahill, A. Harned, Van Staden, Jr., Doyle and W. Harned third.—H. K.

MAINE STATE TOURNAMENT.—Through J. E. Bloom, Esq., president Ligowsky Clay-Pigeon Company, the Willard Shooting Association of Portland, Me., was appointed trustee of a beautiful gold and silver badge emblematic of the championship of the State. April 17, Fast Day, was fixed upon as the tournament day, and teams of five men from six clubs arrived early on the grounds of the Willard Association, and competition commenced under the following conditions: Each man 10 single birds and 5 pair doubles, singles at 18yds. rise, doubles 15yds, trap set in fourth notch, a second barrel break to count one-half bird. All shooting from 5 traps set 3yds. apart. The weather was anything but pleasent, a strong and cold east wind blowing into the faces of the men, and frequently rain fel briskly. The Androscoggin Gun Club of Lewiston was proven the winner, and immediately received a challenge to shoot for the badge inside of fifteen days, from the Willard Shooting Club of Portland. The winning club is subjected to immediate challenge, the club winning the most times within one year from the tournament becoming permanent owner of the badge. The arrangements were perfect and satisfactory to all the shooters, and reflect credit upon the Willard Association, who were indefatigable in their endeavors to please. Geo H. Pierce, secretary of the Willard Club, was chosen referee, and Major Lovejoy, of Bethel, and Z. M. Cushman, of Kennebunk, as judges. Following are the scores in detail. Figure 2 indicates second barrel break:

Androscoggin Club, Lewiston.

CLEVELAND, O., April 17.—Eleven men of the Cleveland and Kirtland clubs faced the traps for the contest for the Ballantyne badge this afternoon at the Cleveland Club's East End grounds. As usual, a keen contest came out of the meeting, Mr. C. E. Calhoun, of the Cleveland Gun Club, winning the trophy for the second time, with a clean score of 20 glass balls and 20 clay-pigeons. The trophy, when won by an individual for the third time, becomes his personal property, and is open free to any member of a gun club in Cuyahoga county. The shooting, under the badge rules, is at 20 glass balls thrown from one rotary trap, at 18yds. rise, and 20 clay-pigeons from one Ligowsky trap at 15yds. rise. There was a good attendance of sportsmen at the shoot, and the weather was fair. The individual scores of the eleven contestants were as follows:

	Balls.	Pigeons.	Total.
C E Calhoun	20	20	40
R E Sheldon	19	20	39
T A Closs	20	19	39
C F Wheal	19	19	38
O Alger	19	19	38
C M Roof	18	16	34
J J White	18	13	31
Dan C Powers	14	16	30
W H Millard	14	12	26
George Newberry	14	10	24
W Reynolds	12	8	20

The winners of the badge since its existence have been as follows: C. M. Roof, Kirtlands; C. E. Calhoun, Clevelands; R. E. Sheldon, Clevelands; C. M. Roof, Kirtlands; J. J. Wightman, Clevelands; C. E. Calhoun, Clevelands.

WALLINGFORD, Conn., Aug. 3.—Following is the score of those that shot for the individual State medal to-day, possible 50. It will be shot for again May 14, in New Haven, at the State shoot: H. Nichols 38, F. Smith 25, J. F. Ives 39, Talcott 26, Hall 36, A. Ives 37, Gurd 28, Goodrich, Folsom, Beers and Brogden withdrew.

NIAGARA, N. Y., April 24.—The fourth of the monthly contests for the championship of Niagara county, took place to-day at La Salle. A finer day for a shooting match could not be wished for. Smith won the medal for the second, and stands well to be final winner. The score was:

Smith	1100111111011111111111111—22
Gombart	1111111101111111111001111—22
Barker	1111111110111110101111111—22
Pierce	1111111111101011111110111—22
Jennings	0101011111100111111011111—19
Taylor	0101010011111101100010010—13
Philpott	0100010000100010111111100—10
Ripson	0101010101010101010010000—10

First Tie at ten Clay-Pigeons.—Smith 9, Gombert 9, Barker 8, Pierce 9.

Second Tie at ten Clay-Pigeons.—Smith 9, Gombert retired, Pierce retired.

Sweepstake shooting followed. First contest at 5 target balls: Gombert and Smith first, Jewett and Barker second, Ripson third.

Second at 10 Target Balls.—Smith first, Barker second, Pierce third, Bampfield fourth.

Third at 10 Clay-pigeons.—Smith 9, Jennings 9, Barker 9, Pierce 8, Jewett 7, Taylor 7, Bampfield 6, Gombert 5. First tie at 5 clay-pigeons. Smith 5, Jennings 5, Barker 5. Second tie at 5 clay-pigeons, Smith 5, Jennings retired, Barker 3.

SCHENEVUS, N. Y., April 26.—The club was out to-day, using the combination trap, fourth notch, at 18yds. The scores ran:

D Chamberlain	1110111011101010010—13
Peter Rickard	1111011110110 110110—14
John C Wilson	0010001111110001011— 11
C Brockway	0011100110010010110—10
Dr Parrish	0000111100000000010— 5
Chas Armstrong	1111000111111011111—15
L E Saxton	1110000011110011100—11
Ad Parsons	0110001100111110101—12

WORCESTER, Mass., April 24. This has been a field day at Cool Mine Range of the Worcester Sportsmen's Club. Among the guests were E. Brogg and B. Moses, of Springfield, George Tidsbury and J. H. Cole, of Ashland, and J. M. Frye, of Boston. The event of the day was a contest for the championship individual glass ball badge of the State Association, Mr. Charles DeRochmont, of Newburyport having challenged W. S. Perry, of this city. Mr. George Tidsbury was Judge, Gilbert J. Rugg, of this city, and J. A. Cole, referees. The score was as follows out of a possible 50:

Perry	1011111111110101011101111111111101011111111110111—43
DeRochmont	1101011011111111001111111111111001101111010111011—39

WELLINGTON, Mass.—The weekly meet of the Madison Gun Club at Wellington, was attended by a large showing of lovers of the sport, and a good number of birds were broken. In the gold medal match, the first class medal was taken by J. Buffum with a score of 17, the second class by C. I. Lewis with 14, and the third class by F. J. Scott with 13. The winners of the other events were as follows:

First event, five birds—Adams and Loring divided first, Powers and Saunders divided second, Scott third.

Second event, five birds.—Loring first, Scott second, Saunders and Adams divided third.

Third event, five birds—Loring first, Adams and Scott divided second, Lewis third.

Fourth event, five birds—Lewis first, Nichols and Saunders divided second, Loring and Adams divided third.

Fifth event, five birds—Lewis first, Hopkins, Nichols and Scott divided second, Goodnow and Shattuck divided third.

Sixth event, five birds—Goodnow first, Lewis and Nichols divided second, Shattuck third, Loring fourth.

Seventh event, three pair doubles—Scott first, Adams second, Short and Nichols divided third, Shattuck fourth.

Eighth event, five birds—Saunders and Hopkins divided first, Short second, Nichols third, Snow fourth.

Ninth event, five birds—Hopkins and Saunders divided first, Short second, Nichols third, Sanborn fourth.

Tenth event, three pair doubles—Short first, Hopkins second, Saunders third.

Eleventh event, five birds—Saunders, Scott and Hopkins divided first, Lewis and Adams divided second, Short and Brown divided third.

Twelfth event, three birds, 21yds.—Nichols first, Snow second.

Thirteenth event, three birds, 21yds.—Nichols and Sanborn divided first, Snow second, Adams and Douglas divided third.

Fourteenth event, three birds, 21yds.—Nichols first, Goodnow and Saunders divided second Snow third.

Yachting.

FIXTURES.

May 18.—Eclipse Y. C., Opening Cruise.
May 24.—Oswego Y. C., Opening Cruise.
May 24.—Boston Y. C., Opening Cruise.
May 23.—Quincy Y. C., First Match.
May 30.—Knickerbocker Y. C., Spring Matches.
May 30.—Atlantic Y. C., Opening Cruise.
May 30.—Newark Y. C., Spring Match.
May 30.—South Boston Y. C., Spring Match.
May 30.—City Point Mosquito Fleet, 18 and 15ft. boats.
May 30.—New Haven Y. C., Opening Cruise.
May 31.—Boston Y.C., First Match,Connor and Commodore's cups.
June 9.—Portland Y. C., Challenge Cup.
June 9.—Savannah Y. C., Opening Cruise.
June 10.—Atlantic Y. C., Annual Match.
June 11.—Hudson River Y. C., Annual Match.
June 12.—New York Y. C., Annual Matches.
June 14.—Seawanhaka Corinthian Y. C., Annual Matches.
June 16.—East River Y. C., Annual Matches.
June 18.—Newark Y. C., Open Match.
June 19.—New Jersey Y. C., Annual Match.
June 21.—Hull Y. C., Pennant Match.
June 23.—Newark Y. C., Open Matches.
June 24.—New Haven Y. C., Spring Match.

A FINE YACHT.

THE commodore's pennant of the New Haven Y. C. will this year fly from the masthead of a yacht in which all hands may take just pride. The nobby cutter Rajah, now nearly finished at Driscoll's yard, in Greenpoint, is a vessel one can look at twice. She is a thorough cutter, 32ft. loadline, 8½ft. beam and 6½ft. draft. Her lines were depicted in our issue for Jan. 24. She is of course flush deck, with 7.3 tons, practically all her ballast, on the keel. Built to exacting specifications, she has been put up in excellent shape, with a good deal of finish outside and in. The accommodations are something at which to wonder, and far in excess of those of any flat-iron of same length. When the New Haven investigator climbs over 30in. of freeboard at the quarter and proceeds below upon the commodore's invitation, he need not even douse his plug hat. The first thing at which he will express astonishment will be the delightful coolness and quiet light of the cabins, no matter how broiling the summer sun may be shining; and this wonder will be all the more pronounced if the visitor should happen to have pulled off from a sloop, where the heat down below has driven all hands out as intolerable.

Forward he will find a roomy forecastle with hatch and berth for the foremast hand. Next between two bulkheads a large pantry on one side and a w.c. on the other. Abaft of this in the mid body of the vessel he will admire a spacious main cabin with ample sofas and the companion ladder coming down at the after end. Surely this is all; but no, pass through a door and you face an after cabin or ladies' saloon with sofas each side, and then discover another bulkhead with a trap into a large a large sail and store room. Standing height with a hat on fore and aft. Over the after cabin is a skylight admitting more air than need be, and so much light that the rays have to be softened by colored glass sashes. The yacht is fit to cruise round the globe, so far as build, ability, rig and accommodations are concerned. She is absolutely non-capsizable and non-knockdownable into the bargain. For Sound sailing in summer her cool cabins and big displacement are specially adapted, as she is certain to go in light winds.

On deck she is pretty as a picture, and there is style and smartness in her long counter, in her rig, and in all her fittings. She will not be plastered over with lubberly lincrusta on the "ceiling," nor will she be lathed and plastered inside, but panelled neatly and with taste in pine in good ship-shape fashion. She is, in short, just what a good yacht ought to be. As for her speed, we venture no predictions. Her type is certainly not against fast sailing, as many races have already proven. If she is not fast it will be due to the shaping of her lines and not to her cardinal dimensions. But we see no reason why she should not perform satisfactorily, and be remarkably dry and buoyant in a sea, and work out to windward with reasonable comfort when the traps have to square away for the nearest shelter. The Rajah will make a host of converts this season, and no doubt be the cause of some sister vessels before another twelve months roll round. Her iron work was made to special patterns, and is commendable, with the exception of a clumsy windlass, for which the lack of good patterns among the trade is responsible.

NEW ENGLAND Y. R. A.

AT a meeting held April 23, at the Parker House, Boston, the final steps were taken in the organization of the association. Clubs represented were the Beverly, Boston, Dorchester, Hull, Jeffries, Lynn, Quincy, Salem Bay, South Boston, West Lynn and Yale. Any other club in New England having 50 members or 25 yachts over 16ft. is eligible at future sessions. A subscription of $10 per club was ordered to defray expenses. The following officers were chosen: President, W. Lloyd Jeffries, Beverly Y. C.; Vice-President, Louis M. Clark, Dorchester Y. C.; Secretary and Treasurer, Benjamin W. Rowell, West Lynn Y. C.; Executive Committee, with president and vice-president *ex-officii*—Commodore E. C. Neal, Lynn Y. C., Commodore C. A. Perkins, Hull Y. C., and Charles P. Pike, Jeffries Y. C.

The meeting, as a committee of the whole, adopted rules to govern races held under its supervision. It was decided to allow time by the Herreshoff table on a measurement of water line length. The question of measuring overhang was referred to a committee to report at next meeting. We have already pointed out the unfairness and tendencies of measurement by length, and in this matter the New England Y. R. A. ranges itself in opposition to the decision of experts all the world over. However, the association is perhaps too young to risk its existence by any precipitate reform movement, and open opposition to the length rule might have driven out some of the clubs given to sailing small boats. But as it is, should the committee not recommend including overhang, the rule of the association will be a vast improvement upon the "mean length," or "one-third overhang" rules, which interfere so seriously with a finished afterend, and impose such an unjust penalty upon any one with taste enough to spin his overhang out into a shim edge. It is at all events one step ahead, and when the association has acquired the strength and influence of age, further reforms may be hoped for.

It will not be long before many will rebel against the excessive cost and clumsiness of yachts built under a length rule and then the agitation for some modifying factor will begin by which size can be held accountable. The meeting likewise resolved to prohibit shifting ballast altogether in boats of any kind. A wiser and more enlightened move could not have been made. The custom of shifting ballast is so directly subversive of all earnest object in yachting, that the sport is to be congratulated upon the effective quietus the New England Y.R.A. has given to the carricaturing of the whole business in boats as well as in the men who sail the bag shifters. The penalty of infraction of the prohibitory rule, we are glad to find, has been made as heavy as it could be, as the offender will be expelled with his yacht from membership in all the clubs composing the association.

INTERNATIONAL AMATEUR CHANNEL MATCH.

WE have received the following conditions to govern the proposed Corinthian "cross seas" matches from the Thames to Ostend, Belgium, and from Ostend return to Portsmouth. The distance from the Medway to Ostend is 100 miles, and the match home to Portsmouth covers 200 miles, nearly all of which will be open sea work. These races are an innovation which all well-wishers of "real" yachting hail with delight, since they put vessels and crews to actual test without a trace of the hippodrome or greased pole exhibition with which our smooth-water racing still has too close connection. The crews are to be amateurs in the main, so that the profit will not merely be a cup won, but a grand lot of experience all round, of which the last boat partakes as much as the first. Of course, the sickly old hens in this country will be seized with holy horror at the idea of small craft from ten to twenty tons putting out to sea for a business-like proceeding which men can countenance instead of contenting themselves with horse play on a pond, but the 'longshore old maids have no say in English yachting and would be laughed out of countenance, so the races are certain to proceed despite the ludicrous misgivings of frightened old dish rags. We hope the example of our cousins may lead to similar attempts in our own waters, so that the poverty-stricken traps may be shown up in all their shortcomings. Hitherto the little ocean racing done in America has been confined to huge schooners, most of whom made a pretty poor showing as soon as the glue got wet. A race from Sandy Hook around Block Island and home in September or October, open to sloops under 50ft., would be something like the real thing, but how many of our toys and drifters would have the ability and courage to come to the scratch for what ought to be a very ordinary event?

CONDITIONS OF THE PROPOSED AMATEUR CHANNEL MATCHES, UNDER THE FLAGS OF THE CORINTHIAN Y. C. AND THE ROYAL PORTSMOUTH CORINTHIAN Y. C.:

First Race—To start from Port Victoria, at the entrance of the Medway, leaving the Shivering Sand Bell Buoy on the starboard hand, and finishing inside a markboat, to be moored outside the Stroom Bank, off Ostend Harbor. It is intended to start this race to arrive in time for the commencement of the Ostend Regatta, so that vessels intending to be present or take part in the regatta can avail themselves of this match in sailing to that port.

Second Race—To start from a markboat off Ostend Harbor, finishing off Southsea Pier, Portsmouth. No restrictions as to course. It is intended to start this race at the finish of the regatta at Ostend.

These matches are open to cruising yachts under 51 tons, Y. R. A. tonnage, belonging to any royal or recognized yacht club. The yachts will probably be divided into classes, viz., up to and including 20 tons, and over 20 tons, but this will depend entirely on the number of entries received.

Time allowance to be calculated on sail area and load water line; taking the distance of the first course to be 85 miles and of the second to be 170 miles.

Yachts to sail in cruising trim, under the rules of the Y. R. A., with the exceptions that every yacht must carry a boat, and that the clause in the rule relating to crews will be altered as follows: No restriction to the number of amateurs on board, but boats of 15 tons, Y. R. A. tonnage, and under, will be limited to one paid hand; boats over 15 and up to 40 tons, two paid hands; boats over 40 tons, three paid hands.

Only members of recognized yacht clubs to be allowed to touch the tiller, or in any way to assist in steering the vessels.

The committee reserve to themselves the power to refuse any entry, and to make any alterations they may think necessary.

Dates of closing entries and further particulars will be advertised later.

It is proposed to give two prizes for each race, and prizes to the amateur crew of the winning vessel in each class. The value of the prizes will altogether depend on the amount of the subscriptions received, which may be sent to the following gentlemen:

S. HARMAN STURGIS, Esq., Vice-Com. C. Y. C., 12 Copthall Court, London, E. C.
A. G. WILDY, Esq., Rear Com. J. T. Y. C., 13 Furnivals Inn., London, E. C.
CAPT. SUTTON, Vice-Com. R. P. C. Y. C., High street, Portsmouth.
H. CRAMPTON, Esq., R. P. C. Y. C., High street, Portsmouth.

Subscriptions Already Received.—Royal Portsmouth C. Y. C., £10 10s.; Corinthian Y. C., £10 10s.; Junior Thames Y. C., £10 10s.; Other subscriptions under £5, about £40.

APRIL 8, 1884.

A BIT OF REAL YACHTING.

THE following summary of the schooner Fortuna's recent cruise to the West Indies, we take from the *Herald*. It will give an insight into a bit of real yachting, and will, we hope, lead many others to follow suit, even though in a smaller way with smaller boats. It is certain that the day of the frightened old hens, who faint away at the suggestion of going to sea in a yacht, has about come to a close. The modern generation of Americans have pluck and ambition enough to follow the sport from the standpoint of men. So many yachts have passed successfully through the exceptionally severe weather this spring at sea, that a large fleet is certain to take to ocean cruising as a regular thing with the attainment of experience. In fact, it may be accepted that yachting in America is fast undergoing a change in its objects and methods of pursuit, which is but the natural transition from child's play in land-locked stretches, to the bolder and nobler attainments of genuine nautical life at sea. It has its counterpart in the expanding ambition of the youngster astride the wooden nag of the merry-go-round to mount a veritable saddle in the field. And who would dare insist the youngster should forever stick to the wooden counterfeit until his hairs grow gray, simply because the real saddle offers less chance for play, and urges riper dexterity, coupled with weightier responsibilities, and correspondingly greater realization in return.

It seemed like a wild prophesy some years ago to predict winter cruising down our coast even by a fleet of big schooners. Yet that prophesy has now been fulfilled. To the crustaceans and fossils of a past generation it may likewise seem wild to predict a swarm of little fellows dodging in and out from rockgirt Maine down to the sandy dunes of the Bahamas or the coral reefs of the Floridian shores. Yet that, and nothing short of it, is written in positive characters in the book of the future. Time will come when ten and twenty tonners will think no more of a run over to the Bermudas and a thrash home than they do now of a "pleasure excursion" to Greenport and home, and there are those who even at this day look forward to accomplishing the passage in a five-ton cutter as a venture fraught with spice, laurels and gratification, which many others will learn to appreciate in the near future. Yachting is dropping its swaddling clothes in America, and with the change in popular sentiment in favor of deep, safe boats with shipshape rigs, the sport is donning the breeches of men. None view this rapid expansion with more satisfaction than those who, like ourselves, have been brought up to the sea and know well the very gale there is between the feeble chaos of drifting up the Sound and the vigorous activity of body and mind in a fight which conquers the wild elements in sweet reward of a courageous undertaking.

The tide of affairs leading on to the ocean can no longer be stemmed by the relics of the old flat trap period, who play Sir Oracle, snugly ensconsed in the armchairs of some of the older organizations, nor yet by the stale, vapid washwomen, who curry their favor, and affront Americans of grit in some public prints with cowardice of spirit and bodily sloth. Out upon such lubbers and traducers of our national backbone, who defame us before the world as a nation of simpering, effeminate asses, with neither pride in the athletics of our bodies nor ambition in the direction of mental acquisition!

"The deep keel schooner Fortuna, Mr. Henry S. Hovey, of Boston, has arrived, after a five months' cruise, in the West Indies. In this time she experienced much bad weather, and soon after starting encountered a revolving hurricane which thoroughly tested the craft, but she passed through the ordeal with flying colors. At another time nineteen ugly squalls in twenty-four hours tried the patience of the yachtsmen, the ability of the sailing master, the strength of the crew and the staunchness of the yacht, but the men were equal to the occasion and the boat gave the greatest satisfaction to her owner. Bad weather lasted, with only short intervals of favorable sailing breezes and sunshine, for nearly two months, but the last ten or twelve weeks were delightful and more than compensated for the disagreeable nature of the early part of the voyage.

"The Fortuna yesterday looked as if she had been fitted out for the season's cruising, instead of recently returning from a long ocean trip. Her brasswork was polished, decks holystoned, sails with covers on, and a boat riding at the boom, while a stout, hardy looking crew forward, and a sun-browned, smiling sailing master aft made her indeed look the cruising vessel all over. In the cabin and owner's stateroom were found specimens of tropical plants and fish, together with a fine collection of quaint pottery, picked up at the many places touched in the long ocean ramble so happily finished.

"From the appearance of the seams, both inside and outside, this pleasure vessel passed through the unpleasant experience of hurricanes, squalls almost without number and continued bad weather, requiring most of the time double reefed sails, without the slightest injury. Nothing was washed overboard and nothing carried away, not even to the parting of a rope yarn. The winter and spring have made up a season of exceptionally bad weather at sea, as the many disasters chronicled fully attest; but there is no record of much worse weather than that through which the Fortuna passed. The hurricane was a very severe one. The wind at the nearest point of land, which was sixty miles away, registered seventy miles an hour, and Sir Thomas Brassey's sea cruising steam yacht Sunbeam, of 565 tons, having caught the last of the blow, reported that in their extended experience they had never met anything worse.

"The Fortuna left Gloucester, Mass., at half past 5 o'clock on the morning of Nov. 25, bound to Bermuda, with the owner and guests on board, the latter being Mr. C. A. Longfellow, Mr. William Stackpole and Mr. Joseph Fay. On the morning of the 26th at 5 o'clock, hardly twenty-four hours having elapsed, the yacht had put 264 miles astern—not a bad day's work, by the way—when a wicked blow from the southeast came on, and it continued to gather strength with such astonishing rapidity that Captain Newcombe made the necessary preparations and the yacht was hove to, in which condition she remained thirty hours before it was again prudent to make sail. About noon of Nov. 27 the wind hauled due north, and the yacht was scudded under single reef foresail the balance of that day and night and until 1 o'clock of the afternoon of the 28th, when the gale became so dangerous another reef was put in the foresail and said Captain Newcombe, 'we then let her go—and go she did, like a bullet, making splendid weather of it.' On the 29th an observation showed the yacht to be sixty miles due west of Bermuda, and all hands soon expected to see the friendly light of that island. Neptune, however, had another score to settle with them, as at midnight the revolving hurricane alluded to struck them with but meager warning, and for twenty-four hours the yacht wrestled with wind and waves, and conquered. A friendly nor'wester at last made them forget their trials, and on Saturday morning the lighthouse of Bermuda was sighted. The yacht remained at Hamilton and St. George until Dec. 10, the time being passed in an enjoyable manner, many of the Bermudan officers, citizens and ladies visiting the craft and inspecting it in Mr. Hovey's company.

"St. Kitts was next touched, where the yacht remained five days, and frequent excursions on shore by the party were made with evident pleasure and gratification. The island of Montserrat then engaged attention, but the stay there was brief. The island of Dominica was next visited, where two days were passed, and parties from on shore, including the English Consul and his family, came on board, being delighted with the chance given them to closely examine such a fine vessel. Guadaloupe was called at, and while the roads present a fair anchorage and the scenes on shore were very attractive, so much so as to keep the yacht there a week, Captain Newcombe sailor-like says, 'Well, I remember that place and won't forget it, as they charged us $80 in gold for a ton of ice.' Martinique was touched, and in the harbor of St. Pierre they stayed four days. The weather until now had been detestable, and the yacht was under double reef sails most of the time. From Martinique there was an agreeable change, and for nearly three months after the crew slept on deck. Barbados was the next island in order, where one week was passed in a most charming manner, the Governor, fort officers and officials coming on board at various times, and Mr. Hovey and his guests visiting them on shore. Port Spain, island of Trinidad, the southernmost of the Windward group, was next on the list, and here the Fortuna lay ten days. Many persons came on board the vessel, and the yachtsmen made excursions to the pitch lake, and spent many hours wandering about the large plantations. The rugged and picturesque island of Grenada next engaged the attention of the yachting party; then Tobago, 'where it's all rocks,' was the exclamation of the sailing master, after which the islands of St. Vincent and St. Lucia were visited.

"Fortuna then began to make her way back. Martinique and Guadaloupe were again touched, and then St. John's, island of Antigua. Here Mr. Fay reluctantly left the yachting party with a view of returning to Boston, where he was required on business. St. John's is a pleasant place and the harbor excellent. St. Thomas, St. Kitts, Santa Cruz and Porto Rico followed, and then Jamaica, where, in the harbor of Kingston, one week was passed, the yachtsmen having a glorious time, with fine weather. From Kingston to Havana and thence to Nassau was the programme, when the yacht crossed over to Fernandina, Fla., and glad indeed was the party to be once more on their own coast, although the cruise had been full of enjoyment. The yachtsmen went to St. Augustine, and upon their return Mr. Stackpole took steamer for New York. Ten days was passed at Fernandina. Then 'up the coast!' was the word, and Savannah, Charleston and Old Point were stopped at, the yacht remaining from four to six days at each of these ports.

"'The yacht is a magnificent vessel,' said Captain Newcombe. 'At no time were we completely shut up, and it was only about six hours during the revolving hurricane that the cook could not do his work, and only about the same time that the men did not go down forward, but came aft and passed through the cabin. The men could always do their work on deck and,' he concluded, 'the yacht works beautifully.'

"The Fortuna will go on the screw dock to-day for inspection, and on Monday she will leave for Boston with Mr. Hovey on board. Upon reaching the latter port she will again be fitted with her racing spars, and during the coming season will be found at the starting point in all the regattas in Eastern and New York waters. The Fortuna was built in Brooklyn, by Messrs. C. & R. Poillon, from designs by Mr. A. Cary Smith, and is 112ft. over all, 105ft. on water line, 22ft. 6in. beam, and draws 12ft. of water."

DEEP LAUNCHES.—Lawley & Son, South Boston, are building two seagoing launches for New York *Herald* shipping service from special designs of Mr. Beavor Webb. That is enough to say that the new craft will come up to expectations. They are deep, highsided, and have deadrise, which is a stride in advance of the swampy little traps hitherto accepted as all that could be asked from a steam launch in this country. The pair will be named Herald and Telegram. Length 57ft., on loadline 50ft., beam 9ft. 2in., depth moulded 7ft. 3in., draft 4¾ft. Supplied with the famous 3-cylinder compounds of Willans and Robinson make, Thames Ditton, Surrey, England. These engines have no link motion, and are entirely encased. They work up to high speed without noise or jar. Boilers will be built in this country, as imported generators cannot receive the United States Government stamp required by law.

ADELINA.—Mr. Bierck, of this city, has purchased the keel sloop Gracie M., in Boston, and has changed her name to Adelina. She has received an overhaul from Hutchings & Prior, and will clear for this port May 9 with Rufus A. Smith as skipper and the owner on board. The Adelina is of moderate beam and good depth, with an iron keel, built, we believe, in Marblehead. The demand for keel yachts is so great that the New York market is bare of such craft and Mr. Bierck was obliged to look elsewhere for a safe boat. The yacht agents inform us that they have few or no keel boats for sale, but any quantity of centerboards. Keels are now at such a premium that recent sales in this city brought near first cost for boats half through their natural term of life. Adelina will pick up moorings off Sea Cliff during summer.

SEABELLE.—This handsome cutter, recently imported from the East by Mr. Avery, has been bought by Mr. H. A. Seymour, of Washington, who will keep her off his summer residence at Sachem's Head, in the Sound, and in winter in Chesapeake waters. She is 31ft. L. W. L., and on the passage round logged 33 nautical miles in 3 hours, with 6 miles of tide in her favor, under double-reefed mainsail. This is at the rate of 9 knots an hour, or two knots more than Kemp's observations recorded in his "Yacht and Boat Sailing," and seems a very high rate. Yet we have the assurance from direct sources that the speed was made. Mr. Avery leaves for Japan for an absence of several years.

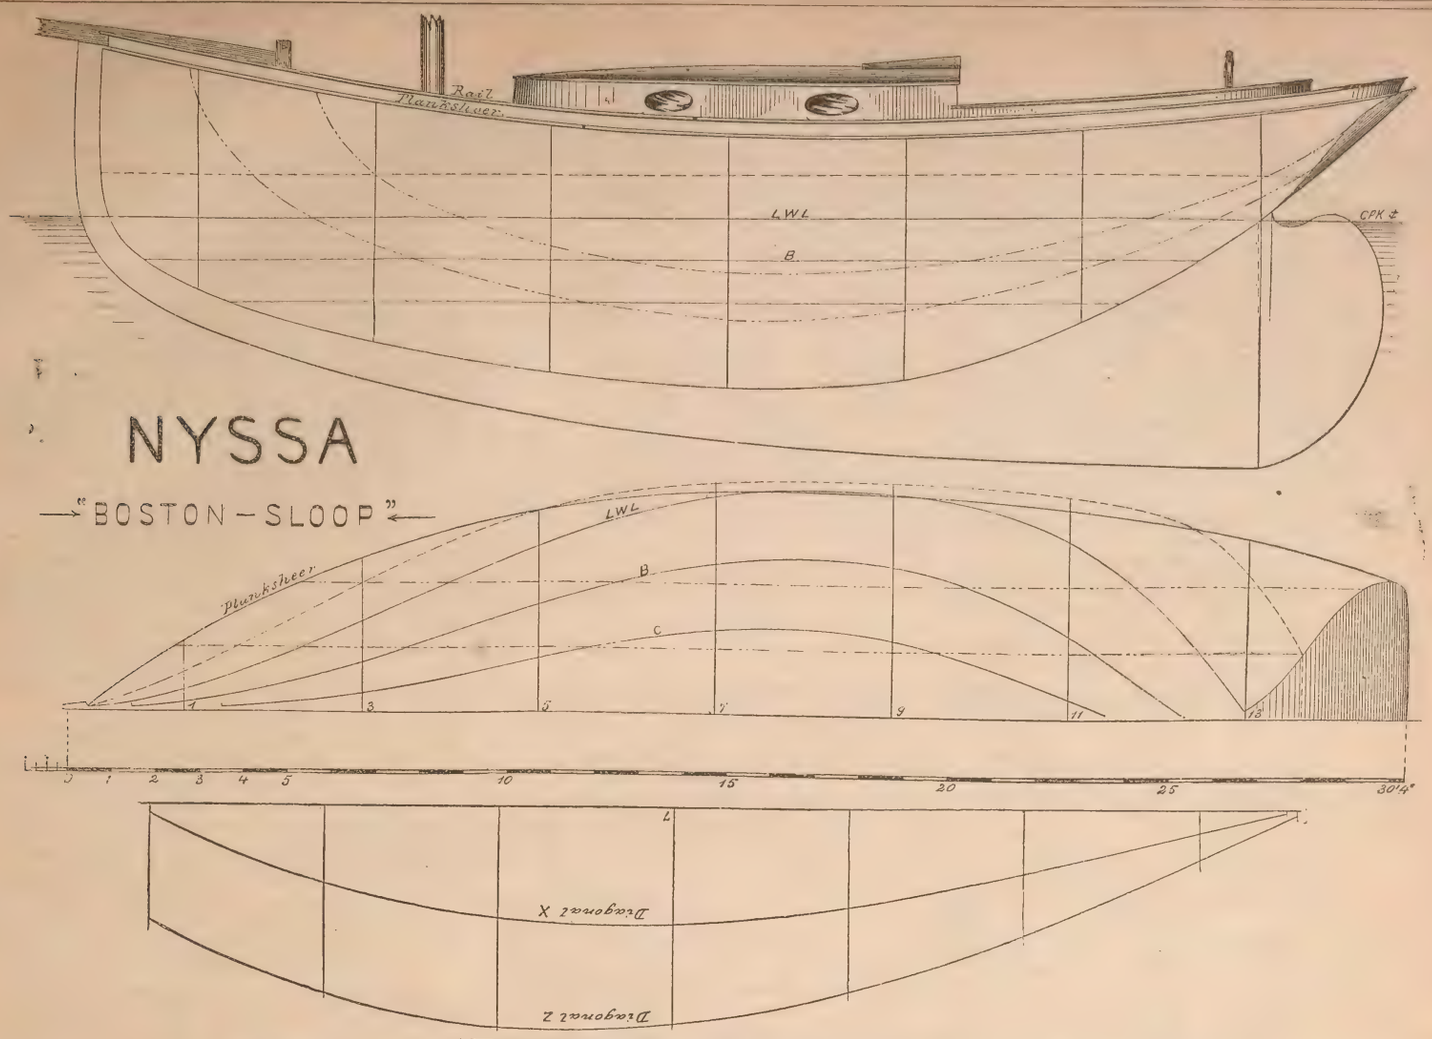
YACHTING IN GERMANY.—German yachting has been picking up of late, and sea cruising in the Baltic is becoming common; but so far the government has failed to relieve yachtsmen of burdensome and harrassing legislation, as all yachts are subject to the same rules and restrictions as merchant vessels, and have to clear every time upon leaving port for an hour's sail, and submit to customs inspection and a lot of red tape upon returning. A move is being made to seek relief. It is a wonder that a government so enlightened and so anxious to cultivate national sports as the Berlin Ministry should not long ere this have taken action in the matter.

ATLANTIC Y. C.—The rule compelling the deposit of model or lines before receiving a prize from the club, which has been enforced for several years, was repealed at the meeting of April 14, quite unexpectedly, at the instigation of a small clique. At the meeting held April 28, the more enlightened element of the club turned out in force, and by a vote of 33 to 4 re-established the rule in a stronger form than ever. It is to the credit of the club that it does not propose to countenance the petty selfishness of a few persons.

MUST GO.—"The tendency is to fixed ballast in both large and small yachts and the sandbagger must go," says the South Boston *Inquirer*, which is very true and very much to the interests of yachting on small tonnage. We note likewise with satisfaction the determined attitude of the New Jersey Y. C. to live up to its excellent tenets in instructing Mr. Dilworth to have nothing to do with any proposition for a combination race with the Oceanic Y.C., should the latter seek to make it a piece of sandbag tomfoolery.

FLUSH DECK.—Cockpits, even among the lounging class of yacht drifters, are fast going where the woodbine twineth. Schooner Columbia has come out as a flush-decker after recent alterations. Where is that "comfortable lee" and that "protection" so dear to the old hens? American yachtsmen are assuming a hardier complexion. The chewing-gum school must go. Columbia now is a vast improvement upon her former self. Four inches more freeboard, longer overhang and fined out forward.

FRENCH YACHTING.—The value of prizes won by French yachts last year was $23,000. The sport has made steady and rapid progress, many yachts being imported from England and others built after American ideas. In 1878, total value of prizes won was $10,000, so that in five years the amount has been doubled. In 1883 there were sailed 183 races, with an average value of prizes of $120. The number of winning yachts last year was 150.



PROVINCETOWN Y. C.—At the first meeting of the season of the Provincetown Y. C., the following principal officers were chosen: Commodore, Thomas Lowe; Vice-Commodore, A. P. Hammond; Fleet Captain, Frank Allen; Measurer, Joseph S. Atwood; Secretary and Treasurer, H. A. Jennings. A list of the officers was ordered to be sent to FOREST AND STREAM, the Boston *Courier* and Cape Cod *Item*.

PROMOTING SPORT IN FRANCE.—The regatta society of Rochelle, France, receives a subsidy from the city of $200; from the department in which it is situated, $60; from the Minister of Marine, $80; from the Y. C. de France; the parent institution, $500; from Admiral Veron, Maritime Prefect, $40. The association has 202 members.

THUNDER BAY Y. C.—Officers for the year: Fred Jones, Commodore; H. K. Wickstead, Vice-Commodore; W. T. Clarke, Secretary and Treasurer; Committee of Management, W. F. Davidson, G. T. Marks and J. I. O'Connor. The Vice-Commodore has nearly finished a five beam cutter, but will probably rig her as a yawl.

NEW CUTTERS.—Mr. Brisben, of Philadelphia, is having a cutter built by Albertson Bros., of Kensington. She is similar in model to the Windward, illustrated in our issue for Feb. 7. The design for a second cutter 22ft. long has been sent to another gentleman in Philadelphia.

HARDWARE.—We receive inquiries from time to time from Canada for the address of a ship chandler dealing in yachts' hardware across the border. If such an establishment exists we would like to publish address for benefit of Canadian yachtsmen.

NYSSA.

THE Nyssa, built by Wood Brothers, of East Boston, and now the property of Mr. J. L. Wall, of the Seawanhaka Corinthian Y. C., serves as an excellent example of the modern Boston keel sloop. It will be seen that to good depth she also adds large beam, and requires a correspondingly liberal rig. Boats of this class are very stiff and powerful, with great ability in a sea, and, of course, uncapsizable, as they are supplied with plenty of outside ballast. In some recent specimens nearly all the weight is hung on the keel. The drag and deep heel is peculiar to the East Boston builders. Where there is enough water this deep heel is an advantage in steadying the boat, and doing away with long bowsprits, as the center of lateral resistance is found well aft.

The extent to which such boats can be modified with benefit by clipping some of the beam and filling below, making an easier form to drive, is indicated in the success of such yachts as Vayu, Beetle, Oriva, Mavis and many others. Such alterations would in no wise interfere with cabin floor, but add to its width and to the height below as well, so that even in boats of the Nyssa's length a flush deck is not impossible. The present popular tendency is in the direction mentioned. In other words, the typical Boston sloop, evolved since the introduction of keel ballast, is slowly approximating the regular cutter with three to four beams.

How far this gradual merging into the cutter will be carried in our waters is for the future to tell. Under length measurement boats must always remain very large on their loadline; hence we may look for all the depth, displacement and draft which experience will allow, and in addition such beam as is congenial to the other requisites. This tendency has received exemplification in the numerous new yachts built in Boston during last winter. It is a most wholesome prognostication for the future. As fast as the truth is vividly brought home to the public through the force of example that more satisfactory and practically useful results can be obtained through moderation in beam and corresponding expansion in depth proper and displacement, the sooner will we all arrive at a type which will become the ruling standard for the future, and the present period of sore transition, with its trials and tribulations, will come to an end. When a yacht becomes so deep as to afford head room under the beams, houses and encumbrances on deck will disappear of themselves, as in many new boats recently constructed; so that the assimilation of the Boston sloop to the cutter, step by step, is really a foregone conclusion to any one who draws logical inference from the influences at work. For the present, however, the Nyssa represents a large class of Eastern sloops which have deservedly become widely popular in the search for a reliable substitute to take the place of the old time light drafts and light displacements. But for the prevalence of these deep drafts with their outside weight, general cruising along the Eastern coast would be practically impossible, as it would be fraught with such risks and so many accidents, that few would care to expose themselves to the chances of going to Davy Jones's locker at an untimely age. Our columns in the past have recorded many instances of close escapes in Boston sloops, where disaster would have been a certainty in a light draft centerboard of the New York pattern.

The Nyssa was well built in the first place, and a year ago received a thorough overhauling, fresh rig and outfit, under the superintendence of Mr. John Harvey, of this city, so that she is to-day the most complete and best equipped sloop of her class in New York waters. The keel is 6in. sided, stem and post 4in., all of oak. The deadwood is 4in. thick. Timbers below the bilge are of oak 2½×2½, and of natural crook hackmatack from the bilge up, the floors 3-inch oak, and the frames double up to turn of bilge. The planking is yellow pine 1¼in. thick; the deck being 1¼in. white pine laid tapering with the sheer.

Length over all	30ft. 4in.
Length on loadline	26ft. 9in.
Beam moulded on L.W.L	9ft. 10in.
Depth, rabbet to planksheer on M.S.	5ft. 11in.
Draft at heel	5ft. 7in.
Least freeboard	1ft. 11in.
Displacement	10 short tons.
Ballast on keel	2500lbs.
Ballast inside	6577lbs.
Hoist of mainsail	24ft.
Mainboom over all	30ft.
Gaff, over all	20ft.
Jib on foot	30ft.
Bowsprit outboard	13ft.

The Nyssa has lead ballast, housing topmast, runners and backstays, and a most complete cabin and navigation inventory.

REQUISITES.—We have received an illustrated catalogue of yachting requisites from Norie & Wilson, 156 Minories, London, containing much that is interesting and novel as well as a long list of yachting books suitable to the cabin library.

NEW SHARPIE.—Mr. Clapham has an order for a new 65ft. sharpie, to sail on dew and of course beat all creation while she is building, though what she will actually accomplish is quite another affair

NEW JERSEY Y.C.—Has chartered the steamer John Lennox for the matches of June 19. The construction of a dock 170ft. long will afford the club anchorage excellent shelter.

BEETLE.—Mr. Hemmenway's smart cutter Beetle has received an extra ton lead outside, but may not appear this season, as her owner will be abroad. Sloops breathe free.

FAD.—This yawl is building for Mr. Goddard, of Boston, from his own designs, and not for Mr. Wellman, who has had the Sunshine cutter rigged by McManus & Son.

DORCHESTER Y. C.—The commodore will fly his pennant from his new acquisition, the Boston keel sloop Nirvana, known as a prize winner in many Eastern battles.

NEW CUTTER.—Mr. C. E. Brown, of Chicago, is having a cutter built by Eddy, of Marblehead, who has acquired Keating's former establishment at that place.

LILLIE.—This famous little Boston flyer is to try an iron keel, and if her rig is increased in proportion, some fresh trials with the Hera would be very interesting.

RARITAN Y. C.—This club, with headquarters at Perth Amboy, N. J., has issued a new book containing constitution and sailing rules.

THETIS.—This new semi-cutter, built for Mr. Bryant, by Smith of South Boston, was launched Saturday last.

ELLA MAY.—This is the name of the new 32ft. cutter bought from Lawley & Son by Mr. E. M. Tyler.

TRI.—Mr. Tudor's Boston sloop Tri will come out improved with two-ton iron keel this season.

MEASUREMENT IN THE EAST.—A few remarks will be found upon the editorial page.

QUINCY Y. C.—Fixtures are club races May 28, June 30, July 30, Aug. 28 and Sept. 11.

MONTAUK.—This schooner arrived at St. Augustine, Fla., April 24, from Havana.

SAY NOTHING.—The design for a large five-beam cutter is now underway.

MICHIGAN Y. C.—Has been organized at Detroit with a capital of $2,500.

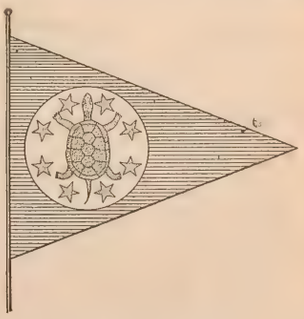
BUNKER HILL Y. C.—Has 58 members and 37 boats.

BOOKS RECEIVED.

A Study, with critical and explanatory notes of Lord Tennyson's poem, "The Princess." By S. E. Dawson. Second edition. Montreal: Dawson Brothers. 1884.

Chinese Gordon; a Succinct Record of His Life. By Archibald Forbes. New York: George Routledge & Sons. 1884. Price, $1.

Canoeing.



Secretaries of canoe clubs are requested to send to Forest Stream their addresses, with name, membership, signals, etc, their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to Forest and Stream their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

May 30 and 31.—Spring Meet at Newburg.
May 30 and 31.—Spring Meet on Connecticut River.

MOHICAN C. C.

R. W. GIBSON, Snake, Captain; P. M. Wackerhagen, Thetis, Mate; B. I. Stanton, Black Hawk, Purser; B. Fernow, Fior da Lice, Secretary; E. S. Oliver, Marion, member of Executive Committee. The Mohican C. C., of Albany, N. Y., was organized in 1882, with five members and five canoes, an old Everson Nautilus, weighing 150lbs., more or less, and still occasionally taken out under the name of the

Tub, though leaking badly; a brass monster, the Curiosity, gone to the bow-wows in a mysterious way; a Racine St. Paul, the Henrietta, sold to an Amsterdam canoeist; a Rob Roy, the Isadora, whereabouts unknown, although her master is still a Mohican; and the Albani, American Traveling canoe, still in the club house. The present members number 21, with 14 canoes.

A LOCAL MEET AT LAKE GEORGE.

Editor Forest and Stream:

A meeting of the joint committees of the Lake George and Whitehall canoe clubs was held on the 9th of April, 1884.

Arrangements were made for a canoe meeting on Lake George on the 24th, 25th and 26th of July next. It will be a cruising meet, the canoeists congregating at the Canoe Islands and then cruising in company through Lake George, camping where night overtakes them.

The races will be under the control of the Programme Committee consisting of F. C. Cooke and E. A. Greenough, of the Whitehall C. C., and Will Ranger, of the L. G. C. C.

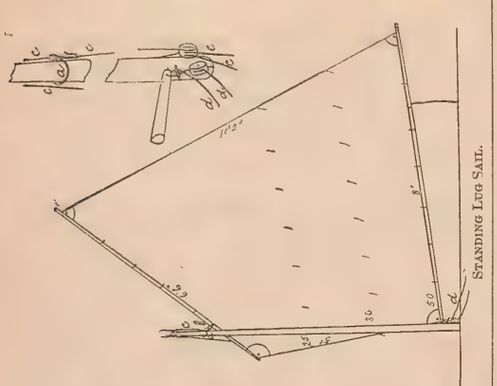
The date has been so arranged that canoeists on their way to the A. C. A. meet at the Thousand Islands may take part in this one. It is something new in the way of a canoe meeting, and it is hoped that it will be a success. For further information address

Whitehall, N. Y. W. W. Cooke, Jr.

AMERICAN CANOE ASSOCIATION.—Dr. Neidé is now sending to members a very neat certificate of membership, designed by Mr. Gibson, of Albany. The upper portion represents a fleet of canoes under sail and paddle, and the lower is decorated with paddles, rudders, anchors, etc., while on the left hand side are the A. C. A. flags and also blank flags, to be filled in with the owner's signals.

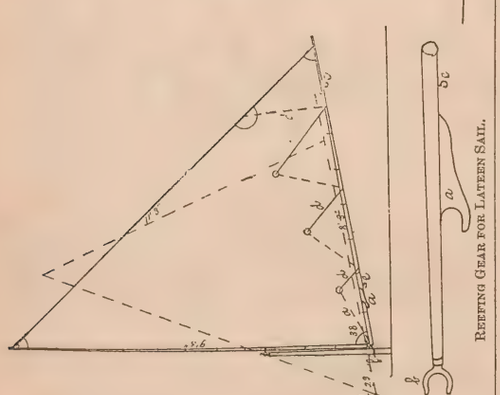
AMATEUR CANOE BUILDING.

Fourteenth Paper.



SAILS AND RIGGING—CONTINUED.

THE simplest rig for a canoe is the leg of mutton, or, as it is sometimes called, sharpie rig, consisting of two triangular sails, requiring only mast, boom, halliard and sheet, and on a narrow boat, where but a small area can be carried, they will answer very well, but where a large spread is needed, the spars must be so long as to be unmanageable; for instance, to spread 60 square feet, with an 8ft. boom, would require a mast 16ft. above the deck. Another disadvantage is the necessity of using rings on the mast, as they are liable to jam in hoisting and lowering.



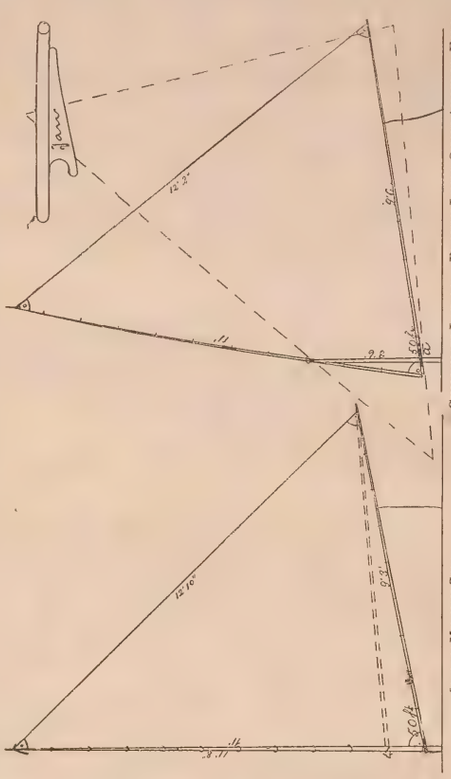
A simple sail, once used on canoes, is the spritsail, but it was abandoned on account of the difficulty of handling the sprit in so small a boat. The ordinary boom and gaff sail is also objectionable as it requires two halliards and the rings on the mast.

The lateen sail, as adapted by Lord Rosse, is much used on canoes, especially the smaller ones. It has the advantages of a short mast, low center of effort, and few lines; but the yard and boom must be very long, the sail cannot be furled or reefed when before the wind, and it is not suited for large areas. The lateens introduced by the Cincinnati C. C. are practically leg of mutton sails, the yard peaking up into the position of a topmast, as shown in the drawing. The ordinary lateen rig consists of a triangular sail laced to a yard and boom, both spars being jointed together at the tack, and a pole mast with a spike several inches long on top. A brass ring is lashed to the yard near its lower end, and a jaw (*a*) of wood or metal is fastened to the boom, a short distance from the forward end. In setting the sail, the yard is lifted until the ring can be hooked over the spike on the mast, then the boom is drawn back, lifting the yard, and the jaw is dropped in place around the mast, the operation being reversed in taking in sail.

The following method of reefing the lateen was devised by Gen. Oliver, of the Mohican C. C. The fore end of the

Standing Lug Sail.

Reefing Gear for Lateen Sail.



boom is fitted with a jaw (*b*) which encircles the mast when the sail is set, making a leg of mutton sail, while on the boom is a jaw (*a*). In reefing, the jaw (*b*) is removed from the mast, allowing the boom to come forward until *a* touches the mast, the slack of the sail being taken in by a reef line, *d d d*. One end of this line is made fast at the tack, it is then rove through grommets in the sail, and the other end made fast on the leach, the slack being taken in by hooking the cord over a screweye (*e*) on the boom forward, and another aft. Another similar plan dispenses with the jaw on the end of the boom, using instead a second jaw on the boom near the first, the shape of the sail being a little different, but the details of reefline, etc., the same.

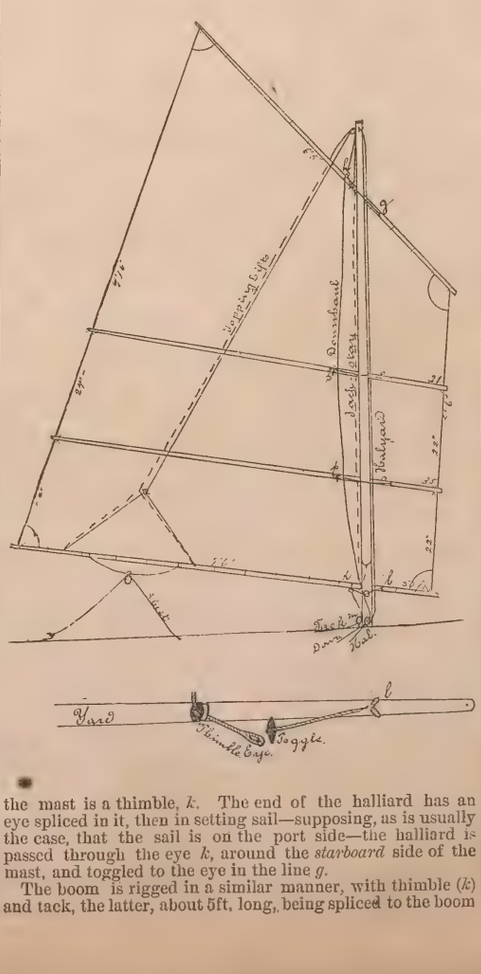
The old sliding gunter is no longer used, as it was difficult either to hoist or lower the topmast with any pressure of wind on the sail. Several other varieties of gunter have been introduced at times, but they are inferior in simplicity and effectiveness to the lug.

On a canoe, the nearer the sails approach a square, the shorter boom and yard they require for any given area, and the easier they are to handle and stow. All things considered, there is no sail so easily set, reefed or furled as the simple standing lug. The head of the sail is laced to a yard on which a ring *b* is lashed, while the foot is laced to a boom, in the forward end of which an eye is spliced. On the mast is a brass traveler *a*, formed of a ring to which a hook is brazed. An eye is formed on the upper part of the hook in which the halliard *c* is spliced, while the downhaul *e* is spliced to the hook itself.

The halliard and downhaul are sometimes in one piece, the lead being from eye in traveler through block at masthead, thence through double block at foot of mast to cleat on side deck; thence through double block again and to hook of traveler, the latter part forming a downhaul. The tack *d* is an endless line rove through a single block on deck at the foot of the mast and a screweye near the well, and having a toggle spliced into it. To set sail it is taken from below, the eye in the end of boom toggled to the tack, hauled out and belayed, then the yard is lifted, the ring hooked on to the traveler, and the halliard hauled taut and belayed. The downhaul is led outside of the sail, the latter always being on the same side of the mast.

Where a large area is to be carried, as in racing, the best sail is, beyond all question, the balance lug, a modification of the sails long in use in China, which was introduced to canoeists some fifteen years ago. In this sail a portion projects forward of the mast, greatly lessening the outboard weight when running free, as well as the length of the boom. The sail is spread on a yard and boom, as the standing lug, but is so hung that a portion hangs forward of the mast,

Cincinnati Lateen. Broken Lines Show Another Form



Leg of Mutton Sail.

about one-seventh to one-eighth of the boom being forward; thus, a sail of 7ft. on the foot will have no longer boom when running free than an ordinary sail of 6ft. on the foot.

To handle a large sail quickly and certainly a number of lines are needed, some of which may be dispensed with at the will of the skipper, but we will give all in the description.

One peculiarity of these sails, a feature also derived from the Chinese, is that they have a light batten sewn in a hem on the sail at every reef, keeping the sail very flat, and permitting the use of reefing gear instead of the ordinary reef-points.

The sail always remains on the same side of the mast, on either tack, being permanently hung there. On the yard just forward of the mast is a short piece of line (*g*), having an eye in one end, and a wooden toggle in the other, and abaft

the mast is a thimble, *k*. The end of the halliard has an eye spliced in it, then in setting sail—supposing, as is usually the case, that the sail is on the port side—the halliard is passed through the eye *k*, around the *starboard* side of the mast, and toggled to the eye in the line *g*.

The boom is rigged in a similar manner, with thimble (*k*) and tack, the latter, about 5ft. long, being spliced to the boom at *l*, and leading around starboard side of mast through *k* and block *m* on deck, to cleat; or the tack may be fast at *l*, lead through a thimble lashed at starboard side of mast, then through eye *k* and to cleat on boom. In these sails the luff must be set up very taut to keep them flat, so the tack and halliard gear must be strong.

On each batten a short line (*o*), called a parrel, is made fast just forward of the mast, fastening with a toggle to an eye (*p*) on the batten abaft the mast, allowing such play as is necessary in lowering sail or reefing. These parrels confine the sail to the mast, keeping it flatter, and distributing its weight more uniformly over the entire length of the mast, thus easing the strain on the masthead.

A topping lift is usually fitted, being in two parts, one on each side of the sail. The lower ends are "crowsfeet," as shown, the main lines leading through a block at the mast head, and uniting in one part, which leads through a block at the deck and to a cleat.

Another line, *t*, called a jackstay, is made fast to the masthead, leads down outside of the sail, and is made fast to the mast just above the boom, or it may be led through a thimble on the boom to a cleat. Its purpose is to hold up the fore end of the boom in reefing and lowering sail. A downhaul is also rigged to gather in the sail quickly, especially in case of an upset. It is made fast to the yard near the eye, *h*, and leads through a screweye or block on deck. The main sheet is made fast to a span, or for a large sail a single block travels on the span, and the sheet is rove through it, one end of the latter having an eye in it. When running free, the entire length of sheet is used, the eye bringing up in the block and preventing it unreeving, but when closehauled the eye is hooked over a cleat on the afterdeck, and the sheet is used double, giving a greater purchase and taking in the slack.

For racing with very large sails, backstays are sometimes necessary, leading from the masthead to the deck on each side, one being slacked off, and the other set up, in jibing. When not in use, the slack is taken up by a rubber band. In rigging the mizzen, the jackstay and backstay are omitted, and the topping lift is a standing one, made fast to masthead and boom, the sheet being single.

The following method of handling a balance lugsail, written by Mr. E. B. Tredwen, and published in the London *Field* some time since, refers both to the large racing sails, and to a cruising rig also: "The difficulty which is experienced by many canoeists, appears to arise from the needless labor of taking off the sail every time the canoe is housed. I have always found it best to keep a mast for each sail, a cruising mast and a racing mast, and the respective sails are never taken off their masts except for washing or repairing. Similarly the mast which has been last used on the canoe is always put away with the canoe, either unstepping it, and laying it on deck, or lowering it (if a lowering mast be used) and letting it lie with a lashing to keep it in place.

If, however, the canoe must be left in the open, it is necessary to remove the mast and sail, which is very easily done. Having finished sailing and come alongside the boat house, the topping lift is let go and the after end of the boom comes on deck; then the tack must be slacked, or if the tack is a fixture, the jackstay must be slacked a few inches. The reeflines should next be gathered together, and stowed into a fold of the sail, the halliard and hauling part of the topping lift, similarly stowed in a fold on the opposite side of the sail, and the main sheet cast three or four times around all.

All the lines leading to the masthead (topping lift, halliards, etc.) should then be gathered to the mast about two feet above deck and a tyer put around. The after end of the sail can now be brought up to the mast and tied there, and the whole let run into a long bag and stowed away in the boat house.

When next going out for a sail, the mast is stepped, the tie of the boom end to the mast let go, and the sail brought down to the deck, the mainsheet cleared from around the sail, the topping lift set up, and the reeflines allowed to lie in the fore end of the well. The jackstay being set up, sail may be hoisted at once. The trouble when under way of reeving two reeflines through two screweyes, and knotting the ends for the sake of keeping them in their places, appears to be a detail scarcely worth discussion.

If the mast and sail are not taken off the boat at the end of the sail, there is not even the trouble of untying the knots in the ends of the lines. When my canoe sails have not been put away by a stranger, I can always get under sail in five minutes.

In a cruising sail there is no necessity for the tack to lead along the deck, or even along the boom. I have always cruised with a fixed tack about 6in. long, made fast to the lug of a triple pulley on the mast for the reefing gear to lead through.

The only occasion on which the tack need be started is in racing, when the wind is very light and the canoe is sailing between high banks. The tack may then be eased up until the yard is hoisted chock ablock, so as to get the sail as high as possible; at all other times a standing tack will do without any part on deck."

THE LOG BOOK.

VIII.—CALOOSAHATCHEE RIVER AND LAKE OKEECHOBEE.

Editor Forest and Stream:

My last was written from Dredge No. 1, at the headwaters of the Caloosahatchee River, and I believe I promised you some items on arrival at Kissimee. I cannot keep my promise, for we did not go to Kissimee. But we did go to Okeechobee, and found it quite a pond, also that it would kick up the biggest sea on the least provocation of any pond we had ever seen.

On leaving Fort Thompson at the headwaters, we passed through a series of lakes connected by canals. First came Lake Flirt, quite a lake, but so filled with lily pads and grass as to look more like a meadow. Some seven or eight miles of canal and river alternately, and we came to Bonnet Lake—another meadow under water—more canal, and we ran into Hickopochee (Little Water). Hickopochee is nearly circular, and from three to four miles in diameter. Water quite deep. Bottom muddy. Caught some very fine black bass.

From Hickopochee a short canal takes us to Okeechobee (Great Water). Reached the lake at sunset on the 14th of March. Turned out on the 15th and found a well developed norther on hand. Concluded we did not care about going to sea, so amused ourselves shooting "'gators." Okeechobee and vicinity must be the home of the alligator. I think we saw thousands. Blew hard all day; 16th and 17th ditto, but on the 18th we got away and ran across to mouth of Kissimee. I heard of a canoeist once who could not find the mouth of the Kissimee. I don't wonder now.

After taking a good look at the mouth of the river, we decided to spend what time we had at our disposal on the lake, and return via Caloosahatchee. Sailed around the northern end of the lake as far as Chansey Bay, on the east shore. Stopped at the bay one day shooting 'gators, and then laid our course for Kissimee River again. Camped in the mouth of the river, and early next morning started on the back track, reaching Dredge No. 1 at 4 P. M., March 22. Left the next morning and reached Fort Myers on the 25th.

My companions left me at Myers, and I returned home alone, spending a few days in Charlotte Harbor. Okeechobee is Great Water. No doubt of that, but if any one contemplates going there for a sport-

ing trip, I would say, don't. Game is scarce, fish are scarcer, and any boat that can get into the lake would have a lively time with even a moderate breeze.

The Caloosahatchee, however, abounds in deer and turkey, and the scenery is delightful; banks are high, with generally a heavy growth of cabbage palmetto; in many instances the pines came to the river, and near the headwaters live oak are plenty. The fishing is nothing to brag of.

In Charlotte Harbor there are both shooting and fishing enough to satisfy the most fastidious, with fine oysters in abundance. Clear water, blue skies, beautiful green islands, and, in fact, everything to make a cruise enjoyable. TARPON.

THE CHART LOCKER.

VII.—WISCONSIN RIVERS.

G. H. G., Cleveland, asks for information as to Wisconsin rivers and maps of the same.

CANOEING IN BUFFALO.—In the small boat line we have the usual number of clinker boats being built, and one or two experiments. Among the latter are two lapstreak boats 15ft.×4ft., with centerboards and decks, built by Geo. Moon, who is anxious to build a boat that will "get away" from the 15ft.×38in. Joyner, owned here. A canvas canoe is on the stocks, being built from lines furnished by Capt. Kendall, and promises to be a flyer if lines and sail area count. She is 15ft.×36in., and will have iron on her keel, being intended for lake service. A Pearl is being talked of by one of our younger boating men, and we have a Racine St. Paul and a Rushton Stella Maris, so it begins to look as though we would muster a fair number of canoes this summer. We have no club, but soon as we get four or five active members we will organize. Of course there must be three officers, and we want a private to boss. With our waters we should have a large fleet of canoes, but the pioneer was put on the river last summer.—CABALLERO.

THE CHOCKSETT C. C.—This club was recently formed at West Sterling, Mass. with E. H. Coolidge as Commodore, E. W. Sawyer, Treasurer, and E. Coolidge, Secretary.

AFLOAT AGAIN.—"Nessmuk" writes us on April 18: "My new canoe, Bucktail, is here, and is simply the most perfect cedar canoe I have ever seen. Not very light, 24lbs., staunch, serviceable, capable; finished like an Elgin watch; intended for a river cruise down the Susquehanna River. She will be heard from."

PERSONAL.—Messrs. Longworth and Lucien Wulsin, of Cincinnati, were in New York last week, the former sailing for Europe. Mr. Gibson, of Albany, was also in New York for a few days.

THE NEWBURGH CAMP.—We have received from Mr. Smith some photographs of the camp ground, showing the beach and inside of the old earthworks.

LEAKS IN BIRCH BARK CANOES.—Can any of our readers inform us as to what is used to stop leaks in a birch bark, and how applied?

HUMPHREYS' HOMEOPATHIC VETERINARY SPECIFICS

FOR THE CURE OF ALL DISEASES OF
Horses, Cattle, Sheep, Dogs, Hogs & Poultry.

For Twenty Years **Humphreys' Veterinary Specifics** have been used by **Farmers, Stockbreeders, Horse R.R., Travel'g Hippodromes Menageries** and others with perfect success.

Special patterns tied to order.

APPLETON & LITCHFIELD,

304 Washington St., Boston, Mass.

EXCELSIOR BAIT PAIL.

(Patented). **The Fisherman's Friend.**

There is an inside pail which can be removed and placed in the water the same as a "fish car," thus keeping the bait alive for an indefinite time. The pan which fits in the inside pail can be raised and lowered, thus affording an easy selection of bait without wetting the hand. The bait is kept alive during transportation (the critical time) by the continuous flowing of the water through the perforations, thus causing a never failing supply of fresh air. For sale by all dealers, or will be sent on receipt of price. 8 Quarts, $2.50 each; 12 Quarts, $3.25 each. Manufactured only by DE LA VERGNE & CO., 176 Chambers street, New York.

NEW.

Harrison's Celebrated Fish Hook.

Registered.

Trade  Mark.

Whereas, It having come to our notice that some unprincipled house, to gain their own unworthy ends, and to attempt to damage our good name having spread reports to the effect that the manufacturers of the above hooks are defunct, we now take this opportunity of informing the American and British public that such reports are utterly false. The same efficient staff of workpeople is employed as heretofore, and **we challenge the world to produce a fish hook for excellence of temper, beauty and finish in any way to approach ours,** which are to be obtained from the most respectable wholesale houses in the trade.

Signed, **R. HARRISON, BARTLEET & CO.,** Sole manufacturers of Harrison's Celebrated Fish Hooks, Redditch, England.

Manufacturers also of Fishing Tackle of every description. Sewing and Sewing Machine Needles.

SOMETHING NEW.

Sportsman's Fishing or Camping Tents

And if desired, a portable curtain to close tent at night, or in storms. These tents are made of best waterproof goods, rendered mildew-proof at slight extra cost. Also tents of all kinds, flags, banners, etc. Yacht and boat sails. Send for illustrated circular. Address **S. HEMMENWAY,** 60 South street. Factory, 39 South street, New York City.

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.,

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

Allen's New Bow-Facing Oars.

For sale by the trade, and by F. A. ALLEN, Monmouth, Ill.

JAS. F. MARSTERS,

55 Court Street, Brooklyn.

Established 20 years. Open Evenings. **J. F. MARSTERS, 55 Court St., Brooklyn.**

KYNOCH'S

Patent "Perfect" Brass Shells,

MANUFACTURED BY

KYNOCH & CO., Birmingham, Eng.

These shells are made of extra fine thin pliable metal, with reinforced base; are adapted to either Winchester or Wesson No. 2 primers. Can be reloaded as often as any of the thicker makes. **Cost only about half as much.** Weight less than paper shells. They shoot stronger and closer, and admit of a heavier charge, as owing to the thin metal, inside diameter is nearly two gauges larger. Load same as any brass shells, using wads say two sizes larger than gauge of shells. Or can be effectually crimped with tool and straighten out to original shape when discharged. **The crimping tool also acts as a reducer,** an advantage which will be appreciated by all experienced sportsmen. Sample shells will be mailed (without charge) to any sportsmen's club or dealer, and prices quoted to the trade only. For sale in any quantity by gun dealers generally, or shells in case lots only, (2,000), and crimpers not less than one dozen, by

HERMANN BOKER & CO., Sole American Agents,

ANSWERS TO CORRESPONDENTS.

With its compact type and in its permanently enlarged form of twenty-eight pages this journal furnishes each week a larger amount of first-class matter relating to angling, shooting, the kennel, yachting, canoeing, and kindred subjects, than is contained in all other American publications put together.

BENCH SHOW JUDGING.

WE regret to see that the practice of holding dog shows extending over a period of four days still continues, as well as that of dragging the judging along over the whole time of the show. It is generally acknowledged that both of these practices are wrong in principle, that the dogs would suffer much less in a three-days' exhibition than when confined for four, because the accumulated strain of confinement, excitement and bad air increases in geometrical ratio, and the poor beasts by the fourth day are either frantic or utterly worn out. It was the place of the Westminster Kennel Club to have inaugurated a reform in these particulars. The strongest and best equipped bench show association should have had the courage to break its way out of the old rut. The time was when the dog show was kept open for four days, in order to pay expenses and to put a little balance into the pockets of those who took the risk of the expenses, but that time is past. A dog show in New York is now sure of liberal patronage, and it is no longer necessary to treat it as if it were a peep show, which must remain open as long as any one would visit it, and at which everything must be done to attract the public. This last is the reason for the long drawn out judging.

Mr. Charles Lincoln's utterly mistaken idea that the public desires to see the judging explains the survival of this ancient custom, which has long been obsolete in the country where dog shows were first held, and from which we have drawn most of our best dogs. No one but the exhibitors care a rap to see the judging. What the public care about is to know which are the best dogs, and to be able to examine and admire them. The judging should, therefore, be all done on the first day of the show, and the catalogues marked, in order that the public, whom it is desired to instruct, may have an opportunity of seeing what the best dogs are, and learning why they are the best. As it is at present, the winners in many classes are not announced until the last day of the show, and so are seen by only a small proportion of the visitors. Thus a great deal of the good that a dog show should do is lost.

There are other matters that will bear reforming, to which special allusion need not now be made, but we hope another year to see the necessary changes made.

INIQUITOUS MEASURES.

THE game law tinkers, who turn up annually at Albany, have devised certain amendments to the present statute which will effectually nullify any force the law may have now.

One amendment allows owners of land to trap birds on their own property—which means that the New York and Albany and Utica and Buffalo market stalls will be piled up with snared game.

Another permits the sale of woodcock in nine counties, including New York county, in July—which means that the market refrigerators will be stuffed full of woodcock, killed out of season in other parts of the State. This is something like the "refrigerator amendment" which Mr. Abel Crook tried to foist on the sportsmen of this State some years ago.

A third clause so hampers the investigation of suspected stores of contraband game that it practically puts beyond probability the detection of the offenders.

These three moves are all in the direct interest of the market dealer, and, we understand, are engineered by the same individual who has been so notoriously engaged in working for the New York game dealers for several years past.

The only salvation against the machinations of these selfish game law tinkers is a powerful State association of men who honestly desire the good of the sportsmen community and will work to secure it.

Is there any possibility of organizing such a society? It would have abundance of work to do. We have been shown to-day two snared quail from a wholesale poultry dealer's refrigerator in this city, and the man who brought them in said he would get thousands of the same sort, with woodcock and ruffed grouse in the bargain.

A BENCH SHOW ASSOCIATION.

FROM correspondence and private conversation which we have had with many breeders and exhibitors of dogs, it is apparent that there is a strong desire on the part of a number of them for centralization in dog matters. Complaint is made, and very justly too, that dog shows are at present carried on in an aimless fashion, the managers of the show being responsible to no one body of men, which represents the kennel interests of the whole country. There are several large and wealthy clubs representing certain sections, which have done good work with the sporting dogs, and the two special clubs which have recently sprung up are doing a great deal for the breeds which they have taken in charge. Any one who will inspect the beagle and spaniel classes at the show now in progress, will see how great is the increase in the interest taken in these breeds within the last two or three years. All this effort is well expended and has a good effect, but much is required, besides this special care for particular breeds, to put kennel matters in this country on the same firm basis that they now have in England. A radical change in the methods under which our bench shows are now held is imperative. The old-fashioned rules require extensive modifications and additions, and some court of last appeal is required, before which all questions of importance may be brought. It should not be possible for any irresponsible person or set of persons to hold bench shows, as has several times been done, for speculative purposes. There should be some recognized authority which should have the power to approve or disapprove any show. Many other matters would come before such an association.

It is evident that such a kennel club, covering the whole country and having on its membership roll the names of the recognized leaders among the exhibitors and breeders of the different varieties of dogs, would be a power in the land, and could work out the needed improvements in the methods at present followed. This seems to be the general sentiment. The question now is, how is such a kennel club to be formed? There are reasons enough why something should be done, but it is not our province to call upon exhibitors to carry out their own wishes; the project is one which is best left to develop itself in the hands of those most interested, until the columns of the FOREST AND STREAM are necessary for its more complete establishment.

We would point out, however, to those who have taken any part in the private correspondence which has been going on, that there is no better time to canvass the matter than during the present week, when every exhibitor of prominence is in attendance at the Westminster Kennel Club show.

It has been objected that this work would naturally fall within the province of the National American Kennel Club, and that this body was originally organized for the purpose of filling in America the place occupied in England by the E. K. Club. This was undoubtedly the case, but these purposes have been so modified that the N. A. K. Club is interested now only in pointers and setters, and, while holding each year successful field trials, gives no attention to the non-sporting classes, which now fill so large a proportion of the benches at our shows. It is but simple justice to state that the N. A. K. Club has done a great work for kennel matters in America, but it has so far modified its original purposes that it has become a field trials club, and what breeders and exhibitors are now calling for is a club to care for matters which do not fall within the province of a field trials club.

If the time is ripe for any decided action in this matter, it will no doubt be taken hold of energetically and carried through successfully.

MR. LUMBERMAN LITTLEJOHN.

THE Lansing bill in the New York Legislature, provides for the appointment of a forestry commission to undertake the intelligent care of the Adirondack forests. The bill, as it came from the Senate, is not all that an Adirondack measure should be, but is good so far as it goes. Now Mr. Littlejohn wants the Assembly to amend the bill in various ways, reducing the number of commissioners, and cutting down the appropriation. This move of Mr. Littlejohn is not for the benefit of the Adirondack forests; it is a deliberate, thereby disguised attempt to hamper legislation on the subject, and at this late day to prevent any measure at all from being enacted. It is, so far as the public can judge, a big scheme to ward off the day of judgment for the men who are wrecking the Adirondack woods. Mr. Littlejohn, in other words, is working in the interests of the lumbermen, of whom he is one. His purpose is to look out for his own pocket at the expense of the public weal. If the members of the Albany Legislature care anything about their constituents, they will repress the activity of Mr. Lumberman Littlejohn and pass the Lansing bill.

ALMOST A CATASTROPHE.

THE steam yacht Norma was launched last Saturday from Poillon's yard in Brooklyn and came near startling New York with a frightful accident, the lives of two hundred people having been risked in a manner which calls for condemnation. The steamer was sent off the ways with her spars on end and no ballast inside. She had no sooner slid clear of the ways when she toppled over and rolled from side to side up to her hatches. Everything that could possibly insure a catastrophe, was done, and neither the builders, nor the skipper, nor the "designer" foresaw the fearful risk they were taking. It was a miracle that the yacht did not capsize, and but for the fact that the righting arm of her stability couple reappeared, when the vessel was on her side, after vanishing at the outset, hundreds would have met a watery grave. Coming so soon on top of the Daphne disaster abroad, the incompetency or callousness exhibited in this case calls for the severest censure, in the hope that the insane advertising dodge of herding a crowd aboard a vessel about to be launched will be done away with in the future by law or the good sense of the people in charge. The Norma has already been described in these columns.

DYNAMITE MEASURES.—Mr. Nathan Curtis and a confrère "ned Freeman were pursuing the gentle art of angling with dynamite cartridges in Lake Champlain last Saturday, when one of the infernal engines of destruction went off prematurely, blew the boat sky high, and deprived Mr. Curtis of one of his arms. Thus it appears that a dynamite cartridge is more powerful than a game constable.

BOOKS AND PICTURES.—We are prepared to supply sportsmen's books of every description. Our facilities are such that we can promptly supply all orders for books. Our series of FOREST AND STREAM publications include "Woodcraft," "Training vs. Breaking," "Shore Birds," "Angling Talks," and the "List of Open Seasons." The portraits of canine celebrities have been received with great favor; we still have a limited number of sets on hand.

DEFECTS IN ARMY PRACTICE.

THE system of target practice in the regular army has been tried long enough to show that there are many grave defects in it. It was a good system when it was started and has done good work, but this was true simply because it came after a period when there was absolutely no provision for instructing the men of the regular forces in the handling and firing of the rifles provided for them. Bad as it is now found to be, the system was capable of making a vast improvement upon entire ignorance, and the army of 1884, judged from a marksman's standpoint, is an entirely different thing from the army of a dozen years ago.

What some of the faults are, which have been shown to exist in the present system, will be found set forth in the interesting letter of our correspondent "C. D." He writes from an army post and knows accurately the entire field of facts covered in his narrative. The present scheme, it would appear, is in danger of being submerged and rendered next to useless by a flood of red tape, so that when the officer has completed the elaborate system of returns and has filled up all the blanks which an active printing press turns out, there is little time left for him to devote to the instruction of his men.

The fundamental error seems to be that too much dependence is placed on mere emulation. This in itself is a capital thing. It seems to be inseparable from rifle practice, whether it be the civilian contest, or by men in the ranks. But in the army, with its great chain of scattered posts and companies, oftimes of the same regiment, located a thousand miles apart on garrison or frontier duty, a system of reports seems necessary. Each company is required to do a certain amount of ball practice, and as far as can be done by a rigid scale of rules, each man of the army is placed on exactly the same footing. Certain grades are established and certain percentages fixed to entitle the marker to particular grades in the order of rifle shooting merit, and just here comes in the inherent weakness of the system and a pretty exhibition made of the jugglery of which figures are capable. The company or post commander sets his wits to work in order to "beat the punch," as the railroader would say. There is an effort to make the best showing on paper, whether that showing really represents the doings and real merit of the men or not. There is no absolute dishonesty; but there are arrangement of the results which, cleverly done, is apt to bring out very misleading conclusions.

There needs to be, over and beyond these routine reports, some sort of supplementary examination of the men which should show their ability as shots in an entirely different manner from that conveyed through the present filling up of blanks. A sharp visiting inspector could, in a single afternoon, put a company through a course of individual, file and volley firing, and make a report thereon, which, in connection with the data afforded by the reports now made, would enable a very accurate estimate to be formed of the real shooting ability of the men, considered as skirmishers or line-of-battle men in actual warfare.

Another point upon which stress is properly placed is the seemingly absurd and wasteful system of having each man of the army go over each year the entire course of rifle instruction. The theory is, that on a certain date of each year the entire army is considered as a great squad of recruits and put through a certain order of scores. It matters not whether any particular man has shown exceptional skill as a marksman, and has for years held his place as a sharpshooter, he swings back to his place as a recruit, and, of course, easily passes through the routine of qualification. There should be some system of post-graduate marksmanship, by which any particular man in the ranks can go on to more difficult feats of shooting, in place of the present ever-slipping-backward method.

We are glad to witness a disposition in various parts of the country to have friendly bouts before the butts between regular army and militia teams, or between the army and plain civilian marksmen. Thus far the general practice has been for the men in blue to get points from those who shoot for pleasure. The outsiders have experimented for pleasure, have made improvements which have been adopted by the men under arms, and so a very steady progress has been kept up. With an army of so much leisure as ours, the inventive faculties of both officers and men should be stimulated to the utmost. There is abundant room for changes, and radical ones, too, in our whole scheme of small arms, but it will hardly come so long as the main effort is directed toward wriggling into a certain position on the annual roll of merit, and the men regarded as so many items in the account to be manipulated to the best advantage.

THE WIMBLEDON MEETING.—The English papers devoted to the art of rifle shooting come to us with the programme for the Wimbledon meeting of July next, given in its usual very complete shape. The list of matches is a long one and the range of prizes large. There are many modifications upon the programmes of previous years, but in the main the wants of the various classes of riflemen are well looked after, and there is a disposition to add prizes where the conditions of the match attract marksmen, and to take away competitions which seem to have outlived their usefulness. There is a gain of £1,200 in the aggregate prize list, and with its general attractiveness, there is no reason why a number of American marksmen should not be found among the list of entries and winners as well.

The Sportsman Tourist.

"MONTY."

WHAT combination of circumstances had led us, John and I, to take up our temporary abode in the deserted cabin on the southern slope of El Conquistador, it is not necessary, for the purposes of this sketch, to particularize. We had been there now about six weeks, and should probably remain that much longer. The trail from Argentum to San Rafael ran down the main valley some four miles below us, and, there being neither game nor "mineral" as yet discovered, on that side of the mountain, no wandering hunter nor peripatetic prospector intruded his unwelcome presence upon us. Once a week one or the other of us sauntered down to the trail below and met the mail carrier from Argentum, received our share of his precious freight of letters and papers, had a few moments free and easy chat while he smoked his half-way pipe, and then climbed leisurely back to our solitude. With this exception we had not seen, or cared to see, a human face since the day we had turned our backs upon the mining camp we called, for the moment, home. But it was for that reason we had come, and we rather dreaded the day when that gad-fly of American life, called "business," should sting us back to the smoke and the smelters, the riot and roar of Argentum. For the first time in many years John had leisure to indulge his vagabond instincts, to botanize and geologize, unharrassed by thoughts of sulphurets, gauge, pay dirt, dips or strikes; while I—well, those passages in my essay on "The Thingness of the Unconditioned, as differentiated from the Condition of Unthingness," and which have most touched and thrilled the great thinkers of the present day, owe the larger part, if not all, of their incisive analysis, psychological subtlety, and soul-stirring pathos to the hours spent on the grass in front of that old cabin at the head of the gulch on El Conquistador.

As to who erected this cabin, his purpose in so doing, or why he abandoned it I know no more than you. We had heard dim rumors of it, searched for it and found it, and incontinently took possession thereof. It was comfortable, it was picturesque, it was home-like. It fitted as happily into its surroundings as though it had resulted from a slow process of evolution, or had arisen by a happy consentaneous thought of the brown spruce boles, who had whispered to each other, "Go to; let us doff our green crowns and huddle ourselves together, that we may form a shelter for the wandering brother poet, who some day will come hither to learn the music of our songs." In front of the cabin, one huge spruce had thrown himself prone, as though to rest after long centuries of laborious uprightness, and it was there I first saw the subject of this sketch. John was in his favorite lair under a huge pine that overhung the stream, watching for the hundredth time the antics of a water ouzel, and I was stretched lazily on one of the bunks in the cabin, when, through the open door I caught sight of a stranger sitting at ease upon the log. He had not yet seen me, and I had time for a protracted study of him before his eyes met mine. He was in the prime of life, that is, neither old nor young, though his hair, brown in shade, showed in the sunlight faint siftings of gray. His eyes were the blackest and keenest I have ever seen, with a clear, straightforward gaze that somehow seemed to pierce all defenses of sham and custom, and read the inner man like an open book. His forehead was rather low and sloped downward to a shapely, slightly pointed nose, under which his black moustache curved backward over a mouth whose thin lips parted slightly over white teeth in a half-expectant, half-contemplative way. His form was lithe and muscular, giving one the impression that he would be a bitter antagonist in a personal conflict. He was dressed in a suit of some grayish-brown material, fitting closely and giving him a natty, jaunty appearance, contrasting strongly with the general baggy look of the ordinary San Juaner, clad in woollen shirt and canvas overalls.

As he sat, carelessly contemplating the cabin, he seemed so alert, fearless and keenly alive in every nerve and fiber, so interfused with the strength of the rocks, the vigor of the pine trees, the dash and sparkle of the running brook; so in keeping with all the surroundings, so much a part and parcel of this wild life, that it never occurred to me to be surprised at his sudden appearance, or to do him the impertinence of attempting to act as host in a place where he was evidently far more at home than I could ever hope to be. He was so different from anything I had yet seen among the biped inhabitants of that country that my heart instinctively warmed to him, and I think he read the feeling, as his eyes met mine, with a glance in which was neither surprise nor doubt, neither silly self-assertion nor loutish subserviency, but a clear, straightforward gaze of modest equality. This was the beginning of our acquaintance, which grew and strengthened every day. He was so much a resultant of the hills and rocks, such a true "montagnard" in every look and gesture, that I found myself unconsciously calling him by the half-playful, half-affectionate, diminutive "Monty," a freedom which he did not resent, accepting the name as calmly as though it were his proper appellative. What his real name was I never thought to ask him, and he never volunteered the information. In regard to his past history, or his present business in this remote mountain valley, he would furnish us no light whatever. To all our delicately-worded hints, as well as to more outspoken and direct questioning, he presented his buckler of impassive taciturnity, against which our interrogatory javelins were hurled in vain. So taciturn was he, that I do not think, in all the time of our acquaintance, I ever heard him speak a dozen consecutive words of English. When he did speak, it was generally in so low a tone that he could hardly be heard, and often in a language which, though I was familiar with most of the tongues of that polyglot country, I could not recognize as either English, French, German, Swede, Polish, Spanish, Navajo, Ute, Pi-Ute, or Stickareen. I thought once it sounded like Gypsy, but when I put the question flatly to him, "Can tuto rakker Romanes, miri pal?" though the twinkle in his eye left me still in doubt as to whether he understood me or not, I received no more satisfactory answer than when I addressed him in English. But with all his limitations as to conversation, there was a charm in his presence it was impossible to resist. His cheery simplicity, his shy confidence, a certain subdued gravity and compassionate air, as though he, so near to the very heart of nature, pitied those who, like ourselves, caught but fitfully the rustle of her robe, were all so—I had almost said unhuman, that I felt sometimes as though Praxiteles' Faun had come to life in these fastnesses of our western Sierras. But alas! one human failing he had, almost abnormally developed—that of curiosity; not manifested by asking questions, for, as I said before, he seemed to consider speech too valuable a commodity to be lightly used, but in making tactual and visual inspection of everything belonging to our "outfit." In less than a week after our first meeting there was not an article in our cabin which had not undergone a thorough scrutiny from him. A small clock, which John had insisted on bringing, especially excited his curiosity. He would sit for an hour at a time gravely watching the beat of its exposed pendulum, and listening to its sharp metallic "tick-tock, tick-tock." One peculiarity he had which assimilated him still more in my estimate to the wild life around him. The sense of smell, which in the rest of us had been atrophied into comparative uselessness, was in him as acute as that of sight or hearing. No investigation was complete until he had submitted the object to this last crucial test. He often dined with us, and it was curious to note how the nose instead of the palate was made the judge of any new dish submitted to him. But this sense was not developed at the expense of the others, for they were all normally keen. As John said, he had the eye of a hawk, the ear of a stag, the foot of a fox, the nose of a hound, and the nous of a wild turkey. His taste, in matters of food, was exceptionally plain—I had almost said dainty. He ate very little meat, contenting himself with vegetables and bread, and as to tobacco, whisky, tea or coffee, he literally abhorred them. His healthy natural taste revolted against them as coarse stimulants, unnecessary and repulsive to a palate unspoiled by artificial pungents.

He had an unconquerable aversion to dogs, and the first time that Swipes, our bull-terrier, appeared upon the scene, Monty left the cabin, and vanished up the gulch with a haste, which, if all his movements had not been so unstudiedly graceful, would have bordered upon the undignified; nor, after he had become more accustomed to our quadrupedal companion, did he ever seem to feel at ease in his presence. Friendship there never was between them, only a state of suspended hostility, and it generally took all our authority, backed by the persuasive force of kicks and cuffs, to prevent Swipes flying at our guest's throat, whenever they were together. There was a reserve, an impassive dignity about our friend, which prevented our asking impertinent questions as to his domestic affairs, and his habitat and place of abode were unknown to us, until accidentally, in one of our rambles up one of the ramifying gulches which radiated, like the fingers of a hand, from the main cañon in which we were, we stumbled upon his rustic home, hidden so cunningly in a thick cluster of pines, that only accident revealed its presence. Here, much to our surprise, we found his wife and family, the latter consisting of five ruddy youngsters, fac-similes in everything of their father. At least, for charity's sake, we will call her his wife, though from various circumstances, we were satisfied that no legal or religious ceremony, such as is deemed essential in more straight-laced communities, had ever thrown the ægis of its sanction over their companionship. A weak compliance with popular prejudices was not one of Monty's failings; though innately pure, according to his lights, he was a law unto himself; but, though neglecting, probably from an innocent ignorance, that such a thing was elsewhere demanded, the requirements of legalized matrimony, he was a faithful husband and a loving father. The home was well stocked with food, simple but healthful, and though the furniture generally was scanty and rude, we could but admire the softness and cleanness of the luxurious beds, made of the sweet-scented vernal grass, evidently gathered afresh every morning.

We did not make much headway in establishing friendly relations with the family, as Mrs. M. was generally too much occupied with household cares to have time for gossip, and the children, shy as wood rats, scuttled off at our approach and laid perdu behind the fallen pines till we had taken our departure. This was hardly to be wondered at, as we felt assured that we were the first strangers from the outer world whom they had ever seen. But Monty himself was more sociable, and a day rarely passed that he was not to be found in his favorite seat on the old log. Here he would sit while I talked to him, saying little or nothing himself, but listening with calm enjoyment and an air of placid receptivity, as though devoutly assenting to everything I said, though sometimes a subdued twinkle in his keen black eye would seem to cast a shade of derisive doubt on some of my statements. Whatever ideas I advanced—whether upon bread making or the telephone, "Shakespeare or the musical glasses"—he met them all with the same air of grave, respectful attention. I was often puzzled to decide whether my words flew as far above him as the wind that stirred the treetops over his head, and with as little meaning in their sound, or whether, on the other hand, he had not some familiar Socratic "dæmon," who had already revealed to him all this crude product of thought which I was laboriously spreading before him. Emotion of any kind rarely stirred the fine-graven lines of his Sphinx-like face; the art of self-repression had in him reached its highest development. Though utterly unconventional he was "high-toned" in the best sense of the word. I never knew him to do an ungentlemanly act or be swayed by a low impulse. His every movement was characterized by dignified courtesy and unembarrassed ease. He never lounged and he never hurried. His walk was smooth and gliding, yet full of a nervous grace that was the furthest possible removal from affectation or languor. In the care of his face and hands he was so dainty as to be almost finical. In a word, a thoroughbred gentleman from head to foot, with an innate delicacy and refinement that would have put to the blush many who had possessed a million-fold his advantages.

I find myself loath to approach the sad catastrophe, which brought to sudden end this friendship, so dear and so unique. Something had gone wrong at the smelter in Argentum, and an urgent message had been despatched to John, requiring his immediate attendance. When the bearer, Tom Lee, a burly miner, reached us, it was too late in the day to start on a return trip, so arrangements were made to leave early in the morning. We were sitting in the cabin, talking desultorily about business matters, when suddenly Lee's hand dropped to the butt of his revolver, and in a moment the long shining barrel was leveled at something outside the door. Turning quickly to see what the target might be, I caught sight of Monty in his accustomed place on the end of the log, with his head turned sideways looking at something which had attracted his attention up the gulch. Before I could speak or move the pistol cracked, and I saw for a moment the livid mark, square on the temple, where the bullet had done its cruel work.

"Good shot," said Lee, coolly, as he threw out the empty shell, and put in a fresh cartridge.

I was stunned for a moment at the suddenness of the atrocity, and then broke forth in execration of the brutal deed. The blood-stained ruffian listened stolidly for a moment, and then interrupted me with: "Seems to me you make a — of a fuss about a mountain rat!"

H. P. UFFORD.

MAJOR JOSEPH VERITY'S STEAM CAT.

"There, where the Garden of Irem lies,
Are the roots of the Tree of Paradise;
And happy are they who sit below,
When into this world of strife and death
The blossoms are shaken by Allah's breath."

IT recently happened that I found myself one evening in the luxuriously-furnished library of Mr. J. P. Squibob. We had dined, and the gas was lighted, and as we selected our cigars from the silver thingumbob upon the teapoy, I observed by its side a copy of FOREST AND STREAM, lying open at the last paper on the Bigosh. "Ah," said I, "it seems that you manage to find time for Mr. Mather's admirable sketches."

Replied then the Squibob: "With pleasure and profit have I devoted to these papers a portion of those moments of leisure which I sometimes contrive to reserve from the cares of State."

"What, then, think you, of the Bigosh? Is it a real stream, or a delightful figment of the imagination?"

Mr. Squibob leaned back in his fauteuil, with a far-off look in his eyes, and silently smoked, until the ashes from his cigar descended upon and obscured the lustre of the magnificent coprolite which blazed in the bosom of his shirt. Then he spoke: "The Bigosh is no myth. I know its waters well. It is a stream of many sources, and the finest fishes of all lands are there obtained. Its tributaries—I have traveled far and I have seen them oft. They rise in the grim shadows of Hood and Shasta, of Tahawus and Chocorua, of the Monck and the Aarhorn; of Snowdon and the Bens of Lorn, and their confluence may be found in the Garden of Irem, where stands the Tree of Paradise.

Mr. Squibob remained silent for a space, while I mused on the somewhat peculiar statement he had made; then he spoke again:

"I made the acquaintance of the Bigosh when a little boy. My first cane fishing-rod was in my hand, and I was happy. I stood on a small ledge of rock, with the bank rising abruptly behind me, and the foam of an eddy circling at my feet. Above, there was a dam, and a bridge on which stood other fishers. Across the river, the old mill clattered on; the sunbeams sifted gently through the branches of the ancient elm above, the dash of the water was in my ears, the golden oriole darted in and out of his pendent nest. I could have reached it with my rod, but I had come to fish, and had I not, in my own hands, and for almost the first time, the means of doing so?

"There was a new cane rod, and a good stout line, and a nice large hook, and a fine fat worm, and a good big hunk of lead, and the cork of a bottle, and—

"There was a tug and a strain, and—well! It is very fine, and all that, to hear those tarpon fishers tell of their petty exploits, with a few hundred yards of spare line to help them out of a tight place; but there was I, an urchin five or six years old, with line tied fast to the tip of the rod, and standing on a ledge like a window sill, no chance for retreat, the water foaming at my feet, and a good four-pounder doing his level best to pull me in.

"By dint of the most herculean efforts, born of despair and the necessities of the case, I managed to raise the fish, once only, half out of the water. That one look was enough. I set my teeth hard, and planted my heel more firmly and held on like grim death. How long the struggle might have lasted, and what its result, had I been left to my own devices, can never be known, for a young man, seeing my dire predicament, and fearing, from the gallant fight the fish and I were both making, that I might be pulled in and drowned, ran down and landed the prize. "Augustus," said I, as together we rode homeward from the mill with the "grist" for which we had come, and the fish I had taken at our feet in the wagon; "Augustus, if that fish had pulled me in, wouldn't you have saved the fish-pole?"

"But, Mr. Squibob," said I, "could you not contrive to communicate some definite information concerning the Bigosh?"

Again there came into the eyes of my friend that far-away look, but I brought him to a realizing sense of his duties to the guest within his hall by requesting a light for my cigar. Mr. Squibob struck with a sledge hammer, which hung at his side, a large tin pan, attached by an emerald clasp to a chain of rubies, pendent from the frescoed dome above, and ere the soft tones had died away in the dim recesses of the vaulted walls, appeared two gigantic blacks, habited, one in the costume of the Falklands and one in that of the Farallone Islands, and bearing flaming torches of the perfumed wood of the Oklawaha. When I had availed myself of their services, another stroke upon the melodious pan sent them through the floor, as I imagined; for so sudden was their exit that, but for the burning cigar and the sable wreaths of pitch pine smoke which floated among the silken folds of the portico, it was as if they had never been.

"You are well and promptly served," said I. "Aye," he answered. "Those fellows were formerly in the service of the Countess de Landsfeld-Heald. She trained 'em. But to return. The Bigosh flows through many lands, and is finally lost in Adironda, near the southeast corner of Major Joseph Verity's park." "Ah," said I, "this reminds me. Did you see, a few weeks since, in the FOREST AND STREAM, a communication from Major Joseph Verity, in which he relates an incident connected with the initial experiments with the combination bear-machinery?" "I did, sir. I remember it well, as I was much annoyed." "Then the statement was incorrect?" "I did not say that. The annoyance arose from the Major's having called me J. *B.* Squibob. My name is J. *P.* Squibob, and in schoolboy phrase, I do not like to be called out of my name. I infer that his memory fails. Besides, the original combination bear-gun was no invention of mine. It was conceived in the brain, and manufactured by the hand of Doctor Ebenezer Christopher Columbus Kellogg, Justice of the Peace and quorum." "And custalorum?" "Aye, and rotalorum, too, of Mancelona, Michigan. He is a man after Major Verity's own heart, and let him have due credit."

"But the Major's statement?" "Why, as to that, it seems odd that any one should remember such a trivial occurrence. Major Verity is a gentleman, firm of eye and calm of lip. There was a time when the mere slaying of a bear with a bowie, or the incidental slashing off of the seat of a gentleman's galligaskins, would have left his leathern visage undisturbed even by the faintest ripple of emotion. But I think that he retains some old-fashioned ideas concerning pistols and coffee, and has, besides, quarte and tierce at his fingers' ends. I shall not question his statements. The graves of those who have thus presumed, now dot the sward from Passamaquoddy to Alaska. I think that had it not been for a little circumstance connected with his old invention of the once celebrated 'Steam Cat,' he would scarcely have borne in mind the occurrence he has related." Then Mr. Squibob dreamed again, but roused himself, and said: "I was trying to call to mind the occasion on which I first met Major Verity. I think that it was in the charge of the Six Hundred, at Balaklava—or was it Solferino?—no—I have it. It was in the famous campaign against Kamaiakan, when together we 'wallowed in the Walla Walla,' and when, in the words of a historian of that day, the hardy pioneers, at the call of their country, casting aside the frivolous spade, the enervating pickaxe, and the trifling hoe, shouldered their $50 rifles, and springing into their $80 saddles, dashed their $300 steeds into the desolate plains of the Walla Walla, and there recklessly and fearlessly encamped. It was in this action that the Major won his spurs. They were purchased by subscription of the brigade, from Spiegel Eisen & Co., of 'Frisco, and cost at the rate of $1.90 a dozen, 15 per cent. off for cash in six months, and they were, I regret to say, a fraud. We all did know those spurs, and I remember the first time that the Major had them on. 'Twas on a summer evening, near his tent, and the rowels were hooked into the sinches of a bucking cayuse. They both gave way. The distance from the cayuse to the point where we picked the Major up, was stated in the report of the Government surveyors attached to the expedition, at sixty-seven feet and four inches, in a northwesterly direction."

"And what were the results of the expedition?"

"They were thus briefly summed up by the historian previously quoted: 'That great chief, Kamaiakan, now sits and gnaws the gambrel joint of a defunct Cayuga pony, little knowing on which side of his staff of life the oleaginous product of lactation is disseminated.'"

"But about the 'steam cat?'"

"Well, the Major and I drifted East after the war, and as he did not at that time own the immense diamond mines which he subsequently discovered in the Barkhamsted Lighthouse Territory of Connecticut, he was, I imagine, somewhat impecunious, and either invented or purchased the celebrated steam cat. Properly managed, there might have been a fortune in it. It was designed to overcome and do away with a leading cause of insomnia. Placed upon a roof in the heart of a great city, its dulcet caterwauls were absolutely irresistible, and the cats swarmed in like Bulwer-Lytton's ghosts, only to be torn in pieces by the steam cat's claws of steel. I think that it was first set going in Cleveland. Contracts from all the larger boarding houses were rapidly filled and money was flowing in, when, unfortunately, a large Persian cat, belonging to the wife of the Mayor, yielded to the seductions of our animal, and the Mayor's wife caused the passage of an ordinance prohibiting its further use in the city. The other lake towns were jealous because Cleveland had the first chance, and wouldn't allow it within their limits.

"The Major was discouraged, and got a new idea. He said: 'There's a big demand for kindling wood just now; let's take the cat into one of the tracts of dead pine, make kindling, and freight a fleet. There's millions in it.' The thing looked feasible, and in fact, the plan at the start proved successful. The cat clawed a forty-four inch pine into kindling stuff in nine minutes, and I began to think our fortunes were made. There was, however, one trouble. Our engineer was ill, and we hired McBallywhistle to take his place. You knew him—not Dunk McB. of Buctouche, but Donald, the son of old Mrs. McBallywhistle of Merigouische. He had been guiding parties, and used to leave a piece of Limburger cheese at the camp so that he could easily get back by a short cut, and not lose his way, but the party was attacked by what the doctors, I think, called 'acute nostalgia,' and he was thrown out of a job. Well, Mac didn't understand the cut-off or something, and the cat, under his management, became restive and dangerous, and would sometimes jump the wrong way.

"We had just set the machine at work at the foot of a huge pine, and Mac depressed the lever, when I saw in the steel-blue eye of the animal, a gleam which meant mischief. It was at that instant headed at the Major. ''Ware cat,' I shouted, and Verity sprang. The claws just missed his cuticle by the thirty-second part of an inch, but—this in your ear—there wasn't as much clothing left on the weather side of him as it would take to wad a combination bear gun."

Natural History.

DEER IN THE ADIRONDACKS.

BY C. H. MERRIAM, M.D.

[From advance sheets of the Transactions of the Linnean Society of New York.]

Cariacus Virginianus (Bodd.) Gray.

COMMON DEER; VIRGINIA DEER; RED DEER; WHITE-TAILED DEER.

Spike-Horn Bucks.

THE matter of "spike-horn bucks," though somewhat threadbare, deserves mention in this connection from the circumstance that the suppposed variety was first described from the Adirondacks. In a note in the *American Naturalist* for December, 1869 (Vol. III., No. 10, pp. 552-553), a writer observed that he had hunted in the Adirondacks for twenty-one years, and goes on to say: "About fourteen years ago, as nearly as I can remember, I first began to hear of spike-horn bucks. The stories about them multiplied, and they evidently became more and more common from year to year. About five years ago I shot one of these animals, a large buck with spike-horns, on Louis Lake. In September, 1867, I shot another, a three-year-old buck with spike-horns, on Cedar lakes. These spike-horn bucks are now frequently shot in all that portion of the Adirondacks south of Raquette Lake. I presume the same is true north of Raquette Lake, but of this latter region I cannot speak from personal observation, having visited it only once.

"The spike-horn differs greatly from the common antler of the *C. virginianus*. It consists of a single spike, more slender than the antler, and scarcely half so long, projecting forward from the brow, and terminating in a very sharp point. It gives a considerable advantage to its possessor over the common buck. Besides enabling him to run more swiftly through the thick woods and underbrush (every hunter knows that does and yearling bucks run much more rapidly than the large bucks when armed with their cumbrous antlers [!]), the spike-horn is a more effective weapon than the common antler. With this advantage the spike-horn-bucks are gaining upon the common bucks, and may, in time, entirely supersede them in the Adirondacks. Undoubtedly the first spike-horn buck was merely an accidental freak of nature. But his spike-horns gave him an advantage, and enabled him to propagate his peculiarity. His descendants, having a like advantage, have propagated the peculiarity in a constantly increasing ratio, till they are slowly crowding the antlered deer from the region they innhabit."*

The foregoing note contains several inaccuracies of statement, and the writer's deductions are wholly erroneous. It was very justly criticised by Mr. W. J. Hays in the *Naturalist* for May, 1870 (pp. 188–189). Further remarks and discussions may be found in the same journal, Vol. IV., pp. 442–443, 762–763, and Vol. V., pp. 250–251. The subject is now well understood, and the Hon. Judge Caton has presented the facts of the case with such accuracy and conciseness that I cannot do better than transcribe his own words:

"It has long been a prevalent opinion among hunters, and to some extent has been adopted by naturalists, that a race of common deer, the adults of which have antlers without branches, have established themselves in the no theastern part of the United States and in Canada, whence they are driving out the prong-antlered bucks.

"This is a matter of the greatest scientific importance, and I have taken pains to investigate it to my satisfaction, and am entirely convinced that it is a popular error, founded upon incomplete observations. The spike bucks found in the Adirondacks are all yearling bucks with their first antlers. The universal testimony, so far as I have been able to gather it, is that they are smaller than the average of the prong-antlered bucks, and that their spikes vary in length from eight inches, or ten inches at the very utmost, down to two or three inches in length. It is only the largest of these that any have claimed to be adults. It is very easy for a hunter to say, and even believe, that he has killed deer with spikes ten inches long, but did he actually measure them, and make a note of the fact, with time and place, describing its appearance, and take and note the measurements of the animal, or did he preserve the head, so that he could submit it to the examination of others? * * *

"Continued observations upon the young deer in my parks have enlightened me much on this subject. For several years I really persuaded myself that I had the true spike-antlered bucks, and set myself to carefully note their peculiarities, and fondly believed that I was about to add an important chapter to scientific knowledge. But these careful and continued observations soon undeceived and disappointed me. By marking the spike buck of one year, which was as large as one feeding by its side having two or three tines on each antler, I found the next year that his antlers were also branched, and my spike-antlered buck had become a fine specimen of the ordinary kind. And then the early fawn of the year before, dropped from a full adult vigorous doe, which had furnished him plenty of milk, had now grown to the size of a medium adult, and had fine spike-antlers, resembling in all things his older brother of the preceding year now bearing the pronged antlers. And so I anxiously pursued my observations for a number of years, ever looking in vain for a second antler without prongs. Without this certain means of knowledge, I should have believed that those large spike-antlered bucks were more than yearlings and nearly adult. It is true the dentition might have undeceived me, but this I could not acertain while the animal was alive, and this test has probably been rarely examined and carefully studied by those hunters who believe they have killed adult deer with spike antlers. I feel quite sure that they had not the means of accurately determining the true ages of the wild deer which they had killed; and what I have already stated may serve to show how very liable all are to be misled in relation to a point upon a certain knowledge of which the whole question depends."†

The only exception, that has come to my knowledge, to the rule that spike-horn bucks are always yearlings, is a case that fell under the observation of Mr. E. L. Sheppard: A very old buck, with much gray about his head, was killed in Queer Lake about ten years ago. In addition to its extreme age, it had but three legs and was consequently ill-conditioned, having been unable to procure sufficient food. It carried a pair of spike horns, which differed from those of yearling bucks in being much thicker at the base, rougher, more warty, and deeply wrinkled for some distance above the burr. This apparent exception is an illustration of two general laws (*a*) that in extreme age there is a tendency for certain parts to revert to a condition resembling that of early life; and (*b*) that ill-nourished bucks bear stunted and more or less imperfect horns. It is a well-known fact that the largest, handsomest, and most perfect antlers come from middle-aged deer that have wintered well, and are in fine condition; while the few-pronged and unsymmetrical ones are grown by young or very old animals, or by those that have been wounded or from other cause are poor and ill-conditioned.‡

All yearlings do not have true spike-horns, and if the term be made to include all unbranched antlers, I am strongly of the opinion that two-year-old bucks sometimes grow them. I have a pair of unbranched antlers that are curved both inward and forward, and are of exceptional length, the separate horns measuring respectively ten and a half and eleven inches (or 267 and 279mm.) over the curve, and seven and a half and eight inches (190 and 203mm.) in a straight line from the base of the burr to the tip. The longest horn presents a slight enlargement, three inches from the tip, along its upper and posterior border, the greatest thick-

*The above passage fell under the ever-searching eye of that eminent naturalist and indefatigable collector of facts, the late and much lamented Charles Darwin, whose massive intellect and exhaustive researches have revolutionized natural science and mark a new era in the progress of knowledge. Mr. Darwin, misled by this account, part of which he quotes in his masterly work on the "Descent of Man," remarks upon it as follows: "A critic has well objected to this account by asking, why, if the simple horns are now so advantageous, were the branched antlers of the parent-form ever developed? To this I can only answer by remarking, that a new mode of attack with new weapons might be a great advantage, as shown by the case of the *Ovis cycloceros*, who thus conquered a domestic ram famous for his fighting power. Though the branched antlers of a stag are well adapted for fighting with his rivals, and though it might be an advantage to the prong-horned variety slowly to acquire long and branched horns, if he had to fight only with others of the same kind, yet it by no means follows that branched horns would be the best fitted for conquering a foe differently armed." ("Descent of Man," New York, 1875, p. 513.)

†Antelope and Deer of America, p. 231–232.

‡Through the kindness of the well-known guide, Mr. E. L. Sheppard, I possess a specimen of unusual interest that well illustrates this point. The buck, which was an adult, was killed at Big Moose Lake, September 10, 1880, and its horns are imperfect, asymmetrical, and very scraggy. The animal was lank and thin, and was found to be a cripple. Its left humerus had once been broken and the fragments had united at a right angle, so that the fore leg was directed forward, and the shortening of the humerus was so great (its greatest length being less than six and a half inches, or exactly, 164mm.) that the foot could not be made to touch the ground.

ness of which is three-quarters of an inch (19mm.), thus indicating the point where a prong ought to have grown. I take it that these are the two horns of a two-year old, but have no means of determining this very important question. I also have two other pairs of horns from young deer that are smaller than those just described, and yet one horn of each pair is forked. Whether they came from yearlings or two-year olds I will not venture to decide.

In my opinion the term spike-horn should be limited to the straight and true spike that is known to be characteristic of the yearling buck.

Does sometimes, though rarely, have horns, and they are usually of the "spike" pattern, only more incurved than those of the bucks, and they are apt to be more or less imperfect and unsymmetrical. They are generally covered with the velvet, no matter at what season taken, in this respect resembling those of castrated bucks. Does that bear antlers do not commonly bear young, though they are not always barren. §

The Chase.

An account of the different ways of hunting the deer on the plains and prairies of the West, in the canebrakes and swamps of the South, and in other sections remote from the region under consideration, however interesting, does not fall within the scope of the present work; hence the methods practiced in the Adirondacks will alone be described.

There are three principal ways in which deer are hunted in this Wilderness, namely: By floating, by driving (hounding) and by still-hunting.

Floating consists in paddling up to a deer, at night, with a light called a jack fastened above the bow of the boat, and so arranged that it casts the whole light ahead, leaving the boat and contents in exaggerated darkness. The jack of our ancestors (used even within the brief period of my own recollection), was a very simple affair, constructed where occasion required. It consisted of a torch, or sometimes a tallow candle, fastened upon a piece of bark, and backed by a bark reflector. This rude illuminator was attached to a stick, three or four feet long, that stood upright in the bow. The stick, or standard of the primitive jack, still remains, and now supports a lantern which is closed in on three sides so that all the light shall be thrown in front. Some sort of a reflector is generally used to concentrate and project the rays to a greater distance. Sometimes the light is fastened to the hat.

Two people constitute a floating party, and the *modus operandi* is as follows: The sportsman sits on the front seat, with his legs tucked under the bow in a position that is, at the start, anything but agreeable, and becomes distressingly uncomfortable as hour after hour drags slowly on. He dare not move lest the noise thus made should alarm the deer. The guide sits in the stern and must be expert with the paddle, for it is his duty to propel the boat steadily and noiselessly within easy range of the wary deer.

The locality is usually selected in the daytime, and is generally some marsh-bordered bay, abounding in lily-pads, or a similar place along the banks of a sluggish stream. On nearing the feeding ground not a word is spoken, not even a whisper, and the hunters strain eye and ear to discover the whereabouts of the quarry. The light is turned in such a way that it covers the shore as the boat glides silently on, for the deer may be gazing at it from the bank, standing motionless and silent. Indeed, he is often seen, not more than a couple of boat lengths away, before any sound has forewarned them of his presence.

Bright moonlight nights are undesirable, because the animal can then detect the outline of the boat, and is apt to take to the woods without delay.

Let us note the course of events in an ordinary floating expedition, premising only that the sportsman is somewhat of a novice. Unless there is direct water communication between the camp and the place selected for the hunt, the party eat an early supper and set out at once in order to reach the spot before the gathering darkness obscures the way. The guide, placing the boat upon his sturdy shoulders, takes the lead, following some old trail or blazed line, or, if the spot be unfrequented, finds his way by certain features of mountain or valley that are familiar landmarks to his practiced eye. The sportsman follows, carrying the jack and gun, as well as a bottle of tar oil for protection against insects.

The start is well timed, for the outlines of near objects have already become indistinct, and the shades of dusk are fast blending the dim forms of the evergreens, transforming the coniferous forest into a uniform mass of darkness, when they emerge upon the open shore of a small and shallow lake and launch the canoe in its black but unruffled water. Night is upon them, and with it the flies and mosquitoes. Tar oil is applied freely to face and hands, the jack is lit and placed, and they step quietly into the boat and move noiselessly off, —the sportsman on the front seat, his overcoat buttoned up to his chin, and his feet crowded uncomfortably under the bow, one on each side of the jack-stick; the guide astern, silently plying his paddle.

The nearest marsh-bordered bay is soon reached; and as the light skims along the bank, falling in turn upon clumps of bushes, old logs and stumps, and the dark cone-like forms of the young spruce and balsams, the sportsman's expectation is at its highest pitch; he feels his heart beat faster and faster, and grasps his gun tighter and tighter, imagining that each fantastic shadow will show the white tail of a retreating buck. The suspense is of short duration, for this feeding-ground is passed without so much as the sound of a moving branch to indicate the presence of any animal larger than the flies that swarm about his head. Now comes a pull of half a mile before the next ground is reached, which would afford the sportsman ample time to compose himself, were it not for the armies of pestiferous flies and mosquitoes that demand, and receive, his undivided attention. The bottle of tar oil is produced, and a thorough smearing grants temporary respite. No sooner is this accomplished than the next favorable shore for deer is fast appearing over the port bow. Another ten minutes of breathless suspense and they turn again into the open lake. A close listener might have detected a half suppressed sigh of submission to the inevitable, from the fore part of the boat, but no other sound disturbs the unbroken silence of the night. The third swampy bay is reached and passed, with like result. A council ensues, in a low whisper, and it is decided to run up the inlet, a marshy stream averaging less than a boat's length in width. Having arrived at its mouth they proceed very slowly, for good feed abounds on both banks, and a deer may be surprised at any moment. Presently a noise is heard ahead; it is vague and indefinite, but evidently something moving. The boat comes nearer; the noise ceases; it is heard again. The sight is strained to penetrate the bushes along the shore, but nothing is discovered. Hark! something dripping in the water; the eyes are lowered, and there, on a log that projects into the stream, almost within reach from the bow, is seen the form of a large porcupine, lazily eating lily-pads and gazing stupidly at the light. The sportsman is tempted to fire, but controls his disgust and says nothing. A bend in the tortuous channel is passed, and another, and —*splash, splash, splash:* it is the unmistakable sound of a deer wading in the creek. Then all is still again. Is the animal standing in the water looking at the light, or has he stepped out upon the bank? The sportsman hears the faint ripple of water against the bow as the boat moves swiftly on; he is conscious that the hat is rising on his head; his heart beats louder and louder, and he feels it knocking violently against his ribs. The boat is slackened and the light made, in turn, to cover both shores. Moments seem like hours, and the flies are entirely forgotten. But what has become of the game? Inadvertently the gun rubs against the jack-stick when, simultaneously, is heard the sharp, shrill whistle of a startled buck, from behind a bush to the right, and the fading sound of crackling branches announce his disappearance in the forest.

The flies now seem worse than ever, and so they really are, for the boat is passing through their very headquarters, and the bright light attracts them to the spot. Continuing the course up the sluggish stream it is some time before anything occurs to divert the sportsman's attention from these tormenting insects, which constantly get into the eyes, nose and mouth, till, harrassed, exasperated, and well nigh distracted, he applies his only remedy, the tar oil, so freely that he soon feels it trickling slowly down his aching back. The cramped position of his legs and feet is actually painful, and his back "seems as if it would break." The hour is past midnight, his lids are heavy, and he has almost determined to request the guide to turn back when a loud plunge alongside the boat gives him a sudden start and elicits the involuntary exclamation: "what's that?" forgetting for the moment the necessity of silence. "Nothing but a muskrat," calmly replies the guide in a whisper. "Muskrat? hum!" he retorts in a tone of incredulity, but says no more.

Another hour passes wearily away. The inlet, which is here so narrow and shallow as scarcely to admit the boat, is crossed by a fallen tree that bars further progress. The return voyage becomes very monotonous, and finally even the flies fail to keep up the excitement. The drowsy hunter nods, his eyes close, and his head hangs heavily upon his breast. Suddenly an owl, on a low limb overhead, utters one of his loudest and most startling cries. The affrighted sportman cocks both barrels of his gun, expecting to detect the crouching form of a panther preparing for the fatal spring. On being assured of the harmless nature of his imaginary foe he cannot suppress a groan of mortification and disgust while he endeavors to regain his equanimity. Beads of cold sweat mingle with the oil upon his forehead as he solemnly and silently vows that floating is a diversion into which he will never again be beguiled. He feels chilly, and wonders if this is really a sample of Adirondack sport, or if his guide has been playing him a trick. While his mind is occupied with these meditations they have reached the lake, and the guide, anxious not to return empty-handed, has put the boat into a shallow bay and is working it slowly ahead among the lily-pads. The sportsman, now too cold to sleep, feels the boat slacken its headway and stop. He wonders if the guide has dropped off in a doze, is about to turn and investigate when the word "shoot," uttered in a low whisper, falls upon his ears. He doesn't see anything to shoot, but on looking more closely, discovers, partly hidden behind a bush, the form of a deer, as motionless as a statue, gazing inquiringly at the light. Raising the gun nervously to his shoulder he fires. A desperate leap, a wild plunge ahead, a heavy fall, and a noble buck lies dead upon the bank.

[TO BE CONTINUED.]

§ Alonzo Wood, Esq., one of the most experienced and competent guides in the Adirondacks, has kindly presented me with a very beautiful pair of spike antlers that were taken from a doe which was killed at Second Lake of North Branch about the first of September, 1876. They are deeply curved, symmetrical, and covered with a very dense coat of "velvet," the individual hairs of which are of unusual length. The measurements of these antlers are as follows:

From burr to tip, in a straight line	6in.	(152mm.)
From burr to tip, around curve	8¼in.	(210mm.)
Distance between tips	4¼in.	(108mm.)
Distance between antlers at curve	6¼in.	(159mm.)

UPLAND PLOVER IN MINNESOTA.

EVERYBODY who has paid the slightest attention to the subject knows that the bird commonly called the upland plover is no plover at all, but a sandpiper, and that its full appellation, as given by the authorities, is that of Bartram's sandpiper. Being of the race that it is, one would naturally look for it to make a strong show of aquatic proclivities. But in this connection it proves to be not a little of an anomaly; marhes, mud flats and the like being in no wise to its mind, whether as places of resort or sources of food supply. In fact, as its common name implies, it is exclusively a bird of the fast land, with a special penchant for spacious open tracts assuming the character of downs or plains; and where, in the stores of insects, grass seeds and berries incident to such localities, it finds wholly congenial fare. The geographical range of the species is noticeably extensive, including—so it is affirmed—a large portion of British North America, our own country east of the Rocky Mountains, and a considerable share of Mexico. Forced to look well to its ways in the matter of being provided with the sustenance adapted to its requirements, it is a migrant of the strictest type.

Throughout all the winter months it is a close sojourner in the southernmost divisions of its habitat, and in yielding in spring to the instinct to revisit the north it takes proper thought to lay up no sorrow for itself by giving rein to the prompting with undue precipitation. Its wariness and cunning are proverbial, being, indeed, quite of a piece with the similar endowments entering into the intellectual outfit of the crow or black duck. While not a pronounced beauty it is nevertheless strongly commended to the observer on the score of good looks, exhibiting a suit set off with noticeable taste with designs in white, black and buff, and also being enabled to boast of a figure distinguished to an eminent degree by the attribute of presence. Its capacities for flight, whether as to endurance or swiftness, are but little short of first-class, using the phrase in its exact sense. Even more can be said for the facitily with which it exercises its running gear, this being in sober truth highly phenomenal. Its ordinary note consists of a clear, sustained, and withal somewhat plaintive whistle, keyed to a single tone in the middle register. For the most part one hears this sound uttered by the bird as it takes to its wing in alarm. This, however, is not invariably the case, although it cannot fairly be affirmed for the time that it is invested with any significance of a noticeable broad nature. Concerning the qualifications of the biped for table uses nothing need be said; since it is notoriously a luminary of the leading order in the gastronomic firmament.

From the fact that in the eastern section of our country plain lands constitute a relatively meager geographical element of the region, the upland plover is nowhere a truly familiar avian figure here. It is far different in the West, however, since, with its greatly open character, this part of our national domain proves specially attractive to the creature, and at the right season the prairies of all the Western States and Territories which yet retain their primal features unchanged, are shown to be abundantly peopled by it. During a long residence in Minnesota it was the writer's good fortune to be afforded the opportunity of seeing much of the species, and the results of these observations, both as they relate to the creature's course of life thereabouts, and the usages best commended to the sportsmen of the section in engaging in its pursuit, it is his present purpose to lay as succinctly as he can before the reader.

The particular locality in Minnesota wherein my investigations in the line indicated were prosecuted comprised the prairie district in the vicinity of Minneapolis. Here the upland plover made its appearance by the middle of May, and almost simultaneously with their arrival the birds chose their mates. In their earlier stages these unions were marked by little passionate ardor, the parties thereto being content simply to rest or range about side by side. This condition of affairs continued for about two weeks, or till the first of June drew near. At this period the interest which the pair felt in each other suddenly became so intensified as to effectually sweep away all barriers of reserve between them, and they gave themselves over to the freest interchange of amorous dalliance. So far as the avian swain was concerned at least, this love climax proved also to be a factor which gave the note to much of his general demeanor. More especially he was observed to indulge in signally extravagant exercises on the wing at the time. These consisted for the most part of hovering bursts upward and on a due perpendicular line till the creature had reached a height of fifty or sixty feet, when the particular phase of feeling by which it was moved seemed to reach its term, and the bird descended on a pinion used quite after its normal fashion by a long slant to the earth. The direct meaning of these fantastic demonstrations was not apparent. It would naturally be inferred under the circumstances that they were performances which in part at least were intended to excite the admiration of the female. But if such was the case it was in no wise verifiable, since it was not definitely shown that his sweetheart even honored them with a glance.

Be this, however, as it may, it was soon to be seen that our feathered heroine was occupied with a wholly fresh set of relations. These, as the reader is doubtless ready to surmise, were of a maternal nature. The opening date of the term wherein she figured in this character, fell generally in the second week in June, and from this point of time for an interval of a month or six weeks, one encountered the bird only on the rarest occasions. The work of deciding upon the location of the family nest as well as rearing it was, it is hazarding but little to say, exclusively her own enterprise. The materials used in the edifice in question included the common forms of prairie grass, and in shape and general appearance it much resembled a larger edition of the red-shouldered blackbird's nest, with the difference, however, that it was of somewhat lighter construction. Its site was on the ground, and usually fixed in a portion of the prairie well removed from house or farm or routes of human travel, although occasionally it turned up in places which were not to be designated as noticeably sequestered. The eggs of which it became the repository were four in number, and of a pale clay color, dotted with amber spots. These also, like the eggs of most sandpipers, were so disproportionally large at one end that they diverged greatly from the conventional egg form, and were more nearly pear shaped. Their discovery was a piece of good fortune which the oologist could not often boast of, one or two sets of the treasures being at the utmost all that he would have to show as the result of a season's toil. This, however, as the initiated in the sphere of work in question will understand, was in a great measure ascribable to the nature of the field of search; oologizing on the prairie being a venture noticeably beset with crosses and hindrances peculiar to itself, and calling for the address of the Indian or trained prairie scout to make it more than the veriest venture.

The purpose of the female plover as she withdrew into retirement was, as will be guessed, no secret to her partner, and sharply on the heels of the event, he exhibited himself in an entirely fresh rôle—that of budding plover fatherhood. In due order the feelings which now dominated him were those of egregious self-satisfaction and family solicitude of the gushing stamp; and, as may be inferred, in giving vent to these sentiments his methods partook noticeably of the spirit of oddity, which at the time had so much to do in shaping the great run of the fashions in which his expressional functions were exercised. The arena selected by him for the portrayal of this new part mostly comprised the face of the prairie, where, so long as he was undisturbed, he strutted about throughout the entire day, visibly gloating over the honors and preferment that had been vouchsafed him. Being approached too closely, however, by observers or passengers over the prairie, he was fain to jump at the conclusion that the presence of these parties boded no good to his household peace; and he was, therefore, moved to take such steps as he conceived would effect their removal from the scene. In setting about this undertaking he took to his wings, and nearing the personages whom he would usher off the field to within the distance of seventy or eighty yards, he sailed about them with an air meant to counterfeit partial inanity, till he caught their full attention, when, with a still more emphasized show of decrepitude, he bore away toward the outskirts of the plain, clearly hoping to tempt pursuit.

If this stroke of strategy failed to succeed as he desired, he was commonly ready to supplement it with another device greatly out of course with a wader of his class, and which he doubtless believed to constitute a piece of finesse not to be transcended. This was to alight in a lame sprawling way, on a fence or dry limb of a bush, within eyeshot of the subjects of his oblique regards, and thus seek to lead them to conclude that he was in a state of literal helplessness, and that an immediate rush upon him would make him the prize of the party executing the measure to a dead certainty. These tactics he repeated as long as he persuaded himself that they were to be serviceably employed, and when he decided that they had answered their turn he was seen to betake himself straightway to his ecstatic peripatetics once more.

Ere long, however, another spirit came over the bird, as at the end of a couple of weeks or a little after he awoke to the right sense as to the line of conduct befitting his paternal condition, and rejoining his spouse, he divided with her in all soberness, the supervisionary care of their offspring, which even thus early in their lives had bade adieu to their nest. Doubtless for the reason that their young were virtually secure from the attacks of hawks therein, the places mostly frequented by the birds at this time were the more heavily grass-grown sections of the prairie, and as will be understood, in seeking these resorts they became very widely dispersed over the signally extensive expanse, and so far as the casual observer was concerned, at all events, quite eluded his eye.

But their stay in these deeper fastnesses was of comparatively short duration, since by the first of August the juvenile scions of the family had already attained a stage of bodily and mental vigor that enabled them to cope successfully with the main run of such dangers as were incident to their career, when with one accord, both old and young took their way to grounds of a totally fresh stamp. These embraced certain barren stretches of the prairie which were now populated by myriads of grasshoppers, spiders, crickets and other like insectivorous forms, drawn hither to the end of luxuriating in the entirely unimpeded downpour of the solar warmth. Here the birds took up their quarters by the hundred; and as I scarcely need say the day became one protracted feast with them. The etiquette of their gustatory observances at the time was seen to be of the usual family order, much eager bolting characterizing their disposition of their food when it was once laid hold of, and no small degree of tumultuous flying hither and thither being practiced by them in their endeavors or seize upon it. One was also led to remark that under these circumstances the bipeds were singularly silent, the juveniles of the tribe being wholly dumb, and their elders sounding their pipe only at greatly protracted intervals. That they should add to their avoirdupois during these days with almost porcine celerity was but after the proper order of things. But this pleasant process of larding themselves was in nowise permitted to conduce to the enslavement of the creatures, since, with the opening of the third week in August, they seemed to hear a call from the south which gave a wholly fresh turn to their thoughts and aspirations, and in conformity with which they set forth for the region indicated with precipitate speed.

While the plovers were massed together in the open parts of the prairie as above described, it was not unnaturally their fortune to signally fire the sporting element of the district and enlist its energies freely in the attempt to effect their capture.

In many instances in engaging in this undertaking the shooter was content to stake his chances for success on his skill as a stalker. But the outcome of dealing with the matter in this way was seldom conspicuously brilliant. So far as the older birds were concerned in any event, creeping upon them, waylaying them and the like, came to little or nothing. With the less matured members of the tribe arts of the sort succeeded better. Still, when all is said, the highest count of the bag even through an all day's campaign, wherein measures of the above nature constituted the strategic machinery, rarely exceeded ten or a dozen birds.

The method commended to the more painstaking gunner in addressing himself to the task in question was of a radically different character, inasmuch as he invoked the aid of a horse and buckboard and a coadjutor in the shape of a driver. Attempts to approach the birds in this manner turned out as a rule all that one could reasonably ask. The young birds anyway were to be neared as closely as was necessary, with little or no trouble, by this device. The trustfulness of their elders was of course less to be depended upon. But if the driver was genuinely competent they too were brought within fair striking distance by this means in goodly numbers. That the gunner needed to second the driver worthily here goes without saying. More particularly it was incumbent upon him to be up to the trick of making good his aim when both bird and buckboard were equally under free headway; or, in other words, it was specially desirable that he should be a strong snap shot. When this was really the case with him the enviable fortunes of the enterprise were assured beyond peradventure; the bag secured being—humanely speaking—merely limited by the scope of his ambition. W. L. TIFFANY.

MUSKRAT AS A FISH-EATER.—*Editor Forest and Stream:* In a recent number of the FOREST AND STREAM Dr. C. H. Merriam asks for more information regarding the fish-eating habits of the muskrat, and the following brief note is sent in for a slight aid in this direction. The muskrat is the most abundant mammal to be found in all the marshy parts of Alaska, south of the Arctic circle at least, and during my residence in that country I had frequent opportunity to learn of its fondness for fish. Often when skirting the border of a pool or following the edge of some sluggish stream in the evening or during the dim light of the Arctic nights in summer, I frightened the muskrats from the body of dead fish on the bank at the water's edge. The fish were usually small sluggish species and such as could have been easily caught by the animal itself although it feeds upon fish not killed by itself. That the muskrat will feed upon dead water fowl I have also had frequent occasion to notice, and like many other rodents, especially among the *Muridæ*, this animal is undoubtedly carnivorous whenever a favorable opportunity offers.—E. W. NELSON (Tucson, Arizona, April 22).

THE ARROW-HEAD IN THE SWAN.—*Editor Forest and Stream:* In a recent issue of your paper is a cut of an iron arrow-head taken from a swan killed in Chesapeake Bay. During my explorations in Alaska I secured several quivers of iron-tipped arrows, notched like the original of your cut, and the form being unusual. The region whence I secured my notched iron arrow-heads is probably the same whence the swan brought its unwelcome burden. My arrows of this character are all from the Upper Yukon River, about two hundred miles above Fort Yukon, and are from the Tutchóne-Kutchin tribe of the Chippeway Indians. I scarcely need add that swans are very abundant on the Upper Yukon. —E. W. NELSON (Tucson, Ariz., April 22).

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Received by purchase—Four flying squirrels, two gray ichneumons, two black apes (male and female), one white-nosed monkey (female), one bonnet macaque, one yellow baboon, one pig-tailed macaque, eight common macaques, one black bear (male), two chacma baboons (male and female), one ibex (male), one peccary (female), one roseate cockatoo (male), two slender-billed cockatoos, one Alexandrine parrakeet, two sandhill cranes (male and female), two South American parrakeets, two red-crested cardinals (females), two European swans, one Polish duck, one American bluejay, ten European widgeons, sixteen green-winged teal, one bar-headed goose (female), and two canvas-back ducks.

Game Bag and Gun.

AMERICAN AND IMPORTED GUNS.

Editor Forest and Stream:

I have carefully read a letter from "Wells" criticising Mr. Greener's book on the "Gun." Mr. Greener is an English gunmaker, and his book is a cheap way of advertising his work. Some allowance must therefore be made for his statements—statements, of course, to his own interest. The book contains a great many incorrect statements besides those on wing-shooting. The assertion that Damascus barrels are the weakest of all twist, and his laminated steel are the strongest, is one error, as also are his remarks on machine-made guns, which mean American guns. His reason why the Damascus barrel is the weaker is to a gunmaker quite absurd, however good it may appear to those who are not gunmakers. In the first place, he gives the methods of manufacture, and states that in twisting the iron the fibers are liable to be broken, and thus are rendered weaker than other twist barrels. Now gunmakers know that the same process which welds the bars will also weld any fiber which may be broken; and experience and common sense teach us that twisted fibers are stronger than those which are not. If the accidental breaking of the fibers of the iron in Damascus barrels make them weak, it would only prove his to be weaker, for while the Damascus might have one or two fibers broken by accident, his, in short, are broken by intent by the hundreds, being made up of small scraps and not of bar iron, which is sufficient in itself to show that Mr. Greener has the facility of stating things which are not so.

As I said, he has his business to advertise, and I am prepared to make an allowance for an English maker running down American work; but I cannot make the same allowance for "Wells" when he backs up Mr. Greener in depreciating American work. "Wells" may be capable of criticising Mr. Greener on wing-shooting, but when he attempts to criticise American work in comparison with foreign work, he undertakes that which his own statements prove he knows but very little of, when he says he cannot see over $150 worth of work on a gun, except in fancy work. If "Wells" were a judge of work he would be able to see where over $150 worth of work could be put on a gun; and facts show that some of the finest guns have the least fancy engraving on them. He states that the best English barrels may be had for $75. Granted. Now if the barrels cost $75, the locks to suit them will cost $75 more, for fine barrels and equally as fine locks cost the same. A piece of wood to match will cost from $12 to $15. Now, commence the frame and actions and the mountings, $75, and say nothing for work of fitting up, and here are figures amounting to $237. This, in itself, is sufficient to show that "Wells" is no judge of what constitutes a fine gun, and, therefore, has no right to come out in public print and condemn American work, for in doing so he is doing an injury to the country and American mechanics; for when any one makes what is supposed to be a disinterested statement, they are supposed to know what they are writing about, and they will go far to injure the reputation of American work, and in that way do an uncalled for injustice. "Wells" states that there is too much "cheap John" work about American goods. This may be; but from his statement about the $150, it seems to me that he is one of that sort who patronizes the "cheap John" classes; but he wants the foreign manufacture, they are so Henglish, you know.

I will state facts for the benefit of "Wells." There are thousands of English and Belgian guns imported to this country that are no more to be compared to Colt's or other American makers than a five cent nickel is to be compared to a gold dollar. Americans this day make the best gun for the money that any country produces. I am a gunmaker. I served my time with one of the best makers in Europe, and I claim to know what I am talking about. I am in no way interested in any make of gun; in fact the machine-made gun is an injury to me; for the more of them that are in use the less work I get. I repair a hundred English guns to the one American. The locks of the American gun are plain and of good material; the tumblers and sears are steel, while nine out of ten of the English guns imported have tumblers and sears of iron, not even case-hardened, with the names of respectable makers fraudulently put on them so as to swindle the purchasers, men like "Wells," who think that nothing good is produced in America. Some American dealers have no use for machine-made guns, for there is not that opportunity for fraud that there is in imported ones. If "Wells" were a judge he would soon find out that there is ten times more "cheap John" about the average imported guns than there is in the American. The American gun is plain and well fitted, with nothing of the "cheap John" about it.

Ten years back an American if he had $100 to spend on a watch, couldn't have been induced to buy an American watch; it was a machine-made thing; therefore most of the American watches were made on the cheap and medium class, if fine ones were made they could not be sold unless they had a foreign mark on them. This is what prevents the best class of goods from being manufactured in this country. To-day high-priced watches are manufactured in America and sold with the maker's name on them; but this has been only since the Swiss Commission reported that our cheap machinery-made watches were equal to their best; so you see the Americans had to be informed as to the good quality of our watches by foreigners before they were willing to admit it and pay a sufficient price for a fine piece of work—and just so with the guns. If Americans can make as difficult a piece of machinery as a watch by machine and have it rank among the first, why can they not make a gun as well? Simply this, because no foreign commissson has as yet proclaimed their superiority for the money. When this may be done then the amateur judge will pronounce them the best, and the American shoddy will not be ashamed to be seen shooting with an American gun. Some may think that I am severe in making such a statement, but I can assure my readers that I have good grounds.

Some years back I made a rifle, price $100. A well-known shot and would-be judge, examining it, made the remark that it could in no way compare with Purdy work. I answered, "Neither does the price; give me Purdy's price and you shall have Purdy's work." He laughed at the idea, and wanted to know if I would presume to set my work alongside of Purdy's. I was compelled for the time to submit to the jeer; but my time came, some time afterward, and in a way least expected. A Purdy gun, manufactured to order at a cost of $550, was brought to me to be cleaned. I saw the judge (?) coming down the street, and I remarked to a gentleman in the store, "Here comes Mr. Blank, and I mean to have some fun at his expense." I had just finished a gun for my own use, and taking the Purdy out of the case as he came in, I said, "How do you like this gun for an imitation Purdy?" He answered, "Pretty fair gun, but not to be compared to Purdy's work." Now he shot a Purdy gun himself, but it was an old pattern, while the one I was showing him was a new and later date. I then handed him my own gun, which I had made, and asked him how much difference he would give in preference of the imitation Purdy over mine. He examined both guns attentively and said he would not give my gun for two like the other. I then told him to examine it again, for although an imitation it was a very fine piece of work. He examined it again and made the same statement as at first. I then told him it was a genuine Purdy, but could not get him to believe it until he found out the owner. If ever you saw a crestfallen man that amateur judge of shotguns was one. He went away, and in about two hours returned, making me an offer of $250 for my gun with this condition, that I would remove my name and substitute Purdy's. His offer was rejected. So much for American work and American judges.

About the same time I received an order to make a gun for $175. As the gentleman wanted the gun by a certain time I proposed ordering one for him; this he would not consent to, so I began the work for him. Every day he visited me and saw the gun made by me, piece by piece, and I think I gave him more individual work than any maker in England would have done. I received the barrels in the tubes. I put them together, breeched, made the locks and mounting, stocked, finished and engraved the gun for him. I got his permission to exhibit it at a coming fair, which began three days after I had promised to deliver it to him, and together with a rifle I had also made, I placed it on exhibition. This was in 1869. I received first on both guns, a diploma on each for the best gun made in the State, and a silver cup on each for the best gun on exhibition open to the world. The judges stated that they had not thought such a gun could be manufactured in America. The owner afterward exhibited the same gun in Alabama, and took the premium for best gun on exhibition. Some years afterward I exhibited it against a gun costing $475. Two gunmakers were on the examining committee. Both guns were entirely stripped, and after close examination, I received first prize, a gold medal valued at $50, for the best double gun. The gun was worth more money than I got for it; for I did the work for exhibition and the owner benefited. He bought a common English gun to shoot from a boat to use for one trip. He paid $18 for it. It had Purdy's name stamped on the barrels. He brought it to me to examine and see if it was safe. I told him it was as far as the barrels were concerned, but that the locks were not safe, which is the case with all common English guns, but these he said he would risk. On his return he told me that he had played a good joke on a friend of his. They started on a hunt, and when the friend looked at the gun, which had been made to order by myself, he remarked, "Pretty nice gun," and when he saw the name on it, said, "Imported by —— of ——?" "No," said the owner, "he made the gun for me." "How much did he charge you for it?" was the next query. "$175," was the answer. "Phew!" he whistled, and said, "By thunder! he knows how to charge for his work." Nothing more was said that day on the subject. The following day they went on the river duck shooting, when the gentleman took his $18 gun with him. He handed that to his friend, and asked, "What do you think of this gun?" He looked at it and answered, "You have fine guns." "What do you think of $500 for this," inquired the gentleman. "Oh!" was the reply, "Purdy is a fine maker." "You don't whistle to-day," remarked the owner. "I don't understand," was the reply. "Why," said the gentleman, "You whistled when I told you my other gun cost $175." "But," was the answer, "you don't compare this gun with the one you had yesterday. Why, the maker of this is the finest in England." "Well," replied the owner, "I should not think I would compare them. This gun cost me $18, and the name on the barrel is a fraud, Purdy never saw the gun." Now, no doubt but this judge of work and prices would be just as willing to air his opinions on American work as "Wells" has been. Sometimes persons expose their ignorance when they least expect to. In the case just noticed, the man knew that Purdy was a fine maker only from reputation, and made himself a laughing stock.

It is amusing to see what blasted fools some men do make of themselves. They know but little and they think every one as stupid as they are. One of this sort brought a gun to me for repairs; it was a Belgian gun and had "Manton" stamped on it. He remarked to me when he handed it to me, "This is the finest gun you ever had in your store. My grandfather had it made to order by old Joe Manton, and it cost $500." I looked at him in astonishment. The gun was not five years old and the cost was about $16. I told him he must be mistaken. He immediately became very angry, and said I did not know a fine gun when I saw one. I took the barrels out of the stock and showed him the Belgian proof, when he snatched the gun out of my hands and left the store, and, although we were soldiers together and brother officers, he has never spoken to me since. This circumstance taught me a lesson; and now, if a man were to bring in a broomstick and say it was the finest gun I ever saw, I should not contradict him. I have had a number of similar cases since. One day a man brought me a gun to repair, with "W. Richards" on the barrels, and worth about $40. He said it had been made to order by Westley Richards at a cost of $300. I said not a word, only looked at him. A doctor who was present noticed my look, and when the young blood had gone he inquired what it meant. I told him my experience, and showed a "Westley Richards" and made comparisons. He laughed heartily, and said it reminded him of a circumstance which he knew of where just as great ignorance had been shown. A gentleman of his acquaintance had set himself up as a judge of fine paintings. He had all the names of the masters at his tongue's end, and, like the gun judges with Manton, Purdy, Richards, Greener, Dougall, Scott, Powell and Riley, he could discuss the merits of each quite fluently. So far did he carry this that whenever a new painting was purchased by a wealthy citizen, he was at once sent for to express his opinion. One day he and the Doctor stepped into a paint shop, and the judge's attention was immediately drawn to a painting which was hanging against the wall. He said, "Doctor, look at this piece of work, by one of the masters. Why, it is splendid. I know the author of that, but I now forget it; but he was one of the finest in his day." He inquired of the clerk, who said he thought it belonged to the "boss." "I wonder," said the judge,

"where he got it from. It is the finest piece of work I have examined for years." Soon after the painter came in. The judge asked him, "Mr. ——, is that picture yours?" The painter said it was. "Will you sell it?" "Yes." "How much will you take for it?" "Five dollars." He put his hand in his pocketbook and drew out a V, while the painter unhung the picture, and he whispered in the Doctor's ear, "Why, what a fool he is; it is worth a hundred." Then turning to the painter he inquired if he knew the history of the picture and who painted it. "Yes," said the painter, "I did." The V was returned to the pocket and the painter lost the sale, while the Doctor's opinion of his friend's judgment in matters of art, you may know, was considerably less. He had read but did not know anything of the old masters and their creations. So with the gun judges; with the coolest assurance they will say to you, "There is no use in your saying this or that to me, for I have handled a gun all my life." So had the gentleman above seen pictures all of his life, and so have I carried watches for thirty years; but I have better sense than to put my opinions against a watchmaker's, or to state in public print which country makes the best. I will leave that to men in the business who are judges, and I will not injure any country or individual through my ignorance.

Now, understand me, I do not mean to say that the best guns are manufactured in America. What I do say is that the best gun for the money is made in America. A $50, or $75, or $100 American gun will outwear any foreign gun of the same price, and in purchasing them there is no danger of ever being swindled, as you often are with those of foreign make. The reason why the finest guns are not manufactured here is that in nine cases out of ten, if an American is able to buy a $500 gun, he would not have it made here even if he knew it could be made better, and why? Because it is not fashionable, and would lack the name unless he could get one manufactured at half price and have an English maker's name stamped on it, like the chap who wanted me to erase my name for an English maker's. And, lest your readers may think I write this to advertise my business, you will have to excuse my name and accept my *nom de plume*, VITUS

SOUTHERN SHOOTING GROUNDS.

Editor Forest and Stream:

In pursuance of your idea of investigating new fields for sportsmen in the South, I took special notes by the way between St. Augustine and this city, coming by the Waycross and Pensacola & Atlantic Railroad from Jacksonville. Since the line has been opened between Waycross and Jacksonville, it is much easier to get into the rich hunting grounds of the Okefinokee Swamp than formerly. Now, those daring hunters who want to test their bravery and skill can do so by following bear, wildcat, panther, and other dangerous animals in the depths of that splendid field for game.

Going southwest from Waycross, there are numerous points in the neighborhood of which game of a most enticing character abounds. Within easy reach of Valdosta, Quitman, Thomasville, Bainbridge and Chattahoochee there are plenty of small birds, fox-squirrels, wild turkeys, pheasants, quail, deer, and occasionally bear and panther.

Among the knobs and numerous streams that abound west of Thomasville to the river, there is as wild country as a hunter ever trod, and it requires the quickest kind of eyes, quicker powder, and dead shot work to bag any kind of game in those jungles. Those sportsmen who have been haunting the section, report that the sport is lovely and exciting beyond anything that can be imagined. Much of the interest that attends a season of shooting in that section, lies in the spice of danger and adventures that occur daily to those who indulge in that kind of pleasure. There is a deal of jungle in the region, in the lairs of which it is very necessary to travel with eyes wide open and ready fingers to call on the trigger in sudden emergencies. This is in broad contrast with hunting in the pine forests in the eastern part of Georgia, where there is comparatively no undergrowth, and where a deer can be seen a mile away browsing on the low grass, and where they see the hunter and are smart enough to keep beyond long range.

Crossing the Chattahoochee River, we came by the new railway to Pensacola, and found the route one of the most delightful that we have ever traveled on in the South. The Louisville & Nashville Railroad Company owns the line, and have provided the trains with buffet and sleeping cars and every modern appliance necessary for the comfort of travelers. Finding that this new line will be popular with hunters and anglers, especially from the North, Superintendent Harahan has arranged matters so that sportsmen shall have every advantage they may desire to pursue their object in that quarter. Mr. Chipley, the superintendent of the line, has a fondness for dog, gun, rod and line, and consequently a kindred feeling for brethren of the craft. Hence, the order stands that dogs and guns must be well cared for on the P. & A. R. R., and those who hunt along the line will find royal treatment, kindly favor and attentions that will surely make the most exacting fall in love with the management that provides for their enjoyment.

With regard to the quality of sport and game ground within convenient reach, it is only necessary to state that the field is entirely new, has never been pot-hunted, and seldom invaded by professionals or parties of amateurs. Those who go would have to take camp equipage, but so little is required for shelter and cuisine that the equipment need not be anything more than each person can readily carry. Among the pines, there are no musquitoes or noxious insects to worry one, and the balsamic odors always pervading the atmosphere are simply charming. Pheasants abound in all portions of that region, and quail are plentiful in the vicinity of every old plantation throughout that section of South Alabama. There is plenty of big game also to the north and south of the line in the vicinity of Westville, Crestville, Marianna and Milton. Along the streams in this region, there are old plantations, in the surroundings of which game of the most attractive kind abounds.

In the vicinity of Milton, Escambia Bay and all of the broad and magnificent sheets of water that are in that region, there is more fine duck and snipe hunting than can be found in any other area of like size on this continent. This kind of game has seldom been disturbed in their haunts, and finding safety they have increased to astounding numbers. The hunters who have investigated this new field report extravagant results of their shooting, and what they say is t empting beyond all measure to an old hand who likes to try new and prolific ranges to test waning skill and work within the limits of our lessened powers of endurance and fatigue. Oh, it is very nice to hunt lazily and yet make bags in an hour that in other lands and years required a day of hard work to fill. In this land of soft sunshine and sleepiness, where even the fish and game take their siestas carelessly, it is charming to hunt without much labor, and snooze beneath the light of tropical starlit skies. With regard to fish, I do not think there is another such stretch of water on the globe for varied and delicious fish as that body of soft blue and green which lies to the east of Pensacola. Just think of pompano and kindred fish, the very name of which delight epicures beyond all that the eloquence of words can express, and to sail on those waters, drifting with the soft winds that blow odorous from isles where the tropical sun distils thousands of perfumes from myriads of richest flowers. There is nothing outside of heaven that one can imagine so delicious, so balmy, so elysian. I am in love with that glorious south coast, for in its sweet airs there came to me healing balsams, which drove the demon of fever from my blood. Its forests gave to me appetite for the tender and rich game with which they abound. Its waters have supplied delicious fish, and hence it is with the zest of a pleased taste and renewed health I write this record, that others may go there and do likewise. DR. I. E. NAGLE.

NEW ORLEANS, La.

THE PERFORMANCE OF SHOTGUNS.

Editor Forest and Stream:

Two of your correspondents have spoken of using a pink-edge wad on powder. I think this a poor plan if shells remain weeks or months loaded, as the grease will certainly escape and affect the powder to a certain extent. Will some one please try the following, and report success through your columns: Over powder place one Baldwin wad, then two pink-edge wads or one felt, and then one Baldwin or cardboard wad; over shot, one Baldwin and cardboard. This last, over shot, is to prevent wads from starting, as two are more liable to keep in place than one. I use 3¼ drams powder for small game and 3⅝ drams for larger; 1⅛ ounces shot. My gun is a Parker 12-30, 8 pounds 5 ounces. It is certain death at 40 to 50 yards, and if I do miss, I blame the gunner and not the gun, and when I make an extraordinary shot I credit neither gun nor gunner, but attribute it to the god of chance. M. M.

GIRARD MANOR, Pa., April 10.

Editor Forest and Stream:

When I first commenced to collect, several years ago, I used a 12-bore double-barrel muzzleloader. I next bought a single-barrel gun, 12-bore, and with this small, light gun I did some very good work. The last gun, one I am now using, is a 14-bore double-barrel gun weighing 6 pounds 13 ounces. I have done some good shooting with this gun this winter, and have found it large enough for all kinds of birds and animals. The last deer I shot was a large, fine buck. I shot him 30 yards off, putting ten very large buckshot into his side, all of which went in back of the fore shoulder. The shell was loaded with 4 drams powder and 14 shot. Can many of the 12 and 10-bores beat this? I am well aware that for shooting at large bunches of birds a 10 or 12-bore gun will kill more birds than a 14-bore, as they can use more powder and shot in the large bores, but for single birds of any kind give me the small bores. I think the next gun I buy will be a 16-bore. CHESTER.

Editor Forest and Stream:

My own experience of some thirty years with the shotgun of various makes convinces me that if the best results are sought—close pattern and hard hitting, the shells should fit the gun chamber perfectly, being neither too long nor short; and there should be sufficient wadding over powder to prevent the escape of gas. My guns have never indicated that one wad would do it effectually, except it was a heavy felt wad.

A short time since I fired a few experimental shots from a 10-bore Parker, for the purpose of ascertaining difference, if any, in result between 2⅝-inch and 2¾-inch brass shells, gun being chambered for latter. The shells—four of each—were loaded with 4 drams Hazard FG powder and 1⅛ ounces (actual weight) Tatham's No. 4 chilled shot, with two pink-edge wads No. 8 over powder and one brown No. 8 over shot. I fired two shells from each barrel, then cleaned the gun thoroughly and fired the other lengths in like manner, distance 40 yards from muzzle of gun, at 30, 24, 18 and 12 inch rings, using same center for each. Average result of 2⅝-inch shells was: 30-inch ring, 112¾ pellets; 24-inch, 88⅝; 18-inch, 63½, and 12-inch, 35⅜. Of 2¾-inch shells: 30-inch ring, 123½ pellets; 24-inch, 104½; 18-inch, 77½, and 12-inch 44⅝. Not a shot but showed in favor of the long shells, the small-sized rings showing greater percentage of increase, that of 12-inch averaging some 35 per cent., 18-inch 22 per cent., 24-inch 18 per cent., and 30-inch 9½ per cent. over short shells. I had no means of determining penetration, but as most of the pellets went through a three-quarter-inch pine backing on which the targets were tacked, think either showed force enough. The rings were made after shots were fired, so as to get the center of pattern in each target. E. M. G.

NEW JERSEY.

Editor Forest and Stream:

My gun is a 12-30-8¼. I load for ducks 4 drams powder, 1 ounce No. 6 chilled shot, two pink-edge wads over powder, one over shot. For small game 3¼ drams powder, 1 ounce shot. I incline to chilled shot at all times, as it gives better penetration with the same amount of powder. I think coarse powder gives the best results in breechloaders, also the finer sizes of shot. I find no trouble in killing ducks with No. 6 chilled shot up to 50 yards, killing wood ducks often, when hunting snipe with No. 9 chilled shot. I generally fasten the top wad with a little mucilage, having no trouble with them starting. Another thing I notice, that most persons like a 30-inch barrel. I once owned a gun with a 28½-inch barrel that was a splendid shooter, and the gentleman I shoot with uses a 25-inch. H. E. H.

BRIDGEPORT, Conn.

Editor Forest and Stream:

Your correspondent "S. S. W.," in issue of April 10 says—speaking of my remarks in reference to 10 and 12-bore guns:—"Now if he will tie the 12-bore down to the proper charge for a 20-bore, the 12-bore will be in the same place as the 10." I reply, not quite. "S. S. W." is mistaken. A charge of 2½ drams of powder and 1 ounce of shot with a 12-bore, will give a closer pattern at 40 yards than can be got out of a larger charge of powder, with sufficient penetration to kill a duck at that distance and even ten yards further. I have killed a black duck sitting at fully 40 yards, with barely 1 dram powder and 1⅛ ounces of shot, "stone dead," too. For duck shooting with a 20-bore, the charge of powder should not be less than 2½ drams, and that of shot not less than 1 ounce. With this charge, and careful holding, a 12-bore gun, chokcd on the same principle as my hammerless, will give a good account of itself every time, up to 50 yards and even 60 yards when held straight. A 10-bore with heavy charges and consequently larger killing circle is better, I readily admit, for shooting at flocks—a little better only—but I cannot see the necessity of a weapon heavier than 7½ pounds and 12-bore, to kill a single bird at all ordinary ranges, ending, let us say for certainty, at 80 yards as the maximum. By this I do not mean to admit that a flock of ducks, either sitting or flying, would be quite safe in front of a 12 bore gun charged with either No. 1 or No. 3 shot.

From the drift of opinion as indicated by many articles in your journal, it seems to me that the day of unnecessarily heavy guns and wasteful shattering charges is rapidly drawing to a close. I have given a pretty fair trial to both the 10 and the 12, and I must confess to a preference for the latter, not because popular opinion is now largely in its favor, but on account of its being—taking it all in all—according to the tangible and practical results of my experience, the handier and the better gun. ALGONQUIN.

OTTAWA, April 14, 1884.

Editor Forest and Stream:

I have been not a little amused in reading the article by "Byrne" in your issue of April 24. I again assert the "truly wonderful fact, preposterous as it is," that a heavy charge of coarse, slow-burning powder, fired from a 26-inch barrel, will blow some of it out without being burnt. In regard to his lunar tube experiment, I think if he stayed here among his friends and would close the end of that tube with his hand, it would be torn to pieces by the grains of unburnt powder, "although gunpowder is notably sensitive to fire." I do not state this as "a fact, as my personal experience has not proven it." Now, about what "A." finds in the snow. I admit that "powder is a compound substance, made up of three very different things, with no two things exactly alike." I also admit that, with some gunners even their first shot in a day's hunt is from a foul gun, and the marks in the snow are from "the loosened powder scale left in his gun from former charges," but I again assert that a heavy charge of slow-burning powder, forced from a short gun barrel, will stain that snow with its unburnt grains. I have lived for many years in the anthracite region of this State and have had some experience in the mines, and on several occasions, when the miners have been injured by premature blasts, have picked from their flesh grains of powder that have been blown there by the force of the explosion. I invite "Byrne" to come over here among these Blue Ridge hills and hunt quail and pheasants with me. My guns, dogs and team are at his service. While we differ we can be friends.

SPICEWOOD.

CENTRALIA, Pa.

Editor Forest and Stream:

I have used shotguns for the past twenty-five years, often owning at some times two or more of different gauge, length of barrel and weight, some of them chokebore more or less, others cylinder, including muzzle and breechloaders, and have made many experiments in the matter of testing the shooting qualities of different gauges as shown by pattern and penetration on target, the only true test. Some of my experiments in loading will be found recorded in FOREST AND STREAM, issue of March 29, 1883, page 169, entitled "Hints About Loading." I believe, for the reason there stated, that better results can be obtained as to pattern, and especially penetration, by loading either breech or muzzle-loading guns substantially as described than by any other mode, viz.: Use about five parts coarse and two parts fine powder, always putting fine powder on top of the coarse; for wads, use one heavy cardboard wad one gauge smaller than bore of gun, then one good felt wad one or two gauges larger than bore, on this and next to shot put a firm leather wad of same gauge as cardboard wad, with a charge of shot properly proportioned to bore of gun and amount of powder used (and this must be ascertained by a series of experimental shooting with the individual gun), with a felt wad on shot. I recommend this mode of loading for both muzzle and breechloaders, unless paper shells are used, when the large felt wads might cause the shell to bulge. Of course, it takes a little more time to load, but it produces clean killing.

I do not believe there is any great difference as to the actual killing range as indicated by penetration of the several gauge guns in common use, while there is a great difference in the hitting circle or range in favor of an 8 gauge, loaded with 6 to 7 drams of powder and large amount of shot, over the 20-bore, with its light charge of powder and shot. One of the hardest hitters I have ever seen shot is a 16-bore, 23-inch barrel, single breechloading gun converted by a country gunsmith from an army carbine. Weight 6½ pounds. But little inferior to this gun is a semi-hammerless of 12-gauge, 30-inch barrel, and of not quite 6 pounds weight, made by the American Arms Company, of full choke, muzzle being contracted by swedging. It is a cheap twist gun, but the pattern and penetration is extra. Both of these guns are worthless for any shooting except sitting shots at long range. One of the best field guns I ever used had been a 32-inch barrel, 10-bore, of about 8 pounds weight, a muzzleloader, the muzzle of one barrel had been blown off through the carelessness of the user, who accidentally filled it with mud which was not removed until it was carried away with the muzzle attached. Previous to the accident the gun was nothing extra as a shooter. As an experiment, the barrels were reduced to 26 inches in length, nothing further being done to them. The right barrel proved to be extra, both for pattern and penetration, while the left lost nothing by the change in length.

My preference is for a full 12-bore, 28-inch gun, of 7½ pounds weight, right barrel cylinder, left modified chokebore. I chose such a gun after having tested several different gauges, length of barrels and weight of gun, on woodcock, grouse, rabbits and other game found in cover shooting in Central New York.

Will some one who has examined a Pieper "rifled choke" inform me through columns of FOREST AND STREAM what form of rifling or grooves is used, and how many are put into a 12-gauge gun; also state how broad and deep such grooves are.

I quite agree with "Green Wing" and "Vox" that there should not be a shoulder at inner end of shell chamber, especially if metal shells are to be used. There was none in the 16-bore I have mentioned, and but little in the semi-hammerless, and no gun of any gauge, either muzzle or breech-loading, will give better penetration.

Is the pistol grip in its several forms an improvement on

the old-fashioned, long, slim, easy grip, or does it not have a tendency to cause the butt of the gun to be raised too high in snap-shooting, with consequent under-shooting at the bird? Is it not a fact that the substitution of the rubber butt-plate in the form now used for the old-fashioned metal one hollowed out to fit the shoulder is detrimental to correct aiming in quick shooting? M. E. B.

WILLETT, N. Y.

TWO-EYED SHOOTING.

Editor Forest and Stream:

In response to your kind invitation to "contribute occasionally" to your valuable journal, I thought an explanation of how two-eyed shooting is practiced and its advantages over the almost universal method of sighting over the rib with one eye shut, would, to some of your readers, be interesting and instructive. What I mean by two-eyed shooting is keeping both eyes wide open and not sighting the gun. I know of no one (except myself) at the South, who shoots in this way. At the North, I understand it is not the rule but by no means unusual. To succeed at all in this kind of shooting, it is imperative that the gun must nearly fit the shooter. What I mean by "nearly" will be explained further on. What I mean by "fit" is, when the gun is thrown to the shoulder, it will point at the object to be shot at. There are two ways of determining the fit of a gun. One is to stand in front of a mirror and look at your reflection in the eyes intently; throw up the gun to your shoulder, keeping your eyes fixed on your reflection's eyes, and if the gun fits you will not see more than a half inch of the rib of your gun and the gun will be pointing directly at your eyes. If you see more of the rib your gun is too crooked or too much drop. If you don't see any portion of the rib your gun is too straight or not enough drop.

Now comes in the "nearly" referred to above. When you get a gun to fit, as per above rule, you will find that you will undershoot rising birds and birds at long distances; therefore it is advisable to get a gun that shoots a little high or "nearly a fit." Having selected your gun you have only, when going to shoot, to look at the object to be shot at intently, and until you fire, with both eyes wide open. Throw up gun, and from moment of throwing gun up to time of discharge, let there be an interval of about two seconds. (In throwing gun up or down, the muscular exertion forces the gun below or above the object, but almost instantly recovers and follows the eye.) A little practie will convince any one that it is the only correct way to aim a gun. The other way of determining if a gun fits, is to target with both eyes open. If it shoots high the stock is too straight, if below too crooked.

It will require some practice to change from the old ruts, but once out there will be no regret at the change. The advantage in this kind of shooting is apparent in pond duck-shooting, where ducks come into ponds so late of evening (to roost) that one cannot see the sights on his gun, and if one eye was shut he would not see his duck. Again, in snap shooting one needs both eyes to follow the quick turns of a bird in cover, and thirdly, distance cannot be estimated with one eye shut, with both eyes you can do much better.

SPORTSMAN.

COLUMBUS, Ga.

There is something of a discussion in the English papers upon the subject of using both eyes when aiming, and a recent writer in the London *Times* says:

"Two-eyed aiming is carried out similarly to one-eyed aiming, with this great difference—that the left eye is kept quite open and looking at the target with all its power. The aim is actually taken with the right eye, but instead of depending on it alone the shooter utilizes the other to help the aim; to tell him, as it were, that his aim is exact and not deviated from in pulling the trigger. If he use one eye only, even if his aim be exact in the first instance, there is nothing to assist him in maintaining that exactness until the gun be discharged, neither can he shoot with the same rapidity. All he has to insure accuracy is his more or less muscular power to hold the gun in the exact position he has given it on taking aim, or with one eye open, only there is a fractional but most critical moment when he must lose sight of the object aimed at, because that eye gets more or less behind the sights on the gun, which are actually intervening. To overcome this he must not only aim slowly, but do so over the top of the front sight, and this is called 'drawing a fine bead.' Virtually, when he uses both eyes, the sights become transparent, and interpose no obstacle to his clear view of the target, and this can be easily demonstrated in the following way:

"Let the reader of this cut a card of some few inches in length into the shape of the letter V, with the limbs over half an inch in breadth (I give these comparatively large dimensions to all the more severely test the question), but with these limbs meeting, just as a V does at an acute angle. Let him hold this card right in front of his face and look toward the top of a chimney or a house at some distance or any point of a pinnacle or other well-defined object just appearing between the limbs at the bottom of the open space in the V. Doing this with both eyes open, the solid card will disappear, but leave in its place a sufficiently distinct although transparent form, becoming the very ghost of its solid self, if the Society of Psychical Research will allow me to call it so, and the object looked at will be in no manner obscured from view. Let him then, keeping the card in this position, shut the left eye, and he will find that the right is doing the actual aiming, although he had taken no means to provide for this, and this fact is the sole mystery, at least to me. The card will then also become solid or opaque to the sight, but retaining its position in reference to the point or pinnacle. Let him, however, shut his right eye instead of the left, and he will find that, while the card also becomes opaque, it has apparently shifted its position very considerably—several inches—toward the right hand. He will now begin to see what the two-eyed system does. It clears away obstacles in the gun itself, it strengthens his vision, it increases his available light, and it lets him use his left eye, not to aim with, but to strengthen considerably by its what I may tautologically call "supervision," the aim which the other is taking. If he then continues to hold the card in the desired position, he will readily see how easily he loses exactness with one eye only, and how well he can maintain the exactness with both eyes open. The V is as the rear right of the rifle, and for exactness may be held at the same distance from the eye—that being some fifteen inches. The absence of the front sight in no way affects this illustration. The left eye, I may state at the risk of repetition, looks, as it were, round the sight on the gun, virtually obliterates it, and tells the right eye at once of any aberration it is making in its aim, thus acting as its faithful guide and supporter."

The *British Medical Journal* takes up the subject editorially, and says: "Two-eyed rifle shooting has recently been the subject of numerous letters in a prominent morning contemporary. It is perfectly clear from the there recorded testimony of such eminent authorities on shooting as Dougall, Hay, Lowe and Malet, that a person shooting with both eyes open has a considerable advantage over those firing in the ordinary way under circumstances of varying or defective illumination, or where rapidly changing objects form the target, and he will probably be at least their equal under ordinary circumstances. The question then arises as to the way in which this shooting is effected. In ordinary vision the eyes working together have certain incontestable advantages, even where the image of one eye is suppressed. This is well recognized by microscopists, as one of the correspondents has pointed out, and also by those in the habit of using the ophthalmoscope. The advantage thus gained is probably due to resting of the muscular apparatus, both external and internal, of the eye, as vision can continue longer under such circumstances without fatigue or aching. A state of rest of the eye must also favor accurate taking of aim in the ordinary way, though the image of the other eye must be suppressed, as in the case of the microscope and ophthalmoscope. But there is another method of taking aim, that in which the marksman does not look carefully along the barrel, or perhaps even fails to raise it to his shoulder, but judges the distance and direction of the object, and adapts his aim accordingly. It is on this principle that a stone is aimed by the hand or a pea is discharged from a pea-shooter. This method is said to be habitually employed by the Chinese, and in its essential points by the distinguished shots to whom reference has been made. Under such circumstances the image of the second eye, instead of being suppressed, becomes of great use; for not only is the vision of each eye rendered less uncertain, but the two together see somewhat more distinctly than either separately. Also, the distance can be judged far better and the aim taken more quickly, points of great practical importance when rapidly moving objects of unknown size and distance are to be aimed at, in circumstances very different from those of ordinary shooting at Wimbledon, and far more allied to those actually existing in the recent South African war. We cordially add our voice to those of the eminent shots who are desirous of impressing on the war office the merits of this method of shooting."

An officer of our own Regular Army commenting on this says:

"The difficulties which the British experienced in their operations against the Boers are the same as our troops have to contend with in their skirmishes with Indians. Firing at rapidly changing objects, especially when those objects assume the shape of an Indian, is most certainly quite different from firing at a 600-yard target at Creedmoor or Leavenworth. It is in such campaigns that two-eyed rifle shooting is of great advantage, since on rapidly judging the distance and quickly taking the aim not only depends the result of the shot, but only too often the life of the marksman or one of his comrades. It appears that a revised manual of rifle firing is in preparation, as stated by the Lieutenant-General of the Army in his report to the Secretary of War, dated Feb. 5, 1884, and the compilers of this manual, the instructors in rifle practice and our sharpshooters are invited to give this matter their consideration."

Recently in experimental firing at Strensall, England, Major General Cameron finally ordered a battalion to fire at a range of dummy soldiers, with both eyes open and as rapidly as possible, not looking along the barrel of the rifle, but keeping their eyes fixed on the enemy, who was supposed to be making a rush on the position defended by the volunteers. Eight rounds were so fired in sixty-seven seconds, and the result completely bore out recent arguments, no less than 38 per cent. of the shots having struck the dummy figures. Drawn up in line against an enemy in the same formation, 1,000 men would thus deliver 7,000 shots in about a minute, with some 2,660 hits.

A DAY WITH SNIPE.

SHORTLY after the formation of the Curlew Club, in 1876, I visited this locality in search of snipe, but it was an off year for the wary dodgers. I had the pleasure, instead, of meeting the members of the Curlew Club, who had constructed a handsome club house, fronting Ludlam's Bay. This club included on its roll Wm. P. Clyde, Dr. A. G. B. Hinkle, Wm. Shuster, Wm. Reckless, R. Walter Peterson, James Y. P. M. Young, James F. Wallace, Dr. Peltz and other enthusiastic sportsmen. The hospitality of these gentlemen was overwhelming, and I was urged to renew my visit at an early date. Time (which, as Byron says, makes all things equal) made sad havoc with the Curlew Club. The club reorganized as the Sedge Island Club, and increased the limit to thirty members, it having formerly been twenty, but dissensions arising among the members, the club disbanded.

These recollections of my early visit were recalled when, hearing that a flight of snipe was on, I made my second visit to Ocean View, and put up at the house of Capt. T. F. Shute, who had officiated for the Curlew Club. The snipe grounds here are the Littleworth Meadows—meadows that are famous for snipe and known to nine-tenths of our sportsmen. They were so named because they were of little worth to anybody, being regarded as so much useless land. The cedar swamp creek runs through the meadows, the tributary being the Tuckahoe River. Finer snipe ground, or a richer variety and extent of springs, it would be hard to find or imagine. The meadows are four miles in length on each side of the creek, and when snipe are on it is a good two days' work to cover them properly. The ground is made historical with the footprints of our eminent sportsmen. Here the world-renowned pigeon shot, Mr. Charles Macalester (accompanied often by his wife as a keen participator in the sport, or by his friends, or by his gunning man, Jake Sutton), has whiled away many hours, and hardly had Capt. Shute and your correspondent entered the meadows when, fastened near a small waterway, we saw a boat, and on the oars was branded "C. Macalester," of whom we had been speaking only a few minutes before. Our attention was then attracted to the dogs, Capt. Shute's setter dog, Ducket, and my pointer bitch, Lady B., having come to a stand. "Careful," said the Captain, and we advanced with anxious expectation. Up went two birds. I shot heedlessly and missed, but Capt. Shute laid his bird low, and Ducket retrieved nicely. It was a fine specimen, plump and as fat as butter.

"Where there is one there are two, and where there are two there are more," is the old paradox, and ridiculous as the saying is, it is, nevertheless, just as often quoted. We were delighted when the dogs again drew up, both having got points. Instead of the single birds expected, eight got up, and then the slaughter commenced. The Captain's first barrel killed two and his second another, while I nailed one with each. We then seemed to be right into the midst of them, for in twenty minutes more we had a total of forty-one birds, with Captain Shute leading your correspondent by one bird. As many of the birds had crossed the creek, we determined to imitate their tactics, and, getting into the roadway, did some lively walking for the lower bridge and entered the southern meadow. Hardly had we entered when several birds flushed wild, but settled ahead instead of recrossing, much to our satisfaction. Then we got on to a lovely bit of ground, and the first mishap occurred, a treacherous bog hole treating me to a dose of mud that was anything but pleasant. Captain Shute enjoyed a laugh, and said I held up my Greener hammerless as if it were a thing of sacred value. The dogs were again sent to work, and the finest sport of the day ensued, the birds flushing with a wildness that was refreshing.

When we had almost reached the end of the meadow, we called in the dogs, and returning to the road where our horse and wagon had been "cornered," we sat down to "count." "Thirty-four!" exclaimed Capt. Shute, with an expression that plainly said, "beat that, if you can." "Thirty-three," I said, and shook hands with the Captain. "You beat me one bird." But it was a better beat than that, as we had bet champagne (a bottle on each bird) that we would each kill a majority out of the last five birds; Capt. Shute got four out of the five, the birds quartering on his side. Satisfied we had had a grand day's sport, we returned to Capt. Shute's pleasant home to partake of a hot and palatable supper, and spent the evening, pipe in hand, talking over the various interesting points of the day. The Captain was proud of his victory, because he is proud of his Chas. Daly 10-bore, presented to him during 1879 by a number of friends and admirers.

My next try will be at the bay birds here, which are expected to be unusually numerous this season. I will write you a few lines if a chance occurs. B. B.

OCEAN VIEW, Cape May County, N. J., April 24.

THE CHOICE OF HUNTING RIFLES.

Editor Forest and Stream:

Most of your correspondents seem to have a craze for repeating rifles, and a large number of them have considerable to say about the grizzly and buffalo. Now I would venture to say that two-thirds of these sportsmen, should they at any time happen to come across said grizzly or bull buffalo, would give either a wide berth, for I know from experience that the grizzly or buffalo of imagination differ materially from those in actual life, and this fact can never be fully realized until one comes in contact with them. I would suggest that a gun for this class of sportsman be of the Gatling species, or a sort of crank and funnel gun, one from which cartridges could be ground out *ad infinitum*, or perhaps the new dynamite gun that has a shooting radius of four miles would be better.

My experience with the rifle extends over a period of fifteen years on the Pacific from the Isthmus of Panama north to British Columbia. Have used all kinds of rifles, and have killed game from the smallest squirrel to bear, elk and deer.

I dislike the repeating rifles, first, on account of its peculiar construction, which renders it liable to get out of order at any time. Second, the rifle is never of the same weight, and at each discharge it becomes lighter. Third, the wasted ammunition of one becomes careless, and one would kill far more game than he kills, for if he misses the first shot he will continue to pump away as long as he can see anything.

To illustrate the above: I was on an elk hunt, in Southern Oregon, in the fall of '82, in company with two gentlemen who were armed with the Winchester repeating rifle. I used a Remington single-loader, .40-70. We tracked up and got into a band of fifteen elk. The moment we came in sight of the game my Winchester friends opened fire and fired thirty-two shots before I raised my rifle to my face. They killed one elk and wounded another, which I afterward killed with a single shot. I then got in position on a point of a hill and killed three more in three straight shots, making a total of four elk for me in four shots, while my Winchester friends got one in thirty-two shots. As a matter of course, I did not shoot at random and took no chances, but gave each dead shot behind the shoulder.

Now, without entering into details with regard to the particular merits of the different kinds of rifles, I say that with a singleloader Remington 30-inch barrel, double trigger, .40-70, I can kill anything that walks in the shape of game, and were I going into an Indian country, where one's hair is liable to be lifted at any time, I would want no better gun.

E. T. D.

POUGHKEEPSIE, N. Y.

WHITE ELEPHANT SHOOTING IN NEW YORK.—A white elephant—the only one left in New York, a creature of wickerwork and cotton, fifteen inches taller than Jumbo, owned by the roller skating rink people, and used like the other white elephants for advertising purposes—halted in Printing House square at half past 5 last evening, to give the Siamese high priest in ultra-Oriental toggery a chance to figure on the walking match scores and see how he was likely to come out. It was the hour when many are starting home from their work, and the bulletins from the Garden and the presence of the elephant had attracted a crowd. In the throng was a vague and elusive small boy who had read of elephants slain in Africa by Stanley with his elephant rifle. The boy did not happen to have such a thing as an elephant rifle about him, but he carried a cap pistol in the after pocket of his knickerbockers. This he drew, and fancying that the elephant might be vulnerable in his off hind heel, let him have it. The shot took effect and the boy took his departure. The persons standing on the City Hall Park sidewalk saw a small flame creeping up the hollow hind leg of the artificial pachyderm as flames creep up the elevator wells in fireproof apartment houses. With great rapidity the blaze spread to every part of the elephant save his trunk. It broke through his back and flamed up as high as the wires on the tall telegraph poles. The high priest's attention was attracted from the walkers' scores. He jumped from the truck on which the elephant stood, and, catching the burning creature by the trunk, endeavored to persuade him to come off. The driver leaped down and unhitched the four heavy dapple-gray horses from the truck. Policeman Hawkins rang an alarm from the fire box in front of French's Hotel. The

colossal figure of Franklin stood within a few yards of the blaze, with one hand extended, in the attitude taken by Mr. Barnum when he gestures toward his sacred elephant and says: "Gentlemen, behold! behold!" Hook and Ladder 1 was the first to answer the alarm, and came up with sound of gongs and rattle of wheels. Engine 7 was only a few seconds behind, filling the square with denser smoke than that from the blazing white elephant. Engines 12 and 29 thundered up, and Hook and Ladder 10 arrived. The insurance patrol was on hand, and last of all the water tower came rumbling into the square. The chiefs of the First and Second battalions rattled up in their little red wagons. The firemen seemed astounded. One of Engine 7's men was the first to attack the flames. This he did with a small chemical extinguisher just as High Priest Slee, Principal Keeper Hall and volunteers from the crowd succeeded in toppling the blackened frame of the elephant off the truck. It was a noteworthy spectacle—Three fire engine companies, with machines belching black smoke, two hook and ladder companies, the water tower, hose carts, chiefs' wagons, the patrol, a great crowd surging around, an array of policemen in the midst of it, and one fireman playing a half-inch stream out of a tin can on the charred wreck of the elephant's framework. He soon got the conflagration under control. The high priest said he thought he would know the small boy if he should see his again. Odds of two to one were freely offered that he wouldn't see him.—*New York Sun, April* 30.

Mr. Henry C. Squires, who has lately removed from Cortlandt street to his new and more commodious quarters at No. 178 Broadway, has just issued a voluminous catalogue of sportsmen's tools and luxuries. The primary purpose of the publication is presumably to produce polypragmaty in Mr. Squires's store; but apart from this the compilation is valuable as a compendious and useful book of information about the thousand and one things that the gunner of the day needs, or thinks he needs. The illustrations are numerous and lucid. Mr. Squires, we infer, does a cash business, for he gives no credit for the gems of sentiment mined from the Forest and Stream, which flash out to illuminate his prosaic price lists.

New York Game Districts.—Three new districts have been formed under the law for the protection of fish and game, and protectors will be appointed within a few days. One district includes Jefferson and Oswego counties, one is in the heart of the Adirondacks, and the third includes a strip of territory extending from south of the Mohawk River to the State line. The protector of this district is also to be a protector of the State at large, and is to be under the direction of Gen. R. U. Sherman, of the Board of Commissioners. Gen. Sherman has taken a great interest in this matter, and has given much earnest thought to it.

Olean Sportsman's Club.—At the annual election at Olean, April 25, the following officers were elected for the year: Fred. R. Eaton, President; E. M. Johnson, Vice-President; W. R. Page, Secretary; A. P. Pope, Treasurer. Executive Committee—A. P. Pope, C. B. O'Donnell, F. H. Oakleaf, H. W. Curtis, W. H. Simpson.—Y.

Home-Made Hunting Suit.—A suit of the proper color (for ducks) can be made of cheap material from coffee sacks, which are just the right color. I think the poor success of some duck hunters is undue movement on the approach of a flock, and too small time allowance ahead, for cross shots and over, for ducks rising from the water.—H. E. H.

Mountain Quail.—Lowell Hill, California, April 19.—Mountain quail are whistling in all directions. Thousands of them are coming up from the valleys and are pairing off. They will follow up the Sierras to their very summits as fast as the snow disappears.—J. W. B.

Sea and River Fishing.

CONCERNING BLACK BASS.

BY A. N. CHENEY.

[Read before the Anglers' Association of the St. Lawrence River.]

Mr. President and Gentlemen of the Anglers' Association of the St. Lawrence River:

While your worthy corresponding secretary could have asked many anglers far more competent to "prepare a paper in regard to the habits of the black bass, the various means of catching them by angling, the baits used, and the places where they are to be found at different seasons of the year," he could not have asked one who is a greater admirer of the good and game qualities of this fish, which is destined to stand in the not far away future, if it does not already, at the head of the list of game fishes that are to be found in the greater area of the waters of our State. Long may the glorious *Salvelinus fontinalis* be spared to us by the exertions of anglers' associations, like your own, to enforce just laws, and a liberal State government to provide the fry by artificial means.

But the black bass has even now, in many sections, invaded the haunts of this patrician beauty, and he is energetically and constantly seeking new fields. He is the embodiment of independence, and wherever he finds a home he locates to stay, provided the murderous netter and the worse spawning-bed thief, leaves him unmolested, for he fears no fish that swims, and is the only one of our so-called game fish that guards and cares for its young. In this year of grace, 1884, the black bass is pre-eminently the game fish of the people. The trout streams—greatly diminished in volume—still run or trickle through the farm lands of our sires or grandsires, but the trout took their departure soon after the "wood lot" was cleared, or remain only in story. Trout and progress are, in a measure, incompatible. Naturally secluded in their habits, the constant hacking of the lumberman's axe and the screech of the locomotive whistle jar upon their sensitive nerves, and they retreat before civilization, and the modern savage—he of the net and spear—and are now only found, or mostly found, in places that are inaccessible to the mass of the people, either by reason of the distance to the favored location, or the expense necessary for comfortable sojourn in these remote haunts, or lack of knowledge of the comparatively few profitable fishing waters, or want of time for an extended journey, or all combined.

The black bass, on the contrary, fears only the net and spear, for he is progressive himself, and the steamers and sailing craft on our lakes and rivers are his familiars, and he is on good terms with the mule-propelled vessels in the great ditches, yclept canals. He is a thorough Yankee and proud of every acre of this great "land of freedom" that gave him birth, and he is a game fish, whether found in the great lakes and rivers or small ponds and streams, for he is equally at home in the still waters of one and the rapid current of the other. The latter, however, heightens his game qualities, so that therein he is seen at his very best. But a species of fish that produces young in still water that will, when two and one-quarter inches long, impale themselves on the hooks of a trolling spoon in their efforts to swallow it, requires very little heightening of game qualities.

I have thus far spoken of the black bass without other distinguishing descriptions, but as there are two species of this dusky fish, it may be well to separate them. I trust the veteran anglers of this association will bear with me while I briefly note a few of the marked differences between the small-mouthed black bass—the *Micropterus dolomieu*—and the large-mouthed black bass—the *Micropterus salmoides*—the adjective in each case fitly describes the mouth. In the former the maxillary bone or mouth does not extend back to a vertical line drawn through the posterior part of the eye; while in the latter it reaches to and passes such a vertical line. The small-mouth has also smaller scales, there being eleven rows of scales between the lateral line and the dorsal fin, while the large-mouth has but eight rows of scales between the same points. The former again has seventy-five to eighty scales along the median line, and the latter sixty-five to seventy. The scales of the small-mouth are much smaller on the opercle, breast and back of neck than on the sides of the fish, and on the cheeks they are minute. The scales of the large-mouth are little, if any, smaller on the breast, back of neck and gill covers than on the sides of the body. The notch between the spinus and soft-rayed dorsal is deeper in the large-mouth than in the small-mouth.

As to the game qualities of the two species there is a difference of opinion. Some anglers hold that pound for pound there is no difference in their activity when on the hook. Others contend that the large-mouth is not for a moment to be compared to the small-mouth as a game fish. Of those who hold the latter view are two members of the medical profession, well known as angling writers, each having an experience with rod and line of more than half a century. One says, in a personal letter: "The big-mouth smells and tastes of the muck, and we do not fish for them." The other writes: "I do not bother with the big-mouth, for they will not fight. When hooked they give a flirt, open their mouths and come in like a log of wood." The author of "The Book of the Black Bass" champions the cause of the big-mouth, and considers him the peer of the small-mouth. Some years ago a prominent fishculturist, in writing me about the black bass of certain waters, said it was barely possible that they were a cross between the large and small mouth, but I have never been able to gather any evidence that the two fish would cross; on the contrary, there is every reason to believe they will not, even when the two varieties are confined in circumscribed waters.

The record of the experiments in black bass propagation by Major Isaac Arnold, Jr., U. S. Army, is very interesting, and I quote the following from it: "The black bass—both species confined together in a small pond—hatched out by the thousand, and I think there will be more in a few days. The young fish are all healthy, but they eat each other. Yesterday my foreman, in less than fifteen minutes, saw nine of the young fry swallowed by fish of apparently the same size. The large-mouths seem to do the greater part of this work. Each day the number of this year's fry grows less as the strong ones destroy the weaker. The first hatchings are now nearly three-quarters of an inch in length, and can probably protect themselves." From the dates given, I judge that the small fish referred to were about three weeks old.

The large-mouth thrives in waters with mud bottom, wherein are rushes, reeds and flags; but the small-mouth delights in clear, cold water, with a bottom of rocks, gravel and clean sand, or resorts, during the heat of August, to the long, fine grass in deep water. The large-mouth, if surrounded by as favorable conditions as to habitat as the small-mouth, might be a more vigorous fighter than he is by many supposed to be, but I shall hereafter speak only of the small-mouth.

In coloring, the black bass varies from a pale green to almost black, growing lighter from the dark back to the dusky white belly, and they are spotted, mottled and barred, transversely or longitudinally. I have also seen them when they appeared almost white in the sun as they leaped from the water. Color, however, is a very fallacious guide. If a number of black bass of various colors, or shades of color, are confined together alive, they will all become, in a short time, of the same hue, and the color will be like that of their surroundings. This change takes place evidently at the will of the fish, and it is part of a wise provision of nature that enables them to thus cloak themselves by assuming a line in harmony with their abode for the time being.

They spawn in running water earlier than in the still waters of a lake. In rivers they generally spawn in May or early in June; but in lakes or ponds they are on or near their nests with their young far into July; and last season I saw them with their fry early in August, and heard of them on their beds as late as the 21st of the same month. But last season they were, for some unknown reason, unusually dilatory in attending to their domestic duties. The spawn of the black bass is surrounded by a gelatinous fluid that causes it to adhere to the stones or gravel of the spawning beds in ribbon-like strings; and for this reason the bass cannot be spawned with profit artificially, and there is no necessity for attempting it. They only require to be left unmolested at the breeding season to thrive and multiply. At this season they refuse all food, but they keep their beds swept and dusted, and quickly remove any foreign substance that may fall upon them. The pot-fisher avails himself of his knowledge of their cleanly habits and drops a bare hook or hooks into the nest; at once the bass takes it into its mouth to carry it from the bed and is ruthlessly snatched out of the water. It is this nefarious practice that does more to destroy our black bass than any other means used by those who have no fear before their eyes of the law or an hereafter. Thousands of fish are destroyed, while a few mature bass, unfit for food, are thus cruelly killed. I have always to curb my pen when writing of this vile murder and those who do it. A fish that affords such grand sport will be allowed by all honorable men a bare month, or such a matter of time, in which to produce their young in peace.

The spawning of a pair of black bass extends over two or three days, and the parent fish remain with their young until they are ten days or two weeks old, and the fry prey upon each other until they are two or three weeks old. Their cannibalistic proclivities cease when they have gained a little discretion, but their pugnacious qualities grow with their growth. A black bass will vanquish a pike of a much larger size than himself by swimming swiftly under the enemy and cutting him across the belly with a rigidly erect dorsal fin. The black bass grows rapidly under favorable conditions of water and food, and reaches maturity at three years of age. Only a few years ago a black bass of six pounds was considered to have attained the maximum weight, but more recently small-mouthed bass have been caught of eight pounds in weight for a single fish. Parenthetically, let me say that we have it on good authority that the big-mouth has been taken in Florida waters weighing eighteen pounds. The larger fish—small-mouth—are so extremely fat, however, that they do not display the activity of a two and one-half or three pound fish. These weights are, as a general thing, the size of fish that gives the angler the most sport when on the rod.

Judging from personal experience, the largest bass are caught at an early hour in the morning—the earlier the hour, if it be daylight, the better the fishing or catching. When the black bass have spawned in the shallow of a river, they move seemingly in a body to swift water on the foot of a fall, if such there be, and are there caught in numbers in the down pour or boil of the rapids. After a few days in this rough water, which perhaps reinvigorates them, after the exhaustion attendant upon spawning, they fall back and disperse, to be found just at the foot of the rapids, behind some boulder in mid-stream that forms a little eddy, and along the shores, just in the edge of deep water. When the season advances and the water becomes warmer, they rest in deep pools and eddies, and with the approach of winter, they retire to broken rocks or submerged logs in deep, still water, there to become torpid and hibernate, until released by the warm sun of spring. After severe cold weather in the fall, a few days of warm sun will awaken them so that they will take the hook, if it is let down upon their winter quarters. During the fishing season they lie in wait for small fish just off the rocky shores, or near a weedy or sand points, where the water deepens rapidly, or near a weedy shoal shore that harbors bait fish. They make a rush into the shoal shore water or weeds, and grasp their prey and return to deep water only to repeat the operation as often as hunger demands.

Rocky shoals in midwater are also favorite places for black bass in June and early July, and there they may be found nearly the whole day, as the water is comparatively shallow. These are the places and this is the time for fly-fishing in lakes and deep rivers. Nevertheless, the bass will come on to the shoals to get food at morning and evening during the entire summer, so that a little fly-fishing may be had at feeding time, although one must be prepared for many disappointments. In September and October the bass are moving about in an aimless sort of a fashion, and may be on the shoals, shores, off the sand points, or in deep water, or in all of these places. This is the time to catch the largest fish, and they are in prime condition. Let one catch a black bass in a cold, clear lake, and he thinks it about the most vigorous fish to be found in fresh water, but when he catches one of the same fish in the current of a rapid river, he discovers his mistake, for river bass afford the finer sport. This is owing, in a measure, to the fact that the swift water, sunken boulders and possible snags add to the chances of the bass to escape. Therefore, the angler's satisfaction is greater if he succeeds in saving his fish after a closely contested fight in which the chances are nearly equal. A pound bass may afford more pleasure in the catching than one of twice the weight. To quote my own words, used when writing of the black bass on another occasion:

"It is the play that the fish affords that warms the cockles of an angler's heart, not the fish itself; and as one looks back over other days, it is the gamy, hard-fighting fish that rise up in one's memory like mile stones along a pathway. Greater fish there may be between, but they live only like so many pounds and ounces, and occasion no thrill, no tremor of the muscles, no increased beating of the heart, no particular joy or exhilaration at the retrospect, except that they may have beaten some other fellow's fish. If the mere pounds and ounces lived, there can be no thrill of pleasure at the remembrance, for there never was one; nothing—but pounds and ounces."

I have had excellent sport catching black bass in the autumn when the water was covered at an early hour in the morning with a dense fog, and in no single instance has such a morning failed of good results. But one has to choose, I am informed by a female member of my family, between the danger of malaria and a good score. I can say that to date I have not suffered from malaria because of exposure in fishing.

At the season when the bass are roving I have had splendid returns from baiting certain fishing places. For instance, I save all crayfish that die on the hook during an afternoon's fishing; and just before leaving the lake or river, I throw them into the water at the best fishing places; the next morning I fish these points and again bait them for evening. The baits used for bass are many, including the artificial fly for casting and for trolling, the trolling spoon or spinning bait, the minnow gangs, with live minnow, and the artificial trolling minnow; the live bait, including all small fish which are classified as minnows, and small perch which are best of all, particularly for large bass; the grasshopper and cricket, live frogs, crawfish or crayfish, dobsons or helgramite, in both the black and white state, and the common earth worm. In still-fishing, a dead bait is useless, and the sooner it is taken from the hook, and a fresh, lively bait substituted, the better. Dobsons and crayfish, both excellent bait when native to bass waters, are indifferent or worthless in waters where the bass are not accustomed to feeding on them. In two large lakes in this State is good bass fishing. In one, the grasshopper is a prime bait, and the cricket is of second importance; and in the other the reverse is the case. Around the first lake 'hoppers are more plenty than crickets, and around the second crickets are more plenty than 'hoppers.

I think the greatest pleasure is derived from casting the artificial fly, and perhaps the next best mode is casting the minnow. Trolling or still-fishing is much, if not most, generally practiced. In trolling with artificial flies, two, three or four flies of a large, gaudy pattern, are used on a single leader that terminates in a small fluted trolling spoon or a small minnow gang, baited with a minnow. Black bass are very capricious, in some waters taking a certain bait with avidity one day, and refusing it utterly the next. Of live baits, the minnow is the standard for the season through, although at times in the autumn the crayfish or frog is better. In trolling with flies it is necessary to weight the leader and sink the flies when the bass are in deep water

in August. By deep water I mean thirty or forty feet, for bass are rarely found in water of greater depth. The largest bass I ever caught in a lake where I have fished more or less for twenty-five years, I took on a pike gang that was trolling in forty feet of water, with an eight-ounce sinker, for pike —*E. Lucius.*

One great wrong to the bass fishing is the trolling of the shores of lakes and rivers for pike with gangs at a time when the bass are either on or leaving their beds, and are still about the shores with their fry. Many bass are thus caught and the gang injures the fish, so that if they are returned to the water but few can recover. The truth is, the bass are not often returned to the water when so taken; the fisherman argues that the bass will die anyway, and he may as well keep them. Another wrong is done in retaining small bass. The law says that it is unlawful to catch black bass of one-half pound or under, but the limit should be a pound, for bass are so voracious that little ones of an ounce or two will bite a hook, and many of less than half a pound are necessarily injured in taking them from the hook, and in hundreds of cases there is no pretense of returning undersized bass to the water. If the limit in weight was one pound, there would be less excuse for a person to keep a two-ounce bass, thinking it weighed eight ounces. Many anglers now refuse to basket black bass that weigh less than sixteen ounces. The example is good, but the trouble is that these gentlemen do not fish with the people who keep the fingerlings.

The province of the Anglers' Association is to educate the people in the way of all legitimate means of angling, as well as to enforce existing laws that foster our game fish; and a striking proof of the great good that can be done by an association like your own, is the letter in a recent impression of the Utica *Observer* to your president from a fish dealer, suggesting co-operation in this grand work of reforming existing evils. The letter of the gentleman referred to touches one of the great roots of the matter, and the accomplishment of the suggestions therein will be a grand work in itself, for which the angling brotherhood will rise up and call you blessed.

FLY-BOOKS.

Editor Forest and Stream:

"Governor's" communication in your last issue but re-echoes a complaint common to the whole angling fraternity. Fly-books, as usually made, are justly open to his criticism. They are an excellent thing to "putter" over in the winter, but sometimes exceedingly awkward to use on the stream.

In seasons past I have tied all my large flies with loops only, and quite small loops at that. When fishing in Maine, where a boat is almost invariably used, I have found no fly-book so convenient as a shallow cigar box.

This spring, unable to see why this should not work well on small flies, I tied up a number of midges with small loops. Though as yet only tried in two days' fishing, it seems to be an improvement.

Where the loops pertaining to the leader and tail-fly join, is very conspicuous in the water, since these seem to catch and imprison the air, thus giving rise to brilliant reflections of light. This, if true, is all the more objectionable since the short snells for flies have come into general use.

Therefore to such as are disgusted with fly-books they may happen to have, this is suggested:

1. That all flies be tied with small loops.

2. That the loop on the fly-end of the leader be omitted, and the tail-fly simply tied on with the same knot by which the leader is ordinarily secured to the line—a knot we all know will never slip, yet will infallibly loose with ease.

3. That separate short pieces of gut for the drop-flies be attached to the leader in any of the usual ways, and the drop-flies secured thereto in the same manner as the tail-fly. Thus, when a drop-fly is to be changed, the fly will be merely unfastened from the gut, the latter remaining attached to the leader.

Three advantages at least appear to be secured by this method:

1. Every fly may be used indifferently as a tail or drop-fly.

2. The visibility of the connection between the leader and flies is reduced to the minimum, since the knot is so close to the head of the fly as really to form part of it.

3. An ordinary tin chewing tobacco box becomes a most convenient fly-book, in which every fly may be seen and that desired selected at a glance. The usual fly-book then becomes a mere repository for material for repairs, leaders, strands of gut for droppers, and perhaps the reserve stock of flies in paper envelopes; and resort to it while actually fishing would rarely be required.

Of course like other reforms, if this may be entitled to be so considered, the change should be gradually made, since it would be folly at once to discard a good stock of snelled flies, merely for this purpose. Nor have I used this method long enough to justify me in asking that the foregoing be considered as other than a suggestion, on the strength of which radical action would be unwise.

NEW YORK, May 5, 1884. HENRY P. WELLS.

PHILADELPHIA NOTES.

THE trout fishing season in our State has been good thus far. Harrisburg, Pa., anglers state that it has not been better for years past. Many good fish have been taken from Newville Creek, Pa., and good catches have been made by Alderman Fager, Mr. Horace Lutz, Mr. W. L. Powell, Mr. Charles Greek, Mr. Lerne Lemer and Dr. Vallorchamp, of our capital. Mr. W. P. Seiler, of Harrisburg, accompanied by his friend, Rev. John R. Paxton, of New York, have taken some fine fish from Silver Springs, Pa. Your correspondent had good success with the fly on two Pennsylvania trout streams, and I fancy the growlers who state that Pennsylvania trout fishing is not worth seeking on account of the small size of the fish, would have altered their tone if they could have seen my creel. Not a wonderful display for numbers, I will confess, but a lot of average and good-sized trout, taken from a stream well worn on both sides by paths made by anglers. Perhaps I was lucky in just striking the day, but I warrant the fish were educated, and appeared to remember the spring of 1883 when they were smaller.

Fly-fishing for bass is regularly practiced here with success by two or three gentlemen living in our immediate vicinity as soon as the season opens; and I am told they have been very successful, especially during the month of June, just below the rifts in Perkiomen Creek, and in the swift water below the dam on the Schuylkill River, above Conshohocken. The report comes to me from such reliable sources I shall make an effort to test the matter and report to you. There were some rainbow trout placed in the Upper Perkiomen Creek by the Anglers' Association of Eastern Pennsylvania about a year since. Now that it is said that the rainbow trout is nothing but the young of the California salmon (this I am not yet satisfied to accept), it will be interesting to look for the outcome of the planting. I have my fears, however, be these fish what they may, the bass of the Perkiomen Creek will prevent a satisfactory solution of the question.

HOMO.

FISHING AFOOT.

Editor Forest and Stream:

It is not every one in whom the love of true sport is as surely planted as was in Izaak Walton himself, that can take a month to visit the lakes and rivers of Canada, the trout lakes of Maine, or even some noted river or creek in his own State, to enjoy to the full the fascinating sport. Many have to be content with whatever fishing they may find in their immediate vicinity. Car fares, board bills, and time lost is often too great an expense to be met, and the enjoyment of watching the cunningness of the fish with fisherman's wisdom has to be given up. But three boys of the Keystone State were not to be cheated of the pleasures of spending a week in this sport by a lack of filthy lucre. "We can easily walk to Uncle George's, and after we are there we can very soon trot up to the woods," says George, the oldest of the brothers. Frank and Peter agree with him on this point, and they make preparations to start.

Saturday morning bright and early the trio could have been seen by early risers striding briskly along the public road leading toward Jefferson county, Pa. George and Frank are tall and move over the ground like amateur go-as-you-pleasers, but Peter is so very small that he usually keeps upon a slow trot to keep from falling behind. He is fourteen years old and weighs about sixty-five pounds, but is as tough as whalebone and as spry as a weasel. Frank and George say they will "run him down" before they reach Worthville. Peter only laughs and tells them to "light out" then, as he can keep up his present pace all day, which would cover much more than the twenty-five miles of road lying between their home and Worthville. But they soon forget this little rivalry and make the most of seeing all that is to be seen through the country along their course. Reaching the top of Mahoning Hill they have a splendid view of all the country south of them. The sun is just rising over the hills to their left, three miles away, and Mahoning Creek looks like a stream of molten silver where the sun strikes it between the hills. Beneath the high ridges running north and south the fog lies dense and motionless like a sea of light snow. The air is hollow and carries the sound of the Stewartson furnace steam engine plainly to them. They cannot see the Allegheny River, but the winding line of heavy mist rising above the hills very plainly shows the course of the stream for a dozen miles or more. As the sun rises higher and dispels the fog, the furnace with its scattered houses and gas-well derrick grows into view. Beyond the furnace and on the highest hill in the country near by the two oddly-shaped cucumber trees known as the king and queen can be plainly seen. They see all this and much more while walking steadily forward. They have eyes and know how to use them. They have not lived in the country all their lives for nothing. Now the road winds along the sandy top of a long ridge, and there is little of interest to be seen. They notice a golden-shafted woodpecker's nest, and see why they are sometimes called high-holes. This nest is at least fifty or sixty feet above the ground in the smooth and limbless trunk of a dead chestnut, or what appears to be a chestnut from the road. This pair will be safe from any prowling oölogists at least. Passing a field thickly overgrown with briers and scrub oaks, George tells the boys to look out for a chat, and sure enough they see one of these skulking birds gliding along beneath the thickest brush. Only for an instant they see it, and then it is as effectually out of view as if no such bird existed.

Oakland, ten miles from their point, they reach at 8 o'clock. Crackers and cheese are bought, a few questions asked and answered, and they are again on the road. Red Bank Creek is soon in view, and a train of cars is seen entering the tunnel four miles up the creek, and coming out on the other side of the narrow hill, and twisting itself in and out along the creek's tortuous course, until it rumbles behind a hill and is lost to view. 'Tis seven miles around by the creek, while the tunnel is but two or three hundred feet in length. The dealer in general merchandise in Oakland told the boys that there was good bass fishing in the creek near this bend, and had the hill been less precipitous and their road less long, they would have been tempted to prove the truth or falsity of this information.

It is the second of June, and as they pass a "city of the dead" they see the fresh wreaths lying on a half-hundred mounds, speaking volumes of the patriotism of the brave men who once fell. They have left half of the road behind them, and it is not yet 10 o'clock, so they open the unlocked gate and pass along the graves, reading the names and epitaphs at the foot of each. A mile or so further on they meat a bushy-haired teamster driving a very scrawny span of bays, tugging away at a ton and a half of iron ore, who greets them with, "Are you gentlemen from Mahoning?"

"We're from near that place," George answers.

"See anything of Lize Williams down there?" This, looking over the side of the wagon with a grin on his face.

"Have not the honor of the lady's acquaintance," Frank says with mock politeness.

"Oh! I thought may be you'd seen her," and he drives slowly on, while the boys go ahead briskly to overtake Peter who has not stopped. They wonder who "Lize" is, and why the bushy teamster is interested in her whereabouts. Peter supposes that she is the teamster's wife and has taken French leave for the benefit of her eyes, which might have been, and thus they dropped it.

Twenty-five miles is no little walk to legs and feet that are habitually doubled up in a Keystone iron ore mine. Peter says it takes sixty-five thousand steps to traverse the distance. But even this appalling number will at length be finished, and as the sun crosses the meridian the country loses its familiar look, and the boys know they have passed the limits of their native county, and entered the pine and hemlock-covered hills of Jefferson. Rocks—hard, flinty, gray sandstones—are seen on every side, and the soil looks anything but fertile. Little Sandy is seen below them with its laurel and rock-lined banks. The hill on either side is a weary waste, showing nothing but rocks, rocks, rocks, and the blackened and lifeless trunks of ten thousand pines. Many years ago a cyclone swept up the creek, devastating all in its course. The livid fire in the midst of the circling winds instantly destroyed every tree in its course, and now the place is a famous berry field, where, amid the rocks and rattlesnakes, the hardy and undaunted berry pickers fill great pails and baskets with whortle and blackberries in their respective seasons.

The boys have reached their uncle's house, and are resting themselves in his cool best room. Uncle George is in Worthville, and his good wife entertained her nephews. They have soon dispatched a substantial meal, and are looking at the sows and pigs, the chickens and garden, the young corn and potatoes, and asking questions about every thing when their uncle returns. He is pleased to see his dead brother's sons, brings out his two rifles and a revolving pistol, and invites them to shoot with him. Shooting is Uncle George's favorite pastime, when he has not time to go to the creek, a couple of miles distant. They shoot a while, and then, the sun yet being a couple of hours high, they tramp over the two hills to the creek at Worthville, to "try their luck" on sunfish and chubs. There is a sawmill here and a "bracket" dam, and just under the "apron" of the dam the sunfish are generally quite plenty. But for some unknown reason the fish would not bite, and the fishers leaving the dam, went back of the little village and fished in the creek, but with no better success. At dusk they retraced their steps, wearily enough now, and reach the house disgusted with "chub" fishing, and boasting of what they will do on the coming Monday, when they propose to go to the Middle Branch, to fish for trout.

Monday morning Uncle George complains of not feeling well, and as there is an appearance of rain, all reluctantly agree that they had better wait until the next day before starting to the trout streams. But they will try Little Sandy again for chub and sunfish. A lot of angle worms are spaded up, hooks and lines are arranged, and they start for the creek. The chubs bite savagely to-day, and before noon they have caught over sixty. They are not very large, but what they lack in size they more than make up in quality.

"Let us catch the even hundred," says Uncle George.

"All right," Frank answers. "We lack only thirty-four."

"I'll catch twenty if you boys catch the other fourteen," Uncle George proposes.

"Agreed!" they chorus, and the race is begun, but strange as it may appear, Uncle George had caught his twenty ere the boys had landed six. But they were all tired and hungry, and started homeward with their ninety-two chubs. At a little bend in the creek there lay an old log, partly submerged. George threw in near the log and instantly hooked a large sunfish. Then they all crowded along the bank and dropped in their carefully baited hooks. Five more sunfish and two suckers were caught, making their hundred, and then folding their lines, and throwing away their rods, they started homeward. After dinner, they cleaned their fish, and what a time they had of it! George was covered with fish scales from head to foot, but he only laughed, and said he would be scalier yet before he was through fishing. Aunt Ellen, who never did like fish, says she can't see why any person would fish a half day in the scorching sun for the likes of their fish. They all laugh and tell her they are only "getting their hand in," preparatory to the real "fishing scrape," as Uncle George calls it.

But if Uncle George felt ill in the morning, he was really sick in the evening, and even the next morning yet felt too bad to go far from home. Consequently Tuesday was spent in looking about the woods near by for nests of hawks. But it was too late for broad-winged hawks and no other variety were seen. Uncle George showed the boys where he had once killed a deer—a fine doe—with a little shotgun while hunting pigeons. Unfortunately she ran a quarter mile after being shot, and was not found until unfit for food. They looked for the bones, but could find none. Doubtless foxes or dogs had long since carried them away, as it was twenty-three years since the deer was slain. Peter shot a couple of chipmunks off the fence with a little revolver, and George took a couple of long-range shots at crows with one of the rifles. Some snowbirds were seen in a cool pine-shrouded ravine, but after a careful search, the hope of finding a nest was given up. A hawk's nest was visited that had been razed a month before by some of the farmers near. George ascended to the nest, but got nothing but a few broken shells, much discolored by the action of the sun and rain. Thus the day was spent, all impatient to be off to the woods of which Uncle and George talked so enthusiastically They had fished in the streams before, and pictured in glowing colors the size of the trees, the density and coolness of the whole forest, and the probability of their seeing a deer or fawn before their return.

Wednesday morning, just as the sun looks over the hill with a ominously red eye, the party of four start up the lane *en route* for Middle Branch. Aunt Ellen tells them that it will rain before ten o'clock and that they had better wait another day. But they were too anxious to be off, and said the sky would soon clear off or the rain would all go 'round.

"Call Ned, Peter," Uncle George says, as they reach the head of the lane. "We want a dog to watch while we are sleeping."

Ned is standing in the lane near the house. Aunt Ellen bids him come back, but Peter only laughs and calls the louder. Ned would like to go with the fishers, but he hears Aunt Ellen calling him back.

"Fire your revolver," said Uncle George. Bang! bang! into the fence, as if at a chipmunk, and Ned comes bounding up the lane, yelping with delight. He is a pretty, pug-shaped dog, always accustomed to being petted and spending most of his time in the house. He was a year and a half old, but had been in the woods but a couple of times. Aunt Ellen said he could not stand the fatigue of tramping a couple of days through the woods and water. The party carried a huge basket containing doughnuts, light cakes, lard, butter, knives, pans and salt, everything needed for their comfort for their intended two days' stay in the forest. There is nothing of special interest in the walk up the creek. They take over hills and through forests for four miles; then along the creek past McKinsters, a brisk little village lying in a pleasant bend of the creek; then over a farm to save a long walk around by the creek, and they are on the outskirts of the wilderness. The road plunges into a mass of tall hemlocks and threads its way dimly up the creek. How tall and slender these useful trees are. Their tops weave themselves together in a thin canopy nearly a hundred feet above the fishers' heads.

"Isn't it quiet in here?" Peter says, looking away through the forest until the view is shut out by the blending of all the tree trunks into one solid dark wall.

"Yes," replies George, "and when you once reach the real forest it will be quieter yet. Isn't this a treat to us who at home cannot remember a single moment of such solitude?"

As the party pass Sparr's, the last human inhabitants, they see old man Sparr busily churning on his porch, while the women are working in the garden and driving their cows to a distant pasture near the hilltop.

"Only one more deserted farm to pass and we will be in the woods," said Uncle George.

"What farm, and why did the owners leave it?" Frank asks.

"It was a rented farm, and after the farmer had spent twenty years of hard work, clearing, chopping and grubbing upon it he grew tired and left it," Uncle George explains. "There is a good place for deer in the fall. Right up there behind those fields among the laurel they can always be started."

"Where do they go when started?" Pete inquired.

"They run across the Galehouse farm, cross Indian Camp Run, over the Miller farm, cross Middle Branch, over Sugar Ridge and Burnt Ridge, and on eastward through the wilderness into Forest county," replies Uncle George, who has hunted for deer in these woods more than once and knows most of the "crossings."

At the old bridge where the clear sparkling Indian Camp Run joins Middle Branch they arrange their fishing tackle. There are plenty of big chubs under the bridge and just above it. George stands on the bridge and pulls out a half dozen, vainly hoping to hook a trout. The big dam just below the bridge a few hundred yards is a good place for these big and exceedingly wary old trout. Occasionally a lucky angler lands a two or three pounder, and is the hero for a season or so until some one else captures one a little longer or heavier. George hopes that some of the big trout from the old dam may be about this quiet nook, the bridge, but he is disappointed. They soon pack up their luggage, equally divided among the four according to size and strength, and plunge through the underbrush up the creek. Indian Camp Run does not look favorable for trout, although well supplied with chubs, so they don't lose much time on it, but strike up Big Sandy, as the stream is called here; further up it is called Middle Branch, although how the extreme right hand stream of the three could be called the central one George could not understand. Three years before when George and Uncle George were fishing, the former caught the first trout, and while the other members of the party were eagerly striving for a bite, he coolly hauls out a six-inch trout. But soon all have caught one or more fish, and they are full of the excitement of this rare sport.

The Branch is a rapid, brawling stream, with numerous eddies and riffles. Hundreds of immense hemlocks in different stages of decomposition are lying across the stream, forming bridges for the wildcat and raccoon, and such fishermen who prefer scrambling over than to wading the riffles. Here is a miniature dam formed by the breaking of just such a log in its center and lodging of driftwood and leaves against it. There are sure to be a couple of fine trout in this hole, and there are hundreds and thousands of such dams on this stream. A line dropped in too close to this barrier may become fastened among the twigs of some limb or the roots of the old beech upon the bank, as no one can tell where or how the water whirls and twists before it escapes in a foaming fall on the other side. But who would not risk a hook and line too that he may hook one of these bright-colored beauties hiding somewhere among the branches or roots in the gurgling water.

At 10 o'clock they lunch, resting on a fallen beach and then move on up the creek. The clouds have been threatening all morning and soon the rain is falling in a steady melancholy way that gives token of long continuance. The fishers are soon damp and then wet, but they care little for this and press eagerly on along the creek. Each little eddy and dam holds two or three good trout for them if they are but skillful enough to capture them.

By a roaring fire, on which is cooking a pan of fish, the little party are seated. A wide spreading hemlock, centuries old, keeps the steadily falling rain off, and they vote it a splendid place for camping. The chubs nicely browned, a pan of trout are cooked in plenty of lard and butter, a table is made of a bed of moss, and Frank announces dinner. Uncle George comes up from the creek, where he has been cleaning fish, and his oldest nephew comes through the woods with an armful of dry beech limbs for the fire. He piles up the fire and seats himself before the table, declaring that he is as hungry as a bear. They attack their dinner in a manner that makes the outlook for the next day look gloomy enough unless they can live on a diet composed solely of fish and frog legs. What a keen relish for food the stimulating air of the pine woods give. What a wonderful appetite does tramping through the creek and the exciting sport give. They praise the doughnuts and dispatch the well-buttered light cakes with hearty zeal. The chubs are eaten first and then the trout, when one and all declare that much as they have been praised no words yet penned have ever fully described their many excellencies. Ned is fed and Uncle George enjoys a smoke while the boys fix up their provisions so that they may not be damaged by the rain.

Frank and Peter are loath to leave the cheerful fire and go out again in the rain, which feels strangely cold and uncomfortable now. But George and his uncle are already trying to make a raise in the good pools ahead, and, covering up the fire so that it will keep until night, they, too, start out again. The afternoon is as disagreeable as it well can be, and long before evening all the boys are heartily sick of the fishing, and wish themselves in their uncle's house snug and dry. Ned, too, is thoroughly disgusted with the whole business and walks along with a sullen air, with his tail turned downward instead of upward as is his wont. At length the party get together and hold a consultation as to what they had be ter do.

"It's too wet and disagreeable to camp out now, sure," George says, "and it looks like rain now. I believe we had better pull for home."

"Yes, I guess we had. I would like to stay, but the weather is too bad," his uncle replies. "Wrap up the lines, I want to try this good place here a minute, and I'll catch up with you."

Then down the creek Frank and Peter run, splashing through the creek in wild delight, glad that they are started homeward. George and his uncle come on behind, trying to raise a few trout, as the down-stream fishing is always the best for brook trout. They wonder why they cannot hook any until they see the boys plunging through the creek. They have them go down the bank, and Uncle George is soon dropping out the speckled beauties. George says he had seen some rapid fishing, but had never seen a man galloping and catching a dozen trout, as his uncle did, in a ten-minutes' run down the creek. The low, blowing clouds that all afternoon had been threatening more than a common shower, now broke over the forest in torrents of rain. The fishers sought shelter beneath a wide-spreading hemlock. They were soon thoroughly soaked with the deluging water, and, leaving the tree, they walk rapidly down the creek. There is a sudden cessation of rain, and in its place they hear a low sighing in the treetops. Soon the dim crowns of the mighty hemlocks begin swishing softly like a troubled river. The low sighing grows to an audible murmur, and the clouds, dark and circling, blow swiftly over the treetops. From a low hum the storm soon springs into a roar, terrible in its fierceness.

"Run for the creek!" cries George, as the appalling snap of an immense hemlock just before them warns them, "'tis madness to push on while the trees are swaying on every side, threatening every moment to fall."

Into the creek they plunge like mad, and down its shallow bed they struggle and under a strong log lying across the high banks. "We're safe here," they cry, as they shrink under the log close to the bank. Across the creek Ned stands, yelping so shrilly that George thinks it is his uncle or one of the boys whistling for him to come under the log.

Ah! it is something to awe the stoutest heart when the storm-king reigns with a furious hand amid the tottering giants of the forest! When no sound can be heard save the deafening and unceasing thunder of the rushing winds in the slashing treetops! When the unnatural darkening of the sky is only lightened by the vivid and constant flashes of lightening! And seated under their protecting log, the fishers look out on this scene of awe with feelings indescribable.

Half way home another storm comes on, and the fishers are compelled to seek refuge in Bobbie Neal's barn. Here Ned again causes trouble by not being able to get into the barnyard. He yelps as shrilly as at the Branch. Uncle George runs out into the storm to get his dog, fearing lest Mr. Neal's big dog will be roused up, which would necessitate their staying in the barn all night, which wouldn't be the pleasantest thing in the world. But the eventful day is at length ended. The sixty-one trout are salted and placed in a cool place. The boys will take fifty of them home for their friends and a sick grandmother. They all eat a hearty supper in spite of their having eaten about all of their two days' rations since starting away in the morning, to Aunt Ellen's great consternation. She tells them that they have thrown it away, as Uncle George did the rifle when the last thunderstorm overtook them. But this buxom aunt's good humor soon returns, and she shakes with mirth as she scans the half-drowned and much-fatigued fishing party. Peter, with his uncle's long thrown-away pigeon-tailed coat, which floated back like streamers when coming down the creek, is an object of much merriment. They have all worn some clothes which fit in a ludicrous manner. They are, indeed, a laughable looking set, but full of good humor now that they have reached home again. A half hour later all is quiet in slumber.

After resting and drying up a day the boys leave for home, highly pleased with their trip, and promising to try it again in the coming spring if all goes well. On the return trip they reach home at noon, and think, as we (one of them) do, that fishing is fun if but afoot. Geo. Enty.

Templeton, Pa.

NEW ENGLAND SALMON AND TROUT.

[A paper read before the New Hampshire Fish and Game League by S. Garman.]

THE New England salmon and trout in the Agassiz Museum were obtained in all parts of the section, and among them are probably representatives of all the species and varieties belonging to it. A study of the collection, made in accordance with the wishes of the Fish Commissioners, has resulted in conclusions partially indicated below. Of New England salmon there are but two, the common salmon of our coasts (*Salmo salar*) and the land-locked (*Salmo sebago*). The latter is hardly to be distinguished from the former in its small stages, but being confined to the fresh water it does not go through the same changes in coloration. The shape of fins and number of rays and scales are about the same in each. In a line from head to tail, a little above the middle of the side, there are from 120 to 135, and in a row across the side from the dorsal to the fins just in front of the vent there are from 38 to 48 scales.

Of the trout there are five forms which can be distinguished with more or less readiness. Two of them are commonly called lake trout; the togue (*Salmo namaycush*) and the blueback (*Salmo oquassa*).

The togue is found in most of the lakes; it has from 195 to 215 scales in the row from head to tail, and across the flank there are from 56 to 62. In this species the tail is most deeply notched and the ends have the deepest points. The upper jaw or maxillary extends back much further than the eye.

The little blueback seems to belong only to the Rangeley Lakes and their tributaries. It has from 210 to 235 scales in a row along the flank, and from 64 to 76 across it between dorsal and ventral. The upper jaw does not extend as far back as the hinder edge of the eye, and the hinder margin of the tail is more waved, while the notch is not so deep as in the togue. The short upper jaw (maxillary) and the notch in the tail serve to distinguish the blueback from small togue.

The brook trout is represented by several closely allied forms. The rows of scales are greater in number than in any of the preceding. Between dorsal and ventral and the side there are from 78 to 86 rows. The more southern form has a less number of rows from head to tail than either of its allies. Its number varies from 195 to 210. This is the *Salmo fontinalis* of Mitchell. A form occurring in Lake Monadnock, for specimens of which I am indebted to Col. E. B. Hodge and others, differs from Mitchell's form in having a greater number of scales from head to tail—215 to 240—and in this respect it agrees better with the brook trout of the tributaries of the great lakes and also with the spotted variety from Northern New England. The brook trout as commonly known has a great many bars, blotches and vermiculations of brown and light on the back and retains these markings in large specimens. The brook trout of the great lake region resembles the togue more in the markings, but has a shallower notch in the tail than the latter, though slightly deeper than the *fontinalis*. The trout of Lake Monadnock is closely allied to the brook trout of the lake region further west, but differs considerably in coloration. Small specimens of seven to eight inches are clouded and have indistinct bands on the upper part of the flank, with spots along the side. Later in life they assume the shape of the ciscowet (*Salmo siscowet*), but become whitish or bleached and silvery. This trout contrasts greatly with the spotted variety of brook trout of Eastern New England; it has about the same specific character and the difference is mainly in coloration. By means of this it is readily separated from the *siscowet* of the great lakes. The notch in the tail is deeper and the number of scales greater in each of the more northern varieties of the brook trout.

New England thus possesses two salmon, two lake trout and three brook trout.

Sturgeon Fishing.—Petaluma, Cal.—Here in California the Chinamen and some white fishermen have a rather odd way of taking these fish. They have a long stout line, ranging from a few hundred yards up to several miles in length. At short distances apart are placed other smaller and shorter lines and at the end of each is suspended a strong barbless hook without bait. The main line is stretched across streams, or along their beds, close to the bottom, and the fisherman usually visits his line a couple of times a day. The fish in swimming over the line hooks himself and in threshing around becomes entangled with other hooks, and it is a wonder if he escapes. It is not unusual to find a heavy fish with eight or a dozen hooks fast in him. A line of this description was recently stretched along the channel of Petaluma Creek, for a distance of over six miles, and with its thousands of barbless, unbaited hooks the catch was enormous. The sturgeon caught ranged from two feet to nearly ten feet.—W. F. S.

Large Pompano.—For the past four years there have been occasional large specimens of pompano caught on our coast, and as the ordinary fish is considered large at two pounds, these monsters of fifteen or more pounds attracted much attention. They came in singly, and were considered to be stray specimens from the west coast of Africa, the *Trachynotus goreensis*, instead of our own *T. carolinensis*. Latterly, however, our fish has been suspected to be only the young of the former. On Monday last, Mr. Blackford had ten specimens which weighed 170 pounds, the largest one weighing twenty-one pounds. This is the first time that the large fish have appeared here in more than single specimens. They came from North Carolina.

Meacham Lake, April 29.—Our long winter is ended, and the lake once more clear of ice. The trout fishing began the 28th, with a catch of fifty, by F. P. Dennison, of Syracuse, but Frank says they have been frozen so long they come out of the water like a stick. As soon as we get a little warm weather, we expect a lively time "among the fishes." My eggs of the land-locked salmon are all hatched and doing nicely. I will turn them into the lake about June 1. Everything indicates a good fishing season.—A. R. Fuller.

"For New York Anglers."—*Editor Forest and Stream:* In the item "For New York Anglers," I said, in speaking of the sixty fish caught with bait, that twenty-five were over ten inches long, and three of them over fifteen inches long, not "twenty-five over fifteen inches long" as you have it, and which would make the catch very much more than sixteen and a half pounds.—Amateur.

The National Rod and Reel Association, at a meeting last Tuesday, decided to hold the next annual tournament Oct. 7 and 8.

Fishculture.

FISHWAYS IN SCOTLAND.

THE Secretary of the Board of Salmon Fisheries for the Tay District, Scotland, writes that the McDonald fishway has been chosen as the form which will be erected on the Falls of the Tummel. Col. McDonald will go to Scotland in June to superintend the erection of the structure.

The Edinburgh *Scotsman*, of March 6, has an article on fishways from which we extract the following:

"There are at present in Scotland more than 500 miles of rivers and locks barred against the ascent of salmon by impassable waterfalls. The Falls of Tummel shut out between 100 and 200 miles of water; the Falls of Monnessie, on the Spean, 40 miles; the Falls of the Conon, 22 miles; the Falls of Rogie, 15 miles; the Falls of the Kirkaig, 20; and the Falls on the Polly, in Ross-shire, several miles of river and eleven lochs. Besides these, there are a number of other falls which prevent the access of salmon to a great extent of good spawning ground. Hitherto, the difficulty and expense of overcoming these natural obstructions by means of salmon-ladders or passes has prevented much being done to open them up; it having been found by experience that no salmon-ladder with a steeper gradient than 1 in 8 or 1 in 9 will enable fish to ascend. That is to say, if a water-fall be 20 feet high, the length of the ladder must be from 160 to 180 feet; and in the most efficient salmon-ladder in Scotland—that at Deanston, on the Teith—the gradient is much flatter—namely, 1 in 27. It is obvious that the steeper the gradient by which the fish can be enabled to surmount an obstruction, the shorter and cheaper will be the salmon-ladder, and that in proportion as the gradient gets flatter, the longer and more expensive will it be. The McDonald fishway, therefore, which was exhibited in the United States department of the International Fisheries Exhibition in London, and for which it is claimed that it enables fish to ascend easily and certainly a gradient as steep as 1 in 3 or 1 in 4, is a great improvement on anything of the kind that has been constructed in this country. A company has been formed to work it, and it has been patented in the United States, in Canada, and in Great Britian and Ireland. The cost of fishways constructed on this principle is stated to have varied from £2 to £5 per running foot, and Col. McDonald writes that the price of constructing a fishway, with a gradient of 1 in 4, on the Falls of Tummel, which are 16 feet high, would vary from £100 to £250, depending upon the difficulties of the site, the strength of construction required, and the cost of the substructure or foundations. Reasoning from the data thus furnished, it would seem that a fishway on the Falls of Monnessie, on the Spean, which are 22 feet high, would cost about a third more; and that one on the Falls of the Conon, a little below the outlet of Loch Luichart, which are 28 feet in height, and where the site presents peculiar difficulties, would probably cost nearly double the estimate for the fishway on the Falls of Tummel. Yet these sums, considerable though they are, are very much less than what would be the cost of an efficient salmon-ladder on any system known or practiced in this country. For example, almost the only attempt as yet made in Scotland to enable salmon to surmount an impassable waterfall has been made, within the last few years, at the Falls of the river Moriston, which rises in Loch Clunie, and, after a course of twenty-five miles, falls into Loch Ness. The falls are situated a short distance above the junction of the river and the loch, and being upward of 20 feet in height, they entirely prevented the ascent of salmon into the river until the construction of the present ladder, which was completed in 1880. It is 240 feet long, and has cost £1,800; whereas had it been constructed on the McDonald principle, it would have been only 80 feet long, and would have cost only from £160 to £400."

THE NEW YORK FISH COMMISSION.—The Governor has appointed Mr. William H. Bowman, of Rochester, to be a Commissioner of Fisheries to fill the vacancy caused by the death of Edward M. Smith.

Over Ten Million Dollars has been paid to its policy holders by the Travelers, of Hartford, Conn., since its organization. Present payments are over a million a year.—*Adv.*

FIXTURES.

BENCH SHOWS.

May 6, 7, 8 and 9.—The Westminster Kennel Club' Eighth Annual Bench Show, Madison Square Garden. Entries close April 21. Chas. Lincoln, Superintendent. R. C. Cornell, Secretary, 54 William street, New York.

June 10, 11, 12 and 13.—The Second Annual International Bench Show Chicago, Ill. Mr. Charles Lincoln, Superintendent.

A. K. R.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (25 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **1213.** Volume I., bound in cloth, sent postpaid, $1.50.

EASTERN FIELD TRIALS DERBY.

FOLLOWING are the entries for the Eastern Field Trials Derby, to be run next November at High Point, N. C. All were whelped in 1883:

ENGLISH SETTERS.

PENDRAGON.—T. S. Dumont, New York City, black, white and tan dog, June 11 (Count Noble—Floy).

LORD SUFFERN.—J. Otto Donner, New York City, orange and white dog, Aug. 2 (champion Thunder—Donner's Bessie).

LADY SUFFERN.—J. Otto Donner, New York City, blue belton bitch, Aug. 2 (champion Thunder—Donner's Bessie).

MATADORE.—J. Otto Donner, New York City, black, white and tan dog, Dec. 25 (Mate—Madge D.).

CLIFFORD.—J. Otto Donner, New York City, black, white and tan dog, July 22 (Emperor Fred—Fairy Belle).

COUNT ROBERT.—F. R. Hitchcock, New York City, black, white and tan dog, Nov. 15 (Count Noble—Spark).

BLUE LILLY.—Chas. Heath, Newark, N. J., blue belton bitch, June 21 (Blue Drake—Gypsy Queen).

NOBLEMAN.—Dalliba & Munhall, Cleveland, O., black, white and tan dog, June 11 (Count Noble—Floy).

CROWN.—F. E. Perkins, Providence, R. I., dog, April 7 (Dash III.—imported Blanche).

PRINCE.—F. E. Perkins, Providence, R. I., dog, April 7 (Dash III.—imported Blanche).

PAUL.—F. E. Perkins, Providence, R. I., dog, April 7 (Dash III.—imported Blanche).

NOT NAMED.—H. J. Rice, New York City, July 29, Goodsell's Prince—owner's Pebble).

PEGMATITE.—N. Rowe, Chicago, Ill., black, white and tan dog, April 11 (Cambridge—Marchioness Peg).

PEGOMANCY.—N. Rowe, Chicago, Ill., blue belton bitch, April 11 (Cambridge—Marchioness Peg).

WINDERMERE.—Dr. S. Fleet Speir, Brooklyn, N. Y., lemon belton dog, June 17 (champion Druid—Countess Louise).

CLYDE T.—L. Shuster, Jr., Philadelphia, Pa., lemon and white dog, May 24 (champion Thunder—Cornelia).

THORN.—Jos. M. Sturges, Philadelphia, Pa., lemon and white dog, March 15 (Buckellew—Sally).

JACK W.—Col. A. G. Sloo, Vincennes, Ind., orange and white dog, April 22 (Sergeant—Eva).

KING DICK.—T. W. Stoutenburg, Collinsville, Ill., orange and white dog, April 3 (Bracket—Nannie).

THUNDERBOLT.—Jesse M. Whaite, Chester, S. C., black, white and tan dog, May 7 (Rex—Dot).

BONNIE G.—Jesse M. Whaite, Chester, S. C., black, white and tan bitch, May 7 (Rex—Dot).

GLADSTONE'S BOY.—Dr. G. G. Ware, Stanton Depot, Tenn., black, white and tan dog, Jan. 10 (Gladstone—Sue).

GLOSTER.—Edward Dexter, Boston, Mass., lemon and white dog, June 3 (Dashing Rover—Belle).

BELLE OF PIEDMONT.—Edward Dexter, Boston, Mass., bitch (Dashing Rover—Ranie).

FAUST.—A. W. Foster, Atlanta, Ga., black and white dog, June 1883 (Prince Charlie—Anne Boleyn).

JENNIE III.—W. Tallman, Pawtucket, R. I., black, white and tan bitch, Oct. 29 (Foreman—Jennie).

COUNT RANGER.—H. D. Towner, Nyack, N. Y., black, white and tan dog, Aug. 12 (Count Noble—Gertrude).

DAISY BELTON.—J. R. Hendrick's, Pittsburgh, Pa., black and white bitch, Jan. 3 (Belton III.—Countess).

RICHMOND.—E. M. Usher, Vincennes, Ind., orange and white dog, April 22 (Sergeant—Eva).

SURREY.—W. B. Mallory, Memphis, Tenn., black, white and tan dog, June 10 (Gath—Juno II.).

LADY LEE.—W. B. Mallory, Memphis, Tenn., black, white and tan bitch, June 10 (Gath—Juno II.).

COLONEL COOL.—W. B. Gates, Memphis, Tenn., black, white and tan dog, June 30 (Gath—Lit).

DORA.—W. B. Gates, Memphis, Tenn., black, white and tan bitch, July 22 (Gladstone—Carrie J.).

RODERIGO.—Gates & Merriman, Memphis, Tenn., black, white and tan dog, April 11 (Count Noble—Twin Maud).

HAYDEE.—Gates & Merriman, Memphis, Tenn., black, white and tan bitch, April 11 (Count Noble—Twin Maud).

LEXINGTON.—W. J. Crawford, Memphis, Tenn., black, white and tan dog, June 10 (Gath—Juno II.).

BILLY GATES.—Dr. A. F. McKinney, Forest Hill, Tenn., dog, Aug. 21 (Count Rapier—Kate B.).

LILLIAN.—J. H. & D. Bryson, Memphis, Tenn., black, white and tan bitch, Aug. 21 (Gladstone—Sue).

GLAD ROY.—Whyte Bedford, Horn Lake, Miss., black, white and tan dog, June 28 (Gladstone—Donna J.).

GLIDELIA.—C. Spahr, M.D., Bridgeville, Pa., black, white and tan bitch, Aug. 12 (Count Noble—Gertrude).

BLACKEY.—Benj. Machaneer, Treverton, Pa., black and white dog, June 22 (Sig—Bessie).

FANNIE.—Benj. Machaneer, Treverton, Pa., black and white bitch, June 22 (Sig—Bessie).

INDEX.—J. M. Avent, Hickory Valley, Tenn., blue belton and tan dog, July 10 (Gladstone—Countess Druid).

JESSIE WINFIELD.—J. M. Avent, Hickory Valley, Tenn., black, white and tan bitch, Oct. 5 (Gladstone—Bessie A.)

GLADSTONE'S IMAGE.—J. M. Avent, Hickory Valley, Tenn., black, white and tan dog, Oct. 5 (Gladstone—Bessie A.).

GLAD-MOON.—J. M. Avent, Hickory Valley, Tenn., black, white and tan dog, Oct. 5 (Gladstone—Bessie A.).

ANNIE MORGAN.—J. M. Avent, Hickory Valley, Tenn., lemon and white bitch, Oct. 5 (Gladstone—Bessie A.)

LADY BESS.—J. M. Avent, Hickory Valley, Tenn., lemon and white bitch, Oct. 5 (Gladstone—Bessie A.).

IRISH SETTER.

ROSE OF KILLARNEY.—Luke White, Bridgeport, Conn., red bitch, Aug. 25 (Killarney—Lill III.).

GORDON SETTER.

PILOTAGE.—Dr. S. Fleet Speir, Brooklyn, N. Y., black and tan dog, June 1 (Pilot—Fan).

POINTERS.

SAM.—G. W. Amory, Boston, Mass., liver and white dog, May 1 (Sensation—imported Sal).

SCOUT.—G. W. Amory, Boston, Mass., liver and white dog, May 1 (Sensation—imported Sal).

DIRK.—Edward Dexter, Boston, Mass., liver and white dog, August (Croxteth—Chic).

PRINCE OF ORANGE.—R. C. Cornell, New York City, lemon and white dog, Sept. 11 (Sensation—Seitner's Lass).

LUCKY STONE.—Westminster Kennel Club, Babylon, L. I., liver and white bitch, Aug. 24 (Tory—Moonstone).

MADSTONE.—Westminster Kennel Club, Babylon, L. I., liver and white bitch, Aug. 24 (Tory—Moonstone).

DUKE OF ORANGE.—Westminster Kennel Club, Babylon, L.I., lemon and white dog, Sept. 11 (Sensation—Seitner's Lass).

RICHMOND.—John E. Gill, Franklin, Pa., lemon and white dog, July 27 (Vandevort's Don—Beulah).

WILD BRIAR.—John E. I. Granger, New York City, liver and white dog, Aug. 14 (Croxteth—Dolly).

PRINCE HAMLET.—F. R. Hitchcock, New York City, lemon and white dog, Sept. 11 (Sensation—Seitner's Lass).

TAMMANY.—F. R. Hitchcock, New York City, liver and white dog, Aug. 24 (Tory—Moonstone).

FLASH R.—H. E. Hamilton, New York City, liver and white ticked bitch, March 28 (Dilley's Ranger—Dilley's White Lilly).

MARS.—Otto Plock, Guymard, N. Y., liver and white dog, March 24 (Croxteth—Seitner's Lass).

ROMP.—Neversink Kennels, Guymard, N. Y., liver and white bitch, March 24 (Croxteth—Seitner's Lass).

QUEEN FAUST.—T. W. Stoutenburg, Collinsville, Ill., lemon and white bitch, Oct. 15 (Faust—Rose II.).

NABOB.—E. F. Stoddard, Dayton, Ohio, liver and white dog, Feb. 17 (Croxteth—Trinket).

FRESCO.—Grant & Smith, New York City, black and white dog, September (Bang-Bang—Daisy).

POCAHONTAS.—Luke White, Bridgeport, Conn., lemon and white bitch, Aug. 19 (Tramp—owner's Grace).

VIRGINIA.—L. White, Bridgeport, Conn., lemon and white bitch, Aug. 19 (Tramp—owner's Grace).

DRAB.—A. R. Heyward, Rock Hill, S. C., lemon and white bitch, March 31 (Dan—Arrow).

MIDGET.—J. C. Vail, Warwick, N. Y., liver and white ticked bitch, July 14 (Match—Belle).

THE WARWICK DOG SHOW.

[From our special correspondent.]

THE second exhibition of sporting and non-sporting dogs at Warwick, England, was held on April 16, 17 and 18. The total number of entries amounting to 1,204, and taken together with the quality of the animals exhibited, it must rank as one of the best exhibitions ever held. The dogs were benched in a new building erected by the society, and the situation was one of the best. There were plenty of grounds outside the building for exercising the dogs, and large roomy tents erected for judging, and as the weather was fine, there were several rings out in the open and the judging was got through pretty well. In some cases the awards were not very favorably received, but on the whole things seemed to give general satisfaction.

The first on the list was as usual, bloodhounds. Nestor winning first, having almost a walk over from Lawyer. In champion bitches, Dido, the only entry, won. She was looking well and is no doubt a good specimen of the bloodhound. In open dogs, Mr. Nichols's young dog Triumph, who made his first appearance on the show bench last January at the Crystal Palace, won again here, first and special cup. He is rather dark in color, which we think is improving since we saw him before, and no doubt will continue to improve with age; otherwise he is one of the best—if not the best—bloodhound ever exhibited. His ears are something extraordinary. We consider he stood well ahead in his class, which was in all respects a good one, all of the noticed dogs being quite fit to win at an ordinary show. In open bitch class, Witch I. is a very good animal. We prefer the hc. Patti to the second prize bitch Daisy, the latter being rather small.

In champion St. Bernard dogs there was no competition. In champion bitches first went to Elfrida. She is very large, with light orange markings on head and a white body. She is a good bitch but was rather out of coat. In the open class for dogs, Prince Arthur, hc., is of good color and coat, but rather fine of face and large of ear. Faust, second prize, is well known. He is a grand dog, were it not that his condition is always against him. Musgrave, vhc., is rather fine in muzzle and short on his legs, otherwise a good dog, with good color and markings and good coat. Valor, vhc. and reserve, is rather curly in coat. Ethelbert, third, is a fine large dog, with orange markings on head, body white; he resembles his sister Elfrida very much. Valentine, the winner, shown in good form, and has the best head of anything in the class, good feet and legs, and a well-marked head; his faults being color of body and want of dew claws. In the bitch class, Minna II., a grand bitch, curly of coat, and Countess of Beaufort, both vhc., is well made, with good markings on head and face, white body and orange markings, a good coat, and altogether a very nice bitch. Khiva, vhc. and reserve, is a very good bitch, but out of coat. She is of good color and markings. Dacia, second, has good color and markings, but is too fine before the eyes. Crevasse II., third, is also weak in head. La Mascotte, first, a well-marked black brindle, has plenty of coat, which is rather curly. In dogs and bitches, smooth-coated, Silvia, second prize, is a fairly good specimen, with a well-marked head and white body. Bruce, the winner, is short of leg. In dog puppies, Guy, vhc., smooth, is rather long of face. Plinlimmon, first, is a very large upstanding puppy, of good color and coat. We consider him leggy, quite too long of face and large of ear. Brennus, second, is good in color. In bitch puppies, first went to Thisbe, the best in the class. The St. Bernards, taken altogether, were nothing more than a moderate collection.

In champion mastiffs there were four to face the judge, who awarded first to Pontiff, a decision we could not agree with. He was the smallest dog of the lot, and had the smallest skull, and is rather weak in his quarters. We would have given the honor to Cardinal, who was looking his very best; he has a grand head, good quarters, feet and legs, and is the largest dog. Orlando is very good in skull and body, but he is very low before and straight behind, and is quite a cripple when moving. Crown Prince is not so large in skull as Orlando, but is better in wrinkle; we never liked his liver-colored face and bad quarters. In champion bitches first went to Rosalind, a really grand bitch, larger than her opponent, Crown Princess, nevertheless we like the latter best, being more full of quality and better in coat and muzzle, with the best quarters we ever saw on a mastiff. In open dogs, third went to Montgomery, a very nice dog, of the correct type, but with not so much bone as some. We thought this dog should have been second, as the second prize dog, Moses, is flat-ribbed, out at elbows and weak in his pasterns. The Prince, placed first, well deserved his position; he is good on his feet, with a grand skull, good muzzle and wrinkle; we would prefer him with better quarters. In bitches Olga, who was third, is a very nice bitch; she might be shorter in face. Ilford Claudia, vhc., is another good bitch; she stands too high on the leg and is light of body. The Lady Isabel, first prize, well deserved her position; she is a really good bitch, good in face and body, a good mover and well quartered. Boadicea, second, is another good bitch and was well placed.

The two classes for brindles brought out some fairly good specimens, and they were correctly placed. The first prize brindle bitch Lily II. is a remarkably fine specimen, Mr. Taunton, her breeder, coming second with a full sister, only older. Mr. Evans won first and second in puppies with two very nice young bitches. Elaine, first, is more matured than her sister, and smaller in ear and better in color.

In Great Danes, or boarhounds, Sultan II. had a walk over in the champion class. He is certainly a grand animal and was shown in the best of condition, and worth going some distance to see. There were some good specimens in the open classes and the decisions seemed well received.

In Newfoundlands, Gunville won first in champion dogs (black), Joe Sadler being withdrawn from competition; Trojan winning in the next class, Trafalgar not competing. In champion bitches, the well-known Zoe had no opposition. In open dogs, first went to Courtier, a grand dog in good coat and condition. Scamp II., second, was rather out of coat. Leo V., vhc., is a good dog, bar his legs. In bitches, Mr. Nichols's Sybil won first easily. There was nothing else really good in the class. In Newfoundlands, other than black, there were six entries, representing almost as many different types, consequently there was general dissatisfaction among the exhibitors.

In deerhounds, Cuchullin, first in champion class, is a very good specimen with good hard coat and color, he might be larger. In champion bitches there was but one entry, Heather, who is showing age. In the open class for dogs, Corrie II., who won second, is a very nice dog of good size and good coat, he is rather light in color. Lord of the Isles, first, is a grand upstanding dog, good dark blue in color, with a beautiful coat. The bitches were well placed.

In greyhounds, County Member had a walk over in the champion class. There were no entries in champion bitches. In open dogs Whiskedale II. won easily and the same gentlemen won first and second in the bitch class and cup for best greyhound in the show, with Mother Demdike, she is a black and white. We saw her here for the first time and consider her the most perfect greyhound we have ever seen.

Young Wagg won in champion pointer class with nothing against him, Belle of the Ball repeating the same performance in the bitch class. In open dogs, Devon Sam, a liver and white with plenty of bone and substance, won first, he looks all over a workman. Nap, second, is a good sort of dog, with plenty of go in him, and showing quality. In bitches, Devon Fan, first, is a liver and white, with plenty of bone and quality.

In the setter champion dog class, Ganymede, an Irish setter, and Sir Alister, an English setter, were placed equal first. We would have given it to Sir Alister. The Irish setter bitch Geraldine won first in champion bitches, having no opponent. The English setter dogs were a very fine collection, the winner, a lemon-marked dog, by Emperor Fred, being one of the best setters we have seen lately; he might move freer behind, but he is much better than his sire in that respect. Glencairn, second, is another good dog, possessing good bone and substance, and at the same time full of quality, is a very difficult dog to beat. The bitches were not quite so good a class as the dogs. Mr. Cunnington's Lady Westmoreland, vhc., by his Sir Alister and bred by Mr. Cockerton, is a very fine bitch, good in coat, plenty of bone and full of quality. She may be a bit on the small side. Plimsy, second, is another moderately good specimen, almost white in color.

The black and tan setters were only a moderate collection, the winners in the bitch class being perhaps the pick of the basket.

Irish setters were a fairly good class, but nothing above the average. In puppies the winner looked a trifle high on the leg, but full of go. Sir Kent, second, struck us as a promising puppy with a very good coat.

Retrievers were a fine collection, Mr. Shirley having a very large entry and carrying away most of all the prizes, which he generally does in this variety. Curly-coated retrievers seem going back. There are not such strong classes as there were a few years ago. Banner, the winner in the dog class, was a very good specimen. Mr. Skipworth's puppy, Smike, second, is a very promising young one, well grown; he was heavily handicapped, competing against old dogs.

There was a special cup offered for the best team of pointers, setters or retrievers, and no less than nine kennels entered, Mr. Shirley's team of nine wavy-coated retrievers carrying off first honors. Next, Mr. Cunnington's collection of six English setters. As the several kennels possessed such quality, the committee decided to give some extra prizes, so Mr. Daly's curly retrievers and Mr. Bulled's pointers came in for extra prizes.

In Clumber spaniels, Lance, the only entry in the champion classes, did not put in an appearance. The winner, Boss, in the open class, is a remarkably fine young dog, large, long and low, but a trifle long in face. Ramble, second, is another fair specimen, his color is not quite what we would like, being rather a bright red. We missed Mr. Holmes's dogs on this occasion.

In Sussex, or liver-colored spaniels, there were no entries in champion dogs. In champion bitches, Brida II. won, with no opponent. In open dogs, Horatio, well-known, was an easy first. In bitches, Eastern Bee, first, was much the longest and lowest. She is rather weak in pasterns and short of coat, which no doubt will improve, as she is only twelve months old.

In water spaniels, champion dogs had no entries. In champion bitches, Lady and Young Hilda were equal. In the open class for dogs and bitches, first and second prize winners were only moderate specimens. This variety of spaniel seems to be dying out.

In champion field spaniels, dogs, other than black, Mr. Spurgin's Hop, and in bitches, Mr. Spurgin's Floss had a walk over. In open class dogs, first went to Bruce, a very nice young black and tan dog, rather dark in color. Counsellor, second prize, is a liver. Newtown Abbott Beau, vhc., is a very good black and tan, good coat and good color, a little short of feather, and not as square in head as we would wish him. In the bitch class, Mr. Easton was once more to the front with a very nice liver and tan, long and low.

In cockers, first prize went to Nellie VII., a very nice little bitch of the correct size and type, but out at elbows. Freda, second, is a black, tan and white, of fair quality. Lilac, hc., is of good stamp, with a bad head.

In black spaniels, champion dogs, Roysterer and Solus were equal first. We certainly would have had no hesitation in placing Solus first. The Messrs. Willets placed Solus over Roysterer at Birmingham, and Solus, we consider, looked much better on the present occasion. In champion bitches, Miss Obo won, beating Beverley Bess. We consider Miss Obo a very handsome, small field spaniel, but cannot recognize her as a cocker. In spaniel dogs (black), first went to Easton's Bracken. He has a good head, and is long and low, with plenty of bone. Lord Bute, second, is not so low as the winner, and is rather short of coat and feather. President, vhc., is a good dog with a good coat, but stands rather high on leg. In bitches, Easton once more won first with Busy, which makes a total of five firsts with brothers and sisters all out of one litter by champion Solus out of Beverley Bess. It is a pity Mr. Royle objects to put Solus to stud. If he did we certainly would see a great improvement in the spaniel class in a short time. We have seen some of Solus's puppies in Scotland which we consider equal, if not superior, to any shown at Warwick by Mr. Easton.

Collies came out in great numbers, and the quality was good. In champion dogs there were four entries. Charlemagne, who won first, quite deserved his position. Rutland was next best to our mind. Eclipse being in rather good company, good dog as he is. In champion bitches first went to Madge. We rather preferred Jessie. The open classes of collies were 50 dogs, 36 bitches, 33 dog puppies and 19 bitch puppies. The awards in every case did not seem to give general satisfaction. Nevertheless, we consider from the winner down to the vhc. dogs in each class, with few exceptions, they were all fairly good typical dogs, fit to win at any ordinary show. In champion smooth dogs Guelt had no opposition; in the corresponding bitch classs Yarrow beat Sattie. We consider the latter much the best. In the open class we would have placed the first prize winner third and the third prize winner first, leaving the second as it was. The bob-tailed sheep dogs were about the best class we have seen of this variety. The winner is a very strong, muscular dog, good in coat; the second prize Welsh Boy, not far behind the winner.

In champion Dalmatians, first went to Mr. Fawdry's Treasure, he was much the best. In the open class Mr. Fawdry

won first and second, with only moderate specimens; the others were an inferior lot.

In champion bulldogs first went to Diogenes, a very good white dog, beating Lord Nelson. Queen Mab won in champion bitches. In open dogs first went to Mr. Shirley's Cervantes, a very good fellow with a good chest, good body, and a well arched back, he is not as deep in face as we would like. Castor, second, is too small before the eye, and light of bone, he was shown in bad condition. In open bitches Rhodora was first. Dona Sol, vhc., is small of skull and light of bone. We consider her properly placed on this occasion. In bulldogs not over 45 pounds, first went to Monarch III., who was correctly placed, he is a good, well-made dog, a trifle small of skull. The rest were nothing above the average. The bitches not over 35 pounds, were a moderate lot.

In champion bull-terriers Max Marx had no opponent. In dogs and bitches over 25 pounds, Cairo won first; Count, second; we fancied most. Trentham Lady, vhc. reserve, drops before the eye and appears cheeky. In the small class Mr. George was first again, but the class was a very moderate one, a good many being over weight.

In champion fox-terriers, Brokenhurst Sting beat The Belgravian, a decision we cannot agree with, and one that seemed to give general dissatisfaction to the fanciers of this variety. In champion bitches, Diadem I. had no competitor. She is a very good one, with good ears which would be better if carried more close to the head. In open dogs there were forty-one entries. First went to Mr. Wood's Splinter, a son of Sutta Vida. He is a good up-standing dog with capital feet, legs and shoulders and good shaped body. We think he might show more quality about his head and neck, but we consider he won well. Forrester II. we did not like near so well. His head is short and strong. We preferred the vhc. Sago to this dog. Stockwell, third prize, is fine of face and coarse of neck; nevertheless we preferred him to the second prize winner. In bitches, No Joke, vhc. is strong and well made, but lacks quality. Cynisea, first, is well to the point. She is a good, well-made bitch with good body, feet, legs and coat, with lots of terrier character. Stanhope Semlah, third, has a good long head which lacks character. She has good feet and legs. Dusky, second prize, is another good bitch a trifle large in ear. Scoop, c., is a nice terrier in bad condition. The same remark applies to Miss Nick. In dog puppies, Rallison, vhc., stands high and is strong in head. Hognaston Rebel, first, is a good terrier. He might be in better condition. Raby Muddle, hc., is a good made young dog by Mixture. He is a little strong in head with ears badly carried at present. His markings are not what we would desire. Stockwell, second prize, was third in open dog class. In bitch puppies there were twenty-eight entries, Mrs. Candour, the third prize, weedy and faulty in head. Stanhope Semlah, third in open bitches, second here, and Dusky, second in open bitches, first here. Scoop, hc., we preferred to the third prize winner.

In champion wire-haired dogs Newboy was first, beating Briggs, shown out of form. In the corresponding bitch class, Miss Miggs won, being closely pressed by her kennel companion, Vora. The wire-haired dogs, open class, contained some real good specimens, and most of the noticed dogs are all fit to win. Scrimage, third prize, is on the large size. Quilp, vhc., carried his ears badly. Rocket, first, is a real good one, rather wide in chest. In bitches, first went to Rock Rose, a well-made one with good coat, deficient in head. Dolly Varden, second, held the same position in the puppy class, a good sort and preferred by many to the winner. In dog puppies, first went to Mr. Carrick's Tinker, a good young dog, but many preferred Jack Frost, commended, who has rather too much coat. Tormenter was first in bitch puppies; is rather snipy, long-casted and short of coat; she got more than she deserved.

The beagles were a small class, the prize winners being very good specimens.

Basset hounds had a very fair entry, and the awards were well received, as is usually the case when Mr. Jones judges.

In Bedlington terriers, champion class (dogs and bitches), first went to Dina, owing, no doubt, to Topsy being in bad condition. Projectile has had his day. Tinner, first in open dog class, had a clear win. In bitches, Domino won: she is a bitch we always admired, having a good head, plenty of go and style, with a good short back and arched loin, and is of the correct size.

Mr. Harding Cox exhibited three grand couple of harriers, and had no opposition.

Dachshunde turned out in good force, no less than seven champions, and the other class also well filled.

Airedale terriers were a small class, owing, no doubt, to the Halifax show being held the day previous.

In Irish terriers, dogs and bitches, first went to Glory. We prefer Pretty Lass, who was rather out of coat on this occasion. Thady II. deserved a vhc.

In hard-haired Scotch terriers, first went to Nipper, and correctly. Ailsa, vhc., was preferred by many to the second prize, Lochiel.

In Dandie Dinmonts, Jeannie Deans won well in the champion class, and her kennel companion, Rhoderic, won first in the open class and special for best Dandie of all classes. He is a good dog, with good head, ears, coat and color.

In the black and tan champion class, first went to Wheel of Fortune. We consider her too large, and she walks stilty behind. In the open class, dogs and bitches, first prize was awarded to Welcome, catalogued at £10 and claimed by several. She was afterward put up at auction and realized 19 guineas, at which price we consider her anything but cheap. Mr. Taylor won in the small-sized black and tans with Sissy II. She is rather light in body.

In poodles, dogs, Flute, the winner, is a real good specimen.

In champion pugs Stingo Sniffles, who won first, is a nice size, rather dark in face, and nose not quite black. In bitches So So had a walk over. Mr. Sheffield won again in open dog class with Sir Stafford; not good in face, the second prize dog being better in that respect, but larger.

In King Charles spaniels Alexander the Great was the only entry in champion class, Mr. Briggs also winning first in open dogs with Bend Or, the winner at the Palace last January; he is good in size, remarkably good in head, with a better coat than Alexander the Great, but is not so good in body. The winner in the bitch class was a good way ahead, remarkably good in ears and coat, good head, rather dark in color and light of body.

Blenheim spaniels and Yorkshire terriers were only a moderate lot.

Foreign dogs were a good class, Mr. Taunton as usual carrying away most all the prizes. There was a selling class, but no particular value offered. The local classes were filled with animals, but little above selling class form. Following is a list of the

AWARDS.

BLOODHOUNDS. — CHAMPION — *Dog:* Mark Beaufoy's Nestor. *Bitch:* J. C. Tinker's Dido: OPEN—*Dogs:* 1st and cup, Edwin Nichols's Triumph; 2d, J. C. Tinker's Duncan. *Bitches:* 1st, Osborn Hill's Witch; 2d, W. C. Nash's Daisy. *Puppies:* 1st, Samuel Amphlet's Judy.

ST. BERNARDS.—CHAMPION—*Dog:* Absent. *Bitch:* H. C. Joplin's Elfrida. OPEN—ROUGH—*Dogs:* 1st, Sidney W. Smith's Valentine; 2d, H. C. Joplin's Faust; 3d, G. Neville Wyatt's Ethelbert. *Bitches:* 1st and 3d, L. C. R. Norris Elye's La Mascotte and Crevasse II.; 2d, Thomas King's Dacia. SMOOTH—1st, Samuel Smith's Bruce; 2d, E. Duret's Silva; 3d, Joseph Small's Garnet. PUPPIES—*Dogs:* 1st and members' cup, Rev. Arthur Carter's Plinlimmon; 2d, Wm. B. Megone's Brennus; 3d, W. L. Bicknell's Rex. *Bitches:* 1st and St. Bernard cup, Rev. Arthur Carter's Thisbe; 2d, Mrs. Annie Mansfield's Lady Burghley; 3d, W. Cox's Lady Raggs.

MASTIFFS. — CHAMPION — *Dog:* Cup, Mark Beaufoy's Pontiff. *Bitch:* Dr. Forbes Winslow's Rosalind. *Stud dogs:* 1st, W. K. Taunton's Cardinal. OPEN—OTHER THAN BRINDLE—*Dogs:* 1st, Joseph Royle's The Prince; 2d, Joseph Egan's Moses; 3d, T. W. Allen's Montgomery. *Bitches:* 1st, Dr. J. S. Turner's The Lady Isabel; 2d, Z. W. Walker, Jr.'s Boadicea; 3d, Thos. Wallen's Olga. BRINDLE—*Dogs:* 1st, W. R. Taunton's Commodore; 2d, W. Francis's Kepler; 3d, James Hutchings's Titus. *Bitches:* 1st and challenge cup, F. J. Campbell's Lilly II.; 2d and 3d, W. K. Taunton's Cleopatra and Nell II. *Puppies —Any color:* 1st, and Cup and 2d, Joseph Evans's Elaine and Vivien. Mastiff breeders' cup, Dr. Sidney Turner.

GREAT DANES.—CHAMPION—*Dog:* Charles Petvzywalski's Sultan II. *Bitch:* No entry.—OPEN—*Dogs:* 1st, E. G. Martin's Nero; 2d, Mrs. M. Hazlerigg's Prince Charlie; 3d, Evelyn Wooten's Thunder. *Bitches:* 1st, Mrs. M. Hazlerigg's Peeress; 2d, H. St. James Stephen's Laura; 3d, Charles Petvzywalski's Flora. *Puppies:* Miguel Del Riego's Leal; 2d, A. A. Grosvenor's Mark Antony; 3d, Joseph Evans's Mentor.

NEWFOUNDLANDS.—CHAMPION—BLACK—*Dog:* H. R. Farquharson's Gunville. *Bitch:* T. E. Mansfield's Zoe.—CHAMPION—OTHER THAN BLACK—*Dog:* H. R. Farquharson's Trojan. *Bitch:* No entry.—OPEN—BLACK—*Dogs:* 1st and cup, H. R. Farquharson's Courtier; 2d, A. E. Ainsworth's Scamp II. *Bitches:* 1st, Edwin Nichols's Sybil; 2d, H. R. Farquharson's Lady in Waiting.—OTHER THAN BLACK.—1st, H. R. Farquharson's Seaman; 2d, Edwin Nichols's Admiral Drake. *Puppies, any color:* 1st, Edwin Nichols's Admiral Nelson; 2d, A. E. Ainsworth's Sebastian Cabot.

DEERHOUNDS.—CHAMPION—*Dog:* G. W. Hickman's Cuchullin. *Bitch:* D. P. Thomas's Heather.—OPEN—*Dogs:* 1st, G. W. Hickman's Lord of the Isles; 2d, Frank Dugdale's Carrie II. *Bitches:* 1st, Maxwell & Cassel's Minna; 2d, W. Gordon's Beatrice II.

GREYHOUNDS.—CHAMPION—*Dog:* H. C. Joplin's Country Member. *Bitch:* No entry.—OPEN—*Dogs:* 1st, Messrs. Charles's Whiskedale II.; 2d, S. P. Heatly's Hylan Prince. *Bitches:* 1st and cup, and 2d, Messrs. Charles's Mother Demdike and Acalia.

POINTERS.—CHAMPION—*Dog:* J. Taylor's Young Wagg. *Bitch:* J. Lee Bulled's Belle of the Ball. OPEN CLASS—*Dogs:* 1st and cup, J. Lee Bulled's Devon Sam; 2d, Edwin Bishop's Nap; 3d, J. Taylor's Earl of Croxteth. *Bitches:* 1st, J. Lee Bulled's Devon Fan; 2d, J. R. Jones's Ruby of Homestay.

SETTERS.—CHAMPION.—ANY VARIETY—*Dogs:* Equal 1st, Rev. Robert O'Callaghan's red Irish Ganymede and Thomas Cunnington's English Sir Alister. *Bitch:* Rev. Robert O'Callaghan's red Irish Geraldine. OPEN—ENGLISH—*Dogs:* 1st, J. H. Platt's Sting; 2d, Joseph Boyle's Glengairn. *Bitches:* 1st, Thomas Cunnington's Blue Maud; 2d, J. H. Platt's Plimsy. BLACK AND TAN—*Dogs:* 1st, Adrian Phillips's Young Duke; 2d, W. Long's Norwich Banquo. *Bitches:* 1st, F. A. Manning's Alice; 2d, Robert Parnell's Ruby. IRISH—1st, P. A. Beck's Lismore; 2d, Rev. Robert O'Callaghan's Tyrone. *Irish Stud Dogs:* 1st, Rev. Robert O'Callaghan's Ganymede. *Puppies, any variety:* 1st, Capt. E. H. Howell's Lymington Bruce; 2d, James Hogarth's Sir Kent.

RETRIEVERS.—CHAMPION—*Dog:* S. E. Shirley's Moonstone. *Bitch:* S. E. Shirley's Zee. OPEN—WAVY—*Dogs:* 1st and equal cup and 2d, S. E. Shirley's Tracer and Tractor. *Bitches:* 1st, Harding & Cox's Zealous: 2d, S. E. Shirley's Tacit. CHAMPION—CURLY—*Dog:* S. Darbey's Wonder. *Bitch:* no entry. OPEN—*Dogs:* 1st, S. Darbey's Banner; 2d, H. Skipworth's Smike; 3d, S. W. Hallam's Talbot. *Bitches:* 1st and equal cup, George Hyde Granville's Chicory II.; 2d, Dr. W. A. G. James's Lune.

POINTERS, SETTERS AND RETRIEVERS.—Team prize, equal 1st, J. Lee Bulled's pointers, Thos. Cunnington's English setters, and S. E. Shirley's wavy retrievers; 2d, S. Darbey's curly retrievers.

SPANIELS.—CHAMPION CLUMBER—*Dog:* No entry. *Bitch:* J. B. Wilkes's Lance. OPEN—1st, Joseph Allen's Boss II.; 2d, Messrs. Charles's Ramble. SUSSEX AND LIVER.—CHAMPION—*Dog:* No entry. *Bitch:* James Partridge's Brida II. OPEN—*Dogs:* 1st, Holley Bros.' Horatio; 2d, C. Newington's Laurie. *Bitches:* 1st, Arthur H. Easten's Easten's Bee; 2d, Holley Bros.' Aureola. ENGLISH AND IRISH WATER. —CHAMPION—*Dog:* No entry. *Bitches:* Equal, George S. Hockey's Lady and Young Hilda. OPEN—1st, W. W. Thompson's Barney O'Tale; 2d, G. F. Smurthwaite's Barney Malone. FIELD.—CHAMPION —OTHER THAN BLACK—*Dog:* H. B. Spurgin's Fop. *Bitch:* H. B. Spurgin's Floss. OPEN—*Dogs:* 1st, Arthur H. Easten's Bruce; 2d, H. B. Spurgin's Counsellor. *Bitches:* 1st, A. H. Easten's Bride; 2d, W. Van Wart's Cosie. COCKER, ANY COLOR.—OPEN—*Dogs:* 1st, R. Lloyd's Little Dan; 2d, G. W. Carter's Jingo. *Bitches:* 1st, C. H. Lloyd's Nellie VII.; 2d, H. B. Spurgin's Freda. BLACK.—CHAMPION—*Dogs:* Equal, H. B. Spurgin's Roysterer and J. Boyle's Solus. *Bitch:* P. P. Phipps's Miss Obo. OPEN—*Dogs:* 1st, A. H. Easten's Bracken; 2d, J. H. Hussey's Lord Bute. *Bitches:* 1st, A. H. Easten's Busy; 2d, H. B. Spurgin's Coy.

COLLIES—CHAMPION—ROUGH-COATED.—*Dog:* Cup, James Bissel's Charlemagne. *Bitch:* Rev. H. F. Hamilton's Madge. *Stud Dogs:* 1st, James Bissel's Charlemagne. OPEN—SABLE—*Dogs:* 1st, J. F. Godfree's Lord Clyde; 2d, M. C. Ashwin's Cairn; 3d, John Pirie's The Scot. BLACK AND TAN—*Dogs:* 1st, H. Ralph's Sly Fox; 2d, Henry Skipworth's Scotch Laddie; 3d, Dr. W. A. G. James's Flockmaster. SABLE—*Bitches:* 1st and cup, W. R. Dockself's Flurry; 2d, S. Boddington's Beck; 3d, Arthur L. Chance's Lady of the Lake. BLACK AND TAN—*Bitches:* 1st, Dr. W. A. G. James's Tippet; 2d, M. C. Ashwin's Ida; 3d, Joseph Beach's Myra IV. PUPPIES—ANY COLOR—*Dogs:* 1st and cup, W. B. Dockself's The Squire; 2d, J. F. Godfree's Lord Clyde; 3d, John Pirie's The Scot. *Bitches:* 1st, A. L. Chance's Lady of the Lake; 2d, J. F. Godfree's Gipsy Clyde; 3d, Dr. W. A. G. James's Glemosa. SMOOTH-COATED—CHAMPION—*Dog:* W. W. Thomson's Guilt. *Bitch:* W. W. Thomson's Yarrow. OPEN—1st, M. C. Ashwin's Lady Elcho; 2d, Joseph Royle's Clyde. SHEEP DOGS—BOB-TAILED—1st and 2d, D. P. Thomas's Sir Guy and Welch Boy. SHEPHEEDS' DOGS—ANY VARIETY—1st, James Freeman's Peter.

DALMATIANS.—CHAMPION—James Fawdry's Treasure. OPEN—1st and 2d, James Fawdry's Nelson and Gipsy.

BULLDOGS.—CHAMPION—*Dog:* Medal, John Scudamore's Diogenes. *Bitch:* John Morris's Queen Mab. OPEN—*Dogs, over 45lbs.:* 1st, S. E. Shirley's Cervantes; 2d, B. W. Donkin's Castor. *Bitches, over 35lbs.:* 1st, George Raper's Rhodora; 2d, L. Q. Kermode's Psyche. *Dogs, under 45lbs.:* 1st, C. F. Bartlett's Monarch II.; 2d, W. H. Sprague's Don Pedro. *Bitches, under 35lbs.:* 1st and medal, A. M. Hodgson's Pussy; 2d, J. S. P. Sellon's Belladonna.

BULL-TERRIERS.—CHAMPION—Alfred George's Max Marx. OPEN, OVER 25LBS.: 1st, Alfred George's Cairo; 2d, J. R. Pratt's Count. UNDER 25LBS.: 1st, Alfred George's Grand Duchess; 2d, James Chatwin's Treasure.

FOX-TERRIERS.—CHAMPION—SMOOTH—*Dog:* 1st, F. L. Evelyn's Brokenhurst Sting. *Bitch:* 1st, F. Redmond's Diadem. OPEN—*Dogs:* 1st and cup, A. R. Ward's Splinter; 2d, A. H. Clarke's Forest; 3d, F. Reeks's Stockwell. *Bitches;* 1st and cup, Rev. Charles T. Fisher's Cynisea; 2d, F. Redmond's Dusky; 3d, Joseph Foreman's Stanhope Semlah. PUPPIES—*Dogs:* 1st, A. Hargreaves's Rebel; 2d, F. Reeks's Stockwell; 3d, L. P. C. Astley's Acquisition. *Bitches:* 1st, F. Redmond's Dusky; 2d, Joseph Foreman's Stanhope Semlah; 3d, T. W. Haslehurst's Miss Candour. WIRE-HAIRED—CHAMPION—*Dog:* Cox & Jaquet's Newboy. *Bitch:* Earl of Lonsdale's Miss Miggs. OPEN—*Dogs:* 1st, Corner & Marfitt's Rocket; 2d, H. F. de Trafford's Jingle; 3d, J. B. Dale's Scrimage. *Bitches;* 1st, Geo. Raper's Rockrose; 2d, P. H. Field's Dolly Varden; 3d, Cox & Jaquet's Kate Broad. PUPPIES—*Dogs:* 1st, Wm. Carrick, Jr.'s, Tinker; 2d, F. H. Field's Buzfuz. *Bitches;* 1st, Percy C. Reid's Tormentor; 2d, F. H. Field's Dolly Varden.

BEAGLES.—1st and 2d, Charles H. Beck's Abigail and Myrtle.

BASSET HOUNDS.—*Dogs:* 1st and two cups, M. B. Kennedy's Fino V.; 2d, F. W. Blain's Bourbon. *Bitches:* 1st, George R. Krehl's Theo; 2d, H. V. S. Craig's Carillon.

BEDLINGTON TERRIERS.—CHAMPION—J. A. Baty's Diana.—OPEN—*Dogs:* 1st and special, G. F. B. Milner's Tinner, 2d, G. A. Koch's Bonus. *Bitches:* 1st, A. Holcroft's Domino; 2d, G. A. Koch's Olga.

HARRIERS.—COUPLES.—1st, 2d and 3d, Harding Cox's Shamrock and Archer, Lady and Beautiful, and Lenient and Marvelous.

DACHSHUNDE.—CHAMPION—Medal, H. A. Walker's Hager. *Stud dogs;* 1st, H. A. Walker's Ozone.—OPEN—*Dogs:* 1st and cup, Mrs. P. Merrik Hoare's Carlowitz; 2d, J. S. Pierson's Zagwong; 3d, H. A. Walker's Culoz. *Bitches;* 1st and cup, Mrs. P. Merrik Hoare's Zither; 2d, H. A. Walker's Zulina.—PUPPIES—*Dogs:* 1st, J. S. Pierson's Zagwong; 2d, Miss Field's Dachel. *Bitches:* 1st, H. A. Walker's Zinnia. —*Team prize:* 1st, H. A. Walker.

TURNSPIT DOGS.—No entry.

AIREDALE TERRIERS.—1st, H. C. Grove's Roy; 2d, F. P. Smith's Choir Girl.

IRISH TERRIERS.—1st and 2d, H. A. Grave's Glory and Pretty Lass.

SCOTCH TERRIERS.—1st, G. J. C. Harter's Nipper; 2d, Albert Krehl's Lochiel.

DANDIE DINMONTS.—CHAMPION—G. S. Ball's Jeannie Deans. *Stud Dogs:* 1st, C. H. Lane's Laird. OPEN—*Dogs:* 1st and cup, G. S. Ball's Rhoderick; 2d, A. Nutter's Gethart. *Bitches:* J. Sherwood, Jr.'s Mary Scott; 2d, Earl of Antrim's Quartz.

SKYE TERRIERS.—CHAMPION—W. Nicol's Saxon. OPEN—1st, J. K. Kaye's Claret; 2d, Rev. Thomas Nolan's Kingston Roy.

BLACK AND TAN TERRIERS.—CHAMPION—1st, C. Whitehouse's Wheel of Fortune. OPEN—OVER 12LBS.—1st, C. Whitehouse's Welcome; 2d, J. Blagburn's Laura. UNDER 12LBS.—1st, J. Taylor's Lizzy II.; 2d, Mrs. Frances M. Taylor's Dolly Varden.

POODLES.—*Dogs;* 1st, B. W. Donkin's Flute. *Bitches;* 1st, S. J. Forbes's Jet II.

POMERANIANS.—1st, S. R. Platt's Marco.

TRUFFLE DOGS—No entry.

PUGS.—CHAMPION—*Dog:* Mrs. W. L. Sheffield's Stingo Sniffles. *Bitch;* Mrs. W. L. Sheffield's So So. OPEN—*Dogs:* 1st, W. L. Sheffield's Sir Stafford; 2d, Miss Barlow's Nicodemus. *Bitches:* 1st, W. L. Sheffield's Set Set; 2d, Lady Brassey's Sunbeam.

KING CHARLES SPANIELS.—CHAMPION—Mrs. J. A. Buggs's Alexander the Great. OPEN—*Dogs:* 1st, Mrs. J. A. Buggs's Bend 'Or; 2d, Mrs. William Forder's Jumbo II. *Bitches:* 1st, G. Lodge's Lizzie.

BLENHEIM SPANIELS.—CHAMPION—Mrs. L. E. Jenkin's Bowsie. —OPEN—1st, H. E. Jenkin's Trixey; 2d, Francis Kuhnor's Prince Leopold.

YORKSHIRE TERRIERS.—CHAMPION—No entry. OPEN—1st and 2d, Mrs. E. M. Monck's Kitty and Dolly.

MALTESE.—1st, Miss Elinor Sidebottom's Bebe.

ITALIAN GREYHOUNDS.—No entry.

JAPANESE.—1st, John Lewis's Oskei; 2d, Mrs. E. M. Monck's Chang.

TOYS.—UNDER 7LBS—1st, J. K. Kaye's Sybil.

FOREIGN DOGS.—Selling and local classes we omit.

NEW YORK BENCH SHOW.

THE eighth annual bench show of the Westminster Kennel Club was opened at the Madison Square Garden, in this city, last Tuesday morning, and is now in progress. Nearly all of the 1,117 dogs entered were in their places Tuesday. Many of the classes have filled well, notably that of the St. Bernards, which are out in force. Such a display of this breed has never before been seen in this country. Pointers make a good showing; the quality is very much better than that of this class last year. English setter dogs are not up to the mark, though the open class of English setter bitches is most excellent. English setter puppies are also good. We do not consider that the dogs in the sporting classes are in so good condition as they should be at this season of the year. Collies and fox-terriers make a very creditable appearance. Below we give our usual table showing the comparative numbers of dogs entered in each class for the eight exhibitions of the Westminster Club:

COMPARATIVE TABLE.

BREEDS.	1877	1878	1879	1880	1881	1882	1883	1884

Miscellaneous	23	8	27	38	23	18	26	11

Tuesday was a rainy, gusty, drizzly, and what an Englishman would call "nawsty" day, but in spite of the pluvial downpouring, a very fair attendance of visitors gathered in the Garden. Yesterday was likewise stormy, a condition of affairs which must materially affect the pecuniary proceeds of the exhibition. The facilities for showing the dogs and for judging are better this year than ever before. The ring is capacious, and the work of awarding the prizes went on briskly on Tuesday and Wednesday. The awards up to the time of our going to press (Wednesday noon) are as follows:

Champion English Setters, Dogs.—1st, C. F. Crawford's Foreman, black, white and tan, 4yrs., Dashing Monarch—Fairy II.

Champion English Setters, Bitches.—1st, T. G. Davey's Belle's Pride. 4yrs., blue belton, champion Paris—Harrison's Belle.

English Setters, Dogs.—1st, F. E. Lewis's Rock, lemon and white, 2½yrs., Water's Grouse—French's Daisy; 2d, L. C. Clark's Bob White, lemon belton, 2yrs., Young Laverack—Lady May; 3d, Neversink Lodge Kennel's Laverack Chief, black, white and tan, 3½yrs., Pontiac—Fairy II. Very high com., Thomas F. Ryan's Count Dan, blue belton, 5yrs., Carlowitz—Queen Bess; Dr. S. Fleet Speir's Marquis de Correze, black, white and tan, 2½yrs., Emperor Fred—Lizzie Lee; Stewart McKay's Pride of Columbia, white, 2yrs., champion Cossack—Ophelia; H. Pape's Prince Messenger, white and black, 2yrs., Thunder—Loui; A. H. Moore's Prince Al, lemon and white, champion Leicester—Dodge's Rose. Com., T. G. Davey's Prince Phœbus (imported), black and white, 4yrs., Tam o' Shanter—Prue; G. F. Jordan's Telford, blue belton, 2yrs., Darkie—Rosie Morn.

English Setters, Bitches.—1st, E. W. Jester's Dashing Belle, blue belton, 34mos., Dashing Monarch—Blue Belle; 2d, E. W. Jester's Dashing Jessie (A.K.R. 815), blue belton, 34mos., Dashing Monarch—Blue Belle; 3d, C. A. Stone's Forest Dora, blue belton, 2yrs., champion Dick Laverack—Forest Fly. Very high com., John G. Heckscher's Modjeska, lemon and white, 2yrs., champion Leicester—Peeress; J. O. Donner's Princess Helen, orange and white, 2yrs., champion Thunder—Donner's Bessie; Thomas F. Ryan's Linda, black, white and tan, 21mos., Emperor Fred—Cecilia D.; E. A. Herzberg's Lucid, blue belton, 5yrs., Sim's champion Dash—champion Maid of Honor; John J. Scanlan's Flake, black, tan and white ticked, Druid—Swaze; Howard Hartley's Daisy Queen, white, black and tan, 3yrs., Rock—Meg; T. G. Davey's Genevieve, blue belton, 2yrs., Harrison's London—Dawn. High com., H. F. Aten's Crook, white, black ticked, 4yrs. 9mos., Carlowitz—Dell; F. B. Greenhough's Brier, white, black and tan, 2yrs., 8mos., Coin—Dr. Greenhough's Beauty; S. Fleet Speir's Lady Sanborn, orange belton, 6yrs., Count Noble—Spark; W. A. Buckingham's Alice Dale, orange and white, 2yrs., Waters' Grouse—Daisy Dale; Lawrence Shuster, Jr.'s Clemantine D., white, black and tan, 4yrs., Dash III.—Cornelia. Com., Locust Grove Kennels's Smut II., black, 5yrs., Pratt's Trim—Earl's Smut; R. W. Dodd's Lily, white, 21mos.; Charles E. Husted's Daisy, black, white ticked, 5½yrs., Benedict's Dash—Galloway's Flirt.

English Setter Puppies, over 12 and under 15 Months, Dogs.—1st, W. R. Travers's Rocket (A.K.R. 118), white, black and tan, 17mos., Wagner (A.K.R. 229)—Nell Kelly (A.K.R. 286); 2d, J. J. Scanlan's Drake Carter, black, white and ticked, 10mos. 6dys., Cashier—Flake. Very high com., S. B. Foord's Brant F., blue belton, 17mos., Dashing Monarch—Mollie Bawn; C. A. Stone's Royal. High com., G. K. Haswell's Jock, orange and white, 17mos., Promise—Abbey; H. Hodenan's Plunger, blue belton, 14mos., Emperor Fred—Polka. Com., Locust Grove Kennel's Paul, black and white, 15mos., Dash III.—Imported Blanche.

English Setter Puppies, over 12 and under 18 Months, Bitches.—1st, J. J. Scanlan's Cliney Carter, blue belton, 12mos., Cashier—Flake; 2d, Ed. Lohman's Mistletoe, lemon and white ticked, 12mos., Emperor Fred—Countess Belle. Very high com., Lawrence Shuster, Jr.'s, Clarenda T., white, black and slightly blue belton, 12mos., Thunder—Cornelia. High com., Bassford & Hall's Betsy Druid, black, white and tan, 15mos., King Dan—May Queen.

English Setter Puppies, under 12 Months, Dogs or Bitches.—1st, C. H. Mason's Princess Phœbus (imported) blue belton, 10mos., Prince Phœbus—Patch; 2d, S. B. Foard's Rosa F., black, white and tan, 10mos., Dashing Monarch—Leah II. Very high com., S. Fleet Speir's Windermere, lemon belton, under 12mos., Druid—Countess Louise; T. S. Dumont's Pendragon, black and white, 9mos., Count Noble—

Floy; Ricardo de B. Smith's Peek-a-Boo, blue belton, 10mos., Perfection—imported Beauty; H. D. Townes's Count Ranger, black, white and tan, 9mos., Count Noble—Gertrude; J. H. Lee's Cashboy, blue belton, 11mos. 21dys., Cashier—Flake. High com., Dr. R. T. Tull's Dashing Armida, black and white ticked, 11mos., Dashing Monarch—Armida; Dr. R. T. Tull's Dashing Prim, black and white ticked, 11mos., Dashing Monarch—Armida; Pierre Noel's Verra, white and orange, 8mos., Bruce—Abbey.

Champion Irish Setters, Bitches.—1st, W. Kemble Lente's Trix, dark red, 4yrs., champion Elcho—champion Fire Fly.

Irish Setters, Dogs.—1st, Hiram & William Harris's Jack, red, 2yrs., imported, Barney—Rhoda; 2d, J. Henry Roberts's Bruce, red, 3yrs., champion Elcho (A.K.R. 295)—champion Noreen (A.K.R. 297); 3d, Rory O'More Kennel's Rexford, red, 3yrs. 3mos., champion Berkley—Sampson's Nora. Very high com., H. B. Goerschius's Chief II. (A.K.R. 232), red, 3yrs., champion Chief (A.K.R. 231)—imported Doe: Charles W. Roedenberg's Chip, red, 3yrs., Chief—Doe; C. H. Bunnell's Berkshire, red, 12½mos., Chief—Kate. High com., Charles R. Thorburn's Rory O'More, Jr., dark red, 2½yrs., champion Rory O'More—Nora O'More; F. L. Van Benschoten's Red Pick, red and white, 5yrs., Elcho—Jessie; Philo, red, 4yrs., Derg—Kathleen. Com., Max L. Ranson's Larry II., red, 1yr, 9mos., Larry—Red Lassie.

Cocker Spaniels (liver or black) under 28 lbs., Dogs or Bitches.—1st, B. F. Wilson's Peerless Glass, black, 33mos., Young Berwerlac—Nellie; 2d, E. W. Burkee's Jumbo, liver, 12mos., Hornell Dandy—Hornell Dinah. Very high com., Andrew Laidlaw's Woodstock Flirt (A.K.R. 661), black, 14½mos., imported Tippo—imported Toronto Jet (A.K.R. 860). Schellhass's Benedict's Boy (A.K.R. 130), black, 22mos., imported champion Benedict—imported Beatrice; Frank Thomson's Punch, lemon and white, Bruno—Gill.

Champion Cocker Spaniels (any color) under 28 lbs., Dogs or Bitches.—1st, J. P. Willey's Obo II., black, 23mos., Farrar's Obo—Chloe II.

GREYHOUNDS FOR SALE.—We direct the attention of breeders and exhibitors of greyhounds to the advertisement of Mr. Wm. Graham, who has received instructions to dispose of the dogs belonging to Messrs. Charles, of Neath, Wales. This is the finest kennel of greyhounds ever brought together, and the prices, considering the value of the dogs, are very reasonable. Catalogues can be obtained at this office.

INTELLIGENCE OF A SPANIEL.—Johnsontown, Va.—About '45 or '46 I became the owner of a cocker spaniel dog pup. I called him Cassius, which, of course, was shortened to Cash. He was very affectionate and intelligent, and I taught him many tricks, and some he took up of his own accord. I lived at that time on the south side of a street running east and west. My morning paper folded in the shape of a parallelogram was slipped under the door every morning early by the carrier. Cash would pick it up and bring it to my chamber door every morning and bark for admission. One morning a northeast rain storm was prevailing. Cash came up as usual but without the paper. I asked him where it was and he dropped his ears and tail, and I supposed that the paper had not come. When I went down stairs I found the paper in its proper place, but the rain had beaten under the door, wet the paper thoroughly and it stuck to the oil cloth. On the corner where the folds were thickest were the marks of Cash's teeth plainly visible, and the paper showed signs of tearing. Now, Cash seemed to have found that he could not get the paper without tearing the corner, and to have known that it must not be torn, and so he left it. If that was not "reason" what was it?—OLD FOGY.

CANINE JEWELRY.—They are having a big dog collar competition in this city. The Medford Fancy Goods Company, of Chambers street, without whose collars no well-bred dogs assume to bark or bite, has given a dozen collars for the best dogs at the Westminster show. There are silver and gold collars for pointers, leather and silver collars for greyhounds, fancifully ornamented collars for setters, big collars for mastiffs and St. Bernards, Mortimer collars for bulldogs, a collar with a silver buckle for the collie that is smart enough to win and wear it; and a set of harness for the best pug. When the successful collar competitors are arrayed in all this finery, the rest of the dogs will be mad with rage, unless their respective owners go down to the Medford Fancy Goods Company to buy for each a collar.

Rifle and Tray Shooting.

FIXTURES.

May 20 and 21.—Illinois State Sportsmen's Association Tournament Delaware, Ill. D. G. Cunningham, Secretary, San Jose, Ill.

May 20 to 23.—Knoxville Gun Club Second Annual Tournament, Knoxville, Tenn. C. C. Hebbard, Secretary.

June 2 to 9.—Annual Tournament Louisville Sportsmen's Association, Louisville, Ky. J. O. Barbour, Secretary, 157 Third avenue, Louisville.

RATIONAL TARGET PRACTICE.

Editor Forest and Stream:

Your editorial on regular army rifle improvement in your issue of Feb. 25, leads me to request space for some remarks upon this subject, based upon my own observation and experience as an instructor, hoping that from these remarks others may be led to state their observation, and to see if we cannot get true improvement instead of fictitious merit.

At the very outset let me say that no one will more readily concede than I that improvement has taken place, for the time was not so very far back when such a thing as a regular organized target practice was unheard of; but although I fully sympathize with the present enthusiasm, and aid it in every way possible, still I contend, and always have contended, that our efforts are all tending in the wrong direction, and have not the true object in view, namely, the making of skilled and reliable shots, able to shoot at any and all times with a fine degree of proficiency.

Our system of instruction, though originally based upon "Lindley's Manual," has spread and extended under the various orders and instructions that have been issued from time to time, so that besides instruction we now have an elaborate series of reports to render, presumably to show what progress has been made from month to month, and it is the series of reports that I would particularly mention as being the primary cause that has led to the fictitious merit of which I complain, and to which I would direct attention. Doubtless emulation, as well as instruction, has beneficial results if properly guarded, but when reports are based, as at present, then emulation, being upon an improper basis, and not properly guarded, may, and I contend, does, produce improper results, and may, as I think it does, produce discontent and discouragement instead of pride and confidence.

Let us begin at the beginning and touch upon each point as it presents itself, not only as more systematic but as dividing the subject up into heads the more easily to be answered.

Instruction.—The principles of rifle shooting having been taught as thoroughly as may be, with a view toward making men good shots, should not individuality in the practice be then taught? Is it right for the instructor to continue to adjust wind gauges and elevations for each man, and coach him on every shot, so that he, the instructor, fires the shot in all except actually holding the piece and pulling the trigger.

For match or team firing I admit that the coach is indispensable; there the coach has nothing else to do but coach, and as a means to an end, coaching in practice may be admissible when not abused or carried too far; but the end we should have in view, being to make reliable shots on the field of battle against animate instead of inanimate targets, the coaching allowable should only extend to proper instruction and seeing that such instruction is followed by the men, and each man be taught to depend upon his own judgment and skill for success, whether at the target or the enemy.

At present I am convinced this is not the case. Shooting for record, under the vicious system of reports that are required, as will be shown later on, causes the instructor who desires to emulate in these reports, to substitute his knowledge, his judgment and his skill, for that of the individual, to the bettering of the record to be sure, but at the same time to the production of a record that does not exhibit the true merit of the shooting of his men, but a record that exhibits the result of his individuality impressed upon each man, instead of a record of his men as individuals.

In my own experience I have seen the bad results following such a system. I have seen men who were good shots when shooting under their coach, make most wretched failures when shooting as individuals, and from the acknowledged fact that they could not shoot when placed upon their own individuality. Apart from the coaching our system of instruction appears to me to be radically wrong. After such course of preliminary firing as may be followed, generally a full course of gallery practice during the winter months, the rifleman begins in the spring at 100 yards off-hand. Following the system of classification to be mentioned further on, as soon as he has made 66 per cent. for two scores, not necessarily consecutive, of five shots each, he is advanced to the 200-yard range; and so on up to 600 yards. Right here in his first advancement is the first error. True, it may be that firing at 100 yards at our eight inch bullseye is "nothing more than aiming and pointing drill," as I so frequently hear; but does any well instructed rifleman mean to say that long practice is not beneficial at this range, and that a tyro is sufficiently well instructed when he has made 66 per cent for two scores as above, to be advanced? I have had men who never had fired a piece before in their lives go out and "scratch" 66 per cent. the first day, then miss the target early every shot for a week's firing, then "scratch" 66 per cent. again, and consequently "by order" be supposed to know how to shoot well enough to be advanced; but who will claim that they did know enough to be advanced? As an experiment as well as obeying the order, I advanced them to the 200-yard range, and as a matter of course, they could not hit the target and had to go back to the 100-yard range and stay there until they could do reasonably good shooting before they were fit to be advanced.

It strikes me that preliminary practice at short ranges should be continued until a rifleman was thoroughly well grounded, not only in the principles of rifle firing but in ability to shoot, and 66 per cent. for two scores does not make him so. I have been shooting for the last nine years, nearly constantly, and I yet have to regret the long-continued "short-range" practice and training I subjected myself to, and I yet shoot at from 50 to 100yds. constantly to keep my hand in. It is true that I practice at smaller targets than the 8-inch bullseye, but still I keep up the short-range practice, for I know it benefits me at every other range, no matter how far, or even if I then am lying down.

But, following the order, let us see what becomes of the rifleman. Having made his 66 per cent. for two scores of five shots each up to and including 500yds., he is then a first-class man; that is, I presume a first-class shot. Now observe that but two scores are considered, that his best shooting is all that is taken account of (for as soon as he makes 66 per cent. he goes up and does not remain to better it), and that a man can make 66 per cent. by one score of 16 and one of 17 out of 25, not necessarily consecutive, or in the same month; that a score of 17 can be made with three centers, one inner and one outer, or by two centers and three inners (not counting better combinations of 5-4-3-2 to produce 17) and that even a center does not necessarily hit the centre of a man from the circular shape of the target, and one then can see for himself whether this man is in reality a first-class shot, or anything approaching one. Remember, also, that the poor shooting has not been considered, that no average is taken, and it will then be sufficiently apparent that this rifleman may be and probably is anything but a first-class shot.

But let us follow him again and see what becomes of him. Having become a first-class man (?) he now goes back to 200yds., or the lowest range, where he has yet 80 per cent. to make; for a man may have made 80 per cent. for two best scores, when he was only trying for 66 per cent. Here he begins again and shoots and shoots, under his "coach" or not, depending upon the belief of his instructor as to such a system being advisable or not, until he makes 80 per cent. for three scores, not necessarily consecutive or in the same month, when he is advanced to the next higher range, to there repeat the lesson until he has 80 per cent. or better for these three scores at 200 and 300yds. He then jumps the 400 and 500-yd. ranges and begins at the 600, and hammers away there until he has made his 70 per cent. for three scores. Each score must be of the required percentage—that is, each score of five shots must be 80 per cent. at 200 and 300yds. or better; and each score at 600yds., of five shots each, must be 70 per cent. or better. Perhaps some one right here will tell me how to make a score of 70 per cent. on five shots; it is beyond my arithmetic; but anything less than 70 per cent. for five shots don't count: consequently a man can't make 17 and 18 for two scores and count that, but must make 18 or better. Why don't the order then say 72 per cent. and have done with it? For scores of five shots are the standard, and not scores of ten shots, even if they be consecutive and on the same day (See G. O., No. 53, series 1882, A. G. O. ¶ XI.).

And now the man is a "marksman" (?), and on what qualification? He has gone over the range once and made 66 per cent. or better at from 100 to 500yds., inclusive, counting his two best scores, make his 66 per cent. each at each range; he has thus gone over the 200, 300 and 600yds. range, or as much as may have been necessary, and has made 80 per cent. for his three best scores at the 200 and 300yds. ranges, and 70 per cent. (72 per cent. in fact) for his three best scores at this distance. No account has been taken of his poor shooting, and he has not been required to shoot in all kinds of wind and weather; but I'll guarantee that the weather was fine and the wind did not blow when he made his "qualifying scores." And it is on this basis (?) that our marksmen (?) are "qualified" and orders are published and go forth to the world showing the number of marksmen in the army!!! On paper we have 4,834 marksmen, or had when the order was published, and I ask in all seriousness, how many of these were and are *bona fide* marksmen? I'll answer, not 50 per cent.; by which I mean that not 50 per cent. could go on to the line of battle and at 200, 300 or 600yds. repeat their qualifying scores of 80 per cent. or 70 per cent. against a five target, or will could, except under extraordinary conditions, repeat their qualifying scores upon the Creedmoor target.

But let us follow the rifleman a little further, and see what now becomes of him as a marksman. To become a sharpshooter he must go back again to the 200yd. range and there make 88 per cent., then to the 300 and 600yd. ranges and repeat these percentages for three scores at each range—making the required percentage, for each score of five shots—and making the third time he has gone over the range up to 600yds. Having, for his best scores still, made these percentages, he now for the first time begins to shoot at 800, 900 and 1000yds., and when (by a combination of favorable circumstances, by some coaching or what not) he has made 76 per cent. at these ranges for each of his scores, he is then a "sharpshooter" and supposed to be able to repeat his scores at any time (or he should so be able if he really is a sharpshooter) and to be qualified to act as sharpshooter against the enemy when called upon. As yet we have no sharpshooters, but next year how many may there not be who have made the scores requisite, but who, the same as marksmen now, will not in reality be sharpshooters.

Let us again follow the rifleman and see what now becomes of him. All this going over the range has had some good effect, or else has been so much "love's labor lost;" but by the time all this has been done, the "end of the target year" (Sept. 30) has probably drawn pretty near, and no more time is left for anything further. The movable, vanishing, skirmishers', or dolly target, have all been neglected so far and not a shot has been fired except at the regular Creedmoor range targets.

Oct. 1 comes to hand, and with it comes the "new target year." The rifleman who has not made his qualification as marksman, sharpshooter, etc., but who has yet but one score at the last range left to make to so qualify, loses all credit made for the preceding twelve months, and must begin again at the 100yd. range, make his 66 per cent. there, his 80 per cent. and 70 per cent., etc., anew, instead of going on from the point he had reached Sept. 30, and make that a stepping stone to something higher for the following year.

Would this going back be at all necessary if he had been properly grounded at first at the 100yd. range? Would not he have shot better all through the year if he had been so properly grounded, and would he not have been ready—if a marksman or sharpshooter—to have gone on to something better instead of going back? and if not quite yet a marksman or sharpshooter, would he not be then ready to keep on and make himself one during the remaining fine days in October or November, rather than to lose it all and have to begin anew? and what is the sense of this going back each year any way? If once I have learned to spell in two syllables, must I each year go back to rudiments because by a certain time I have not learned to spell in five or six? If I have learned once to spell properly in four syllables, and have not quite learned the five, must I go back and re-master the two, three and four before I complete the five? Would it not be better for me to keep on when I am just on the point of success and leave the five and then go on to six or seven? But no! Our system only taught me a smattering of two-syllable words, then a smattering of three and four, and consequently I am "stumped," because I did not learn the smattering of five syllables in the time set, and I must go back to the two syllables and get a re-smattering, and so on up again *ad infinitum*, and most decidedly *ad nauseum*.

This is our system and these our marksmen, and these will be our sharpshooters. Let us look at the cause, to be found in our classification, from our reports. Let us look at the reports first: At the end of each month each troop, battery or company commander has to render a report of target practice; said report only mentions the two best scores made by each officer and man during the month, and again no report is made upon the worst or average shooting of anybody. The result of these reports is published, and here the emulation comes in. Naturally I, being a troop commander, desire to have a high average for my troop, so as not to compare unfavorably with other troops, etc. Naturally, therefore, I select my days; I shoot when the weather is good and but little or no wind, and only then; for otherwise my percentage might be poor as compared with others. Naturally, also, I coach my men; I watch each man set his windgauge, fix his elevation, see that his piece is "level," etc., and do all the fine part of the shooting myself, and do not allow the individual to exercise his judgment in the slightest. Result, I have a fine report to make, and I stand "away up" as compared with others; I am "patted on the back" and am called a good boy, and perhaps by any one knows, I may deserve censure rather than praise for I may have given a false impression, even without any falsehood or false returns, and the average of my shooting or of my troop be much lower than that of some other troop whose best scores are lower than mine.

It is true that another report has to be made, giving the total number of shots fired by each man at each range each month, together with the percentages for this total number at each range, but what for passes my understanding, for no account seems to be taken thereof in any qualification, classification or figure of merit. If some account were taken of it; if marksmen were qualified and classified on their average and their number of shots, even if a lower percentage were called for; if the results were published, any standard of comparison taken therefrom or allowances made in figure of merit, then and only then would we begin to have intelligent and honest results, and the end of the year an annual report has to be made, and here comes in the "classification." This report is made from the monthly record of best target firing, and "any two scores of five consecutive shots, each at the same range, during the year, may be taken for determining the percentage at that range." From this we get our marksmen (except that now it will read three scores). So here we have the report of best firing at each range for each man for the entire year, and 80 per cent. at 200 and 300, with 70 per cent. at 600, makes a marksman—those who have made 66 per cent. at 200, 300 and 500 are first class men; those who have made 50 per cent. at 200, 300 and 500, second class men; and all others third class men. Nice qualification, isn't it, and ought not one to be proud to be classed as a marksman?

Now I have "qualified" as a marksman for two consecutive years, and, to be a little egotistic, let us see what I have done on my best scores for three years, and then, to be honest, let us see what my average was, counting every shot I fired, good, bad and indifferent.

In 1882, I was published in order as a marksman, with the following percentage for two best scores: 200yds., 82 per cent.; 300yds., 82 per cent.; 600yds., 82 per cent.; total, 82 per cent.

I began firing on Aug. 5, having been absent up to that time, and fired up to and including Sept. 28, with the following results:

At 100yds., total 45 shots, average percentage, 82.6.
At 200yds., total 45 shots, average percentage, 76 8 9.
At 300yds., total 140 shots, average percentage, 69 4-7.
At 400yds., total 110 shots, average percentage, 66 2-11.
At 500yds., total 100 shots, average percentage, 66 1-5.
At 600yds., total 125 shots, average percentage, 51 7-25.

And yet I made qualifying scores as a marksman, as follows:

At 100yds., 80 per cent. or over, 8 times—scores of 5 shots each.
At 200yds., 80 per cent or over, 4 times—scores of 5 shots each.
At 300yds., 80 per cent. or over, 2 times—scores of 5 shots each.
At 400yds., 80 per cent. or over, 4 times—scores of 5 shots each.
At 500yds., 72 per cent. or over, 6 times—scores of 5 shots each.
At 600yds., 72 per cent. or over, 4 times—scores of 5 shots each.

The above needs no argument. Had I been classified on my average, where would I have been, unless the percentage had been lower? And yet my best shooting is no criterion as to what I could be expected to do under any and all circumstances.

In 1883 I was published again as a marksman as follows: At 200yds., 90 per cent.; 300yds., 90 per cent.; 600yds., 94 per cent.; total 91.3 per cent. I began firing on the new target year Oct. 3, 1882, and fired during the year as follows:

At 100yds.—With carbine, 75 shots, average 85⅓ per cent.; with rifle, 15 shots, average 96 per cent.

At 200yds.—With carbine, 65 shots, average 76 4-13 per cent.; with rifle, 190 shots, average 72 11-19 per cent.

At 300yds.—With carbine, 50 shots, average 70.4 per cent; with rifle, 100 shots, average 74 10-19 per cent.

At 400yds.—With carbine, 15 shots, average 69⅓ per cent.; with rifle, 10 shots, average 96 per cent.

At 500yds.—With carbine, 20 shots, average 54 per cent.; with rifle, 25 shots, average 70.4 per cent.

At 600yds.—With carbine, 55 shots, average 56 per cent.; with rifle, 330 shots, average 54.4 per cent.

Scores of 80 per cent. or over, at 100yds.—Carbine 14, rifle 3; total 17.
Scores of 80 per cent. or over, at 200yds.—Carbine 6, rifle 12; total 18.
Scores of 80 per cent. or over, at 300yds.—Carbine 3, rifle 13; total 16.
Scores of 80 per cent. or over, at 400yds.—Carbine 1, rifle 2; total 3.
Scores of 72 per cent. or over, at 500yds.—Carbine 2, rifle 2; total 4.
Scores of 72 per cent. or over, at 600yds.—Carbine 1, rifle 23; total 24.

These figures again seem to need no comment, and yet on my aver age where would I again have been?

In 1882, in one of the Departments there were something like 223 marksmen; the highest had 80 per cent. as his total, and there were thirteen who had 76.6 per cent. for their totals, that is, they just had the required 80 per cent. at 200 and 300yds., and 70 per cent at 600yds. In 1883, in the same Department, there were something like 602 marksmen; the highest had 92.6 per cent. for his total, and about thirty-three had 76.6 per cent., or just qualified.

Now so far as the report shows, these last in the two years just managed to "squeeze in." They may have had several scores of 80 per cent. or 70 per cent., but from what I know of the *modus operandi*, the chances are that they did not, and therefore they probably are marksmen on the only scores they made that had the required percentage. Are such men necessarily marksmen? and are not the chances very great that they are not marksmen, but that they simply had luck enough to make the percentage and are therefore called such "by order." Understand that I do not mean to say that it is to any one's discredit that he should have made 80 per cent. or 70 per cent. at the proper ranges; it indicates something, and that something is of value, but I claim that it does not necessarily indicate a marksman. Now let us look at it in another way: A has thirty marksmen in his company troop, qualified as above explained; B has none. A's company or troop has a high figure of merit; B's company or troop stands away down. Let us analyze a little and see whether this is just.

The form and dimensions of the target now come in. The 100, 200 and 300yd. target, as all know, has an 8-in. bullseye, and a 26in. "4-ring" or center. Let us suppose B has taught his men to shoot on the vertical, and has bent all his energies to that, rather than to shooting for glory, record and marksmen; the chances are that he will have over fifty per cent. of his men who can "pull up" on either the 200 or 300-yd. target and make 16, 17, or 18, every time, but who have not the luck or skill to make the magical 20. Will not any one of three scores on the vertical be a more killing score than 20 made by scattering shots, all inside the 4-ring, but all so far out to right or left, that they would miss the size of a man? It is easy to make horizontal firing, that is to always shoot a little to the right or left; and, with our target, so long as they enter inside the 4-ring, even if it be on the extreme right or left edge, all the shots are fours, and the magic 20 has been made. Whereas it is hard work to shoot on the vertical line, and a 4-6, 4-12, 4-12 all so close that they all but hit the bullseye, followed by a 3-5, and 3-12 just outside the 4-ring is "by order" worse firing than the five fours at 9 or 3 o'clock, and the man gets no credit for it.

I have had men say to me time and time again, "If you will let me shoot as the men in Blank troop shoot I can make a marksman's score," when I know that shooting there was not so much for close and accurate vertical shooting as it was to hit the 4-ring. Hit it anywhere, but hit it, and be marksmen. I had several men last year—good shots, too—who had made 17-18-19 right along at 200 and 300yds., who could and did shoot on the vertical and close to the bullseye, but who, for some unaccountable cause, would always get in at least one three high or low in their scores. They never got to be marksmen, but I'll gamble on their shooting better and killing more men than many of the so-called marksmen. Then again, as between marksmen, all are alike marksmen, and all of one class by order, and yet what vast differences there are. One man makes only 80 per cent., and yet every shot is but six inches from the center of the bullseye; another makes 80 per cent. also, but every shot is thirteen inches from the bullseye center; the first man's shots were all on the vertical and measure say 36 for string; the second man's were all at 3 o'clock and measure 78 inches for string—some difference it strikes me, and yet each is only a marksman. So far as string measurement goes, the man with but 18 for a Creedmoor score can beat the 78-inch string 3 4-12 at 4½ inches from the center, and 2 3-12 at 13½ inches from the center only count 18, and yet the string is 40.5 inches, 37.5 inches better than five 4s at 3 or 9 o'clock on the extreme edge of the center.

Doubtless we need a standard of comparison, and the Creedmoor target was well enough in the infancy of target practice; but has it not outlived its usefulness, and has not target practice got beyond it? I recognize the difficulty of string measurement as applied to target practice where large bodies of men have to be practiced, scored and classified, and doubtless the circular target was invented to overcome this difficulty; but should we not now have another target? Should we not have a means of scoring and classifying the men according to their actual merits as shots, and not as now, according to so fixed and arbitrary standard, which may, or may not mean anything?

Over a year ago I had the honor to propose a system of targets that overcome the greater part of the difficulty. I proposed an elliptical bullseye, with elliptical decimal divisions—and these targets, or modification thereof, are being now discussed as the coming target.

It is conceded that no target, unless we return to the old outline of a man, can be devised that will embody everything we want. We use elliptical targets, where shots may hit and count high in the score which would have missed a man by going over his shoulder, beside his head or neck, etc.; but yet these elliptical targets would mean much more than the circular ones now do. A "tactical man" is assumed to be 22in. wide. All his vitals are inside of the limits of from 12 to 14in. in width and 16 to 18in. in length, not counting his head as being too small to shoot at with any chance beyond 300yds. Can we not, therefore, have a bullseye and series of elliptical rings that will cover this vital region, and then have a system of counting such that a shot in one of them means a vital or disabling shot, and not a miss or a possible miss, as at present? Draw the outline of a man, in proportion to the target, on the Creedmoor target for 100, 200 and 300yds., as it now is, and see how much space there is inside the 4-ring where a shot can hit and not have hit the man, and then my meaning will be beyond a doubt.

I would not wish it to be understood that I claim that a marksman should always be able to make a dead shot, was always to be able to make his qualifying scores at the target, for I know such would be an absurdity. I know that when firing at unknown distances the best of shots have got to feel their way; I know that a man is a very small object at even so short a distance as 600yds., and that it takes an excellent shot to hit one even once out of five times, but I do claim that we should have some intelligent basis for scoring and classification, that means what it says, and when it says that a man is a marksman then I or any other commander can depend upon that man to make as good a shot as is possible when a long and difficult shot presents itself. I claim that a system of classification and set of targets should be used, such that I and every other man may get justice from our scores. I want to see my men have credit for their shooting that I know would be very dangerous shooting for a man as a target at the same distance, and I do not want to be censured for a low figure of merit when such is not deserved.

I claim that our present system is wrong and faulty, and a humbug from beginning to end. Under it we have made improvement, and have made many men who are really marksmen, whether so classed or not, as well as many men who are not marksmen, although they are so classed. Under a better system doubtless we would have fully as many marksmen, but they would all be genuine, and many who are now so classed would drop out.

If the recent orders had been in such a right direction they would have been hailed with delight by every true friend of rifle shooting; but they are simply an extension and continuation of our present system of humbug, and therefore worthless for true results.

FORT MCKINNEY, Wyo. C. D.

RANGE AND GALLERY.

GARDNER, Mass., April 30.—Only seven members of the Gardner Rifle Club were present at Hackmatack Range to-day. The new American decimal target was used, distance 200yds., shooting off-hand, with a possible 100. The totals made were as follows: G. F. Ellsworth 91, A. Mathews 90, M. Atherton 86, G. E. Fordyce 86, H. C. Knowlton 81, W. C. Loveland 77, G. C. Goodale 77.

BOSTON, Mass., May 3.—The matches for the month of April, at the Mammoth Gallery, closed last Wednesday night, Mr. A. B. Loring winning the first prize, gold badge, M. L. Pratt the second, B. W. Gardner the third, J. J. Monroe the fourth, and C. L. Foster the bronze badge in beginners' match. Some very good shooting was done, as the scores will show. A list of regular prizes will be put up for this month.

Amateurs' Match, No. 1.

A B Loring	46	47	47	46	46—232
M L Pratt	46	46	46	46	47—231
B W Gardner	45	45	45	47	47—229
J J Munroe	45	45	44	44	44—222
E B Edwards	43	43	44	44	44—218
J A Hills	43	43	42	43	46—217
J H Bird	44	43	43	43	43—216
J F Stetson	43	43	42	44	44—216
A B Wilson	43	44	42	43	43—215
W E Dugan	45	42	42	44	42—215
A W Johnson	43	43	43	42	43—214

Beginners' Match.

C L Foster	42	53	44	43	43—215
T A Lynch	42	43	42	42	43—212
L V Smith	41	41	41	41	41—205

BOSTON, May 3.—The members of the Massachusetts Rifle Association turned out in strong force to-day at Walnut Hill range. The large attendance was due in part, no doubt, to the fact that a trial of skill was to take place between teams representing the home club and that of the Springfield armory. As neither team could leave home, it was arranged that each should shoot on its own range and the scores be telegraphed. The result, recorded below, shows a defeat for the home team, Springfield winning on a score of 318 against 309 at 200yds. During the day the wind caused trouble, blowing from 11 to 12 o'clock, but the light was excellent. The day's records are appended:

Creedmoor Practice Match.—O. M. Jewell 48, J. B. Fellows 46, D. Kirkwood 45, F. Chauncey 45, J. C. Chambers 43, J. H. Payne, Jr., 42, F. Stetson 40, W. H. Morton 40, E. B. Smith 40, F. W. Fowle (mil) 39, J. D. Darmody (mil) 39, M. Williams 38.

Decimal Match.—W. Charles 82, A. C. Adams 78, W. Gardner 79, J. N. Frye 74, Lewis Ross 73, G. Warren 70, W. H. Ober 68.

Creedmoor Prize Match.—J. R. Bates 44, Lewis Ross 44, E. B. Souther 43, H. Mortimer 41, D. Humphrey 40.

Rest Match.—S. Wilder 96, C. B. Edwards 92, P. Sylvester 87, J. Hurd 83.

Team match.—Springfield Armory team: T. B. Wilson 47, R. T. Hill 46, J. Kimball 45, S. S. Bumstead 45, L. H. Mayott 44, M. W. Bull, 43, T. R. Bull 43, total 313. Massachusetts Rifle Association: W. Charles 47, J. B. Fellows 46, D. Kirkwood 44, O. M. Jewell 44, J. A. Frye 44, J. N. Frye 42, H. E. Bixby 42, total 309.

The full scores of the winning team are appended. The marksman having the 1 point allowance used Springfield army rifles. Hare used a Hotchkiss repeater and Mayott a Ballard. The wind was an ugly 5 o'clock fish tail:

T R Bull	4544444544—42+1—43	L H Mayott	4554444554—44 —44
T B Wilson	5545554454—46+1—47	R T Hare	4544555545—46 —46
M W Bull	4444454454—42+1—43	S Bumsted	4545444455—44+1—45
J W Kimball	4444455455—44+1—46		
Total			313

THOMASTON, Conn., May 5.—At a meeting of the Empire Rifle Club, Wednesday evening, April 30, it was decided to accept the challenge of the Canton Gun Club to shoot a series of matches, the first one of the series to be shot June 4. The team will be selected from those of the club making the highest aggregate in three weekly shoots, from the first ten shots. The club also voted to have a shoot, open to all, May 21 and 22, and formally open their new range. The cash prizes will aggregate $90, divided as follows: $40, $20, $15, $10, $5. There will also be numerous other prizes, some of which are now on exhibition at Williams's drug store. Mr. Williams is secretary of the club, and is doing all in his power to make the shoot a success. At the weekly shoot Saturday last, the following scores were made: W. H. Dunbar 104, G. Canfield 102, G. Gilbert 101, C. F. Williams 94, E. Bennett 88, Dr. Goodwin 88, C. Alling 87, A. Fox 83.—F. A. P.

U. S. SHARPSHOOTER.—Capt. J. M. Thomson, 24th Infantry, of Fort Supply, Indian Territory, has taken the first sharpshooters' certificate under the new regulations. It was issued by Lieut. Manning, of Rifle Practice, for the department of Missouri. The scores made are remarkably fine ones as qualifications for sharpshooters, which are: 88 per cent. at 200yds. standing, 300yds. kneeling, and 600yds. lying; 76 per cent. at 800, 900, and 1,000yds. lying, in three scores of five shots each, the possible scores being 25 points each, or 75 points at each range. Capt. Thompson's scores are as follows: 200yds., scores 23 and 24, per cent. 92 and 96. 300yds., scores 22 and 23, per cent. 88 and 92. 400yds., scores 22, 22 and 22, per cent. 88. 600yds., scores, 21, 22 and 19, per cent. 84, 88, and 76. 900yds., scores 20, 21 and 23, per cent. 80, 84, and 92. 1,000yds., scores 20, 22, and 21, per cent. 80, 88 and 84.

DENVER, Col., April 27.—The rifle match between the Trinidad Rifle team and the Governor's Guard, which has been on the tapis for several weeks past, was shot to-day, the former team shooting at their home, the latter at the Jewell Park range. Company B's team shot with a high wind blowing and only made a score of 359, which, with the 20 points allowed them by their opponents, made a total of 379. The Trinidad team telegraphed Capt. Lower that their score was 372, thus leaving the Governor's Guard team winners by 7 points. The following is the score in detail of the home team: J. Lower 37, H. S. Davis 34, E. W. Lehman 36, L. Marix 39, C. C. Compton 35, F. P. Jackman 34, G. S. Henderson 34, Ed. Armor 35, G. Lower 44, W. G. Hardin 31.

WALTHAM, Mass., May 2.—The Hillside Rifle Club, of Waltham, held its first shoot of the season at its range in this town to-day. Since last summer the club has increased its membership, put in a new pit, and otherwise materially improved its range. The individual scores (being out of a possible 50) are as follows:

Creedmoor Match—John Foster 46, W. H. Stone 46, L. O. Dennison 45, E. C. Osgood 43, E. A. Emerson 43, G. Bassett 42, F. Dunlap 41, R. B. Edes (mil.) 41, C. H. Gray 39, H. L. Whiting 38, John K. Low 38, George Strickland 38, G. B. Brown 36.

Rest Match—L. O. Dennison 49, W. H. Stone 46, J. R. Monroe 46, John Foster 44.

The spring meeting of the Massachusetts Rifle Association has been fixed for May 29, 30 and 31.

BULLSHEAD RIFE CLUB.—April 24, 12-ring target, possible 120: A. Lober 117, G. Zimmerman 116, C. Rein 114, G. D. Johnson 108, G. Wendelken 107, S. Mehrbach 105, J. Schneider 110, J. F. Campbell 100, D. Lounski 99, D. Holland 96, B. Waters 95.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

ASHLAND, Mass., April 28.—The Ashland Glass Ball Club has just held its third annual meeting. The report of the Treasurer, J. H. Dascomb, shows that the club is in good standing financially. The club has done what it could during the past severe winter to preserve the birds in this section by placing barley and other grain in places most convenient for the birds. The election of officers resulted as follows: President, George G. Tidsbury; Vice-President, J. B. Knowlton; Treasurer, J. H. Dascomb; Secretary, F. N. Oxley. It was voted to join the State Association for another year. G. G. Tidsbury and F. N. Oxley were chosen delegates to the annual meeting of the State Association.—F. N. O.

WINCHENDON, Mass., April 30.—The Winchendon Gun Club had a practice to-day, with the following results: Glass balls—L. F. Martin, 5 thrown, all broken; H. E. Curtis, 5 thrown, 3 broken; F. F. Hopgood, 10 thrown, 7 broken; P. S. Davis, 10 thrown, 5 broken. Clay-pigeons—F. M. Brown, 7 thrown, 4 broken; H. E. Curtis, 8 thrown, 3 broken; James Sutherland, 10 thrown, 7 broken; F. F. Hopgood, 10 thrown, 7 broken; L. F. Martin, 10 thrown, 6 broken; P. S. Davis, 10 thrown, 2 broken. The regular shooting of the club begins next week.

SPRINGFIELD, Mass., May 15.—*Editor Forest and Stream:* Inclosed I hand you a slip cut from this morning's *Republican*. Our team were not treated as they should have been, as the article states; and it is too bad that anything which is contrary to the "squarest deal" should be allowed to enter into these friendly matches between true sportsmen. Here is the extract: "A correspondent writes in this way: After a recent match at glass balls, shot in this city, the charge was made by the Worcester *Spy* that the visitors were received with scant hospitality and that shameless attempts were resorted to to defeat fair play. These charges were afterward repudiated by the visitors themselves, and sufficient apology was offered for such inaccurate expression on the part of the *Spy*. Last Tuesday a team from our home club visited Worcester to compete for the state badge and were defeated. The reason for their defeat was that they were unable to make their score sufficiently high to overcome that of the Worcester team. The cause of such inability, however, was evident to all present at the match; and it is probably true that to the increasing number of marksmen from all parts of the State, who decline to visit Worcester in any further contests with the Worcester club, may be added those from Springfield." I wish you could find some corner under "The Trap" column for this article, as I believe it to be a clean protest which may help eliminate such conduct from future contests.—SPRINGFIELDER.

TOPSHAM, Me., May 1.—At the annual meeting of the Riverside Shooting Club held on April 24, the following officers were elected for the ensuing year: M. C. Hall, President; Chas. Goud, Secretary; A. Q. Goud, Treasurer. A. H. Perry and C. L. York were added to the above named officers to constitute the executive committee. At their annual shoot on May 1, the following scores were made. Shoot for silver badge, 10 single clay-pigeons, 18yds. rise, use of both barrels, second barrel to count a half bird, 5 single balls, 18yds. rise, 5 pairs pigeons, 15yds. rise, Card revolving trap:

*Second barrel.

WORCESTER, Mass., April 29.—At Coal Mine Range to-day there was a large number of sporting men present. The principal event was the team match for the State Championship Badge of the Massachusetts Glass Ball Association. It has been held some time by the Worcester Sportsmen's Club. Their opponents were the Springfield Club. The men in the two teams shot and scored in the following order:

Worcester Team.

George A Sampson	1111111110111111111—19
G J Rugg	0011011010111111110—14
E T Smith	1111101111111111101—18
C B Holden	1101111011111011110—15
W S Perry	1111110111111011111—18—84

Springfield Team.

S E Ford	1010010010111010111—12
Bradford Moses	1011011011111111111—16
J Keith	1101110111111111111—17
S H Barrett	1111111101111110111—18
A Brugg	1011111111111011110—17—80

The judges were Mr. M. D. Gilmon, of Worcester, for Worcester team, and Mr. Smith, of Springfield, for Springfield team. Mr. A. Graham, of Webster, being referee. The Worcester team have held the badge since they won it from the Massachusetts Rifle Association last September. They also hold the Individual Championship Badge of the State Association.

MAINE.—The first challenge shoot for Ligowsky medal, following the State championship tournament, held on April 17, took place today, April 30, on the grounds of the Androscoggin Club at Lewiston. The weather was all that could be desired, and the match was watched by a crowd of interested spectators. The shooting was governed by the following conditions: Teams of 5 men, 10 single birds, 18yds. rise, and 5 pair doubles, 15yds. rise. Five traps, three yards apart, set in fourth notch. Second barrel break half bird. Col. E. C. Farrington, referee; Wormel and Irish, judges. The Riverside Club, of Topsham, have challenged the winner:

Androscoggins.

BOSTON GUN CLUB TOURNAMENT at Wellington, Mass., April 30 and May 1. Many clubs were represented at the above shoots, the absence of some of the team shooters prevented the necessary number of teams filling up the gold medal match; for this purpose additional dates are added, May 14, June 11 and 25, which will conclude and decide the preceding in three man team, clay-pigeon shooting. The second day of the shooting the matches more in order were those like to conform with the shooting expected at the great tournament, Chicago. Fine weather afforded ample scope for all the shooting desired which was keen and close right through, hardly a shooter being present but was recognized as being the best from the surrounding clubs within fifty miles. The two days' shooting being too much to give in full, only winners are given of the different events:

FIRST DAY.—First event, five clay birds, twelve entries—Schaefer first, Sampson and Perry divided second, Parker and Kirkwood divided third, Evans fourth.

Second event, three pair birds, nine entries—Evans first, Kirkwood second, Perry third.

Third event, five clay birds, twelve entries—Johnson first, Eager second, Schaefer and Pillsbury divided third.

Fourth event, three pair birds, fifteen entries—Eager first, Evans and Kirkwood divided second, Sampson and Curtis divided third.

Fifth event, five clay birds, five traps, sixteen entries—Kirkwood and Eager divided first, Pillsbury and Maloon divided second, Perry and Cutting divided third.

Sixth event, three pairs birds, twelve entries—Perry first, Snow second, Eager third, Johnson and Parker divided fourth.

Seventh event, two man team match, fourteen entries—Sampson and Perry first, Eager and Stark second, Kirkwood and Maloon third, Jones and Pillsbury fourth.

Eighth event, three pair double birds from five traps, fifteen entries—Sampson first, Perry second, DeRochmont third, Tinker fourth.

Ninth event, seven birds, five traps, nine entries—Perry first, Eager second, Tinker third.

Tenth event, five clay-birds, twenty entries—Eager and Jones divided first, Perry and Curtis divided second, Stark and DeRochmont divided third, Tinker fourth.

Eleventh event, three pairs double birds, fourteen entries—Sampson first, Kirkwood and Stark divided second, Tinker and Perry divided third, DeRochmont and Parker divided fourth.

Twelfth event, five single birds, five traps, eighteen entries—Eager and Sampson divided first, Tinker and Sampson divided second, DeRochmont and Curtis divided third, Cutting, Evans and Snow divided fourth.

Thirteenth event, seven birds, eleven entries—Stark and Parker divided first, Eager second, Donovan third, De Rochmont and McDonough divided fourth.

Fourteenth event, three pairs birds, fourteen entries—Evans first, DeRochmont second, Snow third, McDonough fourth.

Fifteenth event, five clay birds, fourteen entries—Eager first, Shattuck and Cutting divided second, Kirkwood third, Snow fourth.

Sixteenth event, five clay birds, fourteen entries—Evans first, De Rochmont second, Donovan, Snow and Cutting divided third, Parker fourth.

SECOND DAY.—First event, ten singles and five pairs double birds, five traps—Eager first, Stark second, Sampson third.

Second event, same conditions—Sampson first, Eager second, Perry third.

Third event, six singles, two pairs double birds, five traps—Eager first, Gardner second, Houghton and Stark divided third, Gerrish and DeRochmont divided fourth.

Fourth event, seven clay birds—Eager and Sampson divided first, Perry second, Gardner and Rowe divided third, Gerrish fourth.

Fifth event, three pair double birds—Sampson and White divided first, Eager and Chambers divided second, DeRochmont and Rowe divided third, Gerrish and Houghton divided fourth.

Sixth event, five clay birds—Chambers first, DeRochmont and Rowe divided second, Eager third, Gerrish fourth.

Seventh event, seven clay birds—Law first, Houghton and Sampson divided second, White third, Gardner fourth.

Eighth event, five single, three pair double birds, for two-men teams—White and Gerrish first, Sampson and Perry second, Eager and Stark third.

Tenth event, five clay-birds, five traps—DeRochmont first, Gerrish second, Thompson third, Nichols fourth.

Eleventh event, five clay-birds—White and Parker divided first, Snow second, Gerrish and Nichols divided third, Chambers fourth.

Twelfth event, a miss and out, was won by Nichols and Snow.

MALDEN GUN CLUB, May 3.—The club had a very enjoyable shoot to-day at Wellington, the record showing: First event, 7 birds,

Saunders first, Hopkins second, Snow and Lewis third; second, 10 birds, Snow first Hopkins second, Wemyss and Brown third; third, 5 birds, Short and Lewis first, Scott second, Brown third; fourth, 5 birds 21yds. straight way, Hopkins first, Brown and Adams second, Scott and Lewis third; fifth, five birds, Hopkins first, Adams and Ellsworth second, Scott and Lewis third, Sanborn and Snow fourth; sixth, 3 pairs, Hopkins and Saunders first, Short and Snow second, Ellsworth and Adams third; seventh, 5 birds, Binden first, Brown and Saunders second, Adams third; eighth, 5 birds, Saunders and Hopkins first, Scott second, Adams and Ellsworth third; ninth, 7 balls, Adams and Ellsworth first, Saunders and Short second, Binden and Snow third; tenth, 5 balls, Snow and Hopkins first, Lewis and Brown second; Ellsworth third; eleventh, 5 birds, Hopkins and Short first, Saunders and Brown second, Adams and Scott third; twelfth, cup match, Buffum, 6, 6, 6; Wemyss, 5, 6, 5; Hopkins, 6.

PROVIDENCE, R. I., May 5.—The following are the scores for the three last weekly shoots for the Ligowsky State championship badge, all shot upon the grounds of the Narragansett Gun Club, at 25 clay-pigeons from five traps, 15yds. rise.

April 17.—W. H. Sheldon 24, E. Tinker 23, E. S. Luther 22, C. B. Payne 22, C. H. Brown 21, Geo. Barney 21, F. E. Tingley 18, Isaiah Barney 18, C. B. Potter 17, S. D. Greene 16, W. G. Crandall 15, C. C. Gray 14, H. D. Mathewson 14. W. H. Sheldon won for the third time.

April 24.—E. W. Tinker 22, Geo. J. Crandall 22, J. B. Valentine 21, W. H. Sheldon 20, H. D. Mathewson 20, C. B. Payne 19, C. H. Brown 18, C. B. Potter 15, G. F. Butts 15, H. Salisbury 13. Mr. E. W. Tinker won on the tie by breaking 4 to Crandall's 3, out of 5, making 8 times that Mr. Tinker has won this badge.

May 1.—W. H. Sheldon 21, C. F. Baldwin 20, G. F. Butts 20, E. W. Tinker 20, H. D. Mathewson 19, Geo. Anthony 18, F. O. Wehoskey 18, C. C. Gray 17, C. B. Potter, 16, S. D. Greene 15, F. Hoard 8. W. H. Sheldon wins badge for fourth time.—W. H. S.

Yachting.

FIXTURES.

May 18.—Eclipse Y. C., Opening Cruise.
May 24.—Oswego Y. C., Opening Cruise.
May 24.—Boston Y. C., Opening Cruise.

June 30.—Quincy Y. C., Second Match.
July 4.—Larchmont Y. C., Annual Open Matches.
July 4.—Hull Y. C., Review and Cruise, five days.
July 9.—Beverly Y. C., Marblehead, First Championship.
July 12.—Boston Y. C., Second Club Match.
July 12.—Hull Y. C., First Club Match.
July 19.—Hull Y. C., Ladies' Day.
July 26.—Beverly Y. C., Nahant, Second Championship.

HARDLY CORRECT.

A WELL written letter from London last week in the *Herald* conveyed the impression that the new Scotch yawl Wendur's decks were too narrow to carry sufficient crew to work her racing sails to advantage. We have it on the best authority that no such trouble was found with her at all, and that if the crew ever was "pumped," it was simply from too much work, just as crews often get pumped in broad boats. Wendur's crew always mustered the customary number of hands, and more would only have been in each other's way. The same letter from London says such boats are very wet in a cross sea. This is opposed to recent experiences in the lleen, a 5⅞ beam cutter, for she proved herself especially dry under the worst circumstances, and it is a fact known all over the world that the six-beam Jullanar is about the "dryest" yacht ever floated. It seems evident the letter in question was prepared to suit the supposed American palate. But we have already learnt better in America, and decline to hoist aboard any taffy, even when coming from an apparently good source. Enough will be seen of the lleen this season for those still in the dark about narrow boats to discover their real merits.

The Wendur is 91.5×17.7, according to Lloyds, and that means about 90ft. L.W.L., so that she is little more than a five-beam boat, or, gauged by other racers, such as Vanduara and Samœna, she is not a particularly narrow boat, and we hear nothing about too little deck room aboard her sister vessels. One foot more or less beam makes quite a difference in the proportion of beam to length, but cannot possibly have any practical bearing upon handling the sails. The 40-tonners race without trouble on 11 to 12ft., so Wendur is well off with more than 17ft., which, considered by itself, is very good breadth, and a crew which cannot work in 17ft. could accomplish nothing more on 25ft. The fact is, Wendur proved herself a very smart boat, and the London critics merely seek to quibble and find fault because she is not a South of England production. If she did not win as often as others, it was more owing to her tonnage, which unfits her for class racing, as the smaller yachts find their weather much oftener than a big vessel of 125 tons.

RACING IN ENGLAND.

WE take the following from the *Fortnightly Riview*. It was written by Mr. Dixon Kemp:

"It is a debatable point with many whether the long, narrow, deep-hulled and heavily-ballasted hulls of the present day are, on the whole, superior as sea boats, or for speed, to the vessels of greater comparative beam of a quarter of a century ago, but the general balance of evidence tends to show that for any given tonnage a well-ballasted and judiciously-sparred yacht of five beams length is, taken all round, more capable boat than one of four beams. The reason of choosing a greater length for any given tonnage was the knowledge that, other things being equal, the greater the length the greater the speed. The adoption of extreme proportions for any given tonnage had always been held in check by the necessity of providing a yacht with great comparative beam, in order that she might carry a large sail spread. Speed was thus made dependent as much on the sail-carrying power as upon the length of hull, and until within the last quarter of a century it was considered that four and a half beams of length was the happy medium. The gradual discovery that sail-carrying power could be made almost dependent upon ballasting and depth led to beam being dispensed with in favor of depth, and a consequent low situation of the dead weight. To such an extent is the modern system of ballasting carried that modern racing yachts of ninety tons downward have the whole of their ballast outside in the form of lead keels. They are about five and a half beams to length, and for any given length carry more sail than a yacht of four beams would have carried twenty years ago. The chief objection to this modern type of craft is its extreme costliness, and this circumstance has contributed to the diminution of the number of competitors during the last few years. The Yacht Racing Association has, it may be supposed, taken this view of the case, for its members have passed a new rule for the rating of yachts in competitive sailing based on sail area and length of hull. Contemporaneously the chief yacht-racing clubs in America, led by the New York Y. C., have adopted a similar rule, and it is said to have been much approved. Theoretically, it seems sound and just that if a yacht's success depends upon her length and upon the sail she can carry, these two elements should form the basis for estimating a compensation for differences between yachts in competition; and, further, that the tendency of such a compensation should be to limit sail-spread and length of hull, and so at the same time reduce the expense of producing and working a racing yacht."

While we can agree with the foregoing in most particulars, we cannot concede that the paucity of entries in English matches is due to the large cost of modern narrow-beam cutters. It seems to us the reverse is the truth, and it is of some importance that clear ideas should prevail. For, double the beam of the Tara, Annasona, Freda, Buttercup, Chittywee, and all of them would cost more than at present, even though depth were decreased. Displacement, rig and size all over would be increased. The narrow boat is not more costly but cheaper than a beamy one of like length, supposing both to be equally first-class in every respect. Witness the cost of a 30×5ft. Chittywee of 11 tons displacement and sq. ft. of sail, and a 30×10ft. Itchen boat like Keepsake, with 15 tons displacement and sq. ft. of sail. The latter has the depth and draft of the former, with larger displacement, beam and rig, topsides, deck, etc., and is bound to be more costly, and requires a larger crew to race.

No, the real reason why we see so few entries in English matches is *not* the first cost of narrow cutters, but simply the outrageous handicap the present Y. R. A. rule imposes without reason upon beam, making it perfectly futile for the beamy boats to appear at the line, saddled with ten to fifty per cent. more tonnage than they really possess in competition with narrow boats having ten to fifty per cent. greater tonnage then they are assessed for. Abolish the Y. R. A. rule and substitute sail area and length, and then the beamy and narrow boats will be put approximately on an even footing, and the broader yachts will at once put in an appearance again at the races.

ESTIMATING DISPLACEMENT.

Editor Forest and Stream:

In your paper of April 24, you give the displacement of the cruising schooner Gaetina as 13 short tons. Her L.W.L. is 35ft., her beam 11½ft., draft at heel 6ft. Will you please give the rule by which you get the displacement, as this only gives a co-efficient 0.25, and she is a pretty full boat. Cass.

[For an approximate estimate of displacement of a tolerably full boat, the co-efficient is about 0.33 or one-third the circumscribed parallelogram of the three cardinal dimensions. In case of Gaetina it is 35×10. the beam on L.W.L. to outside of plank, and that again multiplied by 3ft. 6in., the depth from L.W.L. to lower edge of rabbet on midship section =1,225. One-third of this, or 408, will be the displacement in cubic feet, which at 64lbs. per cubic foot, represents an approximate displacement of 26,112lbs., or say 13 short tons. For exact displacement the application of Simpson's rule to the sections in detail would be necessary, as explained in "Kemp's Yacht Designing" or in works on naval architecture. Gaetina is a little full about the sections, but has a lean after end, so that her co-efficient is probably not over 0.33.]

FLORINDA'S GREAT TRIUMPH.

OUR report of the Nice regatta was from special sources, not influenced by any preference for English yachts. We now quote the conclusions of the London *Field* on the trial between the English yawl Florinda and the Boston schooner Gitana. The *Field* expresses a very positive conviction, which coincides exactly with our own: "The result was highly satisfactory to the admirers of the English type of yacht, as Florinda on every point of sailing showed a very decided superiority over Gitana." Again, in speaking of the sailing the first day, the *Field* says: "Florinda soon overhauled Dauntless and luffing sharp up on Gitana's weather in grand style took her place in the van. Florinda steadily increased her lead and at the end of the second round the times of finish were as under: Florinda 3.35.32 and Gitana 4.06.58, Dauntless having given up." Of the second day's race, the *Field* says: "Dauntless was an absentee, apparently thinking she had no chance of winning a prize. Florinda and Gitana were soon leading the fleet, and the former was leaving the latter even faster than she did on the previous day. * * * Florinda was showing Gitana how she could march out to windward, and had a long lead when she weathered the eastern mark and set her spinnaker for the run home. * * * Florinda was steadily increasing her lead, when ultimately the wind died away and Gitana and the small craft closed up. * * * The times at the finish were for Florinda 5.28.14 and for Gitana 5.35.04."

BALLAST WHIPS BEAM.

OUR reports of the Nice International, sailed April 15 and 16, are very disagreeable reading. They announce the complete discomfiture of our two crack schooners, Dauntless and Gitana, by the English yacht Florinda. But for the rig prize given to schooners the first day, our vessels would have come away empty-handed. The easy manner in which Florinda polished off our schooners, even after allowing them a deduction of their tonnage for difference of rig, an allowance not granted by our home clubs, is the latest testimony to the fallacious flogmas upon which our yacht-building practice rests. Not only did Florinda exhibit superiority of a very marked kind, but she did it with a rig only two-thirds as large as those of our schooners compared to their loadline lengths. If we refuse to take to heart these signal defeats at Nice, the consequences will be upon the heads of those responsible for blinding our people to the truth, that in the building of fast yachts we have been left far in the wake of our cousins. What show would we have against a Wendur or even against Florinda herself in the light of the experiences at Nice? The races were sailed in "our weather," mild winds and smooth water, and if, under such conditions, the English yacht can overmatch us from a quarter to half an hour, what would she not do in a slogger, with pile-driving in a head sea? The triumph of Florinda will be hailed with delight by all who wish to see the best type carry the day. With us the nationality of the competitors has no weight or meaning. We know Florinda to be a very stiff, able, and exceedingly roomy yacht of handy rig, in every way and on every count preferable to the schooners whose pretensions to speed she so signally demolished. Hence we rejoice in her victories, and insist that unless we take a fresh departure from such ringing defeats as our vessels have sustained, the future for our glory in yachting looks dark.

NEW YORK Y. C.

SECRETARY'S OFFICE,
Club House, 67 Madison Avenue, May 1, 1884.

COMMODORE BENNETT instructs me to state that he offers the following prizes to be competed for by steam and sailing yachts during the New York Y. C. cruise in August next:

No. 1. A cup of the value of $1,000 to the steam yacht winning with time allowance.

No. 2. A cup of the value of $1,000 to the steam yacht making the shortest time over the course.

No. 3. A cup of the value of $500 to the steam yacht arriving second without allowance of time.

The above race to be over a course of not less than sixty statute miles, and no race unless five vessels start.

No. 4. Cups of the value of $500 each to two classes of schooners, and cups of the value of $500 each to two classes of sloops, to be awarded to the winners of a race from Brenton's Reef Lightship to and around Sandy Hook Lightship and back to the starting point.

The above race to be without time allowance.

If it can be arranged, Commodore Bennett also desires to offer valuable cups for a steam launch race.

All launches not measuring more than sixty feet upon the water line will be entitled to enter, under such rules and classification as the regatta committee may see fit to impose. Launches will be divided into two classes.

The races for steam yachts and launches will be open to the competition of vessels belonging to all duly organized yacht clubs.

All the above races are to take place while the New York Y. C. squadron is at Newport, and upon such dates as may be mutually agreed upon or fixed by the regatta committee. The regatta committee will make the necessary arrangements for the aforesaid races, and have entire control of the same, but should any question of dispute arise they shall be settled by the rules and sailing regulations of the New York Y. C.

Yacht owners intending to enter their vessels for the above races are requested to notify the undersigned to this effect at their earliest convenience. C. A. MINTON,
Secretary New York Yacht Club.

THE NICE INTERNATIONAL.

AS an international affair the Nice regatta, in spite of its large prizes and many attractions, turns out a disappointment this year more than ever. The absence of English racing yachts is attributed to the very peculiar rulings of French committees and courts, which have not acted in accord with the recognized customs adhered to among yachtsmen, but rather with the intent of giving the public on shore a good treat. Hence the races which ought to constitute the chief European event in the year have degenerated into local struggles of little more than scratch importance. The only two matches of any interest to the American public were the classes for schooners and yawls, sailed over a sixteen mile course, twice round. The entries included the New York schooner Dauntless, Mr. Colt, 116½ft. waterline, the Boston schooner Gitana, Mr. Weld, 92½ft. waterline, and the little English iron-built cruiser Gladys, Mr. Collins, 79ft. waterline, from Liverpool. Also two yawls, the Florinda, 85½ft. loadline, and a small French craft called Gabrielle.

The wind was light to moderate and not over steady. Florinda quickly went into the lead and beat all the schooners as she liked, crossing the finish in 3.35.32 corrected time, half an hour ahead of the leading schooner. Of the two-stickers, Gitana went into the lead and won in 4.02.44 corrected time, beating the Gladys by about forty-six minutes; the Dauntless having been so badly outsailed at the start that she gave up after the first round, being twenty minutes astern of the Gladys. The easy manner in which the yawl Florinda turned away from our American schooners is a warning as to what will happen should a large English yawl show up in our waters after the America cup, of which there is some likelihood before long. Florinda took first prize and Gitana got the special purse of $1,600 for schooners.

The second day there was a match open to all yachts for the "prix d'honneur," over a sixteen mile course. The wind was feeble from east and at times almost calm. A small local craft of 16 tons captured the prize. The large yachts in this race included Florinda, 100 tons; Gitana, 127 tons, and Gladys, 65 tons, the same trio which met in the first day's event. Dauntless did not appear, as she has been found so slow and leewardly in working to windward that she stood no show. Of these three large yachts, the English yawl Florinda led the schooners by twelve minutes, finishing in 5.27.31, the Boston schooner Gitana second, in 5.35.05, and the small English cruiser Gladys third, in 5.37.33.

The time allowance was ridiculously small, the 127-ton Gitana allowing only 58 seconds to the 100-ton Florinda, and but 2m. 28s. to the 65-ton Gladys. The Florinda, Gitana, and Dauntless were the best mated as to size, and of the three Florinda was found considerably the best boat. She is 85.7ft. loadline, 19.3ft. beam, 11.9 draft. Mainmast, deck to hounds 54.5ft.; mizzenmast, deck to sheave 33.5ft.; bowsprit, outboard, one stick 26ft.; mainboom 56.5ft., maingaff 42.5ft., topmast, fid to sheave 44ft., area of lower sails 5,257, which is only 0.61 of the square of her loadline and in strong contrast to the unwieldly sail areas of our beamier boats, which the Florinda beat handily. The Gitana was to race in the Menton International as well, but could not reach the start in time to cross with the rest, a scrub lot of small French boats of all varieties.

WINDWARD.

THIS single-hand yawl is now ready for her ballast and rig at Stephens's shop, West New Brighton, Staten Island. She is well worth an inspection from those interested in small boats. Her lines and details were published in our issue for Feb. 7. She is 18ft. on water line, 28ft. over all, 6ft. beam and 4ft. draft, with 1,500lbs. on keel. The deck plank is laid dead fore and aft with the house and cockpit all on the square, ship fashion. The house is more like a hatch, low and handsome, but supplies 5ft. 2in. head room in the cabin. The cockpit is roomy enough for one hand to recline in while steering. Below are two good berths and locker room. In the run a 30-gallon water tank and store room. She will be uncapsizable, unknockdownable, and unfillable, as the cockpit is narrow and the door sill at deck height. The "door" will be a flap hinged on the bottom, opened by dropping down. It can be shut in an instant by turning up and slamming to. The boat will be yawl rigged with single jib and pole mast. She is an excellent example of what a small single-hand cruiser of moderate draft should be. Her speed and general performance will, of course, be in proportion to the excellence of her lines. Fast boats of similar dimensions have been built often enough, and there are no reasons why anything should be urged against boats like the Windward on the score of wanting in speed. It is only a question of good lines to open and close the water, proper build and ballasting and a racing rig, and upon those items each boat must rest for her individual perfection. The type in itself is perfectly compatible with speed, and as for comfort, accommodation, usefulness and handiness, these deep little boats require only to be seen to capture every man who knows what he wants a boat for. They are now becoming so popular that a special club to further their interests will be formed before long. A yacht club limited to decked boats under 25ft. would contribute much to the spread of racing and cruising in small but perfect craft, which are within the reach of the multitude. Nothing could be more thoroughly sporting in spirit than the gathering of the webfooted clans aboard a fleet of two and three ton cutters and yawls, manned solely and always by owner and friend, who quickly learn to delight in roughing it and participating in sea life so far as the tonnage of their boats will permit. The proudest official position in the yachting world will some day be conceded to the man who flies the Commodore's burgee from a three-tonner, the leader of a club with several hundred practical yacht sailors who can design their craft from keel to truck and then sail them with boldness and skill, which will rank them far ahead of the mere yacht owner whose chief qualifications to esteem is the possession of wealth.

YACHT BUILDING ON THE DELAWARE.

Editor Forest and Stream:

The yacht Nohma, 28ft. over all, has been thoroughly tested, and the 2,800 pounds of iron on keel and small iron centerboard has proven a complete success. She was originally a sandbagger with a large board. The change was thought risky, but being a boat of large displacement this great weight was really a necessity, and much to the surprise of old shellbacks did its work as the owner expected. The sail plan of course has been brought down to a lower center of effort consistent with a low center of weight. Two men can handle her now except in a race, when large light sails have to be used. She is active in light airs, turns nicely, and holds on well in heavy weather and lumpy water without her board. Next season her centerboard trunk will be removed, and she will be lengthened aft about 5ft. with a nobby fantail. She has been heeled down until the lee edge of her house top was submerged, but goes about her business all the same and never loses her way. Her long-footed jib has been split in two, and of course, like the other improvements, was to be all wrong. The little Curlew, 18ft. long, 9ft. beam, 32in. deep, owned by Doctors Earl & Davis, originally open and also a sandbagger, has been housed, centerboard trunk taken out, and a keel substituted. I have witnessed her performance, and find she does her work admirably, notwithstanding every one predicted a failure. I candidly admit, in the Curiew's case especially, I was skeptical of success. I built this boat and thought her form too wide for a keel, but her deadrise and weight pulled her through. You will probably be glad to know that the teachings of FOREST AND STREAM are appreciated even here in a stream but little more than a half mile wide. Low centers, heavy displacement, etc., are being understood and acted upon by intelligent yachtsmen, such as Ferry, Whitehead, Davis, Earl, Williams, Walker, and a host of others. For myself I can say, though the father of dish boats, I took up your ideas, gave them a full, practical test, and I am not ashamed to say, found it best to hedge.

2,053 BRANDYWINE STREET, Phila. R. G. WILKINS.

[We may add that Mr. W. M. Brisben is having an 18ft. loadline cutter built by Albertson Bros., of Kensington, and that designs for other small cutters have been sent to Philadelphia.]

EARLY OPENING OF THE DEATH-TRAP SEASON.

A SLOOP yacht belonging to Toronto, Ont., capsized two weeks ago and three hands were drowned. The smack Wreck—most appropriate cognomen—capsized in the Lower Bay last week, and the crew would have been drowned but for the lucky proximity of a rescuing vessel. Other "accidents" of the kind have happened. It is only a matter of time when the community is to be startled with the wholesale drowning of "prominent yachtsmen" in one of the many traps of gilded pretension which still exist in the New York fleets, awaiting only the first unfortuitous combination of circumstance to tumble over and spill their cargoes of human freight.

NOURMAHAL.—This big steamship, building by the Harlan and Hollingsworth Co., of Wilmington, Del., for Mr. Astor, of this city, was launched last Saturday, and will be fitted out as fast as possible for a voyage to Europe. She is 238ft. 5in. on deck, 221ft. waterline, 30ft. beam, and 18ft. 7in. hold. Vertical direct acting compound engines of 1,400 I. H. P. cylinders, 34 and 60in by 36in. stroke. Four steel boilers 12ft. long and 8ft. 3in. diameter. Bark rigged, with 7,000sq. ft. of sail. Foremast, 74ft.; mainmast, 76ft.; mizzenmast, 71ft.; fore and main topmasts, 21ft.; fore and main topgallantmasts, 21ft. 6in.; poles, 5ft. 6in.; mizzentopmast, 73ft.; fore and main yards, 52ft.; fore and main topsail yards, 41ft.; fore and main topgallant yards, 28ft.; foregaff, 26ft.; mizzengaff, 27ft. 6in.; bowsprit outboard, 20ft. Built to class at Lloyds. Will have a steam launch 35ft. long, with coil boiler; 35ft. gig, 28ft. lifeboat and dingy. Model on Norwegian lines, with considerable sheer and characterless watermelon stern, according to the old dogmas of the Copenhagen school, which still talks of "keeping down the midship section" to the least possible, though experience has long demonstrated the fallacy of such notions, as witness the big midships of Bedouin, driven as fast as the much smaller section of the Gracie with the same sail area. Form and not area is the true basis of estimating resistance, but anything at all will do in a steamship.

PHOTOS.—We have received from Mr. Ed. Lincoln, of Cambridgeport, Mass., a very fine assortment of instantaneous views of the principal yachts of New York and Boston. Among them we mention several views of the famous Maggie, of Boston, one showing her bursting through the Gut in last year's open Hull match, when she slid out from under the lee of several blanketing sloops in a way one shall never forget. Also the Bedouin, abeam, bows on and quartering; very instructive in the details of her rig and fittings. A broadside view of the nobby Oriva close aboard, Gracie, Fannie, Crocodile and other well known sloops in all kinds of situations. These photos are by far the best of the kind yet taken in America. They may be procured from Mr. Lincoln direct, who will send a circular and prices upon application.

EASTERN Y. C.—Mr. Henry S. Hovey of the smart schooner Fortuna, has been elected Commodore E. Y. C, vice Com. Pickman resigned.

ADELINA.—This Eastern keel sloop, soon to appear in New York waters, was built in 1880, in Charlestown, Mass., by Commodore D. H. Musgrave. A letter informs us that "She is on the deep plan, with iron on keel and reduced beam, of the style now called the modified cutter. At that time she was derided by all the old fossils, and was predicted to be a failure on that account. She proved very fast, a grand sea boat, and one of the entering wedges to the now accepted models which you have so long and faithfully labored to bring into notice. Her former owner now intends to build a full cutter. Her new proprietor picked her from a lot of others which were for sale for her fine model and good sailing qualities, and is fully satisfied with his bargain."

NOMAD.—Rear-Commodore Wintringham's new sloop was launched from Mumm's yard, Bay Ridge, last Saturday. Model by her owner. Intended for near-by family cruising. Shows up large room inside and in the cockpit. Finished inside and out in polished woods in neat and ship-shape manner. Has cabin, stateroom, pantry and forecastle for one hand. Thayer's noiseless brake or pump wipdless on bits. Length over all 26ft., waterline 32ft. 2in., beam 13ft. 6in., depth 5ft., draft without board 3ft. 7in., ballast 5 tons inside. Mast, deck to hounds 37ft., masthead 5ft., topmast 24ft. 6in., boom 36ft., gaff 21ft., bowsprit outboard 17ft.

BOSTON Y. C.—Has prohibited shifting of ballast. No restriction to sail. One hand to every five feet and fractional part of her measurement. Yachts will be measured on loadline with one-third after overhang added. This is entirely too much and very unfair to yachts having long overhangs, as we will show by a special article next week. Classes for yachts over 38ft. 26 to 32ft. and 18 to 26ft. First two classes to be subdivided according to rig as occasion demands. Any yacht may enter larger class by assuming minimum length of that class.

WENONAH—Has had only 1½ tons lead added outside and not 10. Her rig is not considered too large at all by Mr. Harvey. She has always been able to carry it well enough, contrary talk notwithstanding. The addition to her lead is simply to fill up about the garboards where an angle was left as a rabbet to measure from under the former bulk rule of the New York Y. C. Filling up this angle is only bringing the yacht up to the original intentions of her designer.

NORMA.—Comments upon the launching of the Norma are drawn as mildly as the case admits upon the editorial page. The law ought to step in to secure the public against similar exhibitions, which argue a total ignorance of the principles of stability even by the so-called "designers" of this latest commonplace piece of yachting furniture.

BERTIE.—Mr. Fred Gallatin's new sloop was launched last Saturday from Mumm's yard, Bay Ridge. Usual New York type, though deeper than older sloops. Over all 55ft., on waterline 49ft., beam 17ft., depth 6ft. 8in., draft without board 5ft. Mast, deck to hounds 46ft., masthead 6ft., boom 46ft., gaff 28ft., bowsprit outboard 23ft. 6in.

LARCHMONT Y. C.—New club house and grounds were opened last Saturday. Includes three buildings, the visitors' house, billiard room and additional sleeping apartments, which offer permanent accommodations of forty sleeping rooms.

WANDERER.—This schooner, Mr. Weld, has been off shore cruising. Ran from New Bedford to Bermuda in five days. Thence to Hampton Roads and Norfolk, from which port she sailed May 1 for New York.

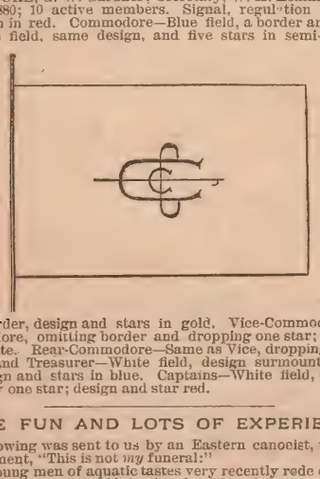
MONTAUK.—This schooner arrived off Staten Island at midnight last Saturday, bringing her eleven weeks' cruise at sea to a close.

LOOSE FOOT.—The yawl White Cap, Com. David Hall Rice, is to have loose foot mizzen this year, and square head topsail.

CUTTER RIG.—Sloop yacht Emily is being altered to cutter rig by McManus & Son of Boston.

BEDOUIN.—The addition to the hoist of her mainsail is 2½ft. instead of 4ft., as reported.

DOURON.—This Eastern yacht is to be altered from centerboard to keel.



Canoeing.

FIXTURES.

May 10.—First Cruise Chicago C. C.
May 30.—Pittsburgh C. C., First Annual Regatta.
June 1.—Hudson River Meet at Newburgh.
June 1.—Connecticut River Meet.
July 9 to 15.—Chicago C. C., Club Cruise.
July 19.—Chicago C. C., First Annual Regatta.
July 24 to 26.—Lake George Meet at Lorna Island.

CLEVELAND C. C.

COMMODORE, G. W. Gardner; Secretary, W. H. Eckman. Organized 1880; 10 active members. Signal, regulation size; white field, design in red. Commodore—Blue field, a border an inch wide around the field, same design, and five stars in semi-circle over

design; border, design and stars in gold. Vice-Commodore—Same as Commodore, omitting border and dropping one star; design and stars in white. Rear-Commodore—Same as Vice, dropping one star. Secretary and Treasurer—White field, design surmounted by two stars; design and stars in blue. Captains—White field, design surmounted by one star; design and star red.

SOME FUN AND LOTS OF EXPERIENCE.

THE following was sent to us by an Eastern canoeist, with the indorsement, "This is not *my* funeral:"

Eleven young men of aquatic tastes very recently rode out into the country to enjoy a quiet mid-day lunch. They drove out in style and sent their six canoes ahead by draymen, intending to float down the swift and tortuous B. brook from the bosky wilds of P. The recent rains have filled it to overflowing, and it is now quite a river. The drive and the lunch were a hilarious success. The canoeing was also a success, but in a different way that temporarily dampened the spirits of the party. Two canoes were capsized and the occupants summarily ducked; two other canoes attempted to shoot some dangerous rapids and were broken in two in the middle, leaving the passengers to crawl or swim ashore amid the plaudits of all C. Two other men lost or broke three paddles; and still another lost a roll of bank bills and half of his clothes. At this point the picnic divided. One party was taken to the hospitable hearth of a well-known gentleman, while the other party packed the remnant of the canoes upon a hay cart and walked home. Such good clothes as belonged to the party when they started for home, being either lost or soaked, the fatigue dress in which the retreat was made was highly picturesque, though far from æsthetic. The procession moved as far as possible across country and through back yards and alleys.

CANOEING IN FLORIDA.

CANOEING has received quite an impetus in this place and, in fact, all along the St. Johns this winter. Here in Mandarin we have a fleet of seven canoes, including the Psyche, N. Y. C. C.; the Sunbeam, an Everson Shadow, the Wyomi, Blue Lightning, Vixen, and another, all open Rushton canoes, provided with fan centerboards.

The word Wyomi is the Seminole for whisky, and when the owner of the canoe of that name was asked why he thus christened her he replied that he wished to associate in his canoe and its name the two things most dear to him.

In flinging to the Florida breezes all five of the flags which she is now entitled to display, the canoe Psyche assumes such a gala day appearance that she is invariably saluted by all passing steamers. Their pilots probably imagine that she has an excursion party on board.

The owner of the Sunbeam purchased and received his canoe but a few weeks since. When he was ready to make his trial trip in her a number of his friends assembled on the wharf to see him start. Stepping boldly into the canoe she at once turned bottom up and he was temporarily lost to view. Since then, in answer to numerous congratulations upon his success, he remarks that he was merely testing the stability of his canoe by attempting to walk along her gunwale.

All canoes sent to Florida from the North should be shipped by schooner to Jacksonville, which can be done at a moderate cost. By all means avoid the railroads. I recently shipped the Psyche from Fernandina to Jacksonville, a distance of thirty miles, over the Transit Railroad, and was made to pay ten cents per mile. She came in a freight car, at shipper's risk. By steamer the exorbitant charge of $20 is made for a canoe from New York to Savannah.

O. K. CHOBEE.

MANDARIN, FLA.

MERRIMACK RIVER MEET.

ENOUGH canoeists have signified their assent to warrant the announcement that a local meet will be held on the Merrimack River, between Lowell and Lawrence, June 14, 15 and 16. A beautiful site has been selected, and permission obtained to camp, in a secluded spot near "Deer Leap," five miles below Lowell. Ample room is provided on high land by a level, open space, backed up by a wooded hill. Water supplied by a spring directly opposite. River broad enough for sailing just below camp, and races can be arranged if desired.

Proposition is this: Ship canoes to Lowell (care George E. Stanley, truckman); leave city early Friday afternoon and paddle in fleet down the river, running Hunt's Falls, a half-mile series of easy rapids, en route; camp Saturday and Sunday; break up Monday morning and paddle five miles to Lawrence, from which point canoes may be shipped home or cruise continued to Newburyport (thirty-six miles) at mouth of river. It is proposed to establish a genuine camp (no hotels in vicinity). Individuals or parties will, therefore, provide themselves with tents, blankets and three days' rations.

All New England canoeists are cordially invited to attend and make the meet a rouser. Location central, expenses light. Further particulars given by letter, and views of camp ground and river sent on application. It is desirable to know at once who and how many will come. Communicate with R. F. Hemenway or F. H. Pullen, Lowell, Mass.

THE MOHICANS OF ALBANY.

ALTHOUGH the river had been free of ice for some time previous to the 8th of April, for reasons beyond the control of the club no canoe was taken out before that day. Then General Oliver tried his new sails and found them working like a charm. The new riggings of both the Marion and the Snake (R. W. Gibson) will create a sensation, I think, at Newburgh, and deserve great praise for the ingenuity of their designers in making reefing easy.

W. B. Wackerhagen has sold his Henrietta (North River build), and has been rather unlucky in his effort to acquire a new one from the same builder; the shop of the latter, Chauncey Smith, burnt down with seven canoes, Wack's among them, almost ready for delivery.

B. Fernow's Fior da Lice, a Waters Nautilus, is being shorn of her keel, and provided with an Atwood C. B. Her owner expects to do something in the sailing line this year.

The Peterboro, new model (decked), imported by General Oliver, has been sold by him to Walter L. Palmer, the well-known painter, and a new member of the M. C. C.

Henry R. Pierson, Jr., also a new member, is negotiating for a Shadow, now the property of Dr. Gardner of the Cincinnati C. C., and lying at Crosbyside.

Two other new recruits to the paddling fraternity, Messrs. Weidman and Weine, have built themselves two canvas canoes after a shortened Ellard model. One of them is entitled to special mention for having been the first this year to leave the deck of his canoe for the cooling waters of the river. Cause: Hatch not fastened.

George Hilton, our last vice-commodore, being prevented by business engagements from active canoeing this season has sold his North River to S. M. Babcock, also a "Morgan," though a young one.

The Mohicans will appear in force at Newburgh, and anticipate great fun; but not so much in the "mashing" line (as the Torontos insinuate) as by their good "seamanship" and general jollity.

After the meet the Marion and the Fior da Lice, with such others as will join, intend to carry by rail to Deposit, on the Delaware; cruise down the Delaware, through the Gap—not to speak of such minor incidents as Coshocton Falls, Lackawaxen Dam, etc.—to Belleville, N. J.; thence by rail to Hamburg, or Franklin, on the Walkill; make acquaintance with the "Drowned Lands," trees and snags, dams and falls of this stream, and try to reach, without any serious accidents, the Rondout Creek, and emerge into the Hudson near Kingston.

FIOR DA LICE.

THE CHART LOCKER.

VIII.—THE SUSQUEHANNA.

BINGHAMTON, N. Y.—River navigable for your canoe from this point. Distance to Owego, 22 miles. Would advise start from here as it is a beautiful part of the river all the way to Owego. Your canoe will be cared for until you want it, can launch within 80 rods of the freight office, good roads to landing and river banks low. Freight Agent, N. Y., L. E. & W. R. R.

Owego, N. Y.—No obstructions in the river here. Steamboats drawing 20in. run in summer. Postmaster.

Tunkhannock, Pa.—In ordinary times canoe will pass easily. Parties from here go up as far as Owego and come down in boats. Force of current about 3 miles an hour. Postmaster.

Wilkesbarre, Pa.—No obstructions here. A slight fall about a mile above the town, but it can be easily run. Stage of water varies with the seasons; steamboat drawing 15in. runs down to Nauticoke, 9 miles. At Nauticoke there is a dam, but you can run through the shute. Postmaster.

Sunbury, Pa.—No obstructions in the river north of Harrisburg. Just below Harrisburg there are falls, called Canawago, which you could not run at any time. Current about 3 miles an hour. Dam here which you can get past through the lock. You will have no trouble in going down as far as Harrisburg.

The following points were got by corresponding with a young lawyer in Tunkhannock, Pa.: The river is very low in July, August and September, and in places not navigable for canoes then. Canawag Falls (as they are called by the natives) are really a series of rapids, which rafts go down but are pretty heavy for canoes. A rise generally occurs some time in June, called the June "fresh," when rafts are floated down, and by putting the canoe on one of these the falls could be run. Scenery very fine below Harrisburg. Sunbury is about half way between Owego and the bay—a raft covers the distance in about five days during a fresh, laying up at night. Rafting begins in in April, when the water is high.

My own experience—No dangers of any kind between Binghamton and Harrisburg. A few rocks were varnished the last day of the cruise. All falls—if you can call them so—can be run, and the several dams got round by running the shutes or carrying round. Lots of springs all the way. River water very good. Food to be had in plenty either from the farmhouses or small towns all along the route. My cruise was made early in May. Find out before starting the height of the water, and time your trip accordingly. Transportation to and from the river by rail fairly cheap.

Experiences of others.—Gen. Oliver and Mr. Fernow of Albany, cruised last May from Binghamton, N. Y., to Bloomsburgh, Pa. Mr. Chas. L. Tilden, of Boston, cruised down the Susquehanna in 1868 in a Rob Roy, all the way to the bay, running every rapid, including the Canewago Falls, below Harrisburg. Mr. F. S. Hubbard, of Boston, who has also made cruises on the river, says: "I can most sincerely recommend the lower part of the river below Columbia as a cruising ground. This cruise should be taken in May, so as to get a good stage of water, as the channels are narrow and the rocks pretty thick in places, especially at the Canewago bridge and below."

A trip of over 400 miles can be accomplished on this river, the waters of which carry you from New York, across Pennsylvania and into Maryland. Try it.

THE GALLEY FIRE.

CANOE AND CAMP COOKERY.

III.—FISH.

FISH caught out of muddy streams have an unpleasant taste, which can be lessened to a large extent by soaking them half an hour or more in strong salt water. Fish that have been frozen should be soaked in cold water to thaw them before cooking. Don't boil a fish under three pounds weight, and of course don't bake a fish too small to be stuffed. If you do not carry a fish-car to keep your captured fish alive, kill them as soon as caught by a sharp rap on the back just aft of the head with a stick or the handle of your big knife. This not only in justice to the fish but because he tastes better, for the same reason that a butchered steer would taste better than one that was smothered to death.

You may find grubs in fish along the backbone in July and August. You will generally remove them by taking out the backbone and its branches. But if you don't get them all out, never mind; they are good to eat; but if any one of the party is squeamish, tell him you have got them all out any way; he won't know any better after they are cooked. It is to be supposed that everybody knows how to clean a fish after it is caught, so I will proceed at once to its preparation for the camp table:

Boiled Fish.—Tie or pin the fish in a clean cloth. If the pot is small for the fish skewer the tail into the mouth. Put it into enough boiling water to cover it about an inch, and simmer steadily until done. Some fish boil quicker than others, as a general rule those of white flesh requiring less time than those of a darker tinge. If a couple of tablespoonfuls of salt and four ditto of vinegar are put into the water the fish will cook sooner. About twenty-five minutes are necessary for a three-pound fish, and over that six minutes extra to every pound. An underdone fish is not fit to eat, and one boiled too long is insipid. When the meat separates easily from the backbone it is cooked just right. Take it up, remove the cloth carefully, and pour over the following hot

Fish Sauce.—Put two tablespoonfuls of butter and two ditto of flour into a hot frying pan over the fire and mix them together with a spoon into a smooth paste. Pour over very gradually about a pint of the water in which the fish was boiled, stirring it well in. Boil up once and season with pepper and salt. If an acid taste is desired, add a few drops of vinegar.

Fried Fish.—Small fish may be fried whole, but large ones should be cut up. Have enough pork fat or lard bubbling hot in the frying-pan to well cover the fish. Smear the fish well with dry corn meal or flour, or, what is better, dip it into well-beaten egg and then into bread or cracker crumbs, and fry both sides to a clear golden brown. Sprinkle lightly with pepper and salt just as it is turning brown.

Baked Fish.—Prepare a stuffing of bread or cracker crumbs, mixed with one chopped onion and enough butter or lard to make the mixture moist. Put the stuffing lightly into the fish and sew up the opening. Dig a hole in the ground eighteen inches deep and large enough to contain the fish; build a fire in it and let it burn to coals. Remove the coals, leaving the hot ashes in the bottom, on which place a thick layer of green grass. Put the fish on the grass, cover with another layer of grass; then rake back the coals and loose earth and build a small fire on top. In an hour the baking will be complete, the skin will peel off and leave the flesh clean. A fish prepared this way need not be scaled, as the scales will come off with the skin after it is cooked.

CLUB NOTES.

CHICAGO C. C.—Chicago, April 28.—*Editor Forest and Stream:* Canoeing is "booming" here. At the last meeting of the Chicago Canoe Club eleven new members were admitted, increasing the roll to forty-two. At least a dozen new canoes will be launched this spring, the majority of which are being built by Messrs. Thomas Kane & Co. A new model cruiser, designed by a veteran canoeist, will be put on the market shortly by the above firm. Two or three have already been ordered. It is confidently expected that she will prove to be the boat for cruising on the lakes. The first Saturday afternoon cruise will take place on May 10. Canoes assemble at foot of Thirty-fifth street, at three P. M. Cruise south five miles, through the small lakes of South Park, returning to starting point. The first regular annual regatta will be held on Lake Michigan, off Chicago, July 19. Several handsome gold medals will be offered by individual members as prizes. The club cruise will take place from June 9 to 15, inclusive. Starting from Madison, Wis., where a regatta will be held, the club will run the Rock River as far as time permits. The fleet will be under the command of Com. G. M. Munger. Individual club members stand ready to erect a handsome boat house as soon as a suitable site can be secured, for which a diligent search has been instituted. A special meeting has been called for May 9.—QUI VIVE.

NEW YORK C. C.—The float has been out for several weeks, and a number of the boats are already in commission. Dr. Neidé was a guest of the club on Saturday last, at Marmalade Lodge, and enjoyed a paddle on the Kills in the evening. On May 4 the Jessica, Mr. Cooke, Mosquito, Mr. Delavan, and Pirate, Mr. McMurray, paddled down the Kills and up the bay to the Morris Canal at Pamrapo, portaged over and paddled across to Newark Bay, and making another portage into the bay, paddled home, arriving at 3 P. M. The Freak, Mr. Schuyler, was the first boat in commission this season. During the winter she has had a new deck with greater crown, air tanks in each end, a 3inch keel in place of her centerboard, and some changes in her sail plan. The Surge, Mr. Bailey, has also had air tanks of copper put in, one on each side of her trunk and one aft, while another mast tube has been placed forward, 15in. from the bow.

SPRINGFIELD C. C.—The Springfield C. C. own a convenient floating house 55x25ft., on the Connecticut River. On each side are nine shelves to hold one canoe each, and nearly all are now occupied, besides which there are a number of boats on the floor. Mr. W. R. Holt has sold his Racine Shadow to Chas. P. McKnight, a new member, and will have an Ellard or Grayling. Mr. F. L. Safford has sold his Racine St. Paul, to a Chicago man, and he is going to order an Ellard. Dr. Brewer has sold his Shadow to A. L. Spooner, and is to order an open canoe, and the canoeing season promises to be early and active. The club now owns 20 canoes, 11 having centerboards, besides 1 birch, 1 sneakbox and a St. Lawrence boat.

THE HUB C. C.—This club was lately formed in Boston, the officers being C. W. Hedenberg, canoe Rambler, Captain; T. A. Walter, canoe Alice, Mate; G. E. Dutton, canoe Waif, Purser. A meet is proposed on Decoration Day.

PITTSBURGH C. C.—Ten canoes are now in the house and four are building. Nearly all are in use. The club will hold their first annual regatta on Decoration Day.

ROCHESTER C. C.—The new house on Irondequoit Bay, on the site of old Fort de Sables, is nearly ready for occupancy. The club has now twenty members.

THE AMERICAN CANOE ASSOCIATION.—Dr. Neidé is now in New York attending to the completion of the annual Association Book, which will be ready in about ten days, being now in press. The book will be published by the Forest and Stream Publishing Co.

BIRCH BARK CANOE LEAKS.—I notice in your last issue a request for information as to how to repair a leak in a bark canoe. It can be done as follows: Take some pine pitch and melt it. Then dip a piece of linen or cloth in it and apply over the hole. Cover this thickly with the rosin and smooth it down so as to present no rough edge. If the pitch is allowed to burn a little in the melting it gets much harder and does not soften in the sun. The Indians in Canada always carry a tin basin full of pitch in the bow of the boat, and the whole operation of repairing does not take more that fifteen minutes. —R. B.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. F., New York.—A .38 or .45 will suit you best.

J. H., Elizabethtown, N. J.—The address is Providence, R. I.

C. J. C., Dorchester, Mass.—For gun barrel browning recipe see issue of Jan. 31, 1884.

W. H. S., Philadelphia.—Miss Sarah McBride is not making flies now. She is in Australia.

J. W. C., Brooklyn, N. Y.—You will find no snipe shooting within 100 miles of New York in July.

C., Hartford City, Ind.—Where can I buy trout fry? Ans. Address Eddy & Co., Randolph, N. Y., or James Annin, Jr., Caledonia, N. Y.

CONSTANT READER.—Yacht you inquire about costs, hull, spars and rigging, $1,500, and completely fitted out, $2,300. Is perfectly safe for cruising along the coast and well adapted to such service.

R. A., St. Louis.—The celebrated English gunmaker, Joseph Manton, died in 1835. His guns were the most famous of the day, being the highest development of the flint-lock and the pioneers of the percussion cap arms.

W. A. R., New Haven.—The route to Grand Marian, N. B., is from Boston, by steamboat to Eastport, Me., thence by steamer. Consult Osgood's "Maritime Provinces," an admirable guide book. We can send it to you. Price $1.50.

J. G. D., Ohio.—The arm is in process of manufacture. It will form the subject of one of our illustrated papers on the rifles of the day. Your suggestion about other papers has been considered before, and will probably be put into execution.

S. B., New York.—Where can I have good trout fishing in the Catskills and also which flies are most killing. Ans. At Big Indian you will be near many streams. Write Mr. Dutcher, Giant Ledge House. Take a general assortment of flies, as professor, coachman, cowdung, etc.

W. S. V., Quebec.—1. Use light drilling for tent, waterproofing with boiled linseed oil and tereben. We cannot give you the other recipe. 2. Your gun can probably be changed from muzzleloader to breechloader. Write to some of the gun dealers whose addresses are to be found in our columns.

F. W. W., Grovetown, Ga.—Will you please inform me as to the manner of fishing for the leather or mirror carp? Ans. Carp are very shy biters. They are taken with a fine line and a small hook on single gut. Bait with boiled peas, dough worked into cotton, or

worms. The carp has a hard mouth, and it should be allowed to gorge the bait. A cloudy day is best and a ripple on the water hides the splash; do not use a sinker.

H. W., New York.—Snipe shooting at Jamaica Bay is sometimes good, but the locality is too near to the city and too much frequented by gunners.

C. D. W., Portland, Mich.—1. Is there a rifle barrel made to use inside a breechloading shotgun? 2. What fly is best for black bass? 3. What is best work or works on taxidermy? 4. A new edition of Coues's "Key to North American Birds" is now in press. Ans. 1. The Shelton auxiliary barrel is such an implement. We believe that it is no longer manufactured. 2. There are many bass flies. 3. Try Manton's, price 50 cents. 4. We can furnish it when it is published.

G. W.—There are a great many shad at the head of our river, and I want to try them with the fly. Can you give me the name of the kind of fly used? I have seen accounts in FOREST AND STREAM where the shad are caught successfully, but the name of the party and the kind of fly and the manner that the shad are caught I have forgotten. Ans. Shad are taken with the fly at Holyoke, Mass. Thomas Chalmers, of that place, makes flies for them. The fishing is usually done toward or after sundown, and the line is let down with the current. Yellow sally, white miller and soldier moth are good shad flies.

A. B. S., Bellevue, Huron County, Ohio.—Can you tell me the name of the duck of which this is a description? It was shot on a pond about ten miles south of Sandusky Bay. Short bill, full webbed feet, black chops, top of head and throat white, black bar across breast, black on back with few brown feathers in wings, two long black feathers in tail like pin or pigeon tail. Length from point of bill to end of tail 18½ inches. Don't say it was a pin-tail, for we are familiar with that duck. Ans. Your description is vague enough, but we presume the bird is a male old squaw or long-tailed duck in summer plumage. This is a very common marine duck, sometimes found on the great lakes. Its scientific name is *Harelda glacialis*.

DIRIGO, Portland, Me.—1. If in shooting double clay-pigeons a broken and a whole bird leave the traps, and the shooter breaks the broken one and misses the other, how should the referee decide? 2. If he misses the broken one, and breaks or misses the whole, how should he decide? Ans. 1 and 2. The referee should decide one broken and one missed. The shooter may refuse to shoot at the broken bird and demand another; but if he shoots at it, he must abide by the result.

GREENWING, Syracuse, N. Y.—A party of men from Syracuse have leased a trout stream. The sign boards which they have erected contain these words, "Fishing not allowed in this stream." There is no name signed. Are the boards made according to law, and can they prosecute a person for fishing in the stream? The land that is leased is not inclosed, neither are there any signs except along the brook. Ans. The law regarding trespass reads as follows: Section 16. Any person who shall knowingly trespass upon cultivated or inclosed lands for the purpose of shooting or hunting any game protected by this act, or shall take any fish from private ponds or streams not stocked in whole or in part by the State, or after public notice has been given by the owner thereof as provided in the following section, shall be liable to such owner or occupation, in addition to the actual damages sustained, in exemplary damages to an amount not exceeding $25. Sec. 17. The notice referred to in the preceding section shall be given by erecting sign boards, at least one foot square, upon every fifty acres of land upon the limits thereof, or upon the shores or bank of any lake, stream, or pond, in at least two conspicuous places on the premises; such notices to have appended thereto the name of the owner or occupant, and any person who shall tear down or in any way deface or injure such sign board, shall be liable to a penalty of $25.

A. L. P., New York.—1. Do you know any place within three or four hours from New York where I can have good black bass fishing? I know the usual places, Greenwood Lake, etc., but I do not care to fish from a boat, and prefer fishing a stream on account of the exercise. Last year I tried some alleged trout streams in the Delaware regions, but found them fished out. Of course I want to get fly-fishing, if possible. When does black bass fishing in this region begin? 2. What is the best trip for fishing purposes (about two weeks) to take from Chicago in July? I believe that I saw some time ago an article on the Northern Peninsula of Michigan. Can you give me any address to write to in order to get the necessary information? Ans. 1. You might find some bass fishing along the Delaware River, above Lambertville and about Point Pleasant. It is not certain at all times. 2. Go to Mackinac and cross the straits, or go to Escanaba. From these places you can easily reach good trouting. Consult the map. Guides can be had at $2 per day.

PUBLISHER'S DEPARTMENT.

A NEW DEPARTURE.—Mr. E. G. Koenig, of Newark fame, will this week open his new store at No. 1 Cortlandt street, N. Y. City, where he will aid in properly equipping sportsmen. While still running his Newark store, he proposes to devote the major part of his time to the Gothamites. He will have a fine stock of guns and fishing tackle, and is the New York agent for H. M. Sprague's boats and canoes.

ABBEY & IMBRIE,

Manufacturers of Fine Fishing Tackle

48 and 50 Maiden Lane, New York City.

We beg to call attention to our new 120-page folio Illustrated Catalogue. We have spared neither labor nor expense in our effort to make this the most complete work of its kind. We will send a copy, postpaid, on receipt of 50 cents, which price does not nearly reimburse us for its cost.

TRADE MARK

FOREST AND STREAM: "The list is surprising, even to one familiar with such matters. The great merit of this catalogue is its accuracy."

AMERICAN ANGLER: "It is, without doubt, one of the most complete and elaborately illustrated catalogues that has ever been issued in the interest of a private firm. This catalogue may be classed as a *text book*, owing to its practical value to the general angler."

NEW YORK EVENING POST: "The amount of ingenuity exercised in devising means to capture fish becomes apparent only upon study of such a catalogue of fishing tackle as Abbey & Imbrie, of New York, have just published."

SCIENTIFIC AMERICAN: "The book has 92 large plates, covering almost every conceivable appliance in this line, and in such profusion of styles as would probably delight even our most expert of fishermen, President Arthur."

MAIL AND EXPRESS: *"To the practical angler the work is indispensable, as it shows him just what to get."*

SILK WORM GUT.

F. LATASA, 35 Broadway, N. Y.,

Calls the attention of the trade and dealers in fishing tackle to his extensive assortment of Valencia Silk Worm Gut in all grades, long and extra long, and from Extra Heavy Salmon Gut to Extra Fine. Sample thousand, 10 different grades, from extra heavy to fine, $5.00.

Established 20 years. Open Evenings. **J. F. MARSTERS, 55 Court St., Brooklyn.**

KYNOCH'S

Patent "Perfect" Brass Shells,

MANUFACTURED BY

KYNOCH & CO., Birmingham, Eng.

These shells are made of extra fine thin pliable metal, with reinforced base; are adapted to either Winchester or Wesson No. 2 primers. Can be reloaded as often as any of the thicker makes. **Cost only about half as much.** Weight less than paper shells. They shoot stronger and closer, and admit of a heavier charge, as owing to the thin metal, inside diameter is nearly two gauges larger. Load same as any brass shells, using wads say two sizes larger than gauge of shells. Or can be effectually crimped with tool and straighten out to original shape when discharged. **The crimping tool also acts as a reducer,** an advantage which will be appreciated by all experienced sportsmen. Sample shells will be mailed (without charge) to any sportsmen's club or dealer, and prices quoted to the trade only. For sale in any quantity by gun dealers generally, or shells in case lots only, (2,000), and crimpers not less than one dozen, by

HERMANN BOKER & CO., Sole American Agents,

101 & 103 Duane Street, New York.

OUR NEW MODEL

THREE BARREL GUN.

PRICE, $75 TO $250.

Send for Illustrated Catalogue.

This gun is light and compact, from 9 to 10 lbs. weight. The rifle is perfectly accurate.

L. C. SMITH, Maker, Syracuse, N. Y.

Black Flies--Mosquitoes.

NO TAR, NO OIL.

"I find the 'Angler's Comfort,' made by N. S. Harlow, of Bangor, Maine, the most effective and satisfactory preparation I have ever used to keep off mosquitoes, black flies, etc." E. M. STILLWELL, Commissioner of Fisheries and Game for the State of Maine.

Orders by mail solicited. Retail, 25 cts., postage free. Wholesale, usual discount.

N. S. HARLOW, Druggist, Bangor, Me.

Studer's Birds of North America.

The most magnificent work of the kind ever published. Contains **gorgeous illustrations** of all our birds, upward of **seven hundred,** artistically drawn and faithfully colored from nature, with a copious text giving a popular account of their habits and characteristics. The edition is limited to one thousand copies, now ready for delivery. Sold only by subscription. Endorsed by the highest authorities. For circulars, prices and full information address, E. R. WALLACE, Publisher, Syracuse, N. Y. ap10,eot

EXCELSIOR BAIT PAIL.

(Patented). The Fisherman's Friend.

There is an inside pail which can be removed and placed in the water the same as a "fish car," thus keeping the bait alive for an indefinite time. The bait is kept alive during transportation (the critical time) by the continuous flowing of the water through the perforations, thus causing a never failing supply of fresh air. For sale by all dealers, or will be sent on receipt of price. 8 Quarts, $2.50 each; 12 Quarts, $3.25 each. Manufactured only by DE LA VERGNE & CO., 176 Chambers street, New York.

The English "Fishing Gazette."

Devoted to angling, river, lake and sea fishing, and fishculture.

Every Friday, 16 pages, folio, price 2d.
Volume VI. commenced with the number for January 7, 1882.

EDITOR—R. B. MARSTON

Free by post for one year for 12s. 6d. (say $3.20) to any address in the United States.

Sent direct from the office for any portion of a year at the above rate. U. S. postage stamps can be remitted, or money order payable to Sampson, Low, Marston & Co., the proprietors.

Contains special articles on all fresh and salt water fish and fishing; reports of the state of the rivers; reports from angling clubs; fishculture and natural history; where to fish; angling notes and queries; angling exchange column; notices of fishing tackle, books, &c., and other features.

A copy of the current number can be had (post free by sending six cents in stamps to R. B. Marston, the FISHING GAZETTE office, 12 and 13, Fetter-lane, London.

The FISHING GAZETTE circulates extensively among anglers and country gentlemen in all parts of the Empire.

"There is a large public interest in fishing. . . An excellent class organ."—*World.*

"One of the best authorities on these and kindred subjects."—*Truth.*

"A brighter and gayer little paper is not published."—*Mayfair.*

The FISHING GAZETTE is quoted by the *Times* and all the best papers.

One of the best mediums for

"Many of his sketches of camp life and far Western scenery are exquisite gems, by reason of their perfect simplicity, truthfulness, and the unconscious way in which they reflect nature."—*Observer.*

For sale by all booksellers, or sent postpaid by

CHAS. SCRIBNER'S SONS, New York.

THE PETMECKY

GUN CLEANER.

The only Cleaner that will thoroughly clean a gun barrel, doing the work equally well in choke bores without adjustment. Will do the work quicker and better than all other implements, for the purpose, combined. Price, $1.25. By mail, 10 cents extra. Ask your dealer for it. Discount to the trade. Circular free. J. C. PETMECKY,

Wholesale Dealer in Guns, Fishing Tackle, etc., Austin, Texas.

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.,

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

Send a 2-Cent Stamp

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, MAY 15, 1884.

VOL. XXII.—No. 16. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. American newsdealers should order through the American News Company, those in England, Scotland and Ireland, through Messrs. Macfarlane and Co., 40 Charing Cross, London, England.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices $1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

Address all communications,

ANSWERS TO CORRESPONDENTS.

A NATIONAL TRAP-SHOOTING ASSOCIATION.

AMERICANS delight in national associations. Almost every branch of trade has its organization of this kind, and so has almost every branch of "sport." The horsemen are leagued together, so are the base ball men, the cricketers, lacrosse players, archers, boating clubs, lawn tennis clubs, and all the rest of them. Some of these societies are active, useful and influential; others are unwieldy, purposeless and moribund. With the character and workings of some of these national associations, the readers of this journal are tolerably familiar.

There is the American Fishcultural Association, which is national in design, but in reality chiefly supported by its Eastern members, who represent a quite circumscribed territory. But the society is unquestionably national in its influence; the fruits of its efforts are seen from the Atlantic to the Pacific. The National American Kennel Club, the American Canoe Association, the National Rod and Reel Association, and the National Rifle Association are all strong and useful bodies, each of which in its special sphere has materially advanced the special interests to which it is devoted.

Some years ago a National Sportsmen's Association was formed. It tried to do too much; to cover too much ground, to unite the inharmonious interests of trap-shooting and game protection. It proved too big, was unwieldy, and fell to pieces. The history of the movement is instructive; we may recur to it at another time.

At the clay-pigeon tournament in Chicago, it is expected that twenty-five or thirty clubs will be present, representing fairly well the trap-shooters of the country, and it is proposed to take advantage of this meeting to form a new national association, which shall have for its purpose the encouragement and direction of trap-shooting in this country. In another column will be found a letter from Mr. J. E. Bloom, giving an outline of what it is thought such an organization might do. We publish the letter and call attention to it at this time, so that the gentlemen who are going to Chicago to represent their clubs in the clay-pigeon tournament, may have an opportunity to discuss the project with their fellows before leaving home.

Nothing is easier, on this side of the Atlantic Ocean, than the formation of a national association. We apprehend, then, that it will be no difficult task to organize the proposed society at Chicago, and to elect a president and other officers. But, the society once established, it is quite another thing to keep it going. We suggest, then, the importance of very thoroughly discussing the exact aims and character of such a national body before taking decided measures to establish it. The purpose ought to be very definitely understood; and the efforts of the members should be directed to that one thing alone.

So far as we are informed, the purpose for which it is desired to establish the new association, is to provide annual tournaments, in which the clubs belonging to it can contest at the trap for prizes and renown. The success of the project then, will depend upon whether or not the association can make annual provision of sufficient inducements to attract clubs to come from a distance to its tournaments. In other words, the one question to be considered is the financial one.

GAME PROTECTION FUND.

IN another column may be found a letter from a New York gentleman who knows something of the way in which the game of this and other States is being peddled out of season, and who understands that the administration of justice so far as it relates to this subject is a huge farce. As things go now, game traffic is carried on all the year around. Our correspondent then proposes to gather funds for the detection and prosecution of offenders. He asked us what we thought of the project. We replied that it was excellent, but that its great weakness was that it appealed to the pocket-book. There are plenty of folks who will talk game protection by the hour, but few who will give anything toward it. But we should be glad to own up mistaken in this case. Does anybody want to join in raising such a fund?

This gives us occasion to repeat what we have often said, namely, that in New York State there ought to be a live association of men bound together by their interest in game and fish, to take active charge of all matters pertaining to the enactment and carrying out of the laws on the subject. There is abundant material for such a body. Why can it not be organized?

We believe that were such a society started by the right persons, it would receive the support of a sufficient number of sportsmen to carry through any measure it might think best to urge at Albany. This would do away with the annual game law tinkering at Albany, and would insure a good statute against being subjected to the interested scheming of men who are working for mercenary or selfish ends.

OPEN SEASONS.

ONE way to secure the observation of the times and seasons for game and fish is to make them known. This we are doing to the best of our ability by publishing every year a revised list of open and close seasons. That it may be correct, we have invited the co-operation of our readers in the several States. Now the request is repeated. Please report to us any changes that have been made in the laws of your State during the past winter.

THE AMERICAN FISHCULTURAL ASSOCIATION convened at Washington last Tuesday, and the meeting is now in progress. Mr. Theodore Lyman, of Massachusetts, delivered the annual address, and Mr. John A. Ryder read a paper on "Legislation Necessary for the Protection of Ocean Industries." A report of the proceedings, with the papers read, will be given in our columns.

A FULL REPORT of the bench show in this city last week is contained in our Kennel columns. As we have there noted, a remarkable improvement was seen in some of the classes exhibited. There were unnoticed exhibits in classes which, according to the standard of excellence at former shows, would have received the ribbons. The show was well managed, and ranks high among the creditable exhibitions given in this country.

MAINE LAKES.—The ice is out of the Richardson, Moosehead, Umbagog and Rangeley lakes, and the boats are running. Elsewhere will be found a communication on the subject.

A NON-SPORTING DOG SHOW.

ACTING on the suggestion contained in the FOREST AND STREAM of April 24, the gentlemen interested in inaugurating a bench show of non-sporting dogs, have conferred with the Westminster Kennel Club, which has consented to give such an exhibition. The show will be held in the Madison Square Garden, this city, in the third week of next October.

There is just now a tremendous "boom" in the popularity of these classes which are known as non-sporting dogs. The demand for these dogs exceeds the supply, and all sorts of ridiculously fancy prices are paid for fairly good specimens. Almost every steamship from England brings into port accessions to the multiplying canine hosts. The bench shows are crowded with them. In fact the exhibition of the Westminster Kennel Club has grown to proportions altogether unwieldy. The number of classes and the entries in each are so great that there is abundant material for two exhibitions instead of one. This arrangement will accomplish more in the education of the public than could have been attained by the other plan. With the spring exhibition devoted chiefly to sporting dogs, and the fall exhibition to the other breeds, visitors will have a better opportunity of intelligently studying the several classes. The judging can be finished more promptly; there will be more room for display; and in various other ways the exhibition can be managed to greater satisfaction than is now attainable.

A COMPETENT FORESTRY OFFICER.—We have had several opportunities of discussing forest conservancy with Mr. Charles F. Amery, a gentleman of considerable professional experience, gathered both in the forest bureaux of Germany, and in the East Indian forest department, in which latter he held a high appointment for fourteen or fifteen years. Mr. Amery is well known in India and to forest men in England by his "Notes on Forestry," a little work in which the whole system of forest management in Germany is intelligently set forth, together with practical instructions for its application to the East Indian forests. His wide experience in practical forest management, and in dealing with the many difficulties inseparable from the inauguration of a system of forest conservancy, would render his services very valuable at the present juncture in this country, where in spite of the generally recognized necessity of doing something for the maintenance of a permanent timber supply, action is paralyzed by the difficulty of deciding how best to set about it. It is precisely difficulties of this sort for which the services of the trained professional are required, and the appointment of such a man as Mr. Amery on the staff of the forestry department would be regarded as an earnest that the Government had at length come to the resolution to face the problem squarely. Mr. Amery is an alien, if it is proper to apply the term to one who has made this country his home, and has no claims to political patronage, his sole claim to nomination is the value of the services his special training qualify him to render, and these are certainly exceptional.

FOREST FIRES AND FOREST FOLLY.—Our exchanges have been filled with reports of the extensive and disastrous forest conflagrations which have raged in various portions of the country, and numerous editorial pens have bewailed the consequent loss of human life and the destruction of millions of dollars' worth of property. But no one of our numerous and highly-esteemed contemporaries appear to have thought it worth while to suggest that one-tenth part of the money which has been so lost, if judiciously expended in securing protection against the forest fires, would have averted the terrible calamity. It requires a long time for us here in America to learn these things.

CANNED GOODS should not be cooked in the cans, for the physicians tell us that there is danger of poison if this be done. The proper way is to pour the meat or vegetables into a cooking vessel. It is possible to provide abundant facilities for all necessary culinary operations without cumbering oneself with a heavy load of pans and kettles. In another column we quote from "Woodcraft" the description given by "Nessmuk" of his camp tinware.

THE MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION will hold its last meeting for the season to morrow evening, and the matter of the defeat of the game bill will be thoroughly discussed and plans for the future mapped out.

The Sportsman Tourist.

SPORT IN THE APENNINES.

WHILE spending some months in Tuscany, the luxuriant garden of Italy, the ill health of a member of the family caused us to seek for cooler air and complete rest in some secluded spot high up the Apennines. The journey thither was a thing to be remembered; what lovely drives over well kept roads, up steeper and steeper grades, the roads winding up apparently endless hills; a turn, and suddenly another green valley would be seen, with quaint old stone-built farm houses, with the old-fashioned tools lying around, telling of patient and hard toil at the bosom of mother earth, cumbersome and clumsy ploughs, all but the ploughshare of wood, and a job for four oxen to pull at, now at rest, however; for were not the valleys smiling with the ripples of the waving wheat, and was not the Indian corn rising, green and strong, and telling of plenty and of happiness? Every farm house had several old walnut trees growing around it, or some lofty old oak, towering, every inch a king, over the many mulberry trees, food for the silk worms, another source of richness.

Higher and higher, and the mulberries ceased to grow, and the grapevines were no more festooning in rich garlands from tree to tree, but instead now and then a straight cedar would appear, or a tall spruce, or even, but more rarely, an old pine would be seen looming up above other trees, as if foolishly it was challenging the ready woodman's axe. Further on and the chestnut trees begin and increase in frequency, and here and there a thin column of dark smoke announces the spot where charcoal makers are at work. For many, many miles do the chestnut trees surround the road, and cover the hills everywhere, trees of great use, for the wood serves as fuel or is made into charcoal, and the chestnuts are eaten, or collected and dried in the sun and ground into flour, to form the principal staple of food of the Apennine mountaineers.

Later on even the chestnut trees cease to thrive, and cedars, pines, spruces, birches, sycamores, firs, maples, and many others are growing thickly; the air is cooler and balmy, with a faint but delightful odor of hidden violets and little red wood strawberries.

This journey having lasted a few days, we reached our goal, a little, unpretentious inn nearly on the summit of one of the lofty hills, where the breeze was cool and agreeable and heavily laden with perfumes of Alpine flowers, and the invalid felt as if new and purer blood was coursing through her frame, and as if every inspiration was another word written on a new lease of life.

Dinner at once and plentiful. The first dish, trout! Trout indeed; and how I wanted to know all about them, and where they were caught and how; and could I fish for them, and this and that, until the folks around had a faint suspicion, becoming hourly more marked, that I was the invalid, whose affliction was a mental one. I could see a rod nowhere, and I found out that the way trout were caught in the neighborhood was primitive, if not sportsmanlike, for it consisted in one man holding a big landing net over any hole in the rocks or under some old log, while another poked in the hole with something like a hop-pole, resulting in an occasional catch and many misses.

I had a small rod with me; I have it still, and have been a twin brother to it for years; I also had a few small snelled hooks with me, and the next morning the few rare inhabitants were amazed at seeing an otherwise sober-looking American pursuing sundry roosters in quest of material for flies. With surreptitious help from the ladies' bonnets and a little waxed sewing silk, several gorgeous specimens of fanciful entomology were soon at hand.

Next morning I started with a small boy and we walked a couple of miles to a mountain brook, quite a good sized one, where the boy said there were "trote." We arrived at one lovely pool, and I put my rod up, and the boy was astonished; I placed the reel, he was amazed; I placed a couple of flies, "yellow rooster and ostrich" and "brown rooster and ostrich" or some other colored rooster and ostrich, the boy's eyes started out of their sockets, and in a subdued way he said, "Maria Santa, è pazzo." Well, he may have thought he had good reason to believe he was with a lunatic. I whipped this pool, caught nothing, and the boy smiled. I tried another, same luck, the boy laughed. I tried another, and the boy looked as if he was thinking of home, and about to cry. I was tired, took a rest; had another cast on principle, and a rise. The fish gave a good pull, and I being excited, gave another, and forgetting that once upon a time I had been a good angler, made up my mind to catch a trout before that boy, and I pulled again, and it only took us a half an hour to disentangle the quarter-pounder and the flies from a good sized maple tree whither they had betaken themselves to flight.

After this signal success, I went on, and finding better pools higher up I managed to kill about a dozen handsome fish, the largest a trifle over a pound and the smallest about six or seven to the pound. We turned homeward, and I felt proud, disgustingly proud no doubt, and very happy. I placed my rod against the barn, and after a cheerful evening went to bed.

Next morning, as I rose early, I went to the barn; the whole available population was there, looking on, much interested in the description the small boy was giving of my methods, and finally an old fellow shook his wise and venerable pate, and declared he hardly believed it was right, inasmuch as he knew it had never been done before.

Many another good day's fishing did I have in those mountain brooks, those rippling and bubbling brooks, now tearing down in the torrent bed and now calmly resting in some deep, dark pool, under the shades of old trees; and the fun was glorious, even with small results.

A few days after I met the government forester, a charming and clever young Italian, a graduate of the School of Forestry at Vallambrosa. He promised to take me with him on his next trip up the wooded hills, and told me to take my gun along.

A day or two after we started off on a prospecting tour, as he had to mark certain trees that were to be felled, and to see some young trees he had planted recently. By his learned talk and enthusiastic descriptions I saw how much he loved the woods, how he was laboring to restore the forests, and I never understood so well how much we in America are to blame for our short sighted negligence of our woods as after having explained the whole process of regeneration by my friend. For a few years only he had held his position, and already he had established a huge nursery, where thousands and thousands of young trees were being carefully reared. He had planted thousands about the hills, and had done a great work. He proudly stated that the saving to the government in repairs to the postal road from the washing of its bed by mountain torrents, which he had nearly stopped by tree-plant, covered a large slice of his expenses.

We had with us two lean hounds who had been rummaging about, and suddenly gave voice, and were off like lightning. The old guard with us said, "Una volpe," and we separated, and waited wherever we thought we had a chance. After three-quarters of an hour or more the deep baying sounded nearer and nearer; after a while I heard a shot to my right, and the young forester came up to me, dragging old reynard by his brush. The guard skinned him there and then, and we went on. Before the day was over I had a chance at a couple of big hares, and bagged them both.

As I reached home we saw all the villagers assembled, and we saw they were looking at the body of a large wolf, that had been killed in the morning by one of the shepherds high up on the hills. I was told that he had killed a large number of sheep before he had succumbed to the big round ball from the old five-foot smooth-bore.

The invalid recovered and we went away. I had not seen much sport, but I expected none, and I had had much enjoyment; but the best of it was that I had seen the work of one man, with little help, in the forests there. There are thousands and thousands of us here that are interested in ours. Shall we let them go to ruin? G. V. S.

Natural History.

THE CATBIRD.

(*Mimus Carolinensis.*)

THE vine tangles along the roadsides and in the swamps are losing their rusty appearance, and the gray lengths of Virginia creeper have thrust their tendril fingers into the crannies of the rough bark, and are drawing themselves up to the soft spring air and sunshine. Delicate green tufts of miniature leaves are already quivering on every swaying branch and twig, and soon their soft rustlings will come to us on the wandering breeze. In the midst of all this spring loveliness appears the catbird with his unostentatious suit of slate-colored feather cloth. Unannounced he comes when he arrives, and where from we know not, so well has he kept the secret these many years.

Scrupulously neat, his modest dress is none the worse for wear, and his black cap is set as jauntily as ever on his saucy little head. The old sparkle is still showing in his bright eyes, and the quick flirts of his long tail evidence the workings of the restless spirit that has always pervaded his little life.

Curiosity is strongly developed in the catbird, for a more inquisitive little chap it is hard to find. Walk quietly on the borders of a wood, where the briers and vines have grown and interlaced themselves through and through the bushes, hanging in festoons from every sturdy sapling. Here, if you remain quiet, you will see and hear much to interest you. Confine your observations for the present to the subject of our remarks, the others we may investigate at another time. All is very still, and we see the midges hovering in a fantastic dance about a shaft of sunlight that glances down into this secluded spot. Hist! what was that? *Churr! churr!* Ah! here he is, and half hidden in the leaves of an alder we discover the sly fellow; so still he sits, that were it not for the utterance of that cautious *churr, churr*, he would have altogether escaped our notice. After a most careful examination of us, he runs swiftly up the trembling branch on which he has been so quietly perched, and pausing an instant to look back, flutters off for his mate. How carefully he pilots her as they both return. Together they crouch in the shade, while he seems to be telling her how it was he first discovered us. As they approach more closely you see their dusky wings open and shut in their nervous excitement, and hear the quiet *churr* of encouragement as they draw closer to the object of their curiosity. Let them see that they are observed, and the bushes will ring with their alarm cry of *chee, chee.* I have often had a pair of these birds attend me for a long distance through the woods, keeping pace with me, now ahead, and now to one side, but ever silent, until a sudden movement startling them, they would commence their cries.

They build a nest, much like that of a robin, in the thickets among the briers, or on the borders of the woods or swamps, and are also very fond of locating in the spruce and hemlocks on the lawn. Housekeeping well under way, the male bird will mount the topmost bough that bends above his home, and ruffling himself into a fluffy ball of feathers, he will pour out his little soul in song; low at first as though afraid to trust his voice, his notes gradually increase in power until the air is filled with the sweet trills and warblings of this much maligned, because little understood, songster. I find one fault with the rascal, however—while the ear is ravished with his exquisite notes he will suddenly utter one or two rasping cries, and entirely destroy the effect of some of his most lovely passages. Morning and evening are his favorite song times, and as he is a first cousin of the mocking bird one is not surprised to recognize the notes of many of our familiar birds, intermingled with his own. An incessant bather, he is constantly spluttering about the bird tank, and immensely does he appear to enjoy it.

The sun has set and as the twilight lingers with a rosy gloom, among the fleecy clouds we see our little friend mounting the topmost spray of his spruce, and presently his pure voice floats out clear as a crystal among the multitude of feathered choristers as they chant an evening hymn of praise. One by one their little voices are hushed until finally it is left almost alone with his music. Admonished at last by the silence, that it is bed time, he ceases abruptly, and with a quick dive, drops from his perch and joins his mate, under the dark green boughs. A good-night to the little fellow. WILMOT.

NEW YORK CITY.

CROSSBILLS IN NEW JERSEY.—Maplewood, N. J., May 8.—*Editor Forest and Stream:* A flock of a dozen or more American red crossbills (*Loxia americana*) have frequented this neighborhood for several weeks, feeding on coniferous trees. April 28, I captured several specimens of both sexes. On dissecting the females, I found eggs in a very undeveloped state, and the breast showing no signs of nesting. I understand these birds breed early in spring. Are these birds likely to be found in a flock while breeding?—C. B. RIKER. [This species sometimes breeds in winter in the northern New England States. Perhaps those you took had already bred.]

DEER IN THE ADIRONDACKS.

BY C. H. MERRIAM, M.D.

[From advance sheets of the Transactions of the Linnean Society of New York.]

Cariacus Virginianus (Bodd.) Gray.

COMMON DEER; VIRGINIA DEER; RED DEER; WHITE-TAILED DEER.

The Chase—Continued.

"DRIVING" consists in chasing a deer with hounds, and killing it, if possible, when it takes to water. A deer is not much afraid of a dog, and when the latter commences to bay on the track does not start off at once, but waits till sure that the hound is really chasing it. It then moves away at a brisk pace, rapidly distancing its pursuer, and is apt to run several miles, circling through valleys and over hills, before taking to water. If now a stream of any size is reached, the animal is liable to wade for a considerable distance in order to throw the dog off the scent. It then stops to listen, and if after a while the dog again finds the track, will generally take a pretty straight course for some neighboring lake, and swim it in order to rid itself of the annoyance of being followed. Instead of swimming, it sometimes skulks in shallow water near shore, and in this way baffles the dog.

The details of the hunt having been arranged over night, the participants proceed, soon after daylight, to their respective posts, while the guide puts out the dogs. If the lake about which the hunt centers is a large one, two or more men are stationed at different points to watch it, while the others make portages to adjacent lakes and ponds. The guide commonly starts several dogs, each on a separate track. Each watch-point is provided with a boat, and the hunters keep a sharp look out, for the deer is frequently so far ahead that it takes the water before the bay of the hound comes within hearing. If the game is a doe or fawn, and particularly if early in the season, the head alone is commonly seen above the surface, and at a distance it is likely to be mistaken for a buck. A buck swims higher, and the later the date the more of its body shows out of water. Deer killed in September generally sink, but after this month they usually float. This depends on the state of the pelage; for when in the red coat they sink, while, on the contrary, when the blue coat, which grows very rapidly, is an inch in length, it will, as a rule, float the deer that carries it, and this length is generally attained about the 1st of October.

When a deer is seen swimming the lake, the hunter waits till it has gone far enough from shore to give him an opportunity to head it off, before launching his boat and starting in pursuit. By exercising a little caution and not hurrying too much, he is often able to approach within easy range without being observed; but, if the animal sights him or hears any suspicious noise, it swims so fast that unless in a large lake and some distance from shore, the hunter has great difficulty in overtaking it.

When a large buck is overtaken and unexpectedly finds that he is pursued, he suddenly turns toward the boat, with a look of mingled astonishment and horror, rises high out of water and snorts; then, facing about, makes a desperate but usually fruitless effort to escape.

In September it is not uncommon for a guide to drive the deer about the lake till well nigh exhausted, and then catch and hold it by the tail, so that it will not sink, while the "sportsman" kills it!

In driving, a hunt ordinarily lasts seven or eight hours, and is apt to become a trifle monotonous, particularly for those who do not happen to see a deer. It commonly has this advantage, however, that there are at this season (autumn) no flies to pester the watchman, who, if he can manage to keep warm, and has enough to eat, may maintain a tolerable degree of complacency.

"Still-hunting," with us, consists in following a deer, by its tracks on the ground, and in attempting to overtake and shoot it, by daylight, in its home in the forest. It is sometimes, though rarely, practiced by our most skillful still-hunters in summer and early autumn, after a recent rain has so moistened the surface that the footprints can be traced. But it is when the ground is covered with a few inches of newly fallen snow, in November and December, that this method of hunting is commonly resorted to. A rifle is the weapon usually employed.

In order that he may step as noiselessly as possible, the hunter lays aside his boots, covers his feet with several pairs of woolen stockings, and over them draws a pair of well-made buckskin moccasins. Starting early in the morning, he makes a circuit in search of fresh tracks, and if deer are plenty, pays no attention to those of does and fawns, but proceeds till the track of a large buck is discovered. This he follows slowly and cautiously, taking care lest he tread on some dead branch or in any way make a noise that might alarm the wary deer. The animal often takes fright and makes off at full speed before it has been seen at all. This the hunter at once detects by the difference in the track, the long spaces between footprints plainly showing that it was on the run. He now throws off all restraint and strikes into a brisk pace, for the deer is already likely to be several miles away, and whatever noise is made cannot possibly reach its distant ears. When the tracks indicate that the deer has slackened its gait into a walk, and has, perhaps, commenced to browse a little, then it is time to advance again slowly and with great circumspection, for having been once alarmed, it is even more on the alert than usual, and can only be approached with the utmost care.

It not unfrequently happens that the deer enters a swamp where several others are feeding, in which case the snow is apt to be so much cut up that it is impossible to follow the original track unless its size serves to distinguish it; and even then it may cross and recross its own path so many times as to bewilder the hunter, who must now do one of two things; either advance stealthily and noiselessly through the swamp, without regard to the footprints, hoping by chance to get a shot; or he must make a wide detour, circling around it, to see if the track he is after leads away in any direction. If it does not, he knows that the deer is still in the swamp, and must return and attempt to find it. Appreciating the difficulty of the undertaking, he moves with great deliberation, his practiced eye penetrating, at each step, every space and recess that the slight change of position brings in view. To the left he observes a prostrate maple, felled by the winds, and, knowing that deer are fond of the kind of browse it affords, works cautiously toward it. The branches are reached but no live thing is seen, and his eyes are bent in other directions when—crash, crash, under his very nose, and he is deluged with a shower of snow that, for the moment, completely blinds him. He may, or he may not, get

his eyes open in time to catch a vanishing glimpse of the affrighted deer, and now that it is too late, discovers the bed of his would-be victim under the fallen treetop, at his very feet.*

The hunter rarely sees the whole outline of a deer in still-hunting. The forests are so thick, and the evergreens so loaded with snow, that an object is not commonly visible at any great distance, and a part of the leg or a patch of hair constitute the target usually presented to his eye. He sometimes fires directly at what he sees, and sometimes "allows a trifle," aiming a little ahead or a little behind, as the case may be. If severely wounded, without being killed outright, the animal is generally left for several hours, or until the next day; for if pursued it would continue to run as long as its strength held out; while, on the other hand, if left alone it soon lies down and will probably never rise again. Judge Caton says: "But few animals will go so far and so fast, after receiving a mortal wound, as a Virginia deer,"† and I have myself followed a buck, shot through both lungs with a .44-caliber rifle-ball, more than a mile and a half through the woods.

In localities where deer are abundant, an expert still-hunter frequently kills two or three in a single day, but such hunts are very laborious, for the track often leads many miles, in a tortuous course, over hard-wood ridges, across stretches of spruce and hemlock, and through dense balsam and cedar swamps. It is a long distance to camp, but thitherward, at nightfall, the weary hunter wends his way. His course lies through a swamp in which the evergreens grow so near together that the eye is unable to penetrate further than a few paces in any direction, and are so loaded with snow that the dark green of the few uncovered branches contrasts markedly with the uniform white of the tent-like cones from which they protrude. The silence is oppressive, and unbroken even by the sighing of the wind. The imagination, aided by the gathering shades of dusk, sees in this picture a primeval forest, among whose time-worn trunks stands the long deserted encampment of a bygone race. The well-preserved wigwams of spotless white, bleached by many winters, and pitched upon a floor of alabaster, mark the final bivouac of an unremembered nation.

Of the three methods of hunting heretofore considered, driving is the least sportsmanlike, and affords the deer the smallest chance of escape. It requires neither skill nor cunning on the part of the executioner; for patience, and a very ordinary amount of common sense, are the only essentials. It has this advantage, however, that the deer, if wounded at all, is almost certain to be killed outright—which cannot be said of the other methods.

"Floating" requires one of the actors to be expert in the use of the paddle, and is really quite an exciting diversion. This is partly because it can only be practiced by night, and partly because each change of position of the boat, and each curve and bend of the shore brings new objects into the limited field of vision, keeping the expectation in a state of acute tension. But after all, when the novelty has worn off, one cannot help realizing that it is like carrying a lantern, any dark night, through a frontier pasture, and shooting the first unlucky cow that chances to stand in the path.

In still-hunting, on the other hand, the hunter is thrown entirely upon his resources, and it is the only method of taking the deer in this Wilderness that requires any particular skill or labor on his part. The guide is here superfluous, unless it be to string up the game and find the shortest way to camp when the hunt is over.

Still-hunting tends to toughen the muscles, to sharpen the vision, to quicken the hearing, and to impart to the whole system a glow of health and vigor. It calls into play the exercise of functions that are apt to be neglected by the student and man of business, and inspires the lover of nature with a zeal and enthusiasm not easily extinguished.

In addition to the three foregoing legitimate (!) methods of hunting the deer, there are sometimes practiced here two other ways of killing—I might say butchering—that are too despicable even to be spoken of without a feeling of shame. They are: by means of licks and by crusting.

A lick is a place where salt is put‡ and the supply from time to time replenished. The deer, being exceedingly fond of salt, after having once discovered the place, repair to it with great regularity. When they have visited the lick nightly for some little time, which is ascertained by examining the ground round about for tracks, the murderous pot-hunter, armed with a doublebarreled gun loaded with buck-shot, secretes himself at dusk behind some convenient covert, or in a neighboring tree, and in silence awaits the approach of his unsuspecting victim.

"Crusting" is a method of destruction that is still more unfair and atrocious than that just described, and is only practiced by the most worthless and depraved vagabonds. It depends, fortunately, upon a condition of the deep snows that is usually of short duration, and rarely occurs save in the months of February and March. When the snow averages four or five feet in depth on the level, a thaw, followed by a freeze, converts the surface into a stiff crust, which renders the deer very helpless. Taking advantage of this state of things, the crust-hunters sally forth. Their snowshoes enable them to skim lightly over the surface, while the poor deer are unable to move except by the greatest effort, and are soon exhausted. They sink to their bellies at every plunge, the sharp hoofs cutting through the frozen crust, which lacerates their slender legs till the tracks are stained with blood. The cruel foe is upon them, and well do they realize that the struggle is for life. Every muscle is strained to the utmost in the frantic effort to escape, but in vain. Every leap tells bitterly on the fast-waning strength, and they soon sink in the snow, breathless and with heaving sides. Their large liquid eyes are turned toward their brutal pursuers, as if to implore mercy, but none is given. All share a like fate—they are butchered in cold blood.

Deer Protection.

For many years an army of hardy lumbermen, woodchoppers, and bark-peelers has been steadily at work, together with its concomitant devastating fires, in making progressive and disastrous inroads upon the ill-fated forests of the Adirondacks. Much of the proper borders of the region, long since stripped of timber, present to the eye a desolate and barren waste, whose present irregular boundaries are still contracting with ominous rapidity.

New sawmills, pulpmills and numerous other manufacturing establishments that consume vast quantities of wood, are constantly being erected; and, as if this were not enough, it is possible that before the snows of another winter cover the earth, a railroad will pierce the very heart of this grand Wilderness.

It augurs ill for the deer when the footprints of the panther or wolf are found near its winter quarters, but the cold steel tracks of the iron horse admonish us of the presence of a tenfold more insidious and subtle foe; for the railroad not only brings the deer's greatest enemy, man, into its immediate haunts, but destroys and carries off the forests that constitute its home. Hence it naturally follows that unless the region is early converted into a State preserve, which, unfortunately, seems hardly probable, the laws that heretofore sufficed to enable this animal to hold its own will soon prove inadequate. Therefore, the subject of deer protection becomes one that claims earnest and thoughtful consideration from our sportsmen and hunters, and demands intelligent and judicious legislation.

The present law was a fairly good one at the time of its enactment, but it has ceased to meet existing conditions; that it will prove ineffectual against the demands of the rapidly increasing occupancy and destruction of the forests, requires no great perspicacity to foretell.

There are two weak points in the law as it now stands: First, the open season is too long by at least a month; and second, there is no limit put to the number of deer that a party, or an individual, may kill during this period. The season begins with the month of August, and when the weather is propitious more than a hundred boats are nightly engaged in floating, on the various watercourses of the Adirondacks. Now it is an undisputed fact that by this method of hunting, more than twice as many does as bucks are killed, and that a large percentage of those fired at are wounded, and escape into the woods to die. It is also a fact that, as a rule, each doe has two fawns, and that fawns deprived of their mother's milk before the first of September usually die. Hence the appalling truth becomes apparent, that for every twenty-five deer secured by floating, at least fifty (and probably a much larger number) must be destroyed! Therefore it seems proper that the season should not open before the first of September. The second weak point in the law is also a vital one. It is notorious that during the past two years many hundreds of deer have been slaughtered over and above the number necessary to keep the parties killing them supplied with venison. In parts of Canada, and in the State of Maine, the law sets a limit to the number of moose, caribou and deer that may be killed by an individual or camp during a given period, and I see no reason why a similar law might not be enacted and enforced in our own State with like good results.

*Deer greedily devour the lichens that adhere to the branches of trees that have long been dead, and the buds and twigs of those that were living when they fell. This fact is well known to woodsmen, who invariably assert that if a tree falls during the night, tracks of deer can always be found there next morning. And I have heard more than one old hunter affirm it to be his sincere belief that deer know the cause of the noise produced by a falling tree, and, guided by the sound, at once set out in quest of the spot. Mr. John Constable tells me that he once shot a deer in the act of browsing upon the lichens that clung to a fallen treetop. The animal was standing on its hindlegs, with its forefeet resting upon a large limb, and was reaching up for the lichens.

†Loc. Cit., p. 385.

‡The only natural deer lick in the Adirondacks, so far as I am aware, is thus spoken of by Colvin: "I observed in a moist place a deposit of marly clay, a rare thing in this region. What was most interesting, however, was the fact that this was a natural deer-lick, many places showing where the deer had licked the clay, possibly obtaining a trifle of potash, alumina and iron, derived from sulphates from decomposing pyrites." (Report of the Adirondack Survey, 1880, p. 193).

SUPERFETATION IN THE DEER.

IN FOREST AND STREAM of April 17, 1884, p. 224, under the heading, "A Zoogenic Paradox," Mr. Frank J. Thompson, Superintendent of the Zoological Garden at Cincinnati, records the following very interesting case: "On the 31st of last December the female axis deer (*Cervus axis*) in the society's collection, gave birth to a fully developed male fawn, which has grown apace and promises to become a fine specimen. On the 5th inst., a few days over three months after the first birth, she bore a fully developed female fawn, which, in less than an hour after birth, was strong enough to frisk around its mother. * * Now here is an instance of an animal giving birth to two fully developed young ones within less than one hundred days of each other, whose period of gestation is well known to be eight months, and as customary with the family, only produces once a year. Is it possible that she could have been impregnated at two periods, with the above intervening space of time? If so, those who have made the zoogeny of the deer a special study, will have to write a new chapter on the subject."

In response to Mr. Thompson's inquiry it may safely be said, not only that it is perfectly possible that this deer was impregnated at two distinct periods separated by nearly one hundred days, but that this is the only rational explanation of the facts. Had the fawn born Dec. 31 been expelled prematurely, the case might be regarded simply as one of twin pregnancy, but this was not the case, for Mr. Thompson expressly states that both fawns were "well developed," and both were alive and doing well at time of writing. The case falls under the head of superfetation, and has many parallels in the human subject. In the Edinburgh *Medical Journal* for 1865, Dr. Bonnar, of Cupar-Fife, recorded several exceedingly interesting cases, in which the time intervening between the two deliveries varied from one hundred and twenty-seven to one hundred and eighty-two days. Dr. Tyler Smith, in his "Manual of Obstetrics," states that a woman "miscarried at the end of the fifth month, and some hours afterward a small clot was discharged, inclosing a perfectly healthy ovum of about one month. There were no signs of a double uterus in this case." When a double uterus is present, superfetation is of far more frequent occurrence, and a large number of authentic instances have been recorded.

Now it must be remembered that while a double uterus is exceedingly rare in the human female, it is the normal condition in the great majority of mammals, including the deer. Hence the question arises, Why is superfetation not more frequent in those species of deer which normally bear but one young? There are two excellent reasons: First, because as a rule the physiological process of ovulation is in abeyance between the time when conception takes place and the expiration of pregnancy; and second, because in the deer, as in the majority of wild animals, there is a definite period of rut, after which no impregnation takes place till the next season. The artificial life of captivity, in inclosures of limited size, and particularly where the animals are subjected to unnatural climatic influences, coupled, as is commonly the case, with a more or less radical change in the nature of their food, brings about a modification of the animal's habits, and frequently perverts the reproductive function. Therefore, instead of "a zoogenic paradox" we have simply a very interesting example of superfetation in the deer—a case which does no violence to the well-known physiological laws, and which was rendered possible by the artificial conditions incident to the semi-domesticated state in which the animal lived. C. HART MERRIAM, M.D.

LOCUST GROVE, N. Y.

DECREASE OF SONG BIRDS.—Boston, Mass., May 7.—*Editor Forest and Stream:* I notice in your advertising columns the advertisement of a Boston taxidermist who calls for "all kinds of native birds." You may not be liable to be taken to task for so aiding and abetting the violation of our bird laws, but I am inclined to be wroth over it. You may not recall the fact of my having for some thirteen years noticed the simultaneous arrival of the Baltimore oriole with the opening of the cherry blossoms here, or rather at my home. This year the trees blossom almost one month late, and still "Lord Baltimore" has not been seen or heard. I account for it, perhaps, on the ground that other taxidermists have advertised in local papers to same effect as above, for last summer I saw in the window of a large millinery store here over one hundred and fifty stuffed skins of the Baltimore oriole all together, labeled 75 cents each. I was so mad I didn't get over it for a week, and my family shan't spend a cent in that store if they go bareheaded the remainder of their lives.—REIGNOLDS.

Philadelphia, Pa.—The past week did not bring the flights of black-breasted plover, robins, snipe and dowitchers, looked for by some. The season is backward, but they will no doubt arrive on our coasts within the next ten days, especially if a southeasterly storm occurs during the period of time mentioned. As these birds treated us last spring, so will they act this—a sudden appearing and a very brief stay—it may be but for a day or two. Many of the warblers have shown themselves. The black and white creeper of course is here, the summer yellow bird arrived some days ago, and on Sunday, the 3d inst., the blue-winged yellowback could be seen among the fruit blossoms in the rural sections of Philadelphia. Both the Baltimore and orchard orioles have been present for several days, and the yearly war on the part of the so-called collectors of birds for scientific purposes against these bright-plumaged songsters has begun. Each collector, armed with a copy of our game laws, which allows the shooting of insectivorous birds for scientific purposes, goes forth, fearing no interference, when every feather secured finds its place in the hat of the fashionable milliner, instead of on the shelves of the ornithological cabinet. We have a city ordinance that can be enforced in the case of these people. It is that of discharging firearms within the county limits, for which there is a fine for every offense. When the State law is faulty the city law should be resorted to.—HOMO.

CORN CRAKE (*Crex pratensis*).—Owing to the number of FOREST AND STREAM for Feb. 14 being mislaid until a few days ago, I did not see Mr. Park's communication on the occurence of this bird in the State of New York last November. Some years ago, I think in 1859, I saw a specimen which was shot by one of the officers in Halifax garrison while on a sporting trip in Newfoundland. More singular still, a specimen was shot by my lamented friend, the late Lieut.-Col. Wedderburn (42d Highlanders) in the remote Bermudas. Here is Col. Wedderburn's account of it in our "Naturalist in Bermuda" p. 45: "The Landrail of Europe (*Crex pratensis*).—On the 25th of October, 1847, while out shooting in the dusk of the evening, in Pembroke Marsh, my good old dog Flora pointed, and a well known bird took wing, which I most fortunately killed, and it proved to be a young male landrail of the year. I sent the specimen to the late Mr. Yarrell, and at the sale of his effects it was purchased by Col. Drummond, who recognized the skin. The occurrence of this bird in such an out of the way place as Bermuda, and so far to the westward of its line of migration, is most wonderful, and it certainly gave me more pleasure to find this single bird, than the whole of the other birds put together. I sent a notice of the occurrence of this bird to the *Zoologist*, in 1849." To reach the Bermudas from the American continent, this bird must have traversed some six or seven hundred miles of ocean; no small distance for a member of a family not specially fitted for continued flight.—J. MATTHEW JONES (Fern Lodge, Waterville, N. S.).

CHIMNEY SWALLOWS.—Saratoga Springs, May 4.—Last evening and this evening I witnessed the unusual sight of myriads of chimney swallows circling around and dropping into an unoccupied chimney of a house adjoining the Arlington Hotel. Fully one thousand of these birds were together, attracting the attention of parties in the vicinity by their chippering cries and erratic evolutions, as they passed over the chimney top, halting for a moment, when apparently their courage gave way and they would circle around again, till at last some of last year's veterans (evidently posted as to the internal arrangements of the chimney) dropped confidently down, when bushels followed in rapid succession. Evidently the birds have just arrived, and use the old chimney as a sort of assembly rooms, where they discuss matters pertaining to the coming season, pair off and seek permanent nesting places. The habits of this bird are singular, it is the only one of the feathered tribe that never alights, except in the dark recesses of its nesting place. It breaks a twig for its nest while on the wing; it gathers its food while on the wing; it is a perfect barometer, predicting storm or rain by skimming along near the surface of field or road, and soaring high for its food when a high temperature exists near the surface. The stormy petrel, purple martin, whipporwill, swallows and all apparently tireless birds are seen to rest occasionally on land or water, but the chimney swallow never. —A. B. F.

ANOTHER SEAL IN LAKE ONTARIO.—Learning that a harbor seal (*Phoca grœnlandica*) had recently been captured in Lake Ontario, near Henderson, Jefferson county, N. Y., I addressed a letter of inquiry to Mr. C. H. Sprague, of that place, and have received the following reply: "A seal weighing 100 pounds was taken from a trap net set in the head of Henderson Bay, near Henderson Harbor, Sunday morning, April 20. He was dead when taken out, evidently having drowned. He was of a grayish color, and a perfect specimen. This is the only one that has been captured here."—C. HART MERRIAM, M. D. (Locust Grove, N. Y., May 10).

DEATH OF WILSON FLAGG.—Wilson Flagg, the naturalist and author, died at his home in Cambridge on Monday, after a long and painful illness. Mr. Flagg was born in Beverly in 1805. He received his education at Andover Phillips Academy and at Harvard College, and afterward studied medicine, but never practiced the profession. He removed from Andover to Cambridge in 1836, where he had since resided.—*Boston Advertiser, May* 8.

Game Bag and Gun.

A HUNTERS' CAMP.

THERE was a sudden stir in Astoria among lovers of river shooting, one late October day, when two hunters, who had been down on the bottoms prospecting, brought back word that the fall flight of wildfowl had begun. Tents were overhauled, and camping traps of all sorts were speedily put in order, for ours was to be a party of genuine lovers of the camp-fire. There was to be no clinging to civilization in the shape of boarding houses or hired cooks. Such things might do for novices, but when we had once entered the swamp forests there was to be no coming back to soft beds and easy chairs until the hunt was ended.

The party went out of the village in the early morning, perched high on rolls of bedding and boxes of provisions, which had been bestowed in an ancient lumber wagon, drawn by a matched team, a low-spirited horse, and a discouraged-looking mule. Steve, the stalwart farmer, was strangely silent about the fields, thickly carpeted with growing wheat, or studded with obese shocks of corn; enough to loosen the tongue of the most taciturn tiller of the soil. He was not silent, however, about former river expeditions. There was a wistful look in his eyes, as though he could already, in imagination, hear the whistle of teals' wings.

The sorriest figure in the party was cut by the Parson. His shining beaver was replaced with a weather-beaten slouch, and his coat and breeches were evidently not out on their first expedition, though certainly out at elbows and knees. The Deacon, occupying the rear berth in the wagon, smoked away placidly in spite of the rain and hail that pelted us as we toiled through the mud. Another team brought the balance of the half score—Senator, Doctor, the Notary, Tom, another dominie (afterward christened the Pelican, when he tried to palm off, as a fresh corpse, a cadaver of that species, which he had picked up in the back-water), the Mote (weight 225 pounds) and last and least, the Bantling. The Deacon ruled that in case of dispute, the Senator should decide all legal questions involved; in case of accident the Doctor should be allowed to officiate; and any member of the party should have "benefit of clergy" in case of hanging.

It was a long pull from the landing, where the boats were loaded, back into the lakes, where the cracking of guns led to the ducks' highways and pastures. The storm had passed and the sun was hanging among the trees, when the boats were pulled up on the eastern shore of Steward Lake, above the mouth of the Any Carte. The tents were deposited under maples and elms, whose leaves were brilliantly streaked with red. The prevailing autumn color of the trees on the river bottom, however, especially if the first frosts are light, is yellow. Back on the bluffs there are plenty of reds, but here the mass of color is yellow; not the shallow, flat, murky sort, but clear and transparent. Sometimes, pushing your boat into a bayou or narrow inlet, you will catch sight of a pecan or soft maple stained the deepest saffron.

But while we have been looking at the trees, the hunters' ready hands have cut posts and poles and stretched the tents. There is a hurried search among the "plunder" after loaded shells, for the sun is dipping out of sight, and if any one gets a shot before the night falls, it must be soon. The Parson and the Senator drift together as the party scatters to shooting points, and for the rest of the week the law and gospel go hand in hand.

There seemed to be no method in the flight of the birds; they were evidently looking for lighting places. The Parson hushed the Senator in the midst of a funny story, as a bunch of low-flying mallards came toward their blind. The guns flamed and two drakes dropped out of the flock. Dusk was gathering, but a flock of teal sweeping across the lake, catching sight of the half-concealed gunners, mounted sharply, their climbing forms silhouetted against the sky and offering a rare shot. Three of them dropped at the edge of the water when the guns blazed. It soon grew too dark for seeing, though swift wings could be heard fanning the air overhead provokingly near. At such a time the hunter longs for power to see in the dark.

At the camp the Deacon, who, by the way, had a weakness for good feeding, had installed himself as cook, a position all were willing he should have and hold after they had once tasted the fruits of his culinary skill. Then and there a burden of anxiety rolled from the minds of all the party as the Deacon—who had joined the expedition in the capacity of philosopher seeking escape from the turmoils of civilization, rather than as a hunter—volunteered to have the meals ready when the others came from their boats and blinds. He blandly called attention to a set of by-laws which he had unanimously adopted and pinned up in a conspicuous place. Here they are:

1. The cook must be exempted from wood cutting and dish washing.

2. The man who snores shall be fired into the lake. [The Mote regarded this as personal.]

3. The wearing of buttonhole bouquets is strictly forbidden.

4. For every tardiness at meals the offender shall forfeit one duck to the cook.

These rules were simple enough, but there was a suspicion in some minds that the Deacon had his eye on many ducks in No. 4, a suspicion which seemed confirmed, as his string of birds grew longer each day.

How we slept that night. A heap of dried leaves, covered with gum coats, made a bed, where we slumbered as men do only under like circumstances. Strange it is that one rarely takes cold in a tent. A silk skull cap drawn well over the head is the only preventive needed. With the wind blowing in at every corner, and the rain sifting through the canvas in a fine mist on your face, you awake with a head as clear as a May morning. Ye dwellers in pent-up offices and stuffy parlors, take to tents and forget that men are ever troubled with colds and sleepless nights.

"Hello-o-o-o!" shouted some one just as we had fallen asleep, as it seemed, but hours after as it proved. It was the Notary, who had caught the noise of swiftly moving wings close above the treetops. We were soon in boots and away. The eyelashes of the dawn were already visible. There came a flash across from the point of timber where Steve had taken his stand behind the willows. He afterward brought in four redheads as the result of shooting into what he called "a bunch of shadows."

The Senator's teeth chattered and the Parson was blowing his fingers behind a blind formed of willow twigs stuck in the mud. A flock of mallards came squarely toward the blind, the dominie catching sight of them first. The Senator sat still, wondering why the Parson didn't shoot, as he seemed to have a fine bead on the birds, and to be fairly reaching after them with his gun; but the birds went "tailing off" in safety, for the Parson was pulling with all his might on the guard of his gun instead of the trigger. The mistake cost him some chaffing at the breakfast table. There was rare shooting that morning. A steady, low flight of mallards kept the guns smoking. In the clear morning light the birds looked as large as brant, and there was a constant temptation to shoot too soon, under the impression that the game was within range. Some old hunters insist that one must wait until the duck's eye can be seen before he is fairly within range; but with No. 4 shot in our shells and 4½ drams of powder behind them we did not wait for quite such close range work. A fine lot of birds were strung up in front of the tent at breakfast time, the Notary exciting every one's envy by contributing a pair of canvas-back drakes. These are not often bagged on the Illinois River, the more numerous species being mallard, teal, bluebill, "blackjack," sprigtail, redhead and wood duck.

One day the Doctor and Tom wandered for a change into the woods, after stalking through the wet ground for several hours after jack snipe, with a total result of twenty-one birds. They brought back a brace of crippled owls, much to the delight of the Bantling, and the whole camp for a while. As the proper one to handle the wounded, the Doctor thrust his hand into Tom's shell bag for the birds. One of them resented the intrusion by striking his claw into the Doctor's palm. "Take him off! Take him off!" he yelled, while Tom cautiously backed away from the scene of conflict. "Why don't you drop him?" suggested Tom, as he dodged behind the Mote. "I can't. Take him off!" fairly shrieked the victim. The Bantling had no difficulty after that in securing an unincumbered title to the owls.

The Notary and the Pelican were sitting, one evening, behind a blind beside the lake, debating a proposal to cross to the camp. It was at that feverish moment when the hunter wants just one more shot before quitting for the night. The two had at their feet a score of teal and bluebills. The Notary said there was "an unsatisfied longing in his soul," "an aching void," which ducks could not fill. He was looking wistfully at a flock of geese driving like a wedge along the horizon. But not even the "howitzer," a number seven bore, used for heavy work, would reach them, unless they came lower. All at once the leader dropped a little and changed his course. Down they came toward the water, wheeling with heavy flight to scan the lake. The Notary fumbled for shells loaded with heavy shot. It was the work of a moment to slip these into the guns. Steadily the old gander led his flock toward the concealed battery, which opened fire with effect. The first to fall was the leader himself. After him came two others, dropping with tremendous splashes into the unruffled water. "My longing is satisfied," said the Notary, as they waded out after the birds, "the aching void is filled." They were in high feather that night at the camp. The evening hour in the tent is a delicious one. Stretched out at full length, with feet toward a hot fire, the hunter talks glibly, if ever. The Pelican had been a soldier, and told of the times when he hunted with a rifle cannon, instead of a Remington shotgun. Steve had been a gold miner in California, and had had many a brush with the Indians. There were no dull ones in that company, and the evenings were all too short for the things which were to be recounted. It will be long before the good fellowship of that congenial half score will be forgotten by any one of the number.

RICHARD GEAR HOBBS.

CIMARRON TO CIMARRON CANYON.

I ROSE very leisurely on the morning of Dec. 26, and just as the clock struck 9 here came Tracy in his lumber wagon, drawn by a two hundred-dollar mare and a twenty-dollar Texas pony, with the old wagon filled with corn, grub, tent, wood and the hundred and one things, that when we cut entirly loose from the railroad we have to take with us. I had not got my wagon packed yet, but everything was ready and piled in a heap in the hall. Blankets, grub in boxes, bread baked, coffee ground, cartridges and corn, and before Tracy had disappeared over the hills to the south I was packed into a buggy that is made of an old government ambulance altered over, with Mr. C. by my side, and we were off for a two weeks' trip, across the shallow Arkansas, through the sandhills, and over a long, dreary, twelve-mile flat; then more hills and at sunset we drew up at the Wolfley dugout on Crooked Creek, which this winter is infested by cowboys. The owner has a kind of rheumatism, and has gone East for repairs, and has lent his dugout to the boys who are holding some cattle. As I knew them all they treated us with great hospitality. Gave us a nice supper and drank up all my whisky while we were eating it. We did not find Tracy at the ranch, but in about an hour one of the boys came in and reported him in camp two miles up the creek. I never camp out when I can find a house, especially in winter, and so C. and I concluded that we would hitch up early and catch him at daybreak. The evening was spent by the gentle cow-punchers in seeing who could tell the biggest lie in regard to riding bad horses and other feats.

We found Tracy just ready to start and in good spirits in spite of his lonesome night, and pulled out for the southwest again. Thirty miles over a rolling prairie, with no water and not an animal in sight and we came to Wildhorse Lake, a pond that generally has water in it. There we unhitched, fed the horses and watered them, got something to eat, hitched up and pulled on. We soon met a freighter coming from Beaver Creek, with an eight mule team, two wagons tied together and loaded with about eight thousand pounds of buffalo bones, which he was taking to Dodge City, where they are worth $15 a ton. They are shipped to St. Louis by the carload, and are said to be used in a sugar refinery. He reported buffalo on the head of the Beaver about one hundred miles from the Cimarron Canyon, and that the country up there was said to be filled with white men, Indians and Mexicans hunting them. So we went on, and about dark camped.

When it became light we saw a large herd of wild horses in three bands about a mile from camp. When they noticed us they edged off a little, but kept in sight of us, traveling in a parallel course with us for several hours. We were close enough to see the stallions herd their bands. They work in the rear of the herd like a shepherd dog and bite the stragglers. There were about sixty head in all. They stay on this big flat summer and winter, unprotected from the terrible storms, and seem fat and happy.

At about noon we reached the Cimarron Canyon or river (so called). Where we struck it, the water barely runs from pond to pond. It is a broad valley about a mile wide, with sandhills stretching back about five miles on each side, and all the antelope for fifty miles each way watering at the creek and grazing in the sandhills. Where we struck the creek the Harwood Cattle Company has a side ranch, where they are feeding ninety saddle horses corn and seventy fine bulls hay. Two men are in charge of the ranch and live in a big dugout. They are Boston boys, and have got as many of the comforts of civilization as they can command. Have good food and lots of it furnished by the company—a very uncommon thing, by the way, in the average cow camp, where coffee, poor flour and bacon are all that is generally furnished (beef is considered too rich for the blood). They had lots of papers and "Seaside" novels, and a real kerosene lamp to read by, instead of fire light and an occasional candle. The creek bottom was covered with cattle and antelope. I counted about a hundred antelope in sight.

I wanted to camp near the dugout, but Tracy, who is a little bashful, thought we had better go a mile up the creek, and I assented. We then had a council of war in regard to going on to buffalo, and Tracy and John both wanted to stop at Cimarron and make a load of antelope. Tracy said we didn't have enough corn to go to buffalo, and I had to give in, though reluctantly. So John and Tracy went on up the creek to make camp, while I stopped at the dugout and mended my buggy with Texas iron (rawhide). I was pretty sulky, but when Frank Mayo asked me up to dinner, and told me I had better put my horses in the corral and feed them hay, I began to see life in a different aspect. I didn't hurry in mending the wagon much, and at sunset drove up the creek to find camp, but no camp could I find, and just as I had turned back to go to the dugout and spend the night, I heard Tracy's old wagon come rattling in from the hills, and met him at the creek. He and John had killed three antelope and wounded another. Tracy had come to camp, got the wagon and gone after the carcasses, while John followed up the wounded one. By the time John came in unsuccessful, we had the tent up, a fire made, supper cooked—more antelope liver fried than anything else—and we all ate with hunters' appetites.

When we got up the next morning one of my horses was gone, and after breakfast I started after her, while Tracy and John went to the hills on foot I found my horse in about an hour, took it back to camp and picketed it—tied it to a stake by a long rope—and started for the hills on horseback. After riding from point to point for about two hours, occasionally catching glimpses of Tracy and John in the distance, just as I came up on the hill there was an antelope herd on the other slope, about half a mile away, in full sight. I know some of them must have seen me as I slid off my horse and crawled back out of sight on all fours, leading the horse, but I peeped when I got my horse out of sight and they had all gone to feeding again. The wind was blowing directly from me to them, so I had to go around them and come up on the other side. The country was all very hilly and I struck out to ride the circle at a fast lope, keeping as near the antelope as the lay of the land would let me and yet be out of sight.

When I got down wind I picketed my horse and walked up almost to the top of the hill and there crawled over to about a hundred yards from twenty of the prettiest antelope I ever saw. I carefully stuck my feet toward them, sat up, rested my gun in a pair of rest sticks that I sometimes use on a windy day, and aimed at a buck's shoulder; he fell at the crack and I jumped up and got in about six more shots as they ran off and saw one more drop.

Disemboweling the two dead ones I followed the herd on foot and soon found blood. When I went over the ridge there stood another, shot through the paunch; he saw me and ran off a few hundred yards and stopped, I followed and shot at him at 250 yards or so and missed; then kept following and missing for three miles. Just as he went up a ridge about a mile ahead of me I saw six more feeding in a little hollow to the right, and I concluded I had rather try a new antelope than that old one, and commenced to make a sneak on the new band and got up to about 150 yards. Shot, but miscalculated distance, and shot under, and the band ran right toward me to about fifty yards and stopped. I put that bullet in the right place anyhow, exactly into the old buck's throat. He went down as if struck by lightning, and the rest ran through a little opening in the hills, helped along by a couple of shots from the Winchester as they went. I heard a shot a few minutes after they had disappeared as I was bleeding and fixing my buck, and then went on top of the hill to mark it by sticking aiming sticks up and tying my handkerchief to them so that I could find my game when I came after it with the wagon. As I stood there counting the empty loops in my cartridge belt John came in sight. He came over and told me that he had one dead and followed another about as I had and lost him at last. So I struck out for my horse to go to camp and get the buggy. In about an hour I had the buggy back to the scene of action, got my two and found Tracy and picked up one for him. Got John's buck and mine and at dark was in camp; tired, oh my. About two pounds apiece of that rarity in a hunter's camp—fried liver—lots of strong coffee, and some bread and butter; and we crept into bed after feeding the horses and went to sleep at about 7 P. M., all three in one bed, John in the middle, with loads of blankets and comforters over and under us. Nig, the dog, occasionally made a dash out of the tent to run off the coyotes, who, attracted by the smell of blood, howled around the tent all night, but he came right back and lay close to our feet on the foot of the bed.

At daybreak next morning Tracy got up and cooked breakfast, and John and I arose and eat it up for him, and we hitched up the best team to the buggy, tied Nig, who would catch a wounded antelope in good shape, behind, and flew for the hills. [Nig was poisoned last week, since I got home, and it hurts me to have to speak of him. A big, coarse black greyhound that knew as much as a man, that would catch and kill anything that I drew blood on, that would not eat game if you left it lying around—he was the best broken catch-dog that I ever owned and I never expect to see his equal.] We saw antelope after driving about three miles, and stopped and unhitched the horses and tied them to the wheels to eat grass while we hunted. Just as we got ready to go for them, two of Harwood's herders came into sight, both carrying a rifle. I pointed to the antelope and waved them to keep out of sight as they came toward us, and they came up carefully. Tracy, John and one of them crept one way, the other man and I another. Tracy and company soon fired and missed. They were too far off for me, so I sat down and waited for the boys to come back. We got together and had a talk. They were pretending to herd cattle, but had really come out after buffalo, which were reported to be drifting north. A man had seen two about five miles from our camp the day before.

While we were standing together, I saw antelope beyond us in a shallow canyon about two miles away—I carry a

field glass—and after the herders went off we went over toward them, got good cover and shot at them at about 125 yards. J. and I let Tracy have the first shot because he shoots a single shot cartridge gun, while we both shoot a Winchester. He killed, and John and I shot half a dozen shots apiece at them as they ran off, and got two more down and wounded three. I put for the team, soon got back, took Tracy in, and went after a wounded one. Turned Nig loose, when the antelope commenced to run off, and he killed it after a chase of a mile. When we got to him he was lying down biting it in the neck, surrounded by an admiring audience of Texas cows. He smiled with his tail when he saw us coming, and we gave him some water in a pan from our keg and put him and the antelope into the wagon and went back for another; but J. had killed one and lost the other, so we had to be contented with five. John drove for camp a roundabout way, because the ground was rough and Tracy and I went cross-lots on foot. We saw John stop and finally crawl out and shoot at five antelope that were coming out into the hills from water; and finally we got into camp and had two hours of daylight to get a good supper in. We went to bed soon after dark.

The wind rose in the night, and when we got up next morning it was snowing and colder than ever. I soon made up my mind that staying in the tent through a bad storm and having our horses stand out would be foolish, and told the boys that I was going to the dugout and that they could do as they pleased. In half an hour we had packed and started in a storm so severe that we could not see fifty yards. When we got to the dugout I acted as spokesman, and we soon had our horses under the lee of a big haystack and ourselves in the dugout. The thermometer stood at 5° below zero at 9 A. M., with a strong wind, and we stuck to the house for the day. I fetched in some of our provisions, butter, etc.—in fact, things that they did not have—and Ed. Newell, who officiated as cook, and I got up a wonderful New Year's dinner. The next day was not much better, but Tracy got uneasy, and he and John started out on foot, making me promise to meet them in the hils at about 2 P. M. with the buggy to fetch in the game. When I went out it was as cold as ever. The icicles hung to my mustache in a few minutes and I was very cold, though I had so many clothes on I could scarcely stir, and had half our blankets and robes in the buggy. I finally found the boys, saw them at a distance on a knoll. They had killed three antelope. We bundled them into the buggy and all rode home at a trot.

The next morning by 9 o'clock it was warm and pleasant, and we went out in the buggy across the bottom, through the water where the crossing was good, past hundreds of cattle that had come in to water, up a long slope and into the red grass hills. A drive of a mile and we came to the edge of a saucer-shaped prairie, and we could drive no further. The prairie was a mile wide and two long, and there feeding quietly were at least four hundred antelope in bands of from ten to fifty. We unhitched and made a plan of action. The wind blew directly toward us, and so John and I crept and walked along the hills to the left of the prairie, while Tracy worked down straight toward the nearest bunch. We had got well past the first bunch and crept up on the ridge as near as we could to the line we knew that they would run, when Tracy shot, and here came the band past us. We fired two shots apiece ineffectually, and just as they swung past a point Tracy fired again and down came a buck. Tracy was at least four hundred yards away. I ran out to the antelope, bled him and looked for the bullet hole. It was in the head, a little hole that showed Tracy's .40-caliber had done the work. Tracy was coming, and I put the point of my knife in the hole and gave it a twist. It looked like a .45 then. Up comes Tracy: "Who killed that antelope?" I silently pointed to the mark of the big bullet in the head, and Tracy gave a grunt. We were shooting for share and share alike, but of course everyone wanted to kill the most, and I regret to say that at times Tracy brags insufferably when he gets ahead.

John went back after the buggy, and Tracy and I went on and soon reached ground that was slightly rolling, with a band in sight about a mile off. They were moving up wind and uneasy, sometimes feeding a little, and we sneaked after them like coyotes, walking when we could, crouching along sometimes, and occasionally crawling on hands and knees for a hundred yards or so, but keeping out of sight. I have worn the skin off my knees till they bled three times this winter by this fool trick of crawling. We finally got to within about 225 or 250 yards, and as we could get no nearer both shot together at the word. Tracy shot his buck through the paunch, I missed. Here is where Tracy has the best of me with a .40-85 rifle against my .45-60. I can beat him at 100 yards, but when an animal is over 150 and I miscalculate the distance a little I shoot over or under, while his gun shoots on so flat a trajectory that he don't have to raise his sight anywhere within 200 yards. His gun is sighted for 125. The band ran off, but the buck soon stopped, and we went around him and approached him so that when he got up he would run toward the way the wagon was coming from. When he saw us he got up and ran just the way we wanted him to and stopped after about a half mile run. We had lots of chances to get a shot at 50 yards, but we kept driving him on till at last here came Nig over a ridge a mile away, close to a badly wounded antelope, John after them in the old buggy, the horses on a run, making the buggy bounce over the rough prairie. Nig soon had his buck by the leg and the buck showed fight. John stopped and looked on, and Tracy and I ran for the scene of action, but before we got there John had unhitched the team and tied them to the buggy, ran up and helped Nig kill the game and had a broad grin on his face as we came panting up. He had shot the buck as he was going back for the buggy. Hitching up and all getting in we soon found the other, but he had enough life in him to give Nig a run of about a mile, in a circle. Nig made a grab at his fore leg when he got up to him and threw the buck heels over head; before he got up, Nig was at the back of his neck and gave him a few big bites, and by the time I got to him he had about kicked his last kick, and we drove for the Harwood dugout with an antelope apiece. At least Tracy said so.

That night as we sat around the fire we heard the coyotes howl, and just as I opened the door to hear them more distinctly—for I like to hear them—down the wind came the long-drawn, hollow howls of a pack of big wolves. They were the first I had heard for several years, and it seemed pleasant, for it showed we were in a wild country. The next morning Tracy had another bashful fit, and nothing would do him but to move down the creek two miles and leave that nice dugout again, and to keep peace in the family we did so. We put the tent inside a roofless claim cabin belonging to the Harwood Company, and as it was late concluded to get some dinner before we went hunting. As we sat around the little fire drinking black coffee and eating some of that everlasting liver that T. is so fond of and even the name of which he rolls like a sweet morsel in his mouth, and which is rather poor fodder in my opinion, the old man gazed intently up and across the creek, and said, "After I eat some liver I am going up to kill one of them antilope yonder." I looked in the same direction and saw some light-colored spots skipping around that did look like antelope in color, but pretty soon I saw a large, dark object get up and charge around a little and fall down again. I got my field glass, and sure enough it was fifteen big wolves killing an A yearling. I remarked in an off-hand way that they were wolves, and it would have tickled you to see the boys drop the liver and go for their guns. I had to scratch, too, for they were off before you could say scat. We ran up the creek and the yearling got up and came down toward it, with the wolves worrying her. Several saw us and ran back for the hills, but five came on, not noticing us. As the heifer passed us at 125 yards one big wolf reared up, put his paws on her stern and commenced biting her at the root of the tail. The blood was all over his head and foreparts, and the heifer was all bitten to pieces. T. and I shot. I shot just over the wolf's back and T. also missed, and the wolves ran over the hills and far away. The heifer went down to the spring branch, waded in, drank, and then lay down. I knew that I could not save her life (she died that night), so I left her and struck for the hills, following John and Tracy, who were away ahead. I soon saw them stop and commence crawling to the right to get out of sight of a band of antelope coming down toward water; but they were too late, the antelope had seen them and ran back, and I made a run of half a mile and caught up with the boys, a little out of breath.

A short walk and we saw the band of antelope grazing quietly, and I had to crawl about three hundred yards and re-skin my knees. We got to within 125 yards, and when we shot, I killed dead, Tracy missed, and John's cartridge failed to explode, and so John exploded. We went on after the herd, and the boys walked me down in about two miles, as I had chased a runaway horse about five miles in the morning before we started, and was pretty tired before we commenced hunting. So I sat down and they went on and killed three of the biggest bucks I ever saw. By the way, out of thirty-four antelope that we killed on this trip, there were but three young ones; all the rest were six years old or over, and only six does out of thirty-four. John said that we were probably sent down by providence to kill them before they died of old age. We sent John back after the buggy by drawing matches to see who would go. He was gone a long time, and when he came back we bundled in our game and started for camp. The reason he was gone so long was that he had to take the tent down, as a man came to camp that wanted to roof the cabin. When we got in we had a roofed home to sleep in and the man was still at work. I got supper as quick as possible, liver as usual, at Tracy's special request, and invited Brown—the man who was fixing the house—to eat with us, which he did at once. I started after supper for the Harwood dugout, to bake some bread, for it is tedious work baking bread outdoors. I was invited to stay all night and of course accepted. Brown came up, and staid all night too, and nearly talked us all to death. I went to sleep trying not to listen to the monotonous drawl which that pestiferous sheepman inflicted on us; and when I awoke next morning he was talkings till—perhaps he stopped a few minutes to sleep, but I doubt it. As a singlehanded talker I will back Sheep Brown against the world for ten cents; but I won't stay around and judge the match. When I got to camp the boys had gone hunting afoot and left me a letter, written on a feed box, to follow them with the team. When I found them they had four dead and four wounded. Nig caught three of them, and we went to camp with seven.

We decided to start for home the next day, and at daybreak we started, with Tracy's lumber wagon stacked full and seven in my buggy. Passing the dugout we bid the Harwood hands good-bye and commenced pulling across the forty-five mile dry strip against a head wind. It was so cold that we had to walk almost all the way, and got to Crooked Creek at 12 midnight in a blinding snow squall. We overtook a man with a team on the road and we all went into camp together in the brush, made a big fire and cooked a lot of eggs that the new man had in his grub box. I ate a sparing meal of eight boiled, washed down with coffee, and slept tranquilly as an infant. When we awoke the sun was shining and we got some breakfast and started off on the home stretch. When we reached the Arkansas it was frozen. We crossed in good shape and soon were in my house, where liver is not the popular food. It is good to go hunting, and it is better to come home.

W. J. D.

FISH AND GAME IN MANITOBA.

Editor Forest and Stream:

In your issue of April 17 "Delta" was giving "S. E. B." a lesson in geography. About the lakes in Northern Michigan, I haven't much knowledge, but I am of the opinion that there is no lake in Manitoba called Birch Lake, certainly no very large one. He is quite right about the fish, but they were caught mostly in Lake Manitoba and in the Assiniboine River and Long Lake, which is an old bed of the same river; and he is astray in the distance from the railway, as Lake Manitoba is not more than ten miles from the Canadian Pacific Railway.

A person who has not actually been here can hardly believe how fish swarm in the lakes and rivers. I have not yet heard any one express a fear that the supply will ever become exhausted. I have seen the pike, or jackfish as they are called here, so thick in the Seine River, a tributary of the Red, which empties into the Red at St. Boniface, that the half-breed children would go to the banks with manure forks and throw them out on the shore, and even kill them with sticks; and that while the water was so thick with sediment that the fish could not be seen, but were killed with random blows. In the ditches along the C. P. R. from St. Vincent, in Minnesota, to Winnipeg, the jackfish are very plentiful and are caught with wire nooses on the end of a pole. The stupid fish will not move a fin while the noose is slipped over his head. The jackfish is not considered so good a fish as the whitefish, those caught in Lake Winnipeg especially, being very fine.

The spring here has opened fully two weeks earlier than last year. The birds are nearly all here. The chickens have wintered well, and from present appearances we will have splendid shooting next fall. This is the breeding ground of geese and ducks, and both are here in great numbers. Have no geese yet, but the ducks are very fine. We have larger game than those, of which I will have more to say at some other time.

NORTHWEST.

CARBERRY, Manitoba, April 25.

A FUND FOR GAME PROTECTION.

Editor Forest and Stream:

There are now before our Legislature at Albany two little jokers in the shape of amendments to the game laws which, if passed, will not only do away with the efficiency of all the game laws, but will eventually do away with all the game. One of them is to allow the farmers to snare and trap on their own lands, and the other one to prevent practically any search warrant to be put into operation, by giving the owner of the ice box ample time to clean out his ice box before any inspection takes place.

Is it not about time that the sportsmen wake up out of their lethargy, and take out of the hands of a very few interested demagogues the making of the laws? I am told that to-day or any other day of the year, open or closed season, there are to be had from any wholesale poultry dealers, game of all kinds, quail, woodcock or partridge. For an illustration to what I say, I send you herewith two quail, gotten this very morning from a wholesale poultry dealer.

If there is any "detective fund" needed anywhere, it is certainly for New York city, where the game laws are nothing but a dead letter. If you think yourself able to raise or start such a fund, I for one will subscribe to it at once to the amount of ten dollars. We have real sportsmen enough in this State to make this fund a perpetual fund of about one thousand dollars, to enable us to employ somebody to represent us ably and decently, and by able argument counteract the workings and doings of a few parties interested in having the game annihilated to enable them to sell it the whole year around.

G.

NEW YORK CITY.

PHILADELPHIA NOTES.

THE forest fires have extended over a large portion of the woodland section of our State, and I fear many nests of the ruffed grouse have been destroyed. In the Wind Gap section the hillsides have all been ablaze, and from the upper Lehigh and Pocono comes the news that the woodlands have been swept over by the blaze. The Pocono section has always been good grounds for grouse, and it was upon the plains of Pocono that the "heath hen" once existed. No better field for "pheasant" or ruffed grouse shooting could be found in Pennsylvania than the latter, but I fear all prospects of sport of this description for the coming autumn are destroyed, for an early hatching is now out of the question.

It is reported that Mr. John McCarty, who owns an extensive property six miles from Hagerstown, Md., has liberated 2,000 quail in his section, together with twenty-four pairs of English pheasants. This being correct, we may expect the region for miles around Hagerstown to be well stocked by the coming season, if the birds have been properly put out. It is a great mistake to put out more than one or two pair of quail in one particular spot; they should be well scattered to prevent any possibility of the birds running together into a covey or pack, in which case they very often remain in a flock and refuse to pair the first season, especially in a strange country.

Snipe shooting has been a failure hereabouts this spring. In the first place the birds were scarce, and in the second place we have had but little fitting weather.

HOMO.

CAMP TINWARE.

MY entire outfit for cooking and eating dishes comprises five pieces of tinware. This is when stopping in a permanent camp. When cruising or tramping, I take just two pieces in the knapsack.

I get a skillful tinsmith to make one dish as follows: Six inches on bottom, 6¾ inches on top, side 2 inches high. The bottom is of the heaviest tin procurable, the sides of lighter tin, and seamed to be water-tight without solder. The top simply turned, without wire. The second dish to be made the same, but small enough to nest in the first, and also to fit into it when inverted as a cover. Two other dishes made from common pressed tinware, with the tops cut off and turned, also without wire. They are fitted so that they all nest, taking no more room than the largest dish alone, and each of the three smaller dishes makes a perfect cover for the next larger. The other piece is a tin camp-kettle, also of the heaviest tin, and seamed watertight. It holds two quarts, and the other dishes nest in it perfectly, so that when packed the whole take just as much room as the kettle alone. I should mention that the strong ears are set below the rim of the kettle, and the bale falls outside, so, as none of the dishes have any handle, there are no aggravating "stickouts" to wear and abrade. The snug affair weighs, all told, two pounds. I have met parties in the North Woods whose one frying-pan weighed more—with its handle three feet long. How ever did they get through the brush with such a culinary terror?

It is only when I go into a very accessible camp that I take so much as five pieces of tinware along. I once made a ten days' tramp through an unbroken wilderness on foot, and all the dishes I took was a ten-cent tin; it was enough. I believe I will tell the story of that tramp before I get through. For I saw more game in the ten days than I ever saw before or since in a season; and I am told that the whole region is now a thrifty farming country, with the deer nearly all gone. They were plenty enough thirty-nine years ago this very month.—"*Nessmuk*" *in* "*Woodcraft.*"

WHAT THEY SAY OF "WOODCRAFT."

The Indianopolis (Ind.) *Journal*, April 30, says: "Poet as well as woodsman and philosopher, his writings possess a peculiar grace and worth and all that he so diffidently suggests is so wholesome, so very reasonable that the reader is won over to his view, unless indeed the reader be already a crank in matters pertaining to wood-life. This book is written for the masses, the author not caring to waste his efforts on men of means sufficient to have everything their own way. To those who care to enjoy a summer outing in the best, easiest and cheapest manner, this book of hints is indispensable. It is woodsy and wholesome in every line. The author's fifty years of life among the summer forests fits him for what he has at last undertaken; a guide to the best, easiest and most enjoyable manner of preparing to spend a vacation in the woods. The investment of one dollar here will make rich returns."

"Seneca" in a private letter praises the book in this wise: "'Woodcraft' certainly is a work that stands without a peer in its field, as was only to be expected from the years of experience and habits of observation of its author. Its main value is in its thoroughly practical instruction, and the veriest tenderfoot ought to enjoy camp-life as thoroughly with this book at hand as the oldest hunter. 'Nessmuk' hits me in a tender spot in his talk about frogging and about still-hunting from the patient sitting on a log, for I have been there in both cases to the fullest extent of enjoyment possible, and these two particulars have been a hobby of mine ever since I can remember. Old 'Nessmuk' never wrote anything that showed his happy style better than the description of his ten days' tramp through Michigan, which reads like a veritable fairy tale."

MARSHALLTOWN, Ia., May 4, 1884.—A few days ago one of our best shots, Mr. Hank Bruner, spent the day in a call on the *Scolopax*, and returned with a bag of 42. Reports last few days are of the scarcity of birds, and opinion prevails they have continued northward.—DISNER.

THE PERFORMANCE OF SHOTGUNS.

Editor Forest and Stream:

"Spicewood" is right. An overcharge of coarse powder in any gun 20 inches and under and 10-gauge and under, will not all burn when discharged. An "overcharge" would be 5 drams in a 10, 4½ drams in a 12, and 3 in a 20-gauge. Shoot such charges in the dark and observe the long stream of burning powder beyond the muzzle. It will not be the mere red heat of the "dirt" or "powder scales left in the gun from former charges," but will exhibit a long blaze of burning powder. Clearly, then, the powder does not all burn in the gun. If all the particles or grains were not ignited at once, nor while traveling through the barrels, would it be unreasonable that some were not, after they left the barrels. This experiment has been tried time and again. Spread sheets of paper on the ground twenty feet long and four or five feet wide; shoot such overloads of coarse powder over them horizontally, and after a few shots you can gather from the sheets a charge (small) of unburned powder, and fire it off in the gun again. The only remedy for this waste, is a medium charge of coarse and fine powder mixed half and half in gauges ten and over, and in lesser gauges a medium charge of fine powder. Such medium charges as will all burn in the gun, or nearly all, will be likely to give you the best pattern and penetration of which the gun is capable.

In our eagerness to make others admire our guns and our ways of shooting, holding and loading, we frequently fall, unintentionally, into serious errors. For instance, "Sportsman," in the same paper (May 8, 1884) in his excellent article on "Two-Eyed Shooting," says: "When yout get a gun to fit, as per above rule, you will find that you will undershoot rising birds and birds at long distances; therefore, it is advisable to get a gun that shoots a little higher or 'nearly' a fit. Having selected your gun, you have only, when going to shoot, to look at the object to be shot at intently, and until you fire, with both eyes open. Throw up the gun, and from the moment of throwing the gun up to the time of discharge *let there be an interval of about two seconds.*" (The italics are mine). In conclusion, "Sportsman" says: "The advantage in this kind of shooting is apparent in pond duck-shooting so late in the evening that one cannot see the sights of his gun," etc. Now, if his advice to hold the gun still about two seconds before shooting only applied to duck sitting on the water, or any bird not in motion, no doubt he is correct; but it does not appear to be so limited, for he speaks of "snap shots" and "birds rising, and birds at long distances."

In the latter event, if the gun be held after it is thrown up to the shoulder two seconds and the bird flying at the rate of only 40 miles per hour, it would have flown in two seconds a little over 39 yards. If at 60 miles per hour (about the average speed of a scared bird on the wing) the distance flown in two seconds would be over 58 yards. Add to these distances the space between the gunner and the bird at its rise, or at the time when the gun was thrown up to the shoulder (generally from 20 to 40 yards) where would the bird be by the time the two seconds interval had expired? Evidently from 70 to 100 yards away, too far to hit or kill with any degree of certainty, especially in cover. Two seconds of interval is too much. It would not do even if he had advised the carrying of the gun along with the flight of the bird and shot 20 feet ahead of him. D. W. C.

CLEVELAND, Ohio, May, 1884.

Editor Forest and Stream:

I think that a few facts may not be amiss—and, by the way, let us have facts. By facts I mean actual experience at the target with a counted charge of shot and a measured distance of 40 yards and a circle of 30 inches diameter. All of these long shots in the field prove little or nothing, for they may be made by a gun that don't shoot central, and the shooter happening to hold in the right place, the bird is killed; then some one paces off the distance, taking long steps, and it is 45, 50 or 60 yards. "Almo" tells us about killing game 100 yards with No. 10 shot. Any one can satisfy himself as to the killing power of No. 10 shot at this distance, by measuring 100 yards and shooting his gun at a target 6 feet square, using No. 10 shot. At this distance the killing force won't be very great, neither will the killing circle be very large. Many a bird have I killed and thought it a long shot until I measured the distance, and some of the writers will find 60 yards is a long way, to say nothing about these 100-yard shots which we hear of.

For years I have thought a gun should be somewhat in keeping to the caliber of the man using it, and don't think it advisable for any man to load himself down with a gun that he cannot carry all day and handle with ease. A man who uses a 12-bore, 28 to 30-inch barrels, right barrel cylinder, left barrel choked and sticks to the same gun after he has targeted it and knows the proper charge to use in it, is a hard man to beat. Neither can I see any decided advantage in using a 10 bore, 8½-pound gun, for the 12-bore of the same weight will kill just as much game, and there is an advantage in the 12-bore as the ammunition for it costs less. Not long since I saw a letter from a prominent officer in a Western fort, who wanted an 8-bore, 8½-pound built, claiming this was the gun to use, and that the time would come when no other bore or weight of gun would be used. Perhaps that time will come, but doubt it a good deal, and I also know that no good maker would build any such gun, as the proportion of metal and wood differs so much from the caliber of the gun that the beauty and balance would be entirely out of place. I think that a 10-bore ought to weigh from 9½ to 10½ pounds, for this makes a good proportion and a good-looking gun, and 32 inches is long enough to balance, and do not see how there is any benefit to be derived in using a 10-bore, 12-pound gun, as the 10½-pound gun will shoot just as well and will burn all the powder necessary and all that will burn to good advantage, yet some say a 10-bore, 12-pound gun is the thing to use. When you get over 10½ pounds the caliber should be 8 and the weight 12 to 14 pounds and barrels 32 to 34 inches in length. To illustrate the way guns are sold, I relate the following, which was told me by the dealer himself: A customer came in to buy a gun and selected one that suited him, but wanted to see it shot. The gun was taken into the backyard and a target placed against the building. The proprietor took the gun to the shooting point, which was forty measured yards. This was a long, narrow place between two buildings. Back of the store there was a square place before you entered this narrow lane. Telling his customer to step around the corner, he goes to the forty-yard mark and then calls him to look and see where he then stands, which he did; then motioning him back, so as not to be in the way of the charge, he (the proprietor) runs up about ten yards, fires and runs back before his customer can see where he fired from. The buyer's eyes are upon the target, which, under these circumstances, is a decidedly good one, being made at thirty and not forty yards, as the customer thinks. Being well satisfied, he takes the gun home and tells all his friends what a wonderful shooting gun he has, and produces the target to prove it. But if he should happen to shoot his gun at forty yards and with a counted charge, it would open his eyes.

Then, again, some one gets a gun, and they tell him the target was made with No. 8 standard, when, if the truth was known, it was No. 9 "trap shot." It is time this humbuggery was stopped. With one exception, don't know of a single American maker (and very few English) that can tell by actual count what one of their guns will do. Each one is anxious to outdo his opponents, so puts in a heaping measure of shot, shoots his gun a few times, and marks the highest pattern (not the average) made; and when the gun is actually tested it falls short of what it is marked. Who will be the first maker to give us guns targeted as they should be, and have done with this guesswork? If all the makers adopted this plan, then one could make a comparison of any gun and tell what it ought to do. I think this would save the FOREST AND STREAM answering so many times the question, what ought my gun to do? Personally I do not own a gun, and have long hoped to own one of these wonderful guns that shoot so far, kill their game so dead, and make such large targets; and if you know of any such gun for sale, I will give a good round price for one of them. "Octo" did not accept my offer, as he has none to sell, and says he did not claim a good gun would average 440 in a 30-inch circle at 40 yards. Had he made his promised experiments before saying "that a good gun at 40 yards, with 1¼ No. 8 Tatham's shot (400 to ounce), and 5 drams of powder, should put 375 to 440," he would never have written any such thing for this reason.

A short distance from where I now write there stands a shooting horse, and pointing north is a target 40 measured yards. Over this horse have been shot the following different makers' guns many is the time and oft: Westley Richards, W. W. Greener, Charles Daly, Clabrough, Scott, Dougall, Remington, Parker, Colt, John A. Nichols, and many others, and as good guns as these makers can make, and not one of them did or will do what the maker claims a good gun ought. And if any of his friends have a gun that will average these figures I would like to purchase it, and will pay more than it is worth. Some time ago a noted English maker gave a gun as a prize, made to order, for the winner in one of our United States shoots. Well, the gun came and it was a "daisy" to look at, and according to all reports could outshoot any gun. A friend borrowed it and brought it to shoot over this same horse. A noted American maker also brought one to shoot against it. Well, the American maker's outshot it, but the shooting of both was below what either was marked. The American maker said he had better shooting guns in stock, but took the first one he came to. This looks strange when there was so much talk about the shooting of this gun. At that time the American maker had never shot one of his guns at 40 yards (and don't now), and at that time shot all of his guns from the shoulder, which is a very uncertain way. He now uses, I am told, a shooting horse. Yesterday I asked a good gunmaker why it was that I could never get one of these guns that do such shooting and what a good gun ought to do. "Well," he said, "with all of your experimenting haven't you yet learned that these guns are very, very scarce?" "The best gun I ever saw is one I have heard them tell about."

HAMMERLESS.

Editor Forest and Stream:

Perhaps a record of some actual experiments might be more interesting than my views and opinions.

After reading a well-known English maker's book on chokebored guns it occurred to me to test whether he could make a gun for a moderate price which would do as well as he says in his book guns ought to do. A gun to be of any use must be a hard hitter as well as able to give a good pattern. I therefore wrote to ask if he would make me a light gun, 12-gauge, weighing not over 7 pounds, and with barrels not over 28 inches long, that would throw 70 per cent. of the pellets of an ordinary charge of shot into a 30-inch ring at 40 yards and also penetrate at least 30 out of 60 sheets of a Dennison pad. The answer was "Yes." The gun was ordered and tested for me by a careful operater with the following results, which I need not say were very satisfactory:

RECORD OF TESTS

with a 7-pound, 12-bore, 28-inch barrels, double hammerless Greener, treble wedge-fast, No. 19,848; 16 shots, all fired at 40 yds. into 30-inch ring; Dennison target and pad of 60 sheets, from ordinary rest, wind light. Powder used: Dupon't Eagle Ducking No. 2, two pink-edge wads over powder; one Baldwin over shot. Shot used: 1½oz. of Spark's Philadelphia chilled and soft No. 6 shot.

No. of Test.	Right or Left Barrel.	Powder Charges.	Shot.	Pattern. Total number of pellets in charge.	Pattern. Number inside of 30in. ring.	Pattern. Percentage.	Penetration. No. sheets of Dennison's pads.
1	R.	3 drams.	Chilled.	253	195	.77	28
2	R.	3 drams.	Soft.	245	218	.89	27
3	L.	3 drams.	Chilled.	253	175	.69	30
4	L.	3 drams.	Soft.	245	238	.97	25
			Average.....			.83	27
5	R.	3¼ drams.	Chilled.	253	149	.59	31
6	R.	3¼ drams.	Soft.	245	226	.92	33
7	L.	3¼ drams.	Chilled.	253	214	.87	31
8	L.	3¼ drams.	Soft.	245	198	.80	32
			Average.....			.79	32
9	R.	3½ drams.	Chilled.	253	169	.67	36
10	R.	3½ drams.	Soft.	245	198	.80	30
11	L.	3½ drams.	Chilled.	253	163	.64	42
12	L.	3½ drams.	Soft.	245	195	.80	33
			Average.....			.73	35
13	R.	3¾ drams.	Chilled.	253	145	.57	40
14	R.	3¾ drams.	Soft.	245	223	.91	32
15	L.	3¾ drams.	Chilled.	253	181	.71	40
16	L.	3¾ drams.	Soft.	245	167	.69	34
			Average.....			.72	36

Total averages { Right barrel..... .765 and 32
Left barrel..... .771 and 33½

Several things are worthy of notice. First, the right and left barrels shoot nearly alike, the left a little the better. Second, chilled shot has the greatest penetration, but soft shot makes the best pattern. Third, as the charge of powder is increased the pattern is not so good but the penetration increases.

I finally adopted a standard charge, consisting of 3¼ drams powder and 1 ounce soft shot. This averages about $\frac{80}{100}$ for pattern and 35 sheets penetration. I would suggest that when careful experiment has determined the best charge for any gun it should be engraved on the gun, or on a plate set into the stock, as the information is too valuable to be lost.

This gun makes very regular patterns, and inside of a 20-inch ring at 40 yards leaves no holes the size of a quail uncovered by shot. Owing to its barrels being comparatively short and heavy at the breech, it balances well, and is altogether the best gun for upland shooting I ever owned, while its cost was moderate.

Allow me to suggest that you take the above form, or with improvements, and ask your correspondents to give actual tests of their guns. Then if tabulated by you and published would give us a common standard of comparison.

EXPERIMENTER.

SEABRIGHT, N. J.

Editor Forest and Stream:

In reply to gun queries in your valuable paper of April 24, by "E. W." First, that a 16-bore gun will kill quite as far as a 12 or a 14 bore provided they are bored on same principle and are properly charged; but in 20-bore the force of the shot would be greatly diminished—the range shortened. Second, small-bore barrels are made shorter than barrels of larger bore to give proper pattern, as a 16-bore barrel 30 or 32 inches long would shoot too close for any use, while a 10 or 12 bore 28 inches long would be just the reverse, the pattern would be too open. Third, there is no use in having barrels longer than 30 inches in 12-bore or 32 inches in 10-bore, as long barrels will produce the same effect as small bores—the force of the shot would be very much lessened. Fourth, in 20-bore gun, barrels 28 inches, would not have them choked under any consideration; but if 16-bore would have right barrel cylinder and left barrel modified choke. R. H. M., JR.

EDGEFIELD, S. C.

Editor Forest and Stream:

I use a 10-bore, 8-pound gun, and load my shells with a thin Baldwin card wad on top of the powder, next an Eley's ⅜-inch white felt wad, then another Baldwin card wad, and lastly a thin cardboard wad over the shot. "Byrne," in issue of April 24, has expressed my views exactly about those persons who can "kill every time" at 50 to 75 yards. An occasional good shot does not justify a man in saying he can do the same thing every time. In many cases no doubt they magnify their feats in order to give spice to their tale, yet how much more pleasure is derived from an article in which you know the simple truth is told, and upon which you can rely. WOODCOCK.

PRINCETON, N. J.

THE CHOICE OF HUNTING RIFLES.

Editor Forest and Stream:

I would be much obliged if you or some of your correspondents will be so kind as to inform me: First—With what rifles were the extraordinary off-hand scores made in the New York shooting gallery, at 200 yards, as recorded in your paper for March 13? Second—Whether there are any American sporting rifles from .40 to .45-gauge which, with a charge of powder not less than one-third the weight of the bullet, can be depended upon when fired from a rest, to put several successive shots into a square of six inches width at 200 yards? If so I would be glad to know the names and addresses of the manufacturers.

Judging from the published targets there is no rifle which seems to me to make such fine shooting at sporting ranges as the Maynard, the .40-gauge of which takes a charge of powder one-fourth the weight of the bullet, and I am much inclined to doubt if this proportion can be exceeded without spoiling the accuracy at 200 yards. I have not yet seen an express rifle which can be relied upon to hit a deer in the right place at distances beyond 150 yards, and by the words "rigt place," I mean not merely the heart, but anywhere in the thick part of the lungs, a wound which will cause an animal to drop quickly through suffocation even when made by a bullet of moderate size. A deer hit in the wrong place, such as the bowels, by a bullet of the largest size, will frequently run for miles, and eventually escape to die uselessly and in torture. While, therefore, appreciating a flat trajectory very highly, I would never attempt to gain it by a sacrifice of accuracy. I do not consider that any one ought, for sport, to fire at an animal beyond 200 yards, but whatever the sporting range may be, the rifle ought to be capable of hitting, at that range, the spot aimed at.

As a very interesting controversy about the best kind of hunting rifle has been going on in your paper for some time past, perhaps I may be permitted to give the result of my own experience, having killed quantities of large game during a residence of several years in India, and a few deer in America. I have used eight different rifles, varying in gauge from a .36 express with 20 grains of powder and 150 grains of lead, to one with a round bullet weighing 13 to the pound and 90 grains of powder. As an all-round weapon, to be constantly in the sportsman's hand, for use in both thick brush and open ground, there is nothing made in the British market equal to a double-barreled central fire .45 express about nine pounds weight, with a powder charge not exceeding 125 grains and a hollow bullet of not more than 300 grains, hardened with one-tenth or one-twelfth part of tin. It is light enough to be carried all day with comfort by a man of average strength; it requires when fired at an animal's shoulder, no judging of distance up to 150 yards, and when properly handled, has been proved by plenty of good sportsmen to be powerful enough for killing tigers and polar bears, which are doubtless as tenacious of life as the American grizzly bear. With a stock like that of a shotgun and held against the shoulder, the recoil is not unpleasant, and is not even felt when firing at game. Doubtless it would bruise severely if the rifle had a short stock with crescent-shaped butt and were held at the upper arm in the American fashion. The latter system I personally prefer when the charge is light in proportion to the weight of barrel, for mere off-hand shooting at a mark, but it is not good for quick shooting at game.

With regard to the weight, the late Capt. Forsyth, of the Indian army, in his book upon the sporting rifle, said that he found 9 pounds about as much as an average man could carry for any length of time and use effectively. My own experience agrees with his, and when out shooting in India with men who had rifles of 10 or 12 pounds weight I have always noticed that they often gave them to attendants to carry, and thus risked losing good chances of game. I am of average strength, and was in the habit for many years of walking in the American bush and Indian jungles, frequently for eight or ten hours daily, yet found that when fatigued I could not use a rifle of even 9½ pounds with the same quickness and precision as one of half a pound less weight. Taking, then, 9 pounds as about the weight, it is difficult to see how any gauge can be equal to .45. If, for

instance, it be made .40, with the usual charge of 80 grains and a hollow bullet of 220 grains, the trajectory up to 150 yards is equally good, and, from the diminution in recoil, the accuracy may be slightly better, but the immediate effect of the bullet is not sufficiently paralyzing upon dangerous animals like tigers or bears, or even upon deer the size of the American elk.

If, on the other hand, the gauge be increased to .50, there is only a choice between two evils—either the powder charge must be so much smaller in proportion to the lead that the trajectory is spoiled, or the recoil must be so great that the accuracy is spoiled. With only 125 grains of powder and a hollow bullet of 340 grains, a .50 express must weigh at least 9½ pounds to be fired with any comfort, and cannot be used beyond about 120 yards without making allowance for the curve of the bullet's flight.

Rifle makers' assistants, accustomed to heavy charges, and employed constantly in sighting rifles, will make good shooting from a dead rest after fixing themselves in a certain position, even with light weapons, but a sportsman who is often obliged to fire quickly without thinking of the way he holds his rifle, will find a marked difference in the practical accuracy obtainable with great instead of moderate recoil.

For many years I used rifles with round bullets of about an ounce in weight, and even now am by no means sure that they are not, on the whole, equal to expresses for shooting in thick woods. Their striking surface is sufficiently great for most purposes, and they cut through twigs which will turn conical balls out of their course, while their penetration is so great that they usually go clean through large animals lengthwise. In nine-pound rifles they can be made almost as accurate as express bullets up to 150 yards, and with a very flat trajectory up to 110 yards.

Of late years I have chiefly confined myself to two rifles for game shooting, viz.: a double central fire, 16-bore, and a "Cape gun," with the right barrels 16-gauge and smooth, for shot or ball, and the left .45 express. The latter weapon was manufactured to order by one of the best English makers, for a purpose which it completely fulfilled, that of shooting for food in remote districts, where it was often uncertain whether large or small game would be met with.

The double rifle weighs ten pounds, and has barrels 26 inches long. The bullets are round, weighing 472 grains, and are fired naked with from 96 to 100 grains of Curtis & Harvey's No. 6 powder. One of Eley's felt wads $\frac{7}{16}$ of an inch thick, is placed between powder and bullet. Fired from a rest the rifle will hit a square 4½ inches wide almost every shot at 100 yards, and I once put 14 successive bullets into that space from alternate barrels without any rest, but sitting down with an elbow on each knee, the 100 yards being measured, and the charge 110 grains of powder. At 150 yards the accuracy decreases considerably, the bullets being seldom in a smaller space than a 10 or 12-inch square, and the best shooting I have made from the sitting position was to put 7 successive shots into an 8¼-inch square. At 200 yards no reliance can be placed upon the rifle.

The express barrel of the Cape gun takes brass conical cartridge cases holding from 110 to 125 grains of powder, over which are placed a card wad, a lubricated felt, and then another card. The bullets are cast slightly too large and passed through a swedge. They have cannelures for holding lubrication and are used naked. They are of three kinds—a hollow conical weighing 270 grains, a solid of the same weight with a flat point like that of the Winchester repeater, and one with a hollow less in diameter than that of the first and weighing 290 grains. At 100 yards there is no difference in the accuracy of the three bullets, but the solid one performs best at 200. Eley's machine-made papered bullets fit equally well, but do not give better shooting, and any number of shots can be fired at a time without the least necessity for wiping out.

The rifle weighs 8 pounds 12 ounces, and the barrels are 28 inches long, with rebounding locks and pistol-grip stock. Fired from a rest a number of successive bullets go into a square 4½ inches wide at 100 yards. The best continued shooting from the sitting position that I have made was putting four bullets into a square 3½ inches wide by 2½ deep, and six into 4 wide by 6 deep. At 150 yards I have not been able to shoot closer than four bullets into 9 inches wide by 5 deep, six into 11 wide by 5 deep, and six more into 11 by 5¼ on the same occasion. I once put five bullets into 4½ by 5¼, but the sixth struck six and a half inches below the square. At 200 yards the shots are seldom less than about 20 inches square, and the best work I have done was putting six into 17 inches wide by 9 deep. The bullets make a curve 3½ inches high between the muzzle and 150 yards, and the block sight is so arranged as to make them strike 1½ to 2 inches high at 80 yards and drop the same at 150.

Although shooting from the sitting position gives rather inferior results to that from a fixed rest; it will be seen from the above account that the accuracy of the rifle falls off very materially at 200 yards, and almost every express has the same defect, according to my experience. The problem yet to be solved in hunting rifles seems to be the proportion of powder to lead which can be used without producing inaccurate shooting. I. I. M.

LONDON, England, April 16, 1884.

Editor Forest and Stream:

With respect to "G. H., M.D.'s," communication in your issue of March 27, it may interest him to know that there is a miniature rifle cartridge made by Messrs. Kynoch for the Morris tube, which is almost perfect for the work it is intended. The little cartridge of drawn brass is bottle-shaped, .295 reduced to .230, central fire, ¼ of an inch long; it takes a charge of 5 grains powder and a hardened bullet of 40 grains; .45 inch long, perfectly cylindrical at its rear end, which is not reduced to fit the shell.

This bullet has no cannelures for lubrication, a jute disc and greased wad doing this work most efficiently. It is cupped at the base. This cartridge is said to have an initial velocity of over 1380 f.s., and to carry well to over 500 yards in the Morris tube. It makes splendid practice, and has a fairly flat trajectory up to 100 yards. I was shown a tube out of which more than 4,000 shots were said to have been fired, and it showed scarcely any signs of fouling. The little bullet penetrated over three inches of pine at thirty feet and splashed on an iron plate behind. There is a shorter cartridge, taking 3½ grains of powder with the same bullet. A cartridge of this kind, lengthened to take a bigger charge, would, I think, satisfy "G. H., M.D.'s," wants. It is beginning to be used a good deal this year for rook rifles, and is displacing the large sizes in this country. The most popular sizes here are the .295 or .300, which carry 10 grains powder and 80 lead, and are very accurate at short ranges.

The Morris tube is used with the Snider or Martini rifles, for musketry instruction; it fits inside the rifle barrel, and is in two pieces. The tube itself is inserted from the muzzle, and its breech end from the breech of the rifle, and the two are then screwed together. A collar screwed on to the muzzle of the tube keeps it steady. An extractor is worked by that of the rifle, and ejects the cartridge on the breech of the rifle being opened. A tube of .300-bore can be fitted to shotguns. The Morris tube is rifled only for about half its length, the rear half is smooth-bored, on account, I suppose, of manufacturing difficulties, as it is so long. The cost of the .230 cartridge is 2s. 6d. and 3s. 9d. per hundred, that of the .22 rimfires being 2s.

Perhaps the following particulars of the usual weights, charges, etc., of English express and other rifles may be of interest to your readers.

Caliber.	Weight, Pounds.	Charge of powder, grains, approximate.	Weight of bullet, grains, approximate.	Remarks.
Express. .36	6 to 8	40 to 50	150 to 180	Flat trajectory to 140yds. Suitable for small antelope, bustard, etc.
.40	7 to 8½	80 to 110	180 to 220	Suitable for antelope and small deer. Very flat trajectory and high velocity.
.45	7½ to 10	95 to 150	270 to 320	Suitable for all antelope and deer, but many prefer the .500. Trajectory flat to 200yds. with large charge.
.50	8½ to 11	120 to 160	340 to 390	The best "all-round" rifle for all game. Great penetration with solid bullet.
.577	10½ to 12½	160 to 180	480 to 500	Suitable for dangerous game. Very effective with solid ball.
Large bore. .73 (12-bore)	10 to 13	160 to 200	580 spherical to 800 conical.	Suitable for dangerous game, preferred by some to the heavy express.
.77 (10-bore)	About 14	220 to 270	700 spherical to 1,000 conical.	Suitable for heavy thick-skinned game.
.835 (8-bore)	About 16¼	270and over	860 spherical to 1,360 conical.	Suitable for heavy thick-skinned game.

The barrels of the small bores are usually of steel, those of the large bores mostly of twisted metal. Their length is from 26 to 28 inches. Double rifles usually weigh a little more than single. Solid bullets weigh from 20 to 60 grains heavier than hollow-pointed ones. The muzzle velocities of the .40, .45 and .50 expresses with the heaviest powder charges are close on 2,000 f.s. Recoil with the expresses is not severe, but they require a long, straight stock, and should be held properly; with the large calibers recoil heel plates are necessary.

The following tables (see the *Field*, Sept. 8, 1883) show the powers of a .45 express and long-range rifle in comparison:

Rifle.	Weight—lbs.	Length of barrels—inches	Powder—grains	Bullet—grains	Proportion of powder to lead	Muzzle velocity—ft. per second	Striking energy—foot-pounds
.45 double barrel express by Messrs. J. & W. Tolley	10	26	150.87	274	1 to 1.822	2,000	2,431
.45 Gov't Martini-Henry	9	333-16	85	480	1 to 5.64	1,315	1,841

Rifle.	Velocity at			Time of Flight (seconds) to			Striking energy at		
	60 yards	100 yards	150 yards	60 yards	100 yards	150 yards	60 yards	100 yards	150 yards
.45 Express	1759	1611	1439	.09612	.1675	.2661	1880	1578	1238
.45 M.-H.	1222	1167	1104	1419	.2418	.3759	1590	1450	1297

Rifle.	Heights of trajectory in inches.			
	At 100yds. range.		At 150yds. range.	
	40yds.	60yds.	60yds.	80yds.
.45 Express	1.2672	1.3260	3.1560	3.4176
.45 Martini-Henry	2.6712	2.7384	6.4128	6.8208

The 276-grain bullet loses velocity very rapidly, and much better work would be done by a heavier ball of about 320 to 350 grains weight, the loss of flatness of trajectory would be practically nothing, and the gain in striking energy at the longer sporting ranges very great. Double rifles shoot well enough at sporting ranges. A double .40 express, by Messrs. D. & J. Fraser, put seven out of eight shots into a 3-inch bull at 110 yards at one of the Wimbledon competitions a few years ago; but I have mentioned this subject already in one of my letters. Lancaster's four-barreled .45 express, a beautifully made, though very costly weapon, is only 10 pounds in weight, and very handy. Its action is similar to that of a double action revolver, the hammer, an inside one, being cocked, and each barrel fired in turn by the trigger; but the "pull off" is beautifully light and better arranged than that of any double action revolver. BENGAL SEPOY.

LONDON, Eng., April 7.

SNIPE ABOUT ROCHESTER.—Rochester, N. Y., May 8.—Those of your readers who are opposed to spring shooting will not be pleased to hear the fact that the snipe shooting has been excellent in this county the present season. There was the usual strife among sportsmen to get the first bird, and numerous trips were taken to the fields before the snipe had left the south. But the reward of the ardent ones came at last, and for the past two weeks they have been knocking the birds right and left, in numbers sufficient to satisfy any reasonable person. The best bag I have seen was in the possession of Secretary Hartman of Greece, who brought in thirty-six as the result of one day's shooting. Various other men have been almost as successful in thinning the ranks of the feathered passengers on their way to the breeding ground. We have all done it, but it does not seem right to carry out in this way the sentiment "after us the deluge."—E. REDMOND.

COST OF SHELLS.—Washington, D. C., May 9.—*Editor Forest and Stream:* Yesterday, when I began to lay in my supply of ammunition for spring bay bird shooting, I found, to my dismay, that the paper shells had risen, and the rise took my breath away. The second grade, N. M., for which I had all along been paying 65 cents a box, had jumped to 95 cents. Now I for one deplore that the speculators have turned their attention to the sportsmen's goods. If they succeed in this venture there will soon be a corner in shot, powder and caps. I kicked and bought nickel shells, and I hope the fraternity of sportsmen will combine and not submit to any imposition.—CHASSEUR.

"WAKE ROBIN."—Will Mr. Riddick allow me to correct a slight misapprehension into which he has fallen, in his pleasant article "Concerning Robins," in the issue of FOREST AND STREAM for May 1, of the current year? The title of Mr. Burroughs's book, "Wake Robin," is derived, not, I am assured, from *Turdus migratorius*, as Mr. R. states, but from the flower *Trillium canadensis*, one of spring's earliest harbingers in New England, and which is known to Northern children by the name of "wake robin." Of the derivative philology of the name I am not sure, but think it may possibly be derived from the early coming of the bird.—H. P. U.

BUFFALO SPRING SHOOTING.—Buffalo, N. Y., May 6.—The spring duck shooting is over and our shooters have oiled and laid away their big duck guns for the summer. The shooting on the whole was not satisfactory. The ducks were few and far between, while there was no lack of hunters. One morning a few days before the season closed, your correspondent shot nine bluebills and whistlers, which was not considered bad under the circumstances. Swivel guns have been used by certain parties living on the Canadian shore, slaughtering and driving away a good many ducks.—W. A. A.

BELLEFONTAINE, O., April 22.—A gun club was organized here last evening with thirty members, for the protection of game, trap-shooting, etc. The club will be known as the Fountain Gun Club of Bellefontaine, O. The following officers were elected for the ensuing year: President, J. C. Brand, Jr.; Vice-President, H. C. Garwood; Secretary, C. C. Lane; Treasurer, J. H. Hornberger; Executive Committee—W. H. Taylor, S. Faris, B. Laport.—C. C. LANE, Sec.

IOWA PRAIRIE CHICKENS.—Woodbine, Harrison County, Iowa, May 5.—Prairie chickens are more plentiful than they have been in a number of years, so those that live here tell me. Some quail left, too.—L. A. R.

Sea and River Fishing.

CAMPS OF THE KINGFISHERS.

Black Lake, Michigan.

PART I.

UNCLE DAN SLOAN and the Writer, with four other good fellows, spent our summer vacation of 1882 on the old stamping grounds, the ever lovely upper and lower waters of the Intermediate chain of lakes in Charlevoix and Antrim counties, Northern Michigan. It appeared to be an off year with the fish, and the trip did not prove as entirely lovely and satisfactory as some of our former camps on the same chain, so that when Brother Bert. Hughes, of Hamilton, Ohio, in November of the same year, filled Jim (ye Editor) chock full of marvelous yarns about the beauties and charms of Black Lake, the prodigiousness of the black bass stiffening its waters, and the enormous proportions of some of the *Esox nobilior* infesting its dark depths, the old place lost its sweetness; the current of our thoughts was changed, and we resolved to kindle our flickering camp-fire somewhere on its, to us, unknown and unexplored shores.

When Jim had been charged until he could hold no more, he hied himself down to the city to pour into the willing ears of Old Knots (the Scribe) and I the wonders and attractions of this lake of the dark waters, and soon after we paid Hughes a visit and received from him many choice morsels of information, that Jim, in his inability to hold everything, had failed to bring down and impart to us. Hughes, with a party, had fished this lake a couple of weeks in September of that year, and had some wonderful stories to tell of the size and numbers of black bass and pickerel taken, notably of an afternoon's sport when they took fifty-six fish with six frogs, and how their lines were repeatedly snapped and their rods smashed into countless fragments by powerful but unseen fish that never stopped to say good-bye when they started for some other part of the lake, or even to drop them a hint about the inefficiency of their tackle, or the masterly skill they displayed in not stopping them. And then he told us that he had seen three or four fingerling trout in a spring branch that flowed into the lake within a rod or two of their camp.

This meant trout, at least in some of the streams in the vicinity, and when he told us that a settler, their nearest neighbor across the lake, had given them a pointer on a stream, seven or eight miles from the head of the lake, that literally swarmed with grayling—so thick in fact that the water had to be changed twice a day to keep them from famishing—we were ready to throw up our hats and shout "Eureka," or anything else that would serve as a safety valve to ease the pressure that was nigh bursting our "piscatorial bilers." It appeared, however, that the pointer had been given them only a day or two before breaking camp, as is usual in such cases, and they were unable to pay the stream a visit.

According to the settler's story, the tangles of this stream, the "Occueoc," had never been penetrated except by a stray mossback now and then. No city feller had ever thrashed its quiet pools with "a sunfish pole and a bunch o' fool fethers," or polluted it by squirtin' tobacker juice into its limpid waters.

It was wild and pure almost as when the sun first shone

on it, and we promised ourselves then and there that we would pay our respects to it and take out a sufficient number of its silvery treasures to give the remaining few a chance to get an abundant supply of a purer flow of water without changing.

We were referred to this settler, a Mr. O. S. Merrill, for further information and particulars, and I at once opened up a correspondence with him. He corroborated all of Brother Hughes's statements and put in a side winder occasionally on his own hook, which so increased the fever in us that by the time spring opened, a trip to Black Lake was a foregone conclusion, and our preparations were made to that end.

The last "sockdologer" we got from this guileless moss-back, in May, was in the shape of a string inclosed in his letter, which, he said, represented the length and girth of a black bass taken in the lake a short time before. The string was 31 inches long, the length of the fish, and 24 inches of it, to a knot tied as a marker, was the girth around "the minnow and frog compartment." Great Scott, what a bass! Not an ounce under 14 pounds.

Does any brother of the rod, with the spirit of a green frog in him, wonder that the fever immediately seized on us with a fiercer and more relentless grip? I inclosed the string to Old Dan (along with a few remarks that I thought would touch the spot), and Dan showed it to Ben R—w, a farmer neighbor, who had for some time been balancing himself on the edge of a strong desire to join the Kingfishers in a trip to the North Woods, but had not just made up his mind which way to fall. That string laid him out, and he came full length on the Michigan side. This "new member from Macon county" filled our party to the limit of eight, viz.: Old Knots, ye Editor, Uncle Dan Sloan, the Writer (the scarred veterans of the old Kingfishers), John R., one of the party the previous year, Ben R—w, Dick Mac and H. H. Muller, Assistant Postmaster of our sooty city of Cincinnati. The three last had never "fit musketers and cussed black flies in the bresh of Northern Michigan," and we, who had gathered up a good deal of experience in this branch of angling, looked forward to an opening night in the woods that would reflect credit on the new members, and at the same time be a source of comfort to the afore-mentioned insects. The entertainment came off as expected, and Dick M. will attest to the extreme end of his natural period that it was a most—agonizing success. Dick, by the way, is a "jaynius" in his way, but a mighty good fellow withal, and as Knots usually tacks on a nickname to each new member to fit some peculiarity in their make up, he was dubbed Mrs. Partington, on account of his fondness for using big words with an utter disregard of their fitness. Any word that came uppermost, with plenty of sound and syllables in it, he would fire out perfectly regardless, and with a refreshing serenity that nothing would disturb. Johnny R. was called the Deacon, by reason, perhaps, of the violent contrast between him and any *bona fide*, well-regulated deacon in good standing, and so on to the end of the string.*

Our preparations were made to start about the middle of July. We shipped our camp outfit and a box of provisions ten days ahead to Cheboygan, in order that we might not be delayed in our start for the woods when we got there by the cheerful information "goods not arrived."

The Scribe, Editor, Dick and John R. decided to start four days ahead of the time set for the party to leave, which would give them time to take a run over to Mackinac Island, buy and have ready butter, eggs, flour, etc., that we would need in camp, and have the wagons, engaged ahead through the kindness of that prince of landlords, Mr. Wm. Spencer, of the Spencer House, Cheboygan, loaded and ready to move on the arrival of the rest of the party. Brother Muller would be unavoidably detained three or four days, and this left the Writer to go it alone again as far as Ft. Wayne, Ind., where Dan and Ben were to strike the G. R. & I. road.

Stepping out of the train at Fort Wayne, I looked all around for Dan, but the old pelican was not to be found, and I concluded he and Ben must have missed connection or met with an accident, for I felt that when old Dan failed to be on time on a fishing trip, something must be out of gear. While rapidly deliberating on what to do in the case, a thin-faced man with a fierce moustache, wiry-looking in every fibre, bronzed and sun-tanned and brown as a ripe hazel nut, stepped up and said very deliberately, "My name's Ben R—w, and you must be 'Old Hickory,' the feller old Dan Sloan has told me so many lies about?" "Yes, same feller; shake, powerful glad to see you, but where is the old pelican?" "Well, I'm sorry to tell ye that jest afore I left Decatur, he was taken suddenly sick, and as I didn't want to disappoint the party, I jest took the train and come on, and here I am." Our traps are all here, and now what do you think we'd better do, go on and leave Dan, or wait till next train? for I think he'll be able to travel to-night." Here was what Capt. Truck would have called "a h—l of a category." Going a-fishin' without old Dan, my veteran comrade in many a pleasant camp, who had fished with me in sun and rain, and even snow, who had shared with me the triumphs of numberless battles with the black warriors of divers streams and lakes for the last score of years, would be playing Hamlet with that moonstruck melancholy appendage left out.

While trying to figure out the best course to pursue in the matter, Ben scraped a match on the rear of a new pair of jeans breeches, which I noticed were tucked carefully into his boot tops, and lifting a short briar root pipe, which he had loaded while talking, said: "Tell ye what, if we stand here much longer blowin' our horns, that train'll hie out, and we'll git"—biff, came a smart blow on my left ear, and turning quickly around to flatten out the offender, there stood old Dan, looking as radiant as a young school marm after a creditable examination, and then those two old loons just humped themselves and laughed "voriferously"—as Dick would have said—at the joke they had played on "Old Hickory." How going a-fishing doth make boys of us all. After seeing all their luggage put on, Ben and I hustled Dan into the train, and we were soon discussing the prospects for big sport at Black Lake.

At Grand Rapids, in the evening, we were met at the depot by our friend Charley Pike, of the First National Bank, who steered us uptown and entertained us very agreeably during the hour or more that the train laid by. We missed the beaming "phiz" of genial, fun-loving old Bill Hess, whose acquaintance and Pike's we so happily made in the "bresh" two years before, as he was out of town, but he left his blessing to be bestowed on us by Charley, and a promise to hunt up our camp in the next fortnight if he could spare the time from his business. Blessed old Bill! may his days be long in the land.

At Mancelona, early next morning, our old cook of '81, Frank Frantz, joined us, having been engaged by letter for the trip a week before. Here, too, we took on a menagerie and circus combined in the shape of a box containing 375 live, speckled frogs, for bait. The box, made for this special purpose, with wire netting sides ¾-inch mesh and a hinged door a foot square in the top, was sent up some time ahead to one of our old neighbors on Central Lake, a Mr. William Derenzy, with instructions to have his boy Tommy catch the frogs a few days before we were to be along and send them up to Mancelona by the mail wagon. The reason for this streak of forethought was we were going to a wild and strange place, and we could not be certain of procuring suitable bait in sufficient quantity to keep the boys in good humor, and if anything is calculated to make ye honest angler forget his early Sunday-school training it is to run short of bait when the fish are just in a mood to ask for it.

The result proved the wisdom of the venture, for we found frogs were a scarce varmint around Black Lake, and we found only one locality on the lake where we could catch minnows large enough for good bait, and these had to be taken with hook and line. Besides, speckled frogs have, with our party at least, proved a better bait than minnows in these Northern lakes, and they certainly are not one-tenth the trouble to keep alive and transport from one camp to another, if occasion requires. When in camp place your box where the water of some little stream near by can run through one corner of it without wetting the whole bottom, and a handful or two of grass scattered inside will evoke various toned croaks of satisfaction that will convince you that even frogs are not devoid of gratitude. Under this treatment they will live four or five weeks on wind, albeit they will look a trifle gaunt in the region of the waistband, but they will be almost as frisky as when first put in the box.

I write all this about frogs, that in case any of the brethren who may take a notion to make a camp on any of the lakes of this region of Michigan, they may have the benefit of our experience. KINGFISHER.

[TO BE CONTINUED.]

* Just here I will crave the indulgence of the craft for jotting down all these little details and peculiarities, and offer as an excuse that I like to read such things when written by others, and will take it for granted that every sportsman likes to do the same; that he takes interest in the preparations made by a party before making a proposed trip; shares the joys of their anticipations; likes to know about the material and make-up of the party, and wants to know where they are going and how they get there.

FLY-FISHING FOR SHAD.

Editor Forest and Stream:

There is a great awaking among the angling fraternity. The number of letters on the shad fly and shad angling are such it would be impossible for me to answer them individually, and wishing to accommodate as many as possible of the lovers of the gentle art, I will ask the use of your columns for a few hints to those who would try for the sport in fresh pastures.

Shad fishing at Holyoke, for the last two years, has been so poor that I have not put up a fly in that time, and as there have been no brawny workers in Western Massachusetts the increase of shad in the Connecticut has been left to the praying ones. If the prayers are heard and answered, I will have to depend on an old cast containing three old favorites, namely, a white miller, second drop; a yellow Sally or a soldier moth, hand drop; a red ibis for trail fly. The red ibis and the white miller are favorites through the season. There are times when the shad will take any fly, in fact I have seen them taken with three or four feathers bunched, and tied to a hook without other preparations of any kind.

There are many other hooks to choose from, and almost every angler has a choice of hooks which he considers the very best. For my own use I dress to a No. 4 Limerick hollow point, but would recommend a hook about the size of a No. 6 Limerick H.P., for the reason I could rise ten fish with the small hook, to two with the large hook, but generally secured more fish with the No. 4. The cast can be stained, or natural color, as suits the taste of the angler. I never could see any difference in the chances offered, nor does it matter whether the reel is placed above or below, as far as the fish are interested. I'll take sugar in mine if it should kill me.

As some of the inquirers are located on tide water, I would say try it, if the current is strong enough to support your flies at or near the surface, with from forty to fifty feet of line out. Let the flies trail out and try it at shorter or longer distances; if not current sufficient to keep the flies floating, try casting a long line across stream, letting the water carry the flies down stream, at the same time draw gently round below the stern of the boat. I have taken some very good fish in that way when crowded out of the regular fishing grounds; also in rowing gently round and trailing the flies has brought some good fish into the boat.

For regular river fishing above tide water, where there are no rapids, I would select the strongest running water. Anchor your boat and let the water trail out the flies to several distances; I would change places often, it makes no difference whether the flies are on the surface or a foot under; I would also try casting as above, as well as different kinds of flies, for I am persuaded that shad can be taken in all fresh water, and the goal, when reached, will be a pleasant one. From 4 to 10 o'clock A. M., and from 5 to 9 P. M. are the best hours to take them; if the day is cool and cloudy they will take the fly all day. THOMAS CHALMERS.

HOLYOKE, Mass., May 10.

THE MAINE SEASON OPENED.

MIGRATION to the Maine trout and land-locked salmon waters has never set in with more enthusiasm. Although the ice is hardly out of some of the lakes yet, several sportsmen have got tired of waiting and have started. A party of five or six Boston merchants started for Moosehead Saturday, and on their return, in about a week, they will go to Bangor and thence to Aroostook to try the waters. A company of five merchants will leave Boston next Saturday for Rangeley Lake and the upper Androscoggins. They will be gone two weeks; the latter one a part of them will spend at Lake Kennebago, that jewel of trout lakes nestling in the unbroken forest, eight miles from Rangeley. But alas! the march of improvement wakes us up from the pleasing dreams of trouting in the wilderness, with only pine boughs for our pillow and the stars for a covering. I hear that a little steamer has been or is to be put into Kennebago even, and that a hotel is to take the place of the old camps. Alas! Those steamers and hotels. They bring the lazy tourist into our dearly loved nooks, and they drive away the sensation of rest born only of solitude. Their ceaseless bluster takes us right back to the active, bustling world again.

A larger number than usual of merchants and professional men have planned fishing trips to the Maine waters this season. Nearly 100 from Boston and the neighboring cities and towns will make the early spring trip, to be followed later by the fly-fishermen in June, the teachers, clergymen and schoolboys in July and August, and the late fly-fishermen and sportsmen with dog and gun, in September. Senator W. P. Frye, of Maine, will go into camp under his own shingled roof on Lake Moosclucmaguntic, early in the season. Weston Lewis, of Boston, vice-president of the Oquossoc Angling Association, with other members—some of them the near neighbors in New York of the FOREST AND STREAM—will start for their camp at Indian Rock, head of Moosclucmaguntic, before these lines are scanned by you, dear reader. The lamented A. D. Lockwood, president of the association, will not be with them this year. He has gone to his rest. The last time he visited the happy trouting waters, where he had been punctual nearly every season for some twenty or thirty years, it was with crutch and cane in one hand and rod and reel in the other. A true, noble lover of nature. He could organize and carry on successfully powerful manufacturing companies, but he never forgot the twirl of the trout, even when white hairs had frosted his brow, and years of active business had enfeebled his manly step.

At the lakes all is bustle, if ever those guides and backwoodsmen can bustle. The boats are painted and out to dry. The minnows are caught or mapped out where they can be secured with a dip net at an hour's notice; the (don't turn up your nose, kind readers) worms are dug. Next week the lakes will be dotted here and there with boats, a guide at the oars (sunbrowned and tanned as black as a red man) and a sportsman in the stern with trolling line and live minnow, sunburned and blistered as red as the flesh of an indoor white man knows how to be. Some big trout will be caught, five, six and even up to eight or nine pounds. Don't imagine, dear uninitiated novice, that such big trout commonly rise to the fly. No, they are feeders upon larger bait. A truthful record of the catching of about nine-tenths of all the large trout taken in Maine waters would show that they were lured upon the hook by some kind of bait. The fly is more sportsmanlike, neater and requires more skill to handle, but when trout will not rise then bait must be resorted to or we go back to our desks and counting rooms to dream over them another year with only a two-year-old recollection to help us through to the next season. SPECIAL.

BOSTON, Mass.

AN ANGLER'S WIFE IN CAMP.

AS the summers have rolled around, with our boy we have enjoyed the life in camp, beside some stream, or in the deep groves of maples, until I prefer "tenting on the old camp ground" to any summer resort, hotel or boarding-house. The years have come and gone, until I am almost as much interested in matters pertaining to angling as my husband, possessing my own rod—a fine lancewood—my own reel, lines and hooks; flies I do not aspire to yet, hence satisfy myself with fishing from a boat, with my boy for my boatman; and to his credit be it said, he can handle a boat well, so well that he has taught me to row. I have but once before attempted to write my camping experience; my husband's reputation is established, while I am but pluming my feathers. For ten long years my husband has borne a *nom de plume* which I have come to recognize almost as closely as his given name. I see his pen skimming page after page oftimes when he should be resting; find the letters going to well-known sportsman's journals, and but for the fact that almost twenty years of married life has woven his name into my daily life, I should prefer to call him by his *nom de plume*. As I take the journals and read the very interesting letters from different anglers, sometimes reading them nearly all through when I come to one that reads like "Norman," I look at the end of the letter, and there is the old familiar name. And here is my thirteen-year old boy stringing out long sentences, quoting poetry, giving his experience to the genial "Kingfishers," whom we had the pleasure of meeting in Michigan when *in transitu* for our camping grounds, and find him corresponding with gentlemen whose names are well known in the angling world. So you will not think it strange that I have caught the scribbling fever. But to my story.

We camped this past summer close to a small creek containing some beautiful trout. Every time they were brought to camp and I cooked them, I longed to try for some myself. I love the dainty little fish, and take pleasure in serving them on the table crisp and brown, but cooked to perfection.

Just below the camp, about a quarter of a mile, was another creek, broader and deeper than the one we had fished; so we determined to try this. Rigging up a rod and line, we took worms for our bait, and began fishing. We climbed logs, clambered over fallen trees, creeping through the thick undergrowth, once in awhile finding a place to drop a line, but I presume the trout knew I was a novice, for they would come out from their hiding places and glide swiftly back under the old stumps and logs. Once, yes twice, my lady friend had one right out of the water, but just when she was about to take him off the hook he was gone, and before she could pick him up he was into the water again.

And now we are in the thick of the forest to get trout; we must walk on logs, for they lay every way across the stream, thickly covered with moss, the stream at times almost hidden from sight with stumps and undergrowth, but the ripple of the clear, cool water guides our way. Our friend and his wife are gone up the stream, and I am trying to swing my bait into a hole under some stumps when, instead of dropping into the hole, my hook swings into the thick brush. I step, as I think, on another log, to save my rod, but it proved to be nothing but brush wood covered with moss, and in I went. My greatest fear was that my rod would be broken; it bent under the pressure almost into an half circle. Somehow I managed to pull myself out again, and saved my rod; fortunately the brush had kept my clothes from getting wet. I was not going to leave off for this little dip, so kept on up stream determined to try again.

Well, we saw the trout and we will have them next time, and although we had to content ourselves for this day with a nice string of perch which we caught on the dock, yet the beautiful woods and the cool creek, with the lovely moss-grown logs, will be remembered for a long time. But I am going to try again another summer, and keep on trying until I can bring home trout, and place them beside my husband's as he empties his creel. We cannot all be expert anglers, and study the nature and habits of this beautiful fish in his wild-wood streams, deep in the forests. I can pardon my husband's enthusiasm when discussing trout with a brother angler, and his earnestness with his pen when defending

them; his love for the depths of the forest is deep and genuine, and I think sometimes he spends more time watching their habits than he does killing fish. I judge so from his creel when he comes home; he never kills for count.

MRS. LUCY J. T.

HALLOCK, Minn.

MINNOWS FOR TROUT.—A great number of pike have been lately taken by anglers, who are fond of the sport, from the New Jersey ponds situated near the city. I am sorry to state that the illegal catching of bass in the same State by Philadelphians has reached the writer's ears. Why can not two weeks more of patience be practiced, when all can fish with a clear conscience? On the trout stream of Carbon county, Pa., which your correspondent fished only ten days since, there is a fair-sized dam, once used to furnish power, but now abandoned by the lumberman. The stream above and below this dam is fished to death, yet still contains a tolerable supply of trout, but all of them now doubly educated. The pond harbors many fish of large size, the water being very deep at the breast. To this portion the trout before the spawning season congregrate until they ascend the stream. In this deep part of the pond they never rise to the fly, no matter how skillfully cast, but in the shallower parts smaller ones at times take the fly freely and make good sport. Occasionally a big fellow is hauled up by a bait fisherman sitting on the breast, who has the patience to wait until his worm is swallowed by the trout at the bottom, and his size always indicates the dimensions of more below. A plan I have proposed to my friend living near the stream, who bye the bye is a true fly-fisherman, and has heretofore vowed he will use nothing but the feather, has at last been accepted, and he will attempt to lure these "whoppers" with the minnow and twelve-foot leader, his bait being caught and carried to the pond from the Lehigh. I am anxiously waiting to hear the results of his attempts, and although the minnow does not occur in the stream where these trout exist, I feel confident the plan will succeed and a number of large fish will be taken. Can any of your correspondents inform me if they have ever caught trout in the manner proposed? In England it is considered legitimate early in the season. Why should it not be here at times and under the conditions stated? Nothing else will bring these big fellows from this deep hole.—HOMO.

VERMONT.—Highgate, Vt., May 3.—"Verily the world moves," and it gives me great pleasure to say that since my last letter to your journal, the net fishers in this vicinity have been taught a severe lesson. Fish Wardens Atherton, of Waterbury, and Tuttle, of Montpelier, have seized a full dozen of seines, trap and fyke nets, and have arrested the ringleaders among the fishermen, two of their number, Herb. Donaldson and Nat. Sheets, have already been fined $100 each, with costs, while the others are under heavy bonds to appear at the next term of county court. Wardens Atherton and Tuttle's task has not been an easy one, but unflinching firmness, backed by muscle and trusty revolvers, has enabled them to conquer all opposition. Owing to the extreme high water that we have had here during the past month, spring duck shooting has been poor. The trouting season opened here on the 1st inst., but as the streams are still full bank the catches have been small. Now that net fishing is stopped and bass and pike-perch are allowed to spawn and multiply, we may soon expect good sport in the Missisquoi River and Lake Champlain, and fish food will become to our citizens a common article of diet instead of a rare luxury.—STANSTEAD.

WHITE PERCH IN LAKE GEORGE, N. Y.—There are a number of salt-water fish which, when they are placed in fresh water, grow to twice or three times the weight they would ever attain in salt or brackish water. The white perch, *Roccus americanus*, is one of these fish. It is often caught in fresh water weighing two or three pounds, whereas in salt water a fish weighing a pound is considered large. Knowing this fact, Capt E. S. Harris, Messrs. W. W. Lockhart and O. B. Lockhart, determined to place some in Lake George. With this object in view the two latter gentlemen went to Sing Sing, where friends assisted them in procuring fish from fykes set for the purpose. On April 26, they left with seven milk cans full of fine lively fish, and arrived at Lake George the evening of the same day with the fish in good condition. There was quite an assemblage of people at the depot when the train arrived, to see the new fish; every one seemed pleased with their appearance. The gentlemen feel well satisfied for the trouble they have taken in first introducing this fish into the waters of Lake George.—A. K. FISHER.

FISHING FOR COUNT.—Worcester, Mass.—A large and enthusiastic meeting of the Worcester Sportsmen's Club was held on Thursday evening, May 8, at the Bay State House to make arrangements for the annual "fish day" and dinner. Asa R. Jacobs and R. L. Golbert were chosen captains, and Maj. L. G. White, H. E. Smith and H. B. Verry, with the two captains, constitute the committee to arrange all the details of the affair. Wednesday, May 22, was decided upon as the day for the fishing, the dinner to be served on the evening of the following day. In choosing up sides every member will be chosen, and all who do not "go a-fishing," but who attend the dinner, will be counted on the losing side and also fined one dollar; and all members who neither fish nor attend the dinner will be fined one dollar. All money thus collected to be used toward paying for the dinner. The club held its first fishing day festival last year and it was a complete success. If this one is equally successful it is safe to say all will be well satisfied.—W. S. K.

DOES THE RAINBOW TROUT MIGRATE?—Since our editorial note on this fish we have heard that two rainbow trout have been caught in the Hudson, near Hyde Park. The fish were taken by men who were "scapping" for the river herring (alewife), and were sold to Mr. John A. Roosevelt, the well-known bass caster of Poughkeepsie, and they weighed three-quarters of a pound each.

BUFFALO, N. Y., May 6.—The perch fishing has not fairly commenced as yet, although several strings of from thirty to forty have been made. A continuance of the pleasant weather that we have been enjoying for the past few days, will warm up the bays and improve the fishing.—W. A. A.

MONSON, Me., May 5.—The ice is all out of the lakes and ponds in this vicinity. Our local anglers are already making good catches of spotted trout. Spring fishing is ten days earlier here this year than it was at the same time in 1883.—J. F. S.

CATALOGUE OF WILLIAM MILLS & SON.—We have just received the illustrated catalogue of fine fishing tackle of William Mills & Son, 7 Warren street, New York. It is designed for the retail trade and includes a complete outfit for an angler, from a Leonard split bamboo to a boy's rod costing not more than twenty-five cents, and from waterproof lines to tents and wading boots. Reels, lines, hooks, and the many other articles used by anglers are shown in great variety.

FLY-FISHING FOR SHAD.—I note your reply to "G. W." with reference to fly-fishing for shad. I have seen them taken at Holyoke at various times of day, especially at midday and in bright sunshine. The white miller was used at the end of a long hand line, in some cases, when fishing from the bridge, from 200 to 400 feet long. The fishermen informed me, however, that, like the black bass, they were whimsical biters.—MILTON P. PEIRCE.

THE NEVERSINK CLUB, of which Mr. Alfred Roe is president and Mr. W. Holberton is secretary and treasurer, has leased four miles of the west branch of the Neversink River, two miles above and below Parker's. The club will make a vigorous effort to preserve this stream and have begun stocking it with trout. The rules of the club forbid any member to take more than twenty-five fish in one day, and no fish must be under six inches in length.

Fisheulture.

THE MENHADEN QUESTION.

Editor Forest and Stream:

I wish to make a few remarks in regard to the menhaden fishery, and call your attention to a few statements made by your correspondent, Mr. Church.

Aristotle, when asked what has a man gained by telling a falsehood, replied: "Not to be believed if he speaks the truth."

First. The menhaden is bait and food for nine-tenths of all the hook fish along our coast. Mr. Church knows that thousands of barrels of this fish are salted for mackerel bait yearly, the bank and lobster fishermen use it, and the club houses along the coast use it as feed and bait for bass fishing. Mr. Church has a great deal to say about the tautog and porgies which is not to be considered in the argument upon menhaden, for it is neither bait nor food for these fish.

Second. In the summer of 1882, Mr. Church fitted his fleet of steamers with small-meshed seines, to catch the small half-grown fish along the New Jersey coast. He was censured by those who knew it to be true, and they wrote that the meshes should be restricted by law.

The taking of these small fish was denied by the Church Company in a letter printed in the Fall River *Weekly News*, of Nov. 23, 1882, from which I extract the following: "Still further our opponents make the apparently unanswerable argument that we drive the fish from their old feeding grounds. I admit that they have deserted their old feeding grounds for the time being, but contend that we have no agency in the matter, and as a case in point to show how little we know about fish, their habits, enemies, etc., will cite what I saw the past summer while fishing on the Jersey coast between Cape May and Barnegat. About the first of August, the coast above mentioned was packed with small menhaden, so small that our nets were not fitted to catch them, and besides there were plenty of large ones, so that we had no occasion to molest them. Well, these small fish drifted up the coast from the southward until they had passed the whole of the menhaden steamers, and when ten miles north of Barnegat they stopped, turned in their tracks, and went southward again, proving conclusively to me that they had met the same unseen enemy in the water which had drawn the large menhaden from their old feeding grounds."

This admits what I claimed in my article of Jan. 10, viz., that there is a scarcity of fish, caused by the crowding of this fish from the coast.

In a letter written to Prof. S. F. Baird, and printed in the "Bulletin of the United States Fish Commission of 1883," page 463, and signed by D. T. Church, in defense of taking these small fish, he says: "* * * Hence, we shall catch all we can of any size we can get hold of. By observation we know that during ninety days of the year 1880, 30,000,000 barrels of menhaden were destroyed by bluefish and weakfish in Narragansett Bay, and in a tract of water only twelve miles long by two miles wide. As the total catch with purse seines is less than 3,000,000 barrels a year, it seems foolish to limit free fishing. * * * I believe that more menhaden are destroyed in one hour by fish than are destroyed by man in a year."

Admit this foolish statement to be true, and that the fish seeks its food for ten hours a day, it would take nearly 30,000,000 barrels a day to feed the fish along the coast. Now, let us glance at the menhaden fishery for the past five years; from 1878 to 1882 the steamers had crowded this fish from the coast from Maine to New York. There were less than 100 barrels taken in the harbors and inlets of Rhode Island in the season of 1882. In the season of 1883, as the fish were coming on the coast, thick fogs and fresh gales protected the fish from the purse seine at sea. True to its instinct, it reached the inlets of New York, Connecticut, Rhode Island and Massachusetts in a limited amount, and a few—the first for five years—reached Maine. As the weather settled, the steam fleet soon caught what they could in the inlets and crowded the rest from the coast, where they could only be reached by the largest steamers. With ninety of the fleet pushed from the business of 1883, and 1,000 men thrown out of employment, the remainder made a fair season's catch.

This fish has decreased 90 per cent. within twenty-five years from our shores. There have been more than 500 purse seines pushed from the business, since the steamer was introduced, for want of fish, yet Mr. Church tells the public that they are more plenty than ever; place his shark story with the above statement. In my opinion, there could not be a man found from Maine to South Carolina, who is acquainted with the business, who would believe these statements if made under oath.

Protect this fish for ten years from the purse seine and fish would be the cheapest food found in the market. The best would not be more than ten cents per pound. If the Fish Commissioners along the North Atlantic States would investigate this subject they could tell the public that their labors were almost worthless in comparison with what they would be if this fish was protected so that it might deposit its spawn in the inlets near the coast, for the fry of the herring, shad and salmon is used up for food and bait. This demand was supplied by the menhaden for our hook fish before it was crowded from our coast. If there could be located 100 steamers with oil works in the best places at New Foundland, Belle Isle Strait and the Gulf of St. Lawrence to catch the numerous schools of herrings that are found in these waters, it would make the hook fishing as worthless there in ten years as it is on our own coast. The man that would dare to speak in defense of the hook fishermen of those waters would hear from some one of the steam fleet that there was no scarcity of food fish nor of herring, and there was no law needed to protect this fish, for it did not spawn along the coast, but at the North Pole; and that they were disciplining seamen for the navy and the Government should send its revenue cutters to protect them to fish against the public wishes, and with many other foolish statements.

With a word to your Pacific coast readers, I will close. The purse seine and oil works are already established on your coast at or near Puget Sound to catch the herrings, which are the food of your salmon, halibut, cod and mackerel. As these herrings are used up the above-named fish will soon leave your coast, the salmon first, for better feeding grounds.

FISHERMAN.

WESTPORT HARBOR, Mass.

MR. ROOSEVELT ON THE CARP.—Hon. R. B. Roosevelt, of the New York Fish Commission, has been up to the Caledonia hatchery and has eaten carp. He said to a reporter of the New York *Herald:* "A carp, taken from the preserve where he had been feeding on the aquatic growth, not artificially, and consequently in the best condition, was the first to be experimented upon. He weighed two and a quarter pounds, and was plainly boiled, so that his flavor should not be changed either for the better or the worse. The conclusion arrived at was that the carp was not in any way disagreeable and far better than no fish at all, but that he did not compare with most of the native varieties, such as the sucker or the bullhead. His flesh was exceedingly soft and yet quite tough, leaving a sort of stringy residuum after it was masticated. The flavor was not bad, and is probably capable of unlimited improvement with condiments and sauces. The fish not only gave good sport on the light rod with which it was captured, making many desperate runs to escape, but also seemed so tame when taken out of water, although it had never been fed nor fondled, that the captors disliked to kill it. This proved that its race could be made interesting pets."

THE OSWEGO FISHWAYS.—Oswego, N. Y., May 9.—*Editor Forest and Stream:* I am pleased to be able to report that by practical test the fishways placed in our river last fall by the State, of the McDonald pattern, are a success. The mullet, or red band sucker, a fish which is taken in great abundance in these waters in the early spring but which have never been found above the dams since they were first built, is now being caught upon the first and second levels of the river, conclusively proving that the ways must have served their purpose. We have strong hopes that the salmon fry deposited this year by Col. McDonald, of the U. S. Fisheries, will thrive, and if they do we look forward to the day when our river will again be as noted as it was forty years ago, offering sport to the salmon fisher without the expense of a trip to Canada or Brunswick. We have this spring added 50,000 brook and mountain trout to the supply in our small streams. We propose to keep Oswego a fishing county.—H.

BLACK BASS FOR STOCKING.—There is a demand for black bass of all sizes, for stocking new waters, and no one seems to attempt to supply them in quantities at all times. Occasionally we hear of some for sale and on announcing it they are gone. Mr. Livingston Stone, Charleston, N. H., sometimes fills orders but does not always have them. A correspondent writes us that Henry Harris, Weverton, Md., has three hundred for sale.

FIXTURES.

BENCH SHOWS.

June 10, 11, 12 and 13.—The Second Annual International Bench Show Chicago, Ill. Mr. Charles Lincoln, Superintendent.

Oct. 8, 9, 10 and 11.—Third Annual Bench Show of the Danbury Agricultural Society, Danbury, Conn. E. S. Davis, Superintendent, Danbury, Conn.

A. K. R.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (25 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **1213.** Volume I., bound in cloth, sent postpaid, $1.50.

THE VICARS TESTIMONIAL.

Editor Forest and Stream:

After a very long delay I have the pleasure to inform the subscribers to the above testimonial that a monument has been erected in St. James's Cemetery, Toronto, over the grave of the late Bloomfield H. G. Vicars, secretary and treasurer of the Dominion of Canada Kennel Club, whose lamented death we all mourned after the first bench show held under the auspices of the Dominion Kennel Club at Ottawa. The delay has been caused by many circumstances, especially the departure from London of the secretary of the fund, and the tardiness of the subscribers in sending in their subscriptions. I will be happy to forward to any subscriber a statement of the disposal of the sum placed in my hands to be used according to the wishes of Mrs. Vicars.

The following is the inscription which met with her approval: "In memory of Bloomfield H. G. Vicars, Secretary of the Dominion of Canada Kennel Club. Born Jan. 27, 1850. Died at Ottawa, April 4, 1883. This monument is erected by those who appreciated his services to the club. Faithful unto death."

I hope this will meet with the approval of the subscribers.

J. S. NIVEN (Chairman of the V. T. F.).

TORONTO, Canada, May 1, 1884.

THE CHICAGO DOG SHOW.

THERE will probably be a large number of dogs exhibited at the bench show, to be held in Chicago next month, and the managers are confident that they will close the season with the best show that has been held in the West.

There will be extra champion classes for setters, pointers, and spaniels, that have won not less than three prizes at any bench show, in addition to the regular champion classes. Major Taylor will judge setters and pointers, and Mr. James Mortimer all other classes. Premium lists may be secured on application to Mr. Charles Lincoln, Superintendent, Chicago, Ill. There will be a great number of special prizes. Many Eastern exhibitors have already promised to send their dogs, especially so among non-sporting exhibitors. The month of June is particularly well adapted for a bench show, as the weather in Chicago at that time is cool and pleasant, and the building is capitally ventilated. Prizes will be given for the greyhound or deerhound showing the most speed, and there will also be trials for setters, pointers, spaniels, etc., for retrieving; in fact, no pains will be spared to make this one of the best shows of the season. Special arrangements have already been made with the various railway and express companies and everything will be done to insure the comfort and welfare of dogs and their owners.

DANBURY SHOW.—The third annual bench show of the Danbury Agricultural Society will be held with the annual fair in Danbury, Conn., Oct. 8, 9, 10 and 11. An annex to the main building was built last year expressly for the bench show, in which suitable pens are placed for complete accommodation of the dogs. Competent attendants, night watchmen, food and all necessary care are provided by the Society. Dogs are taken from and to the trains at the expense of the Society. For full particulars of entries, prizes, and of other matters pertaining to the exhibition, apply to the superintendent of the bench show.—E. S. DAVIS (Danbury, Conn.).

WESTMINSTER KENNEL CLUB SHOW.

THE eighth annual bench show of the Westminster Kennel Club, which opened on Tuesday the 6th instant, closed last Friday.

From the point of view of those interested in our dogs, the show was a most successful one, though it was not a money-making affair. The number of dogs actually exhibited was very large, and the quality of the classes was, on the whole, an improvement on anything that has been known in America. The exhibits were by no means confined to animals owned in this country, and a number of the best known breeders and exhibitors of England sent drafts from their kennels to compete for the prizes. While the so-called sporting classes were as usual numerically the largest of the show, yet it is clear that the non-sporting classes are annually growing stronger, and forcing their way into public favor. Thus there were shown this year nearly one hundred St. Bernards, forty mastiffs, seventy-eight fox-terriers and seventy-two collies. This increase in popularity of the non-sporting dogs is a most healthy sign of the time, and promises more and more for future bench shows. There is certainly no reason why pointers, setters, spaniels and other dogs used in the pursuit of game, should, as they have hitherto, greatly outnumber the dogs which are kept for other purposes, and the fact that the former made up at this show only a little more than one-half of the total number shown will be satisfactory to all lovers of the dog. Mr. Lincoln fairly outdid himself, and at no previous show in this country have the arrangements been so satisfactory. The benches, while not differing materially from those of past years, were more neatly finished and had a better general appearance. Those devoted to the Westminster Kennel Club's dogs were partitioned off by iron railings instead of the ordinary pine lumber, and these railings had a very pleasing effect. The arrangement of the different breeds was much more satisfactory than on some occasions in the past, the classes seeming to follow one another as one went round the building in a natural sequence. The arrangement of the judging ring was a vast improvement on any previous show. The whole central space was inclosed by a high wooden railing, thus perfectly keeping off the public from the ring sacred to judges, reporters, and exhibitors or keepers. This ring was strewn with fresh sawdust, and formed not only a most excellent place for judging, but also a capital place for exercising the dogs when it was not in use for other purposes.

The dogs owned by the Robins Island Club, thirty-seven in number, were benched together, without any partition between, making a very attractive appearance. A number of the large kennels also made excellent displays of their dogs. Many of the stalls were nicely fitted up and tastefully decorated. The performance of the trick dogs was the best that we have ever seen. The retrieving was also very interesting to the spectators, who warmly applauded the various performances. The running of the greyhounds was not a decided success except for the winner, whose name and owner we were unfortunately unable to obtain.

There was considerable dissatisfaction with the judging, and this was especially marked in the mastiff and pointer classes. This dissatisfaction was due in a measure to the fact, that this year Stonehenge was laid aside and everything was left to the discretion of the judge, who selected the type of dog which best fitted his eye, without reference to any of the standards laid down in the books. This being the case, a wide margin was left for individual preferences, and in our comments on the various classes given below, we shall have occasion to differ widely from many of the decisions.

There was some sickness among the dogs during the show, and a few deaths. We saw many puppies and some old dogs which were quite sick, and no doubt more or less deaths will follow in due course. Those who exhibit puppies, however, take the risk of this. The dogs were fed on Spratt's biscuits, and the arrangements for their comfort as to clean bedding and fresh water were all that could be asked. Features of the show were the exhibition of the dog collars, chains, and other necessary articles of dog furnishings by the Medford Fancy Goods Company, the exhibit of Mr. H. C. Glover, and the book table of the Orange Judd Company.

The weather during the four days was anything but pleasant, Tuesday, Wednesday and Thursday being rainy, and Friday more or less overcast, though occasionally the sun showed his face. The attendance, though fair, was by no means what might have been anticipated had the days been fine, and only on the last day was there at all a large crowd. This, while no doubt to be deplored by the managers, was from the visitor's point of view a real advantage, since it gave him abundant opportunity to study the dogs to the best advantage. We understand, however, that there was a small credit balance after all expenses were paid. Next year we hope to see the New York show held for three days only, and that the judging may all be over by the end of the first day. Our bench show managers will have to come to this, and they may as well do it now as later. The reasons for this are so manifest that they do not need repetition here.

Among those present at the show were most of our well-known Eastern sportsmen and breeders of dogs, as well as many from the West and some from England.

Leaving now the general features of the show, we pass to the consideration of the classes in detail.

MASTIFFS.

The showing of mastiffs was not so good as we had expected to see, although there were several fine animals present. In the champion dog class Nevison was awarded the prize. He was not in good form and had a nasty mange sore on his hind leg. He should have given place to Hero II., a capital big dog, with plenty of bone. He is better in skull, muzzle and hind legs than the winner and as good in body, coat and feet. He was well shown, having filled out since we saw him at New Haven. We understand that he was claimed at his price by the Ashmont Kennels. Zulu, the only other entry, is rather small for good company. There were but two in the bitch class. Dolly Varden, the winner, is a grand bitch, but her condition was very bad and she should not have been shown. Dido, the only other shown, is far from a good one. The open dog class was badly placed. Dan, who won first, has a fair skull and body, but is weak behind and lacks mastiff character. Billo, who was given second, is much worse than Dan, as he has no redeeming qualities. Homer, who won third, should have been second. He is a very good dog with a grand head, good ears, except that they are set on too high, good body and legs. He is small in size and might be a bit better in feet. Jim, who was vhc., we thought well placed. He has good body and legs, but is poor in head. Ilford Cromwell, who was hc., was the best in the class. He is a grand dog with an immense head and is excellent in body, legs and feet. He has but just arrived from England and was not in the best of condition; should he fill out well he will take a lot of beating; his worst fault is a light eye. Bruno, who was c., was the third best in the class; he is a fair dog, although he lacks character. First in the bitch class went to Regina, who was much the best; she is a trifle under size, but has a good head, body, legs and feet, and looks a mastiff; her ears are a bit large and she might be a little better in bone. Monmouth Meg, who was second, is light in bone and lacks character. Nana, third, is leggy and has a long, thin head, and should not have been noticed. Queen, who was vhc., should have been second; she is fairly good all round. The puppies, except the three winners, were not much. Sandy, who was third, we thought the best of the lot. There was an immense nine months' puppy, measuring full 33 inches at shoulder, but like most large dogs he is long in face and may not mature well.

ST. BERNARDS.

The showing of St. Bernards was by far the best that has ever been seen, except at the exhibition of the St. Bernard Club in England. Bonivard was alone in the champion rough-coated dog class. He was in grand condition and well deserved his prize. In the bitch class Gertie had an easy win. She was in better form than when at New Haven. In the open dog class Duke of Leeds made his first bow to the American public. He is a grand young dog, even better than Bonivard, and with these two Mr. Hearn has a brace that we do not believe can be beaten. Second went to Caliph, a very good all-round dog. We liked Cardinal Borromo, vhc., full as well for the place, except that he was short of coat and lacked condition. He has the best head and color, and when at his best will, without doubt, find no trouble in getting a better place. Primate, also vhc., is very pretty and is nicely marked, but altogether too small. In the bitch class Rhona, who won first, has one of the best heads that we ever saw. Were she a little higher at the shoulder, she would be a very hard bitch to beat. Millicent II., who won second, is a grand big bitch, with good color and markings. She has a capital body, but might be better in bone behind. She has rather a long, sharp face. Baromo, who won third, has a very good body, with capital legs and feet. She will undoubtedly make a good brood bitch. Beryl, vhc., has a beautiful head, but lacks substance. Sappho, hc., also has a good head and, if nothing befalls her, will do better when mature. In the champion smooth-coated dog class Fido had a walk over as did Baroness in the bitch class. The open dog class contained some good ones. We thought them well placed except that we should have transposed second and third. Royalist, who was second, is lanky and long in face. Sultan, who won third, is a good all round dog, although he is rather small. Jolly Friar, who was c., is also small and has too much coat for his class. Leila, who won first in the bitch class, is the best bitch we ever saw, although heavy in whelp she was clearly much the best. The winners in the rough-coated puppy class were a fair lot, we thought them well placed. In the smooth-coated class we liked Snowstorm for first place, and Noblesse for second, instead of the vhc. each received, we think them very promising. We know that it is next to impossible to form a correct idea of what a puppy will turn out, especially when of so large a breed as the St. Bernard.

BERGHUNDE.

There were but four present in the berghund class, and we can do no better than to repeat our comments of last year: "The berghund, although a noble looking dog, is a mongrel, and should never be recognized as a distinct breed. He is certainly no better than the St. Bernard or mastiff from which he comes, and consequently is a failure as a distinct breed, and he should be relegated to the miscellaneous class, where he belongs."

NEWFOUNDLANDS.

The Newfoundland class was not a very good one. Jack, who won first, is a big dog with a fair head and a good flat coat which is of a good color. He lacks a little in bone. Tasso, who won second, is also of good coat and color and has more bone, but is not so large as Jack. We liked Bruno, vhc., full as well for second place. Matt, unnoticed, is of good form but much too small.

GREYHOUNDS.

Friday Night showed up in the champion dog class in much better form than when at New Haven, although he was not quite at his best. There were no entries in the champion bitch class. The open dog class brought out a rare good one in the winner, Bouncing Boy. He, with School Girl and Begonia, who won first and vhc. in the bitch class, have just been imported by their owner, who may well be proud of them. In the bitch class, the second prize was withheld. We can only account for this in that she was decidedly inferior to School Girl, and did not by comparison please the judge. We thought her more than an average bitch when compared with the entries of previous years, and should have placed her second. There was nothing very good in the puppy class.

DEERHOUNDS.

There was a larger display of deerhounds than we have ever before seen together. Many of them were in very bad condition, and poor coats, flabby muscle and soft flesh was the rule. Roy, who won in the champion class was, however, fairly well shown, which will perhaps account for his defeat of Lance. In the open dog class, both of the Bruces, who won first and second, are very good specimens. The judge failed to find anything in the bitch class that he thought worthy a prize, and all awards were withheld, although to our mind there were two or three of more than average merit.

POINTERS.

The exhibition of pointers was much better than last year, both in numbers and quality. There were 149 entries with 13 absentees. This number has been exceeded but once. Two years ago there were 151 entries with also 13 absent. There were eight in the large champion class. Meteor, who won the pride of place, is of the type of the small pointer, although he is one or two pounds over the dividing line when in good condition. We first saw Meteor at the Chicken Trials a year ago last September, and then wrote of him, "With the exception of being a little off in head, Meteor is one of the best formed animals that we ever saw. He has a thoroughbred, gamy appearance that is not often found." He was in beautiful condition, except that there was an unsightly lump, caused by a bite, upon the side of his head. Beaufort was not at his best, although he has improved since he was at New Haven. He has grown throaty since we first saw him and appears to have some trouble behind which we presume is caused by his recent illness. He is, without doubt, the best large pointer we have and should have been placed at the head of his class. The others were looking well.

Water Lily won in the bitch class. She was very well shown, except that she was a trifle too fat. There was not much to choose between her and Nan, who was also in good condition. The open class for large dogs was the best we have ever seen. There was scarcely a poor one in the lot. They were placed as well, perhaps, as was possible, except that Scout and Jimmie, both unnoticed, were well worth the two letters at least. We greatly admired Fritz, who won first. He is very good all over, with no striking faults, and does great credit to his sire, Beaufort. In the bitch class Miss Merrymack won first. She is quite a nice bitch, with a fair chest, good shoulders, body, loin and legs, and fair feet; she might be better in head and greatly improved in tail. Fan Fan, who won second, is a big bitch with lots of quality; she is too wide and round in chest. Sal, who was third, has the same fault and lacks quality. In the champion small dog class Bravo was an easy winner; he was well shown. Mr. Sterling declined to judge the bitch class, as he once owned one-half of Vanity, and Mr. George DeForest Grant was called upon to decide upon the merits of the class. Vanity, who won the prize, is an elegant looking animal, of much quality and very well put together; she carries her ears badly and is too wide in front, and might be straighter in fore legs; she has a capital tail, but carries it badly. Duchess should have won, although she was not quite at her best, and age begins to tell on her. With the exception of a faulty head and tail she is a very hard bitch to beat.

The open dog class was not well handled. Pride, who won first, was in capital condition, which is about all that can be said in his favor. He has not a first-class head, and is leggy and lathy. There was not much to choose between Fritz, second, Match, vhc., and Bob, unnoticed, for first, second and third. The two former we have described before, Bob is rather an ordinary looking dog at first glance, but a close examination will show him to be of exceptionally good form with plenty of bone. He has not a good head, and his color, black and white, does not improve his appearance. The rest of the class received all that they deserved.

In the bitch class first went to Jilt, who was perhaps deserving, although we liked Belle and Joy, both hc., full as well. Vision, who won second, was transferred from the large class, is also a very fair animal. Flash III., who was third, is very well made, with plenty of bone and good legs, but her very bad feet should have left her out of the money. The dog puppies over 12 and under 18 months were nothing extra. The corresponding bitch class was very fine indeed, and had the judge given Nell III. one more letter, they would have been as well placed, perhaps, as was possible. The puppies under 12 months we are not disposed to criticise, as there is no breed of dogs that is so uncertain when young as the pointer. Many of them looked very well, but we noticed nothing that was mature enough to warrant a guess as to its future.

SETTERS.

The champion English setter dog class brought out only three. Foreman, who won, has greatly improved in form since last year, having gained in muscle and filled out in loin. He was short in coat and feather, having been worked until late in the season. He has also just recovered from a touch of mange. He is very nearly the correct type for field work. Emperor Fred was shown a bit too heavy. He was not in his usual blooming condition. Dick Laverack we never saw looking so well. He is a capital dog, and was, like all of Mr. Davey's dogs, in beautiful condition. Plantagenet and Prince were absent. In the bitch class first went to Belle's Pride, a very good bitch, except that her head is too large, which gives her a coarse appearance. We greatly preferred Queen Alice for the place notwithstanding her bad condition, as she has much the best head of the two, and is fully the equal of Pride in every respect and a little ahead of her in appearance.

The open dog class was not a good one. First went to Rock, a very fair dog in beautiful condition. He is of good type and very well put together with very good shoulders, chest, body and loin. His ears are too thick and set too high. His fore feet stand too close together and his tail is carried too high. Bob White, who won second, was in very bad condition and should not have been shown. He was a long way ahead of anything in the class, and had he been shown in proper form he would have carried off the highest honors. The bitch class was of better average quality than we have ever seen. The large number of excellent animals rendered it very difficult to bestow the honors, indeed the unnoticed ones made a very fair class of themselves, although more than half of the class received mention. We thought them well placed. The puppies over 12 and under 18 months were not quite up to those of last year, although there were several very good ones shown. The puppy class, under 12 months, brought out several promising ones. Princess Phœbus, the winner, is very good indeed. She bids fair to turn out as good a Laverack as we have.

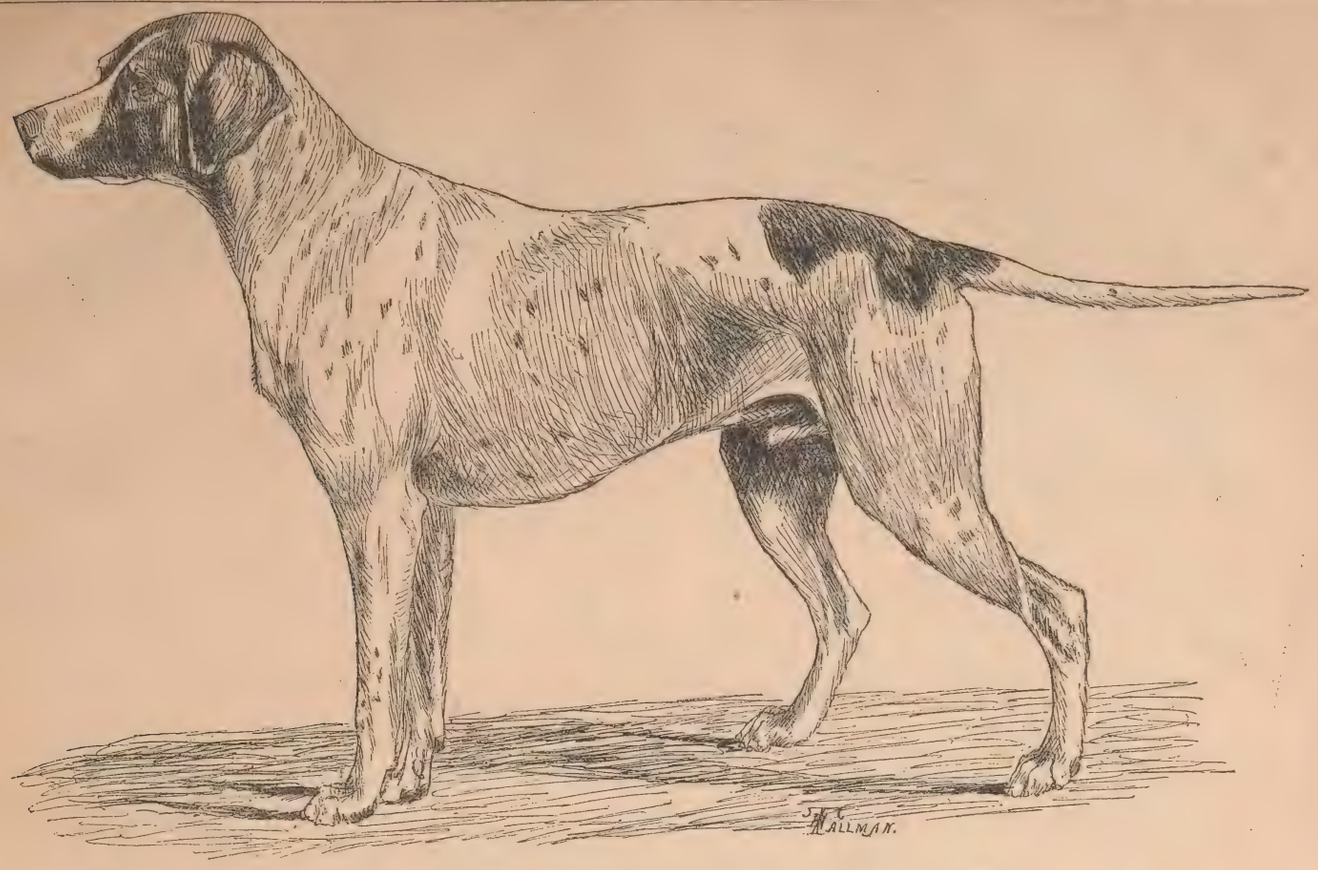
The black and tan setters were much better than we have seen in a long time. In the absence of Mr. Wise the classes were judged by Messrs. Sterling and Higgins. In the champion class one judge was in favor of Argus, while the other thought Turk the best. Mr. J. M. Tracy was finally called upon to decide the question, and succeeded in convincing them that Flash was better than either, and he was given the prize. There were but two in the bitch class, Lady Gordon and Perley. Both are very good indeed, with not much to choose between them. Perley, who finally won, is a shade better in head. The open dog class contained several very fair specimens, who were well placed, except that Duke, who was vhc., is better in head and bone than Punch, who was third, and they should have changed places. The bitches and puppies were fairly good and correctly judged.

The Irish setters were a grand lot all through. The champion dog class was magnificent. Berkley, who was on exhibition only, was looking finely. Dash is a grand dog in coat, color and chest; he has not an Irish head and is faulty behind. Chief was never shown in better coat and feather. Elcho, Jr., the next on the list, furnished the winner; he is a very good all-round dog, with an almost perfect head and of the correct type all through; he was not in first-class condition, and might be a bit better in back and coat. Glencho was not quite at his best, yet we thought him good enough to win, but Mr. Higgins likes a small, compact dog, and Elcho, Jr., just filled his eye. Trix was an easy winner in the bitch class, although she was not in good coat or form. Faun is also a rare good one, and may surprise some of the best of them next year unless they are at their very best. The open dog class made a splendid appearance in the ring. Many of them were very good, although we failed to find anything very remarkable. The winner is a little faulty in head, which was the most common fault to be found with the class. We thought them well placed. The bitches were better than the dogs. Noreen II., who won first, is a very sweet bitch, although she is not quite perfect in color. Reeta, unnoticed, should have been second, although she was not in good form. Nearly all of the others in the class were good, and the seven vhc's. that were given were no more than were deserved. Irish setter puppies are notoriously uncertain, as they often change in form and color. Rory O'More II., who was first in the dog class, was rightly placed. He is grand in color, and if he matures well he will be heard from again. In the bitch class we should have transposed first and second.

CHESAPEAKE BAY DOGS.

There were only three entries in this class. The two winners are very good specimens.

SPANIELS.



There were no entries in the champion Irish water spaniel class, and only three in the open class. The winner is a very good specimen. In the champion field spaniel class Benedict added another to his long list of wins. He certainly was not in such bloom as we have seen him, but his good body, legs and feet carried him through. Black Prince was in magnificent shape and he never looked better. Dash, who is rather heavy in head and a trifle low at the shoulders, is good in coat and body, but is a little out at elbow. In the open field spaniel class the winner is not as straight in front as she might be, and was a little off in coat. Bateman, given second, is a strong, good-headed dog, a little short of ear, but with a very good set of legs and feet. Toronto Jet, vhc., Don hc., Jewell hc. and Punch and Benedict's Boy, c., were tolerably good ones. In champion cockers, any color, Obo II. had a walk over. He well deserved his prize. In liver and black cocker spaniels, Peerless Gloss was given first. He was shown in poor coat, doubtless owing to his recent sea voyage. He is just imported. He has a very good head and body, and excellent legs and feet, with plenty of bone. Jumbo, second, is another good one. He is rather high on his legs and light in bone, but has a capital coat and was well shown. Woodstock Flirt, vhc., is too fine in bone. Bessie, hc., is a trifle leggy, but will improve with age. In cocker spaniels other than liver or black, Rattler was awarded first. He was in very poor coat, and we do not like his eyes. He has good length of body and plenty of substance. Fancy II., second, we do not admire. Blossom, vhc. is a good little dog of the old type, but was bad in coat. Powder, hc., and Clytie, c., were well placed. In spaniel puppies, Black Tournie was given first, Helen, second, Niven's Darkey, vhc., and Darling, hc. This was a very good class and well judged.

FOXHOUNDS.

Vinegar was the only entry in the champion calss. He is a first-class one, good all through. In the open class, the Essex County Hunt with Cardinal, Warrior and Manager won first, second and third respectively. These are all good ones, Cardinal being a little the best in back and loin. Brownie, hc., and Sport, c., though fairish dogs, were quite outclassed in this company.

BEAGLES.

In placing the beagles, Mr. Mortimer followed the standard of Stonehenge, which says: "With the exception of the head and ears the modern beagle has all the points of the fox-

COL. W. E. HUGHES'S LIVER AND WHITE POINTER DOG "METEOR."
Winner of Champion Prize and Large Pointer Sweepstakes, New York, 1884.

hound." The standard of the American English Beagle Club is different in some respects, and as many of the animals exhibited are owned by members of the club it will be as well, perhaps, to compare the merits of the dogs under the latter. The class was well filled and of better average quality than has yet appeared at any of the Westminster Club shows, clearly indicating that the interest in this breed is rapidly advancing. The necessity for a class division for height was clearly demonstrated. Probably half the exhibit were dwarf beagles, and when brought into competition with the larger variety serve to perplex the judge and mystify the lookers on, who cannot understand why a 15-inch dog should beat a 10-inch one, or the reverse. In the champion class, two contestants appeared. The winner, Bush, is a fair average beagle; her principal faults are in forelegs and feet, coat and carriage of ear. Leader, who entered the lists against her, is best in ear and coat, but falls behind in back, loin and muzzle. In other points they are very near together, the bitch being a shade the best. In the open class for dogs we differ from the award. Frank, placed first, was shown in the pink of condition and is an attractive dog, but a careful analysis of his points shows him very wide of the mark as a pure beagle. His eye is light in color and too small; he is long in body and tail, and his coat totally disqualifies him. Duke, awarded second, is a much better dog and should have been first: he is rather cloddy in make-up, but is a useful-looking hound, and, moreover, shows no impurity in breeding. Bugle should have been second, Apart from his head being too conical he is quite a good average beagle with no absolutely strong points, yet no positive defects. Foreman, hc., should not have been shown; the dog was quite ill and moved in a listless, woebegone manner about the ring. This no doubt lost him a place higher in the awards. Pedro is well eared and looks like a workman; hardly up to standard style, however. Jack is rather long bodied, but has fair head and ears. Prince has either basset or dachshund blood in his veins, and his looks strongly inclined to that side of the house. Charm is a large puppy with well hung ears; his coat is rather short for a beagle, looks as though he would be useful in the field, but has no positive beagle qualities, and when grown will be oversize. The closest competition was in the open class for bitches, which class was really very good. While we regard Chase as being an exceptionally fine bitch, we differ with Mr. Mortimer in placing her first, for which position we prefer Deborah, who was given third, the latter will score very high as a typical beagle, and as the contest was in reality between these two it will be proper to note our reasons. Deborah is better in muzzle, jaw and lips, in hips, thighs and hindlegs, and in width of ear, although Chase's are excellently hung and the proper length and texture. Both bitches are slightly open in forefeet, with these exceptions they are model beagles. Midget, a very good little bitch, got second. Rena should have been assigned this position in our opinion. She is better in skull, ear and eye, while in lips and muzzle Midget is best, as she is also in neck. In back and loin Rena is somewhat the best of the two, while in rib Midget reverses the order, and is best also in forelegs and feet. In hips, thighs and hindlegs, Rena has a decided advantage, in other points they are about on a par. Balancing the pros and cons Rena will outscore. Tiney, weak in muzzle and light in bone, is withal quite a neat little bitch, and has some very good marks. Fly is a handsome beagle, with strong back and loin, and good tail and coat. She is off in skull, ears and eyes, but has a well sprung rib and her feet and hindlegs are good. Lady Elmore could not be roused up sufficiently to be critically examined, being obliged to look her over in her stall, therefore cannot go into detail, but consider her general appearance good. Belle, the last of the class, shows a very defective hip and loin, has great length of back, and bad forelegs and feet. She lacks beagle character. Among the puppies, Marjory, first, is the best of the lot. Music, vhc., has a remarkably high domed skull with low-hung ears. She is, or rather will be, oversize, somewhat long in body, but taken all in all, quite a nice puppy. Keiser's head is not quite the thing, but has a good body. We thought Judy a little too much out at elbow, but being young may improve in that respect, otherwise she is moderately good.

BASSET HOUNDS.

This was the first time that a class had been made for this excellent breed, and Nemours, the winner, is a good specimen, being perfect in color and markings, with good head, a trifle snipy in muzzle, perhaps; ears of great length, placed low on the head and hanging in graceful folds: great length of body, with short, but strong forelegs and feet. Countess, the only other entry, is of good length and close to the ground, but is not of the requisite color.

DACHSHUNDE

Were not a good class. Gretchen, the winner, is a nice little dog, but more of the terrier type than the hound. Dutchy was second, Waldman, hc., and Cora, c.

FOX-TERRIERS.

Champion Fox-Terriers, Dogs.—This brought out Brockenhurst Joe, Mixture, Royal and Fennel. Fennel is the youngest of this celebrated quartet, and showed it. He is good in body, legs and feet, and coat, but has a bad head, is weak in jaw and has heavy ears. Mixture is a well-shaped little fellow, but is blind of an eye. Royal shows his age. He has a beautiful head and ears, but is not quite straight in front. Brockenhurst Joe, the winner, though ten years old, carries his age like a two-year-old. He has a beautifully-shaped head, small ears, well placed, good neck and shoulders, and tiptop coat. He is a trifle high on his legs, and his feet were not so good as they might have been, still his fire and terrier quality made him an easy winner. In champion bitches, Richmond Olive was much the best. She is a nice-shaped bitch, a trifle large, with good head, ears nicely carried, fairly good legs and feet, but lacks bone and coat. The latter probably due to the fact that she has just reared a litter of puppies. She comes with the best of credentials from England, and is no doubt one of the best we have yet seen. Viola, an honest little bitch, begins to show age. Jeopardy was shown too fat, and Gypsy was here out-classed. The open class for dogs was the best ever seen in this country. First prize was awarded to Belgrave Primrose. He has the best set of legs and feet we have ever seen on a terrier, his coat is perhaps a bit soft, and his ears, though small, are not at all times well carried. Scarsdale, given second, is a rare-stamped little dog, with good head and ears, feet and legs; he is a trifle heavy and straight in the shoulder. Raby Tyrant, given third, we were somewhat disappointed in. He is wide in chest and is not so good in his legs and feet as he should be, still he is undoubtedly a well bred one. Vakeel, Marlboro Jockey Jr., Roderick and Buff, vhc., are all good ones, Vakeel being a little the best. Roderick is a nice dog, but on too large a scale. Marlboro' Jockey is a gamy-looking dog, not quite straight in front and a trifle soft and open in coat. Buff shows age. Grip, Terror and Belvoir Jim, hc., were far above the average, while Governour, Nip and Tough, c., were well worthy of honorable mention. In fox-terrier bitches, Dance was given first over Village Belle, second. These are both very good ones, of a different type. Dance is very good in coat, body, legs and feet. Village Belle is a little fine in bone and coat, and perhaps a trifle cowhocked. Warren Testy, given third, is rather weak in jaw, has heavy, large ears and soft coat. Diamond, vhc., is a good little bitch, almost too small. Squeak, vhc., is pretty, but light in bone. Twinkle, hc., has good head and coat, but is somewhat out at elbows and bad on her feet. Lady Gay, c., is a neat bitch, too fine in bone and coat for the present day.

In wire-haired terriers, Tyke was a good first. He is too fat, and is getting soft in coat. Meg was placed second, and Sweetbriar third. It is a pity this workman-like terrier does not become more popular. In dog puppies, under 12 months, Warren Joe was given first, to which honor he was well entitled, and Acteon, a nice puppy but almost too large for his age, was given vhc. In the class for bitches Clover Belle, with her good coat, legs and feet, was an easy winner. Azola, vhc., and Daphne and Juno, hc., were each nice ones, as was also Betsy, hc. Taken altogether, the fox-terrier classes were the best that have ever been seen in this country, and many of the unnoticed dogs could have won easily a few years ago.

COLLIES.

In the champion class for dogs, Robin Adair was awarded the prize over Bruce and Jake, Rex and Tweed II. being on exhibition only. The winner is a very typical dog, with a beautiful head, nice ears correctly carried, good coat, abundant on neck and shoulders, but short on back and loin, nice tail and of very stylish carriage. Bruce is also an exceedingly good collie, first-rate head and coat, but a trifle shallow in chest and slack in loin. Jake was outclassed. In the champion bitch class, Zulu Princess, Effie and Meg competed, and the honors went to Princess. We never saw this handsome bitch in better shape. In the open class for dogs, Hiram was given first, Duncan second, Brack third, Sandy and Hero vhc., Rokeby and Laddie hc., and Donald c. This class did not compare favorably with the bitch class in point of quality, and we did not think one of them first-rate. In the class for bitches, Winnie was placed first. This is a first-class bitch, and fully bore out our prophecy at New Haven, when we said she would make it hot for any of them when in good coat. Jean, second, is a nice little bitch, with the good coat and rather heavy body of her sire, old Marcus. Fairy, third, is a good mover, but we do not like her heavy ears. Of the three vhc.'s, Flyaway, Jersey Lily and Lizzie, we liked Flyaway the best. Eigg, c., is a well-bred bitch with good coat, but too short on leg and cloddy in appearance. In collie dog puppies, under 12 months, Argyle, placed first, we liked very well. Fritz and Robin Hood, vhc., are both nice puppies, the latter showing a good deal of quality, but is at present short of coat. Collie, Shepherd Boy and Major, hc., and Help, c., are all good puppies and worthy of mention. In the collie bitch puppies, under 12 months. Peep o' Day, a clever little tricolor, was given first; this is a very handsome puppy, with good head and ears, but a trifle short of coat. Effie Dean, vhc., is very little behind the winner. Nannie O., vhc., has profuse coat, heavy, badly carried ears, and is coarse. Juno II., hc., and Laurie, c., are both promising youngsters, especially the former.

BULLDOGS.

The champion class was divided into dogs and bitches. In the dog class Messrs. R. & W. Livingstone's Boz, shown in the very pink of condition, just managed to beat Tippoo, who was below himself in flesh and is a little pinched in muzzle. Bill is also a first-rate dog, but scarcely up to the standard of Boz or Tippoo. Old Ben was not for competition. In the bitch class Bellissima, in magnificent shape, easily beat Sweet Brier, who is pinched in face. In the open class for dogs, Hamlet, a tolerably good little brindle, beat Hero II., given second, and Boxer third. Mose, vhc., and Moses, c., we did not like. In the corresponding bitch class, Rhodora, a white bitch, wrongly entered as brindle, won easily over Helen, a very good-bodied bitch, placed second. Jenny, third, has seen her best days, and Julia is only a very moderate one.

BULL-TERRIERS.

It the champion bull-terriers over 25 pounds, Grand Duke, shown in superb condition, was given first. Young Bill shows age, and Lord Nelson, though he has a good body, is coarse in head and lippy. Bull-terriers, dogs or bitches over 25 pounds. President was placed first over Charley, given second, and Rose third. These are three fairly good ones. In champion bull-terriers under 25 pounds, Little Maggie was the only entry. She is a very good little bitch, rather coarse in tail. Bull-terriers under 25 pounds, dogs or bitches, were a very moderate lot. Doonie, transferred from Class 91, was given first, Venus second, Short third, and Katy vhc. Bull-terrier puppies brought out one fairly good one in Rosa, who was given the award.

BLACK AND TAN TERRIERS.

Black and tan terriers over seven pounds, dogs or bitches, was a small class. Bessie, the winner, is a very good one, especially in head; her markings might be a trifle better, but she is a well-shaped bitch and hard to beat. Lady, second, is well marked, but a trifle small and not so good in head as the winner. Brilliant, vhc., is a good shaped dog, rather thick in skull and a little too dark in color of tan. Of the others, Doctor, hc., and Sambo, c., are little more tan toys.

ROUGH-HAIRED TERRIERS.

This was the usual odds-and-ends collection. They were well judged. Some thought Sir Garnet should have been in the money, but our idea is that an Airedale's place is in the miscellaneous class. Heather and Tam Glen are two very good rough-haired Scotch terriers, the proper stamp of dog to win in this class.

DANDIE DINMONTS.

There were only three in the class, we thought them properly placed, the winner is quite a good specimen.

The Bedlington terriers were a small class, only two facing the judge out of the three entries. Blucher, the winner, is a first-rate dog, perhaps a little weak in jaw, but is of good coat and the correct type. Second prize was very properly withheld.

SKYE TERRIERS.

Jim, well known by this time, took another championship from Pepper and Souter Johnnie. In the open class there

were several very nice ones, only they were decidedly undersized. There was not much to choose between Boss and Watty, while Fanny was a good third. This was a remarkably well-judged class in our opinion. Indeed, Mr. Mortimer seems to be especially at home with long-coated terriers.

PUGS.

Pug owners did not agree with Mr. Dana putting Roderick over Joe in the championship class. True, "Rod" was looking better than we have ever seen him, but he is so bad in his hindlegs, double jointed in fact, that we must say we think Joe should have been first. Effie had a walk over for her championship. In the open classes the average quality was poor, for after the first three were sifted out the others were not worth much. Max is good in head and wrinkle, but has a flesh-colored nose, and the Roderick hindlegs. Bob is a very good one for a nine months' puppy. Tu-Tu is heavy in ears, faulty in skull and weak in under jaw. Wrinkle is plain in head, light in mask and small in eye. Pete is light in eye and lacks character. In the bitch class, Victoria we greatly preferred to Duchess, whose ears are outrageously large. Victoria, but for her loose tail, is a hard one to find fault with. Forest City Kennel's Dolly was shown too fat, and was nothing like so good as Minnie May II. In this class we should have placed Victoria first, Cryer's Dolly second and Minnie May II. third. The puppies were mostly of very tender age, and it is precarious work picking out winners at three months old and as bad to criticise such awards.

YORKSHIRE TERRIERS.

Through the whole of the Yorkshire classes Mr. Mortimer exercised excellent judgment. Hero was alone for the large championship. He is going off in coat, both in color and in quantity, and his owner was fortunate to sell him for a good price. In the large open class we had Lancashire Star first, good in coat and color. Prince is rather light in color, but makes up for that defect in length of coat. Bright on the contrary was good in color, but his coat should be longer. Both Nellie and Ben are Montreal silvers and were properly placed behind Billee Taylor and Eddie, both fairly good ones. Mrs. Kisteman was again to the front in small Yorkshires, winning the championship with Crickie and first in open class with Spring, the latter a very good little one. Chester is another nice one both in color and coat. Nellie and Teddie were not well shown, and we might have been inclined to give Charley third place though he is a little off in color. Mr. Marriot's pair were hardly up to the highly commended standard.

TOY TERRIERS AND SPANIELS.

In toy terriers under seven pounds, commendations were very freely distributed. Daisy we missed from her cage when making our inspection, but marked Gyp as best of the lot we did see. Pud and Nellie were also worth noticing, but the others had no great calls except on a judge's liberality.

The winning King Charles spaniel is far too large, and Sankey is not a good one. Mr. Phillips's unnamed one is too long in the face and not good otherwise. Duke of New York is a wonderfully short-faced dog, but that is all. Roy has no tan and Gypsy was out of condition. In Blenheims Sir Guy is nice in color but is too long in the face, and Duke is a big coarse dog not well marked. The Japanese spaniels were small in number but really extra good in quality. Ada promises to make up better than anything in the class.

POODLES AND MISCELLANEOUS.

Mr. Heckscher hit the mark every time when he handled the poodles, and next year the poodle owners ought to support his nomination for the same position. Rajah II. is a good dog and was well barbered, indeed the barber has as much to do with winning as the dog in the poodle classes. In the miscellaneous classes there was nothing of any great merit.

Many of the specials followed the awards in the regular classes. Where judging was necessary the decisions were in most cases satisfactory. In class NN., for the best English setter, dog or bitch, we do not understand why Mr. Higgins should give the place to Rock. For reasons already given we think him inferior to Foreman. The prize should have gone to Queen Alice, who is better than either. The FOREST AND STREAM prize for the best trained setter or pointer which has been trained by the method laid down in "Training vs. Breaking," brought out three, being nicely trained pointers, A. C. Collins's Fritz, Philip Thurtle's Jilt, and Luke W. White's Grace. All of them performed their tasks in a cheerful and intelligent manner that reflects great credit upon their handlers. That this exhibition was very pleasing to the spectators was manifest in the well merited applause which they liberally bestowed. The different classes were judged as follows: Mastiffs, Newfoundlands and pugs—Mr. Paul Dana, New York. St. Bernards, berghunde, spaniels (all classes), beagles, bassets, dachshunde, fox-terriers, collies, bulldogs, bull-terriers, and all other terrier classes—Mr. James Mortimer, New York. Greyhounds, deerhounds and Italian greyhounds—Mr. Joseph R. Pierson, Buckingham, Pa. Pointers—Mr. E. C. Sterling, St. Louis, Mo. English setters—Mr. John C. Higgins, Delaware City, Del. Black and tan setters, Irish setters and foxhounds—Mr. E. C. Sterling and Mr. John C. Higgins. Chesapeake Bay dogs—Mr. Isaac Townsend. Poodles—Mr. John G. Heckscher.

Following is a full list of the

AWARDS.

Champion Mastiffs, Dogs.—1st, Chas. H. Mason's Nevison, imported, fawn, black points, 4½yrs., Gurth—Juno.

Champion Mastiffs, Bitches.—1st, Ashmont Kennel's Dolly Varden (A.K.R. 75), fawn, black points, 4yrs., Young Prince—Merlin.

Haines's Caro, orange and tawny, 3mos., Lohengrin—champion Jura. Very high com., Millbrook Kennel's Eckhardt (A.K.R. 413), orange tawny, 10mos., Rex—Alma I.; G. F. Baker's Como, tawny and white, 10mos., imported Fido—Rosary; E. R. Hearn's Puritan, brindle and white, 3½mos., Rector—Alma II.; Chequasset Kennel Club's Noblesse (A.K.R. 503), orange, brindle and white, 5mos., Alp II. (A.K.R. 705)—Brenner (A.K.R. 706); Springhurst Kennel's Tony, tawny, 11mos., imported Fido—Rosary; Rev. J. Cumming Macdona's Snowstorm, 7mos., Rupert—Duchess; John P. Haines's Chic, orange and tawny, 3mos., Lohengrin—champion Jura. High com., Woodbury Langdon's Argus, tawny and white, 10mos., Rex—Diana; John P. Haines's Perro, orange and tawny, 3mos., Lohengrin—champion Jura; R. P. Lounsbery's Buster, tawny and white, 10mos., imported Fido—Rosary; E. R. Hearn's Druid, brindle and white, 3½mos., Rector—Alma II.

Berghunde, Dogs.—1st, George E. McCollom's Don, orange, tawny and white, 4½yrs., imported Marco—imported Alice; 2d, W. A. Fuseron's Dan, tawny, 3yrs., imported, out of Pflocksie. Very high com., F. M. Du Faur's Belle, tawny, 3yrs.

Newfoundlands, Dogs or Bitches.—1st, C. J. Whigam's Jack, black, 5yrs., imported; 2d, Charles T. Strauss's Tasso, black, 2yrs., Pontoon—Fannie. Very high com., W. H. Lacy's Bruno, black, 3yrs., imported. High com., W. Barbour's Cabot, black, white spot, 7½mos.

Champion Greyhounds, Dogs.—1st, H. W. Smith's Friday Night, (A.K.R. 753) black and white, 2½yrs., Master's Prince—I. H. Salter's Sally.

Greyhounds, Dogs.—1st H. W. Huntington's Bouncing Boy, black, 1½yrs., Walton Lad—Cremorne; 2d, Mrs. Henry Allen's Dell, fawn, 2yrs., imported. Very high com., J. Coleman Drayton's Slingsby, black, 7 yrs., Rapid—Sally. High com., Edward Cullen's Moscow, fawn, 3yrs., full pedigree.

Greyhounds, Bitches.—1st, H. W. Huntington's School Girl, black, 1½yrs., Schoolfellow—Sol-Fa; 2d, withheld. Very high com., H. W. Huntington's Begonia, black, 5yrs., Born a Demon—Bella.

Greyhound Puppies, under 12 Months, Dogs or Bitches.—1st withheld; 2d, Hy. Henderson's Flash, fawn, 9mos. Very high com., H. W. Huntington's La Belle, black, 10mos., champion Double Shot—champion Clio.

Champion Deerhounds.—1st, Clovernook Kennel's Roy, brindle, 2yrs., Paddy—Lassie.

Deerhounds, Dogs.—1st, Archibald Rogers's Bruce, dark brindle, 1½yrs., Grey Gonwyn (late Hector)—Leona (late Linda); 2d, W. D. Whipple's Bruce, dark gray, 5yrs. Very high com., Archibald Rogers's Borrua, dark brindle, 2½yrs., Wallace—Lorna.

Deerhounds, Bitches.—Awards withheld.

Champion Pointers, over 55 lbs., Dogs.—1st, John W. Munson's Meteor, imported, liver and white, 3yrs., Garnet—Jilt.

Champion Pointers, over 50 lbs., Bitches.—1st, Christopher Moller's Water Lily, lemon and white, 5yrs., Skidmore's Don—Dolly.

Pointers, over 55 lbs., Dogs.—1st, C. W. Littlejohn's Fritz, lemon and white ticked, whelped June, 1881, Beaufort—Spot; 2d, Neversink Lodge Kennel's Drake, liver and white, 2yrs., champion Croxteth—Lass; 3d, L. & W. Rutherfurd's Danby, liver and white, 3yrs., Speck—Dinah. Very high com., C. W. Littlejohn's Pilot, liver and white, 3½yrs., Scout—Spot; J. W. Munson's Maxim, imported, liver and white, 3yrs., Garnet—Jilt. J. W. Munson's Bang, imported, liver and white, 5yrs., champ. Bang—Luna. High com., J. H. Stromberg's Guy, lemon and white, 2yrs., Beaufort—Spot; C. M. Munhall's Donald II., liver, white and ticked, 20mos., champion Donald—Devonshire Lass; W. H. Force's Clydesdale, liver and white, 3yrs., Massey's Dash—Virginia Belle.

Pointers, over 50 lbs., Bitches.—1st Frank E. Rogers's Miss Merrymack, liver and white, 3yrs., King Bow—Grace; 2d, J. O. Donner's Fan Fan, liver and white, 4yrs., imported; 3d, G. W. Amory's Sal, liver and white, 3yrs., Dick—Ruby. High com., Knickerbocker Kennel Club's Lady Mac (A.K.R. 1040), black, 3yrs., champion Pete—Mab.

Champion Pointers, under 55 lbs., Dogs.—1st, Norbury Kennel's Bravo, lemon and white, 4yrs., Bragg—Kate.

Champion Pointers, under 55lbs., Bitches.—1st, J. W. Munson's Vanity, liver and white, 2yrs., champion Baug—Pride.

Pointers, under 55lbs., Dogs.—1st, W. Tallman's Pride, liver and white, 2yrs., Croxteth—Royal Fan; 2d, A. C. Collins's Fritz, lemon and white ticked, 2yrs. 7mos., imported Bob—Gabbs's Fly-Shot; 3d, I. S. Crane's C. Don, liver and white, 2yrs., Robin—Sigler's Gypsy. Very high com., G. F. Jordan's Booths, lemon and white, 2½yrs., St. George—Dinah; Knickerbocker Kennel Club's Craft (A.K.R. 1038), lemon and white, 2½yrs., Bang—Jean; R. C. Cornell's Match, liver and white, 4yrs., champion Sensation—champion Grace; Francis Lynch's Max, fawn and white, 4yrs. High com., Dr. John A. Wells's Puck, liver and white, 2½yrs., Lewis Joe—Martin's Fan.

Pointers, under 50lbs., Bitches.—1st, Neversink Lodge Kennel's Jilt, liver and white, 19mos., champion Croxteth—Lass; 2d, R. Hitchcock's Vision (A.K.R. 778), liver and white, 3yrs., Croxteth—Vinnie; 3d, J. W. Munson's Flash III., liver and white, 2yrs., imported Bang—Pride. Very high com., Charles R. Christy's Nina, black and white, 2yrs., Nat—Susy Royal; J. N. Lewis's Jill, liver and white, 2yrs., Joe—Fan Fan. High com., W. R. Williams's Rose, liver and white, 2½yrs., champion Don—Lamb's champion Elf; D. S. Gregory Jr., 2d's Belle (A.K.R. 203), lemon and white, 4yrs. 3mos., Sensation—Grace; R. T. Vandevort's Joy, liver and white, 2yrs, Boon—Rena.

Pointer Puppies, over 12 and under 18 Months Old, Dogs.—1st, Chas. F. Murphy's Rox (A.K.R. 566), liver and white, 14mos., Dick (A.K.R. 76—Gen. McLaughlin's Belle, by Scout out of Freeman's Belle; 2d, Jas. K. Heyde's Don, lemon and white, whelped April 27, 1883. Jim (A.K.R. 353)—D. Allerton Jr.'s Dione.

Pointer Puppies, over 12 and under 18 Months, Bitches.—1st, C. M. Munhall's Dora, liver and white, 13mos., champion Sensation—Devonshire Lass; 2d, W. F. Sage's St. Kilda, liver and white, 12mos., Dilley's champion Ranger—Dilley's White Lily. Very high com., Neversink Lodge Kennel's Romp, liver and white, 14mos., champion Croxteth—Lass; Essex Kennel Club's Cora, liver and white, 16mos., Arcos I.—Cora. High com., Thomas F. Ryan's Nell III., lemon and white, whelped Nov. 13, 1882, Czar, by Snapshot—Gypsie, dam Nell II., she by Rake II.—Nell.

Pointer Puppies, under 12 Months, Dogs or Bitches.—1st, Norbury Kennel's Daisy Bravo, lemon and white, 8mos., champion Bravo—Lily; 2d, F. R. Hitchcock's Prince Hamlet, lemon and white, 8mos., Sensation—Lass. Very high com., Dr. A. C. McCollom's Faust II. (A.K.R. 696), liver and white, whelped May 12, 1883, champion Faust—Gertrude. High com., Garret Roach's Lou, lemon and white, 11½ mos., Beaufort—Duchess; Knickerbocker Kennel Club's Jule (A.K.R. 1042), liver and white, 8mos., St. John—Folly; Julien Rosenblatt's Don, brown and white, 10mos., Don, Sr.—imported bitch; Francis Lynch's Windsor, white and black, 7mos., Bang Bang—Daisy Dean.

Champion English Setters, Dogs.—1st, C. F. Crawford's Foreman, black, white and tan, 4yrs., Dashing Monarch—Fairy II.

Champion English Setters, Bitches.—1st, T. G. Davey's Belle's Pride, 4yrs., blue belton, champion Paris—Harrison's Belle.

English Setters, Dogs.—1st, F. E. Lewis's Rock, lemon and white, 2½yrs., Water's Grouse—French's Daisy; 2d, L. C. Clark's Bob White, lemon belton, 2yrs., Young Laverack—Lady May; 3d, Neversink Lodge Kennel's Laverack Chief, black, white and tan, 3½yrs., Pontiac—Fairy II. Very high com., Thomas F. Ryan's Count Dan, blue belton, 5yrs., Carlowitz—Queen Bess; Dr. S. Fleet Speir's Marquis de Correze, black, white and tan, 2½yrs., Emperor Fred—Lizzie Lee; Stewart McKay's Pride of Columbia, white, 2yrs., Cossack—Ophelia; H. Pape's Prince Messenger, white and black, 2yrs., Thunder—Loui; A. H. Moore's Prince Al, lemon and white, champion Leicester—Dodge's Rose. Com., G. F. Jordan's Telford, blue belton, 2yrs., Darkie—Rosie Morn.

English Setters, Bitches.—1st, E. W. Jester's Dashing Belle, (A.K.R. 414) blue belton, 34mos., Dashing Monarch—Blue Belle; 2d, E. W. Jester's Dashing Jessie (A.K.R. 815), blue belton, 34mos., Dashing Monarch—Blue Belle; 3d, C. A. Stone's Forest Dora, blue belton, 2yrs., champion Dick Laverack—Forest Fly. Very high com., John G. Heckscher's Modjeska, lemon and white, 7yrs., champion Leicester—Peeress; J. O. Donner's Princess Helen, orange and white, 2yrs., champion Thunder—Donner's Bessie; Thomas F. Ryan's Linda, black, white and tan, 21mos., Emperor Fred—Cecilia D.; E. A. Hemberg's Lucid, blue belton, 5yrs., Sim's champion Dash—champion Maid of Honor; John J. Scanlan's Flake, black, tan and white ticked, Druid—Swaze; Howard Hartley's Daisy Queen, white, black and tan, 3yrs., Rock—Meg; T. G. Davey's Genevieve, blue belton, 2yrs., Harrison's London—Dawn. Champion Pugs, Bitches.—1st, W. R. Knight's Effie, stone fawn, 3½yrs., imported, Banjo—Zoe.

Pugs, Dogs.—1st, M. H. Cryer's Max, fawn and black, 1yr., champion Roderick—Dolly; 2d, M. H. Cryer's Bob, fawn and black, 9mos., Atlas——; 3d, Mrs. C. Wheatleigh's Tu Tu, fawn, 2½yrs., Young Peter—Loe. Very high com., Miss Lulu Lockwood's Wrinkle, fawn, 4yrs. High com., Miss Ada L. Gibbs's Pete, light fawn, 2yrs. Com., Peter Cassidy's Punch, Morrison Strain, 2yrs.

Pugs, Bitches.—1st, Miss Morley's Duchess, fawn, 25mos.; 2d, M. H. Cryer's Dolly, fawn and black, 4yrs., Toby—Liz; 2d, Forest City Kennels's Dolly (A.K.R. 170), apricot fawn, 3yrs., Punch—Judy. Very high com., Mrs. C. Wheatleigh's Victoria, silver gray, 16mos., Atlas —Vic. High com., Lucy Bros.'s Minnie May II., silver fawn, 11mos., Lucy's Fritz—Lucy's Minnie May. Com., W. H. Closs's Puck, fawn, 1yr.; John G. Browning's Judy, fawn, 2yrs., imported.

Pug Puppies, under 12 Months, Dogs or Bitches.—1st, G. B. Wilson's unnamed, fawn, black points, 12wks., —— —Peggie; 2d, J. F. Schenck's Chochra, fawn, 3mos.; 3d, M. H. Cryer's Puppy, fawn and black, champion Roderick— ——. Very high com., John Hammond's Minnie, stone fawn, 11mos., imported. High com., Andrew Ludwig's Punch, cream, 3mos., Punch—Plucky. Com., Andrew Ludwig's Jerry, cream, 3mos., Punch—Plucky.

Champion Yorkshire Terriers, over 5 lbs., Dogs or Bitches.—Mrs. H. A. Kisteman's Hero, blue and tan, 4yrs., full pedigree.

Yorkshire Terriers, over 5 lbs., Dogs or Bitches.—1st, H. A. Kisteman's Lancashire Star, blue and tan, 2yrs., full pedigree; 2d, John Hammond's Prince, blue silver tan, 4yrs., imported; 3d, H. A. Kisteman's Bright, blue and tan, 1½yrs., full pedigree. Very high com., Lieut. Aaron Ward's Billee Taylor, blue and tan, 3yrs., imported; H. F. Vogt's Eddie, blue and tan, 15mos., imported. High com., John Hammond's Nellie, golden tan, 3½yrs., imported; John Hammond's Ben, blue and tan, 15mos., imported. Com., Dr. Gage's Flossie, blue and tan, 3yrs.; Mrs. James B. Wasson's Muff, silver blue, 4yrs.

Champion Yorkshire Terriers, under 5 lbs., Dogs or Bitches.—H. A. Kisteman's Chickie, blue and tan, 2yrs., full pedigree.

Yorkshire Terriers, under 5 lbs., Dogs or Bitches.—1st, H. A. Kisteman's Spring, blue and tan, 2yrs., full pedigree; 2d, Mrs. Robert Lyon's Chester, blue and tan, 17mos., full pedigree; 3d, John Hammond's Nellie, blue and tan, 1½yrs., imported. Very high com., John Hammond's Nellie, blue and tan, 18mos, imported; John Hammond's Teddie, blue and tan, 2½yrs., imported; John Moore's Charley, blue and tan, 15mos., imported. High com., John Marriot's Charlie, blue and tan, 15mos.; H. A. Kisteman's Prince, blue and tan, 1½yrs., full pedigree; John Marriot's Flora, blue and tan, 1yr. Com., Wm. McGovan's Frank, blue and tan, 1½yrs., Nip—Sallie; Miss M. R. Finlay's Rags, silver grey, 4½yrs., ——Putz.

Toy Terriers other than Yorkshire, under 7 lbs., Dogs or Bitches.—1st, John Power's Daisy, black and tan, 3yrs., Dandy—Fanny; 2d, Peter Mooney's Gyp, black and tan, 2yrs, Dandy—Fly. Very high com., Tom Poleasky's Nellie, black and tan, 3yrs., imported; Miss Emily Green's Pearl, black and tan, 3yrs., Patsey—Fan. High com., Bernard Costello's Martha, slate, 14mos., imported Teddy—Rose; R. & W. Livingston's Daisy, black and tan, 2yrs. 10mos., Sam—Daisy; R. F. Wheeler's Charlie, silver, 14mos. Com., F. L. Vogt's Dan, black and tan, 2yrs., imported.

King Charles Spaniels, Dogs or Bitches.—1st, John Hammond's Charley, black and tan, white star, 4yrs., imported; 2d, John Hammond's Sankey III., black and tan, 6mos., Sankey II. Very high com., Wm. Phillips's ——, black and tan, imported, full pedigree.

Blenheim Spaniels, Dogs or Bitches.—1st, Miss Gertrude Gibert's Sir Guy (formerly Charley), orange and white, Charlie—Lucie; 2d, Josh. Geo. Browning's Duke, orange and white, 2yrs., imported. Com., Frank Mariott's Charley, liver, 18mos.

Japanese Spaniels, Dogs or Bitches.—1st, John Hammond's Ching, black and white, 3yrs., imported; 2d, James F. Larkin's Mancha, white and black, 18mos., Onaska—Otomasea. Very high com., Walter Scott's Venus, white and black, 2yrs. High com., John Hammond's Ada, black and white, 5mos., Ching—imported Nellie.

Poodles, Dogs.—1st, Miss Work's Rajah II., black, 4yrs., imported; 2d, Miss Rives's Gaulois, black, 3yrs., Mr. Lorillard's Schwartz, imported—Mr. Lorillard's Flora, imported. Very high com., Mrs. Walker Breece Smith's Figaro, black, 4yrs., Mr. Lorillard's Schwartz, imported—Mr. Lorillard's Flora, imported. Com., J. Pierrepont Edwards's Peter the Great (E.K.C.S.B. 11,016), black, 4yrs.; Prescott Lawrence's Sweep, black.

Poodles, Bitches.—1st, E. B. Wall's Mignon, 2yrs. 4mos., Work's Dog; 2d, J. R. Sergeant's Pompey, black, full pedigree. Very high com., Prescott Lawrence's Dinah, black.

Italian Greyhounds, Dogs or Bitches.—1st, Mrs. Constance A. Andrews's Queenie, golden yellow, 3yrs., imported 1882, born in Italy; 2d, E. W. Jester's Pearl (A.K.R. 758), fawn, 5yrs., Douglas—Gypsy Queen.

Miscellaneous (or Foreign Class), Dogs or Bitches, over 25 lbs., not specified in the above classification.—1st, Geo. A. Saportas's Judge, brindle, 18mos., Jones's Bruno—Unknown; 2d, Edward Dexter's Belle Tinker (English retriever), black, 3yrs., imported. King Coffee—Salter's Belle; 3d, John H. Foster's Nellie, spotted, 4yrs. Very high com., Wm. F. Smith's Bob, black, 6mos.

Miscellaneous (or Foreign Class), Dogs or Bitches, under 25 lbs., not specified in the above classification.—1st, N. Thomas's Me Too, mouse, 2yrs., Unknown; 2d, John F. Scholes's Hornet II., white, 2½yrs., Hornet—Juliet.

SPECIAL PRIZES.

The Eastern Field Trials Club prizes for dogs that have been placed at any field trials were awarded as follows:

A. Best pointer dog—Neversink Lodge Kennel's Drake.
B. Best pointer bitch—No entry.
C. Best English setter dog—C. Fred Crawford's Foreman.
D. Best English setter bitch—Dr. S. Fleet Speirs's Maida.
E. Best Irish setter dog—Max Wenzel's Chief.
F. Best Irish setter bitch—No entry.
G. Best black and tan setter—No entry.

The Westminster Kennel Club specials:

H. Best kennel of large pointers to consist of five.—The Knickerbocker Kennel Club's Knickerbocker, Lady Gleam, Jimmie, Glenmark and Lady Mac.

I. Best kennel of small pointers to consist of five.—The Knickerbocker Kennel Club's Lady Bang, Craft, Temptation, Doncaster and Jule.

J. Best Kennel of English setters to consist of five.—T. G. Davey's Dick Laverack, Belle's Pride, Glenfinlass, Genevieve and Canadian Queen.

K. Best kennel of Irish setters, to consist of five—Rory O'More Kennel's Rexford, Lady Edith, Rylla, Gay and Rory O'More II.

L. Best kennel of black and tan setters, to consist of five—No entry.

M. Best collection of five pugs—Dr. M. H. Cryer's Roderick, Max, Bob, Dolly and a puppy.

N. Best black setter—The Locust Grove Kennel's Smut II.

O. Best Clumber spaniel—Frank Thomson's Don.

P. Best basket beagle under 12 inches—No entry.

Q. For the dog or bitch that retrieves in the most stylish and obedient manner—A. C. Collins's Fritz.

R. Best champion bull bitch—John E. Thayer's Bellissima.

S. Fastest Greyhound— ——.

T. For the greyhound making the highest leap—George S. Parvin's Major.

U. Best trick dog—A. C. Collins's Fritz.

V. Best bull dog or bitch the get of Ben—Mrs. James Patterson's Bill.

W. Best pointer dog got by Sensation—R. C. Cornell's Match.

X. Best pointer bitch, got by Sensation—J. H. Swain, Jr.'s Nan.

Y. Best five St. Bernards—E. R. Hearn's Bonivard, Gertie, Duke of Leeds, Rhona and Don II.

Z. Best looking setter that has been placed at a field trial—Max Wenzel's Chief.

AA. Best looking pointer that has been placed at a field trial—The Westminster Kennel Club's Bang Bang.

BB. Best pair of pointers—J. W. Munson's Meteor and Vanity.

CC. Best brace of English setters—E. W. Jester's Dashing Belle and Dashing Jessie.

DD. Best brace of Irish setter puppies of one litter—John J. Scanlon's Pride of Glencho and Lady Glencho.

EE. Best fox-terriers.—Prescott Lawrence's Brockenhurst Joe.

FF. Best pair of bulldogs.—John E.Thayer's Tippo and Bellissima.

GG. Best dog puppy got by Sensation.—F. R. Hitchcock's Sensation Lad.

SWEEPSTAKE PRIZES.

HH. Best pointer dog over 55 lbs.—J. W. Munson's Meteor.

II. Best pointer dog under 55 lbs.—The Westminster Kennel Club's Bang Bang.

JJ. Best English setter dog.—C. Fred Crawford's Foreman.

KK. Best Irish setter dog—Dr. Wm. Jarvis's Elcho, Jr.

The Medford Fancy Goods Company's specials:

LL. Best pointer dog—J. W. Munson's Meteor.

MM. Best pointer bitch—J. W. Munson's Vanity.

NN. Best English setter—F. E. Lewis's Rock.

OO. Best Irish setter—Dr. W. Jarvis's Elcho, Jr.

PP. Best greyhound dog—H. W. Huntington's Bouncing Boy.

QQ. Best greyhound bitch—H. W. Huntington's School Girl.

RR. Best brace of greyhounds—H. W. Huntington's Bouncing Boy and School Girl.

SS. Best St. Bernard—E. R. Hearn's Duke of Leeds.

TT. Best mastiff—C. H. Mason's Nevison.

UU. Best pug dog—Dr. M. H. Cryer's Roderick.

VV. Best bulldog—R. & W. Livingston's Boz.

WW. Best Collie—Thos. H. Terry's Zulu Princess.

EXTRA SPECIALS.

XX. Best collie dog sired by Robin Adair or Tweed II.—John Romaine's Robin Hood.

YY. Best collie bitch sired by Robin Adair or Tweed II.—No entry.

ZZ. Best fox-terrier got by the stud dogs of the Messrs. Rutherfurd or bred in their kennel.—The Clovernook Kennel's Clover Belle.

AAA. Best trained setter or pointer which has been trained by the method laid down in "Training vs. Breaking"—A. C. Collins's Fritz.

BBB. Best English setter over 12 and under 18 months old.—J. J. Scanlan's Cliney Carter.

CCC. Best pointer got by Bang Bang—G. de Forest's Grant's Fresco.

DDD. Best deerhound dog—C. F. Dumbmann's Jack.

EEE. Best deerhound bitch—T. A. Blake's Lorna II.

FFF. Best white poodle—Miss Edith Jones's Mouton.

AMERICAN-ENGLISH BEAGLE SPECIALS.

GGG. Best beagle—H. W. Ashburner's Deborah.

HHH Best beagle owned by a member of the club—H. W. Ashburner's Deborah.

EXTRA SPECIALS.

III. Best American-bred bulldog—Mrs. James Patterson's Bill.

JJJ. Best cocker spaniel dog owned by a member of the A. C. S. Club—J. P. Willey's Obo II.

KKK. Best cocker spaniel bitch owned by a member of the A. C. S. Club—Andrew Laidlaw's Woodstock Flirt.

LLL. Best stud pointer—A. E. Godeffroy's Croxteth.

MMM. Best three greyhounds—H. W. Huntington's Bouncing Boy, School Girl and Begonia.

NNN. Second best beagle owned by a member of the American English Beagle Club.—N. Elmore's Chase.

OOO. Best pointer, the get of Faust or Bow.—C. H. Mason's Beaufort.

PPP. For the fastest greyhound.— ——.

PPP.A. Highest leaping greyhound.—George S. Parvin's Major.

QQQ. Best pointer got by Beaufort.—C. W. Littlejohn's Fritz.

RRR. Best Yorkshire terrier under 9 months.—Not awarded.

SSS. For the pointer or setter under 12 months best trained to retrieve—No entry.

TTT. For the best imported English setter under 12 months—F. Windholz's Princess Phœbus.

UUU. For the best five collies—Thos. H. Terry's Robin Adair, Tweed II., Zulu Princess, Effie and Meg.

The Cocker Spaniel Produce Stakes.—1st, Hornell Spaniel Club's Rattler; 2d, Andrew Laidlaw's Woodstock Flirt; 3d, Dr. J. S. Niven's Darkey.

THE PHILADELPHIA DOG SHOW.—The exhibition of the Westminster Kennel Club last week in New York, has given a great impetus to the dog men of Philadelphia, and the only topic of conversation at the rooms of the Philadelphia Kennel Club is their coming show, to be held in connection with the State Agricultural Society's fair the last of September. A special building for the dog show is to be erected, and some very attractive features never before had in connection with a canine show will be added, which cannot fail to be interesting. The list will be large and already very many valuable special prizes have been promised. A field trial for members' dogs will be had next November, and a number of farms well supplied with quail have been leased.—HOMO.

No MEDICAL EXAMINATION is required to take out an accident policy in the Travelers, of Hartford, Conn., guaranteeing a sum of money weekly while disabled from accidental injury, and principal sum in case of death resulting therefrom.—*Adv.*

Rifle and Trap Shooting.

FIXTURES.

May 20 and 21.—Illinois State Sportsmen's Association Tournament Delaware, Ill. D. G. Cunningham, Secretary, San Jose, Ill.

May 20 to 23.—Knoxville Gun Club Second Annual Tournament, Knoxville, Tenn. C. C. Hebbard, Secretary.

May 26 to 31.—First International Clay-Pigeon Tournament, at Chicago, Ill. Managers, Ligowsky Clay-Pigeon Co., P. O. Box 1292, Cincinnati, Ohio.

June 2 to 9.—Annual Tournament Louisville Sportsmen's Association, Louisville, Ky. J. O. Barbour, Secretary, 157 Third avenue, Louisville.

ARMY RIFLE PRACTICE.

Editor Forest and Stream:

I am but little given to noticing, much less discussing the merits of any scheme of action that has for its object the overthrow of an approved system, science or industry, and that does not at the same time propose and formulate a better one for adoption, but I cannot contentedly let pass unnoticed the communication of your correspondent "C. D.," in your issue of May 8, who so persistently attacks and reattacks the army system of rifle firing, an old and well-established system, and, although admitting it to be good, in the end denounces it as "wrong and faulty, and a humbug from beginning to end." I need not remark upon the many evidently strained conclusions reached in his efforts to discredit the system that he denounces so unsparingly, and I am wondering if he has not already been reminded that it is not so much the system, but the practices that have been allowed at his station to grow upon this system, that constitutes for him his grievance, and which may have led him to declare it all a "humbug from beginning to end."

I have no wish to follow your correspondent in all the different detailed statements he makes. It would occupy too much of your valuable space, nor can this be desirable, showing as he often does, to the thoughtful reader the very practices he condemns to be almost if not quite necessary, and for which he evidently knows no suitable remedy, and but in this one—simple one as he evidently thinks it—that of targets, does he suggest a substitute for what he condemns. He would substitute an elliptical or oblong target and markings for the Creedmoor or round target markings. What superiority he claims for it seems to be this, that the new target would more nearly represent the "tactical man," that they would call for shots to be fired and counted on elliptical or oblong target markings, in homely phrase, set up on end and more nearly representing the form of a man,

and he would have the marksman taught that a shot over or under the center was of more value than one at the right or left, and all because a man, when he stands on his feet, offers a similar target. Suppose we admit this to be the case when he stands; now let him lie down, as he will in most cases if time be given him, or you, for careful aim, what then? For such cases shall we lay the elliptic on its side and practice at it a time that way? And suppose the man kneels, then what shall we do to meet such a case? We would need to make the elliptic into a circle, I guess.

Inasmuch as we cannot well make these changes at pleasure, hadn't we better use the round target marking as a good comparison? I think so. As to "C. D.'s" estimate that a shot above or below is better than one to the right or left of the center, of course that must depend upon whether the shot be fired at a man standing or not. Certainly it is easier to make line shots than others; I mean easier to put shots on, or above and below, the center than in the center. A rifleman in a bad wind will easily make fair line or vertical shots, firing with what is known as a "rising sight;" indeed, not to do such work is what he wants. We have gone far past the day of "line shots."

"Blank's" men's "fours" were of more value than "C. D.'s" men's "threes," and must always be so in our modern times. When this is reversed will not be when men take aim, but when men fire without aim and with both eyes open, as is not unusual in the heat of battle, and then not at one man but at a body of men. I am thinking that "C. D.'s" men's scores were credited for quite what they were worth. Surely the Creedmoor target gives quite completely what he claims to want, and is very easily understood and very practical, and has been selected because it possessed, all in all, the best excellence of all the many heretofore tried. No, most decidedly it has not outlived its usefulness.

The classification that gives your correspondent so much concern, will undoubtedly be regulated to the needs of the service from time to time, and it is likely that the new manual General Sheridan's orders refer to will show that full consideration has been given this subject. Making the second grade of sharpshooters is a step in that direction as established by the G. O. No. 12, that your correspondent declares to be "worthless of true results."

It is much to be wished that when riflemen like your correspondent condemn to be destroyed, that they do not do so without being prepared with something better; it is not enough to say that it is a "humbug" and "worthless." For if such sayings are intended to do good they fail to work, for as nothing is offered as a substitute for what they condemn, an intelligent discussion tending toward any assured advancement cannot be had.

I trust your readers will see that there are two sides to this question as to most all others, and that they will understand that much of your correspondent's details may have quite a different application than given by him, and that has somewhat warped your judgment and led you to the belief that the army system, declaring merit in rifle firing, is based on a system of "jugglery" and that merit goes where all has been "manipulated to the best advantage." You err greatly in this, and I fear your editorial article unintentionally gives a very mistaken estimate of the army system of rifle firing and "the defects in practice." BENTON.

RANGE AND GALLERY.

THE WHEELING CLUB.

Editor Forest and Stream:

The Wheeling Rifle Club still keep up their weekly practice at 200yds. off-hand. There are five members who shoot about even, sometimes one and then another comes out on top.

Messrs. Stewart and Dwight have lately begun using Sharps mid-range, .40 cal., 30in., 2½in. shell, and like them very much for off-hand work. The Sharps is short-range was heretofore used among our riflemen, and some good work has been done with them. With a crescent butt plate on the mid-range it holds very nicely, and the 70 grains of powder behind a 285-grain oval-point bullet gives a very flat trajectory and true flight.

Mr. Dwight has been using the open bead for off-hand practice, and has finally mastered it, although few riflemen seem to use it, either from not having given it a trial, or not being able to hold it. We would like to hear the experience of others with this sight for off-hand practice.

We have been using a new target lately, which is the design of Mr. Dwight. It is the Massachusetts target with each of the rings outside of the bullseye divided into two rings by a line drawn around between each line of the Massachusetts target; then the bullseye is divided into rings with one-half inch space between each line, and leaving the center space one inch in diameter. This latter space is numbered 25, and each ring out from that is numbered one point less. Thus the four-inch circle, which is the 12 line on Massachusetts target, is the 22 line, and the edge of the eight-inch bullseye is 18, and the Massachusetts 10 ring is numbered 17 and 16 and so on outward. The target thus arranged gives a closer count than any one used, and as the object of a target is to record the closeness of the shooting, this certainly is more correct than to have such wide spaces, even as the Massachusetts target has. The latter target has become a favorite by the fact of its spaces being divided up more than the old Creedmoor target, and this new target has the same advantages over the Massachusetts as the latter has over the Creedmoor. We have tried the German ring target, but the twelve-inch bullseye is too large for us. These targets are easily made at home, and the rings on the black bullseye may be made by a drawing pin on dividers, with thin mucilage in place of ink, and then rub over some bronze powder, which adheres to the gum and brings out the lines on the black very plain, and does not dim it for aiming.

The following scores were made on our new target last Saturday, 3d inst. As the lines of all the rings of the Massachusetts target are retained, the scores can be kept on both counts if desired, and also Creedmoor count as well. Our ring target we call the "West Va. target."

First Match.

Chas E Dwight	18	23	20	23	17	17	17	22	19	16—192*

	10	10	9	10	10	11	10	12	10	11—103†

* West Va. † Massachusetts.

Mr. Jaeger has made 205 on the West Va. target, counting 111 Mass., and Mr. Dwight has made 200, counting 111 Mass. also.

The club will shoot a telegraph match with any who wish amusement of that kind. WIND.

WHEELING, West Va.

BULLSHEAD RIFLE CLUB, May 1.—12-ring target, possible 120: G. Zimmermann 118, G. Holzmann 116, A. Lober 116, M. Dorrler 115, V. Steinbach 113, C. Rein 114, S. Mehrbach 111, H. Gunther 110, J. F. Schrarder 110, W. Ross 106, J. Jordon 106, D. Holland 102, S. F. C. Weber 98, H. Zubiller 98, B. Walters 106, G. Wendelken 107, G. D. Johnson 104, H. Kruger 106, D. Louitzki 102, A. Stolzenberger 110, A. Ringler 107, A. Hoesser 107, G. Augermeier 105, J. F. Campbell 102.

Thursday, May 1.—12-ring target, possible 120: G. Zimmermann 117, A. Lober 117, C. Rein 114, M. Dorrler 114, A. Ringler 112, J. Schneider 113, H. Hackmann 111, B. Walters 108, J. Schrarder 108, J. Campbell 100, L. Louitzki 98, S. Mehrbach 98, J. Weltze 96, D. Holland 94, A. Pierson 94, S. F. C. Weber 94.

THOMASTON, Conn., May 12.—At the Empire Rifle Club's shoot on Saturday, G. Canfield captured the badge with a score of 103 out of a possible 120. Following are the other scores: C. F. Williams 95, W. Dunbar 93, C. Alling 93, G. Gilbert 90, F. Carr 89, E. Thomas 88, E. Bennett 85, A. Fox 82. The weather was rather unfavorable for high scores, being alternate rain and sunshine. The "open to all shoot" is to be the 21st and 22d.

THE FRELINGHUYSENS AT NEW YORK.—Newark, N. J., May 7.—*Editor Forest and Stream:* I beg space in your columns to enter a protest, in the name of the Frelinghuysen Rifle Association of this city, against the manner in which the prizes have been awarded in the late match at the Grand Central Gallery in New York. Your last issue gives the prizes awarded for scores ranging from 333 to 305, entirely ignoring the score of 307 made by our representative, Mr. Geo. D. Weigman, who shot on or about Thursday, April 10, I think. The score was counted by the regular range scorers and placed on blackboard when made. When Mr. W. called a week later, to improve his record if possible, he found his score missing, and it was again placed in line when attention was called to the omission. On the award of prizes, however, it is again dropped and without explanation; and a man who has spent about $5 in shooting and car fares is thus debarred from receiving the trivial $2 prize he has honestly earned. We cannot believe that this is done by the connivance of men of such well-known integrity as the judges are known to be; but must say that if New York clubs wish the help of any out-of-town shooters in their free-to-all matches, we wish to be assured that we shall have what we have a right to expect—fair play in the keeping of score records.—EDWARD O. CHASE.

SAVANNAH, Ga., May 10.—The Republican Blues had a very enjoyable day at the Schuetzen Park last Thursday, the occasion of their annual picnic. The attendance was very large, and among the guests were noticed many members of the several organizations of the city. A feature of the day was the target shooting for prizes, which resulted as follows: In the first class Sergt. N. Nathans won the first prize, a silver butter dish, and was also awarded the company medal, score 19; in the second class Private S. C. Lee won a silver cake basket. Sergt. J. J. Gaudry won the prize for the best single shot, and Private John G. Butler, in the contest of the ununiformed and pay members, won the prize on a score of 19, a silver pickle dish.

The same afternoon several well-known marksmen met at the Schuetzen Park and, after the Blues had indulged in their rifle contest, they had some fine shooting. The following shows the scores made:

R R Dancy	4 4 4 4 5 4 4 5 4 4—42
J P White	4 5 4 5 4 4 4 5 4 4—43
H Kolshorn	5 4 3 4 5 4 4 4 3 5—41
R R Dancy	4 4 4 4 4 4 5 4 4 5—42
J P White	4 4 4 5 5 4 4 4 4 5—43
H Kolshorn	4 4 5 4 4 4 4 4 5 5—43
R R Dancy	5 4 4 4 4 4 4 4 5 5—43
J P White	4 4 5 4 4 4 4 4 4 5—42
H Kolshorn	4 4 4 4 4 4 2 4 4 4—38

The Savannah Rifle Association turned out a full membership at its regular practice at the Schuetzen Park yesterday afternoon, and some excellent scores were made. Among the best shots were Dr. J. D. Martin 65, J. P. White 63, R. R. Dancy 61, E. J. Keiffer 62, W. M. Mills 61. The shooting was 15 shots at 200 yards, Creedmoor range, and excited considerable interest. After the practice an election of officers was held, with the following result: President, R. H. Anderson; vice-president, J. W. McAlpin; secretary and treasurer, J. M. Bryan; executive committee, Dr. J. T. McFarland, H. M. Comer, J. D. Martin, Martin Tufts, H. A. Palmer; ordinance officer, J. P. White. The weekly practices of the association will be held during the season on Friday afternoons, cars for the accomodation of the members leaving West Broad street at 3:30 o'clock. The date of the annual prize contest has not yet been determined, but will probably be sometime during the latter part of this month. The association has an increased membership over last year, and the interest manifested in its affairs and in the practices promise some excellent records of marksmanship before the close of the season.

WALTHAM, Mass., May 10.—Following are to-day's scores of the Hillside Rifle Club, 200yds.:

Creedmoor Practice Match.

J T Foster	5545544454—44	J K Lowe	4454443444—40
E C Osgood	4444544444—41	G Strickland	4434334345—37
J O Jenison	4444444444—40	J R Monroe	3442442235—33
H L Whiting	4444434544—40		

Creedmoor Rest Match.

John Foster	5545555545—48	J R Monroe	4455555445—46
G Bassett	5455545455—47	C H Gray	5455444455—45
L O Dunson	5544554455—46	H S Whiting	4455544544—44

BOSTON, May 10.—There was a fair attendance at Walnut Hill today, and some very good shooting was done. The weather was not all that could be desired, except in the early morning and late in the afternoon, after the shower. A team match was shot between two teams of six members of the association, which resulted in a victory for Mr. Charles's team by a lead of 20 points. It should be stated, however, that Messrs. Ashmead and Brackett were shooting with open-sighted rifles. Saturday next there will be another team match, probably between the members of the M. R. A. and members of the Lawrence Rifle Club. If the Lawrence Club does not send a team there will be a match similar to that of to-day. Following is the result:

Creedmoor Practice Match.

H Cushing	4	5	4	5	5	5	4	5	4	4—45
F Chauncey	4	4	4	4	4	5	5	4	5	5—44
C B Edwards	5	4	4	5	4	4	4	5	4	4—43
J E Darmody (mil)	3	4	4	5	4	5	4	5	4	4—42
P B Smith	4	4	4	4	4	4	4	4	4	4—40
H Lewis (mil)	3	3	4	4	4	4	4	5	4	4—39
S B Perrin	3	4	4	4	4	5	4	4	4	3—39
F W Fowle (mil)	4	4	4	5	4	4	4	0	4	4—37

Decimal Match.

W Charles, F	5	10	8	10	8	10	9	9	8	8—85
A C Adams, F	10	10	9	9	10	9	8	6	7	6—84
W H Oler, F	7	5	10	9	10	9	8	8	8	8—82
W Gardner, E	8	10	7	8	7	6	7	8	7	9—77
S B Perrin, E	9	7	9	6	10	9	5	8	9	3—75

Rest Match.

W Gardner	10	9	10	10	10	10	10	9	8	9—95
W H Oler	10	10	10	9	10	10	7	9	8	9—92
S Wilder	10	9	9	8	10	6	10	10	10	9—91
P Silverstal	8	9	10	9	10	9	9	8	8	10—90

First Team.		Second Team.	
C B Edwards	4445455—31	A M Jewell	4544555—32
H Cushing	5545444—31	J P Bates	5445454—31
W Charles	5554444—31	J B Fellows	4444444—30
C H Hurbert	4455444—30	W Gardner	4444534—28
C A Hunt	4544444—29	A L Brackett	4334445—27
P B Smith	4435344—27—179	H L Ashmead	0030332—11—159

In the one-day match the prizes were won by W. Charles, O. M. Jewell, J. B. Fellows and J. P. Bates, in the order named. The spring meeting of the Massachusetts Rifle Association will occur May 29, 30 and 31. There will be two matches open to all comers, one on Creedmoor and one on decimal target, with prizes amounting to at least $350.

BOSTON, May 10.—Mammoth Gallery, 655 Washington street.—The prize list for the month of May will be $10 for all-comers' match, gold, silver and bronze badges for amateurs' matches. Also extra prize of $10 for ten consecutive bullseyes. Following are the scores as they now appear on the blackboard:

A. B. Loring...44 45 45 44 46—224 C. L. Holmes...43 43 44 44 45—219
J. J. Munroe...44 43 44 45 45—222 J. A. Wright...41 42 43 44 42—212

WHEELING, W. Va.—In reference to the scores made on April 5, during the visit of W. M. Farrow to this city, the record in FOREST AND STREAM of April 24 is somewhat in error. The account presents them as in two strings of fifteen shots each, but they were not shot in that way. They were three scores of ten shots each, and Mr. Jaeger won first match and Farrow second one, and Cox the third.—J.

MILWAUKEE, May 7.—The *Sentinel* of to-day says of Mr. Farrow's doings in town: "W. Milton Farrow, the celebrated rifle shot, who has been in the city for a day or two, visited the Soldiers' Home grounds yesterday, and participated with members of the Milwaukee Rifle Club in a competitive shoot, off-hand, at the 200yds. range. Each man had 15 shots, the possible total being 75. The weather conditions were unfavorable, a drizzling rain falling during part of the afternoon, and the trip to and from the grounds was disagreeable because of the mud. The detailed score of the shoot is as follows:

Farrow	4	5	4	5	5	5	5	5	5	4	5	5	5	5	5—72
Meunier	3	4	4	4	4	4	4	5	5	5	5	5	5	5	4—66
Drake	5	4	4	5	4	4	4	4	4	4	5	5	5	4	5—65
Wells	4	4	4	5	5	5	4	4	4	4	5	4	4	5	4—65
Pale	5	4	4	5	4	5	4	3	4	4	4	4	4	4	4—62
Hoffman	3	4	4	4	5	5	4	4	4	4	4	4	4	4	4—61
Simonds						4	4	4	3	3	4	4	3	4	4—37
Greenleaf						4	3	4	4	4	4	4	4	3	3—37

"The latter two had but 10 shots each, being obliged to return to the city. Mr. Farrow's score, as will be seen, lacks but three points of being the highest possible. The score is the highest by two points that has ever been made on the Soldiers' Home range."

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

PROPOSED NATIONAL ASSOCIATION.

To all Sportsmen of the United States:

At the coming First International Clay-Pigeon Tournament to be held at Chicago on the 26th inst., an effort will be made to organize a national sportsmen's association, whose objects will be primarily:

First—To establish a code of rules for each species of shooting—live birds, clay-pigeons, etc.

Second—To appoint an Executive Committee, whose duties it shall be: (*a*) to organize future annual tournaments; (*b*) to act as an arbitration committee to adjust all disputes; (*c*) to establish a central office or address in charge of a specially appointed secretary: (*d*) to execute the will of the association as indicated at its annual meetings.

To organize this association properly, the thoughtful consideration of all sportsmen is invited. If you cannot be there in person and desire to make any suggestions, transmit same to me, care the Palmer House, Chicago. Wherever practicable, obtain the views of your club, and if possible secure a proxy to act for the same, or a club which will have no representative present can send its proxy to me. The principal points to consider in my opinion are: (1.) The monetary question—how funds shall be raised to effect the purposes of the organization; (2.) at what point the central office (the secretary's) shall be established; (3.) what other functions, if any, the association shall assume; (4.) if the association shall be open to both clubs and individuals; (5.) for whom you will vote for president, secretary, treasurer and executive committee.

My own views in brief are as follows: The association to be open to both individuals and clubs, the initiation fee to be $1 for clubs and $1 for individuals; the annual dues to be $1 for each active member of a club, and $1 for the individual subscriber; that each member of all firms in the gun (and kindred) trade be invited to join, initiation fee $1, annual dues $1; that donations from gun (and other) trade firms be invited; that if sufficient means can thus be raised, a permanent office be rented for the headquarters of the association, with a salaried secretary in charge, said secretary to be a sportsman (not connected with any mercantile firm engaged in the gun or kindred trades) and who shall carry out the orders of the executive committee, attend to the correspondence of same, collect the annual dues (for the safe keeping of which he shall furnish proper bonds) promote all gun sports under the direction of the executive committee, conduct the office so as to make it a club room for all visiting sportsmen, form a sporting library of reference, file all sporting papers of this and other countries, etc., and that said office be permanently located at New York City or Chicago, depending upon which city, with fifty miles of surrounding country, furnishes the most cash subscriptions to the treasury of the association by Oct. 1, 1884.

J. E. BLOOM.

THE CHICAGO TOURNAMENT.

THE diamond badge for the best individual score in the clay-pigeon tournament at Chicago, will be on exhibition at Duhne & Co.'s., corner of Fourth and Walnut streets, Cincinnati, until the 18th inst., when it will be placed in the show windows of Spalding & Bros., Chicago.

Mr. J. E. Bloom, President of the Ligowsky Company, will be at the Palmer House, Chicago, on the 20th inst., to perfect arrangements for the tournament.

The following have entered teams for the first international clay-pigeon tournament. Entries close on first day of shoot;

Boston Gun Club, Boston, Mass.
Tallahassee Gun Club, Tallahassee, Fla.
Vicksburg Gun Club, Vicksburg, Miss.
Niagara Gun Club, Niagara Falls, N. Y.
Narragansett Gun Club, Providence, R. I.
Cleveland Gun Club, Cleveland, O.
Capital City Gun Club, Washington, D. C.
Knoxville Gun Club, Knoxville, Tenn.
Kirtland Gun Club, Cleveland, O.
Evanston Gun Club, Evanston, Ill.
Chippewa Falls Gun Club, Chippewa Falls, Wis.
Franklin Gun Club, Benton, Ill.
Des Moines Gun Club, Des Moines, Ia.
Parker Gun Club, Meriden, Conn.
Springfield Shooting Club, Springfield, O.
Bradford Shooting Club, Bradford, Pa.
Peoria Shooting Club, Peoria, Ill.
Oshkosh Shooting Club, Oshkosh, Wis.
Cincinnati Independent Shooting Club, Cincinnati, O.
Exeter Sportsman's Club, Exeter, N. H.
Lincoln Sportsman's Club, Lincoln, Neb.
Medfield Sportsman's Club, Medfield, Mass.
Worcester Sportsman's Club, Worcester Mass.
Algona Sportsman's Association, Algona, Ia.
Farmington Sporting Club, Farmington, Ill.

Other clubs are yet to be heard from. It is expected that the gathering will be a representative assembly of shooting men. The railroads have announced that they will issue excursion tickets from Cincinnati to Chicago at rate of fare one way.

NOTES FROM WORCESTER.

ALL the challenge badges, four in number, owned by the State Association, are now in the possession of the Worcester Club. After the individual glass ball badge was won from Mr. Moses, of Springfield, on March 1, they all rested peacefully till some time in April, when we received, almost simultaneously, three challenges as follows: From O. H. Debchmont, of Newburyport, for the individual glass ball badge; from the Springfield Club for the team glass ball badge; from the Massachusetts Rifle Association Club for the team clay-pigeon badge. The matches have been shot on our grounds in successive weeks and an account of the first two, with the scores, has appeared in the "Trap" columns of the last two numbers of FOREST AND STREAM. The last of the series was shot yesterday, the account of which we shall expect to see in this paper when the week rolls round.

In connection with these matches we have held all-day tournaments which have been largely attended by sportsmen from different sections of the State, and so far as our club is aware everything has passed off pleasantly on each occasion. We have supposed that as a club, and individually, we enjoyed the most friendly relations with the clubs of this State, and so far as acquainted, throughout the country. There appears, however, an article in the last number of FOREST AND STREAM signed "Springfielder," to which I desire to reply. I wish to say at the outset that I do not know as the article in question emanates from the Springfield Club or that it receives their indorsement. It is apparent that somebody intends to say something to injure the standing of our club among sportsmen. The article, which is apparently his own, and partly a clipping from the Springfield *Republican*, is vague and amounts to little more than a few blind insinuations susceptible of any construction, but evidently intended to convey the idea that the Springfield Club were ill-treated at Worcester, and also that other sportsmen had been shabbily treated by us, and that the Springfield shooters would now join that aggrieved party and hereafter give Worcester a "wide berth." Now as this is the first and only complaint we have ever heard, we don't feel called upon to defend ourselves, and I shall only state a few facts concerning the matter referred to by "Springfielder."

In the first place, he alludes to an article which appeared in the daily *Spy* after the match between Perry and Moses, and for which, he says, the Worcesters made "suitable apology." It is true that there was an unpleasantness on that occasion, caused by what a prominent member of the Springfield Club was pleased to call "a shameless attempt on the part of the referee to hold up the score of Moses after he had utterly gone to pieces." Our men expressed their indignation strongly, and said perhaps more than they would have said in cooler moments. Afterward an individual member of the Springfield Club held a correspondence with the secretary of the Worcester Club, in which there were mutual explanations and regrets that anything of the kind should have occurred, and this correspondence was understood to be confidential. There never was an official word passed between the clubs concerning the matter. The article in the *Spy* was incorrect and unjust to the Springfields, and was deeply regretted by the members of our club. We were, however, in no way responsible for it and never indorsed it.

So far as the late team match is concerned, we supposed every thing was satisfactory. We certainly intended to do all in our power to make it pleasant for our guests, and also give them a perfectly square deal in the race, and it is equally certain that we heard no word of complaint. The trap was changed just before the match at the suggestion of the captain of the Springfield team, and was as new to us as to them. The best of feeling seemed to prevail throughout the day, and when our friends departed, their captain shook hands with our president and remarked: "We always have a good time when we visit Worcester." Our tournaments have been well attended, many shooters coming from other States, and so far as we are aware, have always gone home happy. If there be one who has received ungentlemanly treatment from our club, let him stand forth and we will make "suitable apology." E. SPRAGUE KNOWLES.

WORCESTER, May 10, 1884.

WORCESTER, Mass., May 9.—This has been a field day at Coal Mine Range of the Worcester Sportsmen's Club. They were favored with good weather and a large attendance. There were present as guests Messrs. J. H. Cole, of Ashland, and E. P. Tinker, of Providence. The event of the day was the match for the championship clay-pigeon team badge of the Massachusetts Association, which the Worcester Sportsmen's Club has held since June, 1883, subject to challenge. The one to-day came from the Massachusetts Rifle Association. Their judge was Mr. David Kirkwood; the judge for the home club was Mr. L. J. White, while Mr. H. Gardner was referee. The position of each man with the score of each was as follows:

Massachusetts Association.

C H DeRochmont	1101110010000011100—10
O R Dickey	1110111100111111011—16
E W Lane	1101101101111111101—16
G H Wurm	0111101111111111011—17
G H Tidsbury	1111101110111111110—17—76

Worcester Team.

H W Eager	1111111101111011111—18
E T Smith	1111111101101011101—18
G J Rugg	0011010101110111110—15
George A Sampson	1111111101101111111—18
W S Perry	1111101111101011111—17—84

The club have voted to make Wednesday, May 21, the annual fish day, to be followed on the 23d, by a fish supper. The captains are: Asa R. Jacobs and R. L. Golbert. Messrs. L. G. White, Henry E Smith and H. B. Verry a committee of arrangements. Sides are to be chosen, and all men who do not go fishing will be fined $1, the prizes to be used to help the defeated ones pay for the supper.

TOPSHAM, Me., March 9.—Riverside Club's regular shoot for silver badge, clay-pigeons, 10 singles, 18yds. rise, use of both barrels, second barrel ½ bird, 5 pairs, 15yds. rise, 2 traps. Figure 2 denotes second barrel:

A Q Gould	1111001110	11	10	11	11	11—16
M C Hall	1111111221	11	00	01	10	01—14
A S Alexander	0111111111	11	00	11	11	01—16
C L York	1020210021	11	10	10	00	11—10½
G B Strout	0001101000	11	10	10	10	01— 9

Ties on 16: A. Q. Gould, 011111—5; A. S. Alexander, 101011—4.

SIZE OF SHOT FOR THE CLAYS.—Will some sportsman be good enough to give his opinion as to the best size shot to use for clay-pigeons, I have tried all sizes and cannot come to a decision.—AMATEUR.

WELLINGTON, Mass., May 10.—The Malden Gun Club had a lively time this afternoon at the traps at Wellington, with the following result:

Cup Match.

J Buffum	1 1 1 1 1 1 1 1 0 1—9	Crosby	0 1 0 1 0 1 1 1 0 0—5
H Field	1 1 1 1 0 1 1 1 1 1—9	Scott	0 1 0 1 1 0 1 0 1 0—5
A F Adams	1 1 0 1 1 1 0 1 1 0—6	Short	1 0 1 1 0 1 0 0 0 1—5

Badge Match.

H Field	1 1 1 1 0 1 0 0 1 1—7	0 1 0 1 1 1 1 1 1 1—8	—15
J Buffum	1 1 0 1 1 1 1 0 1 1—8	1 1 0 1 0 0 1 0 1 1—6	—14
Lewis	0 1 1 0 1 0 1 1 1 1—7	0 1 1 1 0 0 1 1 1 1—7	—14
Brown	1 0 1 1 0 1 1 0 0 1—6	1 1 1 1 1 1 0 1 1 0—8	—14

First taken by Field and second by Brown.

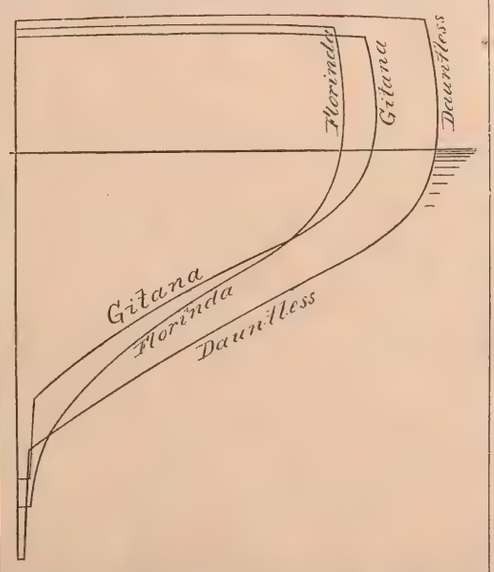
WALNUT HILL.—The Massachusetts Rifle Association will hold a practice and sweepstake shoot at clay-pigeons and glass balls, on Wednesdays, as follows: May 7 and 21, June 4 and 18, July 2, 16 and 30, Aug. 13 and 27, Sept. 10 and 24, Oct. 8 and 22, Nov. 5 and 19, Dec 3, 17 and 31. Rifle shooting every Saturday.

SCHENEVUS, May 10.—Conditions: Combination traps, 18yds. rise, 3d notch:

D Chamberlain	0110111101110111111—15
P Rickard	0101101000000111110— 9
I Roberts	0100000111010110010— 9
J Wilson	0010010110111001110—11
A Parsons	1010001000101000001— 6

Owing to the inclemency of the weather but few were present.—E. E. B.

ALGONQUIN GUN CLUB, New York, May 12.—On Thursday last the Algonquins enjoyed a visit from their old friends, the Washington Heights Gun Club who, together with some members of the Knickerbocker Gun Club, made up a team that came very near beating the more or less noble red men at the traps. The teams agreed upon were twelve members of the visiting clubs against an equal number of the home club. Twenty puff balls to each shooter, thrown from a screened rotary trap. At the close the score stood 215 hits out of 240 balls shot at by the Algonquins, to 211 hits for the visiting clubs. Sweepstakes in clay-pigeons closed the afternoon's sport, which seemed to be thoroughly enjoyed by all concerned. The clubs cheered each other until the throats of the different members were as "dry as lime kilns," and then—J. E. M. L.



Yachting.

KNICKERBOCKER Y. C.

THIS club has shown its progressive spirit in deciding at the meeting last week to adopt the Seawanhaka sail area rule in place of length measurement, and in limiting crews for all boats to one hand per three feet of length. Thus a 27ft. sandbagger is now allowed only nine hands and a helmsman, thereby abolishing the tomfoolery of sailing open boats with unlimited crews and giving the boat some chance instead of reducing a yacht match to a trial of foolhardiness and gymnastics. In course of time we hope to see the club go one step further and prohibit all shifting of ballast with crews reduced to one hand for every five feet of length. Many new members and yachts have been added. Among these we note the Amazon, Mr. Franklin Beams, a sloop, which has at times given evidence of considerable speed, even under a meagre racing outfit. This year she is to appear with kites of all kinds in the sail room, and lead ballast, so we may expect to see her figure well at the finish. First match will be sent away at 11 A. M. May 30, for which nearly forty entries have been made. Steamer Perseus leaves East 120th street, Harlem, at 9:45, and Port Morris dock at 10:30. Club now numbers 160 members and 76 yachts. Club house at Morris Beach has been extended and renovated.

THE COLLAPSE AT NICE.

IN further illustration of the defeat of Dauntless and Gitana by the English yacht Florinda, we offer this week a sketch of the successful yawl and cross sections of the three competitors, drawn to scale. The Dauntless being considerably larger than the others, did not find the wind of sufficient strength in proportion, and was left hull down early in the race. But making all due allowance for size, there can be only one conclusion to the fiasco, that Dauntless is an excessively slow vessel in light winds, and too slow and unwieldy in stays to be ranked as a competitor in company of first-class racers. Yet at home Dauntless has the reputation of being something of a wonder, and columns have been filled in other papers chanting her fame. A truthful estimate of that schooner and the whole class of

her kind in our waters has never been made. The public has been misled from the start, deriving the impression that our large schooners were really fast vessels, from the pointless trials between the huge Sappho and Cambria, and the old-fashioned Livonia, a bluffish schooner ranking only a poor average with other English old timers across the water. Yet we have seen that same unpretentious old Livonia hold her own with our crack Columbia in one of the international matches, and which Livonia would actually have won but for the misunderstanding about turning the outer mark.

Of late we have all been falling down upon our knees in adoration of the new Montauk as a wonderfully fast schooner. Yet her reputation rests upon nothing more solid than contests with such mediocre productions as Tidal Wave and other ordinary vessels, much in the same class with the Dauntless, to say nothing of sundry small schooners differing too much in size to afford a fair chance for comparison. And even in company of our home vessels Montauk is not at all a brilliant performer in light winds, though quicker in working than the Dauntless. It is of course exceedingly unpatriotic to tell unpleasant truths, but we take it to be our business. Had any one predicted that Florinda would run and turn away from Gitana at will and make the Dauntless appear ridiculous over a thirty-two mile course in "our smooth water" and "our mild weather" such as was found in the recent Nice International, he would have raised a howl of patriotic indignation about his poor head and been accused of being a rabid "Anglophobist" and a traitor in the camp. Yet the very worst has happened.

When we now venture the prediction that in face of Wendur, Latona, Florinda or Miranda, our choice Montauk would utterly collapse in a bout to windward, and that the pretentions of our schooners would be found as mythical here at home as they have been shown to be at Nice. We expect just the kind of self-complacent indifference to such a prediction, which the faulty interpretation of the Cambria and Livonia races has served to propagate. We have been underestimating our foe all along. The modern English schooner or yawl is quite a different affair from old time arks like Livonia. If we choose to overlook the progress made abroad since the general introduction of outside ballast, the awakening from our self-sufficiency will be very abrupt and very disagreeable. The truth is, we have not progressed one iota in our schooners since the days of the America, while our cousins abroad have passed through various "revolutions," which made our defeat at Nice a foregone conclusion and point to a collapse of our remaining pretentions as a probability in the near future.

The test between Florinda and Gitana was fair and critical. Both have like displacement and ballast within a few tons. Florinda carries 54 tons on 150 tons displacement and Gitana about 60 on 165 tons. The latter has likewise about 7ft. extra length to her benefit. The only radical difference is depicted in the cross sections, Florinda being the narrower and deeper of the two, with a longer sweep to the bilge and less floor. Gitana furthermore received a concession of 15 per cent. of her tonnage for difference in rig, while on this side of the Atlantic the yawl is quite generally ridiculed as a sort of crazy piece of British nonsense. Not one in a thousand in this country but who would have rigged Florinda as a schooner in preference and laughed at the notion of expecting better results from a silly English custom, the choice of which is decried as "snobbery" throughout the truly patriotic circles. Let us hope that even the blindest patriot will catch a gleam of light from the slaughter of our schooners within sight of the attending crowds along the Promenade des Anglais. The lesson to be drawn from the Nice regatta is simple enough and has two chapters.

First, "patriotism" does not win races. Second, the old faith that beam to carry sail and floor to "slide over the water" in some impossible manner, or floor "for to stand up on," are the essentials to speed, is arrant humbug, empty words devoid of meaning, refuted a thousand times over in experience, and once more again in the disappointment at Nice. Finally, in view of the much smaller sail of Florinda, that beam contributes more potently to resistance than depth and displacement in a narrower form. Florinda's lower sail area is 5,250 sq. ft. in racing condition, though we learn that her spars were docked for cruising in the Mediterranean, with a sail area not over 4,500 sq. ft. The rig of Gitana, whether cruising or not, we cannot positively say, was large enough to attract general attention and was commented upon in the London *Field*. It could scarcely have contained less than 6,000 sq. ft.

TAPERING DOWN.

THE old mean length rule is gradually tapering down to hard pan. From mean length to one-third overhang, to one-quarter overhang, and now comes the New England Y. R. A. and announces in Rule 4, that for the measurement of length, only one-fifth the overhang aft shall be included. Where length is still to remain the standard, one-fifth the after overhang is somewhere near to common equity. The stupidity of taxing 6ft. counter as equal to 3ft. of middle body, or even 2ft. or 1½ft., is so patent to every one with a grain of mechanical conceptions in his make up, that the example of the New England Y. R. A. is sure to be followed quickly by other clubs still adhering to measurement by "simple length."

YACHTING AT BELLEVILLE, ONTARIO.

THE annual meeting of the Bay of Quinte Y. C., which was held yesterday evening, was of a character to show that the season will be quite lively in these waters. The club is in a good position financially, without a dollar of outstanding debts, and a balance in the treasury. The principal officers elected were: Commodore, W. H. Biggar; Vice-Commodore, R. M. Roy; Captain, S. R. Balkwill; Secretary, R. S. Bell; Treasurer, Wm. Pike; Measurers, Geo. N. Leavens and Wm. S. Drenary. All were re-elections except the commodore, captain and the second measurer. The secretary now enters upon his tenth year of service, having filled that honorary position ever since the establishment of the club.

The new commodore is a man of the right stamp. An enthusiastic yachtsman, one of our ablest young barristers, energetic and wealthy, his administration will beyond doubt be successful. He made a very neat speech on assuming the chair, and intimated that he will present a valuable prize for competition.

As the by-laws of the Lake Yacht Racing Association have not as yet come to hand, the formal union of the club with the association could not be made, but a committee was appointed with power t act in the matter, and the commodore, ex-commodore Clarke an

vice-commodore were appointed to represent the club on the executive committee of the association, and to endeavor to secure a change in the date fixed for the association regatta here.

Work on the fitting out of the local fleet is being proceeded with. The Iolanthe has undergone considerable alterations. Her spar has been shifted forward, her cabin enlarged and the house lowered, and she will be fitted with a wheel.

The new rule of measurement, sail area and length, as adopted by the L. Y. R. A., has been received with great favor here, as it is felt that it will equalize rating much more satisfactorily than the old length and breadth rule.

There is one proposed rule of the L. Y. R. A. which I do not like, that is, confining each yacht to her own class. For my part, I cannot see why, if a small yacht is good enough to compete with her bigger sisters, she should be debarred from doing so, the more especially as she has to accept a handicap in order to sail in the class above.

BELLEVILLE, Ont., May 8. PORT TACK.

ISIS.

THIS new cutter, built by Poillons, of Brooklyn, was launched last Saturday. She is a fine, bold, flush deck craft, with massive material in her framing and rather old-fashioned in construction and fastenings, the garboards being merely treenailed, and most of the work spiked. Built from lines by her owner, Mr. Cass Canfield. She has a long bow and short run, which, in connection with large beam and snug rig, will not be likely to result in a fast craft, though well adapted for cruising, with more room on deck and below than any yacht of her length in these waters.

Length over all	60ft. 10in.
Length on loadline	51ft. 5in.
Beam extreme	13ft.
Beam on loadline	12ft. 4in.
Depth of hold	8ft. 6in.
Greatest draft	9ft.
Displacement	41.75tons.
Ballast on keel	32,000lbs.
Ballast inside	9,000lbs.
Area three lower sails	2,325sq. ft.

Length of lead keel is 23ft.; width across top, 22in., and depth, 19in. at midships. Center of buoyancy abaft center of loadline, 1.07ft. Meta center above same, 2.517ft. Center lateral resistance abaft center of loadline, 2.02ft. Mast deck to hounds, 41ft. 6in.; masthead, 7ft.; topmast, heel to shoulder, 30ft. 6in.; boom, 47ft.; gaff, 30ft.; bowsprit outboard, 25ft. 9in.; spinnaker boom, 47ft.

LAUNCHED.—The new schooner building by Lawley & Son, South Boston, for Mr. J. Malcomb Forbes, from designs by A. Cary Smith, was launched last Saturday. Length over all, 78ft.; water-line, 65ft.; beam, 19ft. 6in.; draft without board, 6ft. 4in. Centerboard trunk of boiler plate, 18ft. long. Displacement, 68 tons, with 27 tons lead ballast inside. Built of two skins, inner skin being 1in. thick, outer of oak, with yellow pine bends, both caulked and copper-riveted together, after paying over with crude turpentine. An iron hog strap is wrought over the frames in wake of the chainplates, to take the strain from the rigging. Keel of oak, 18×20in.; frames of oak, 21in. between centers, sided 4in. and moulded 4½ at heels, tapering to 3½ at head. Floors of iron, 2×3in. and 8ft. long. Deck of 2¼ square white pine. Locust stanchions and bits and mahogany fittings. Main cabin, 16×9ft., with over 6ft. height under house beams. Two staterooms each side of centerboard. Berthing for six hands forward, the iron berth frames turning up against the side when not in use. Yacht has long cutter fantail. Schooner rig, with fore staysail and single stick standing bowsprit for one jib outboard. She is a splendid job throughout, full of new ideas which have been well executed by the builders, to whom she is a great credit.

FIXED BALLAST.—The South Boston *Inquirer* wants ballast to be sealed down in races to prevent surreptitious shifting. This does not speak well for the honesty of those it apparently addresses. In England shifting was abolished many years ago, and the rule is enforced without recourse to any penal precautions. Are we less honest in this country? The fact of a person's shifting could hardly be kept secret for any length of time, and the disgrace of expulsion from the yachting brotherhood will probably be enough to hold in check any tampering with ballast, unless in so few cases as not to require a disagreeable reflection upon all hands in assuming them to be card cheats in advance. However, anything at all to prevent shifting.

MICHIGAN Y. C.—The new club of Detroit will consider adopting the Seawanhaka rule of measurement. A gentleman writes from Detroit very pertinently as follows: "I think the length and sail area rule is what we want. The snug cruiser can stand some show with her big, over-rigged rival. It is time this "brute force" sailing should end. A boat with half a ton of live ballast on a six-foot lever beats a fixed ballast boat with three men to windward, and the boat gets credit for it, when if the same boats were to sail singlehanded over the same course and same wind, the fixed-ballast fellow would beat her blind. Now is that a test of boats and models, or is it a test of gymnastics?"

SEAWANHAKA CORINTHIAN Y. C.—The club has decided upon the following further qualification of the method for obtaining sail area, to prevent a relapse to broomstick topmasts: "But the measurement to be recorded as the height of the perpendicular, shall in no case be taken as less than the distance from the upper side of main boom to the under side of hounds with nine-tenths of the length of gaff added thereto." The club has also induced the N. Y. Y. C. and the E. Y. C. to join it in adopting a uniform signal code and system of etiquette and rules for hoisting colors, etc.

PAYING DECK SEAMS.—After caulking with cotton, pay with care with mixture of whitelead and common whiting, mixture to have consistency enough to be properly applied. See that the seams are filled thoroughly, using an ordinary putty knife. "Marine glue." an English preparation of tar, rubber and varnish, has been tried in this country, but not with success, as the glue softens in our strong summer sun. This marine glue cannot be bought on this side. Thick whitelead can also be used without admixture of whiting.

NEW SCHOONER.—Mr. Edgar Harding has had a new schooner built on lines by Dwyer, of Portland. Over all 63ft., water line 57ft., beam 14ft., draft 9ft., mainmast 61ft., foremast 60ft., bowsprit outboard 18ft., jibboom 13ft. beyond cap, mainboom 43ft., gaff 21ft., foreboom 18ft., gaff 17ft. Mastheads are 5ft. Sails by A. Wilson, of No. 5 duck. Area, mainsail 1,320 sq. ft., foresail 625, jib 426. Staysail, flying jib and two topsails 1,196 sq. ft.

MADGE.—Orders have been received to fit out this famous eye-opener, at Newport, for racing this year. Who is going to skipper her? A green hand will make a mess of it. It takes years to become an A1 cutter skipper. The sloop man has first to unlearn all he knows and then begin over again. It requires the finest touch and keenest judgment to tool a cutter for all she is worth.

PASTE THIS UP.—Rule 26 of the New England Y. R. A. reads: "Shifting ballast shall not be allowed in any race governed by the rules of this association under penalty of the boat and the owner of the boat, or any other boat belonging to him, being debarred from any further entry or participation in any race given by any club affiliated with this association."

CLUB HOUSES.—Buy an old schooner with sound bottom, build a mansard roof over her from rail to rail, keep lower masts and rigging standing. Construct large "tops" with railings at masthead. Then you will have a cheap club house, roomy, appropriate, can be shifted at will. Splendid lookout from aloft and exercise racing up and down the rigging.

STEAM LAUNCH.—Kirby, of Rye, has built a 45ft. steam launch for Geo. Mertz & Sons of Port Chester. She has 9ft. 8in. beam and 5ft. depth. Flat floor and quick bilge, as she will be required to lie on the mud at her moorings.

ALGA.—This 32ft. cutter, which has been drying in Lawley's yard for two years past, owing to Mr. Longfellow's absence in Europe, will be launched and fitted out this season. She will have English made spars and sails.

JERSEY CITY Y. C.—Will open the season with an informal cruise May 30. Spring match fixed for June 12, which is an unfortunate selection, as it clashes with the date of the New York Y. C. races.

CHICAGO Y. C.—Annual cruise fixed for July 3, sail for Milwaukee. A subscription has been raised to purchase a fine yachting library and photos from Halifax. Mr. Miles Nixon is now recording secretary.

SOUTH BOSTON Y. C.—Circular for Decoration Day races having been issued before the formation of the New England Yachting Association, shifting ballast will be allowed on that day.

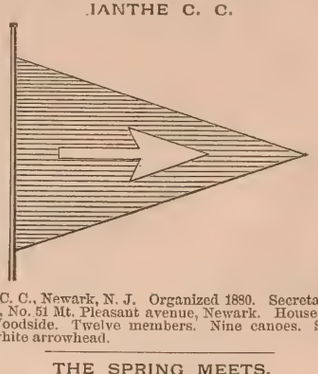
ROYAL CANADIAN Y. C.—Will establish a system of junior membership, enabling young men under twenty-four to become members on an annual subscription of five dollars.

ATALANTA.—Mr. Isaac R. Thomas has bought the 27ft. catboat Abbie A., of Marion, and changed her name to Atalanta. She will fly the burgee of the Beverly Y. C.

SALEM BAY Y. C.—Has arranged for matches as follows: First championship, June 26; second, July 26; open races, Aug. 16; third championship, Sept. 4.

GALLEY FIRE.—The owner of the schooner Gaetina accomplishes all his cooking over two oil stoves swung on gimbals.

NEW KEELS.—Borden, of South Boston, is altering the centerboard sloops Ellen and India to keels,



Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc., od their clubs, and also notices in advance of meetings and races, an reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

May 30.—Pittsburgh C. C., First Annual Regatta.
June 1.—Hudson River Meet at Newburgh.
June 1.—Connecticut River Meet.
June 14 to 16.—Merrimack River Meet.
July 9 to 15.—Chicago C. C., Club Cruise.
July 19.—Chicago C. C., First Annual Regatta.
July 24 to 26.—Lake George Meet at Lorna Island.

IANTHE C. C.

IANTHE C. C., Newark, N. J. Organized 1880. Secretary, John B. Russell, No. 51 Mt. Pleasant avenue, Newark. House on Passaic River, at Woodside. Twelve members. Nine canoes. Signal, blue field with white arrowhead.

THE SPRING MEETS.

MERRIMACK RIVER.

Editor Forest and Stream:

I noticed in a recent issue of FOREST AND STREAM that it was proposed to hold a local meet on the Merrimack, and it struck me as being a first-class idea, and, for one, I should like to attend.

If there is any canoeist in this vicinity who would like to make the cruise to the meet in company, let him ship his canoe and himself to Sterling, and I will take him to the head of canoe navigation on the Stillwater River, a tributary of the Nashua, and a cruise from here to Lowell will be very pleasant. E. H. COOLIDGE.

WEST STERLING, Mass.

NEWBURGH.

Editor Forest and Stream:

New Yorkers may find the following a good way to go up to the Newburgh canoe meet: Get afloat with everything stowed about slack low water and lay for a tow of canal boats or barges anywhere between the Battery and Thirty-fourth street. Paddle alongside one of the rearmost boats of the tow and make arrangements for a deck passage with the skipper. The crew will cheerfully lend a hand in getting the canoe on board, and you can turn in as comfortably as if you were stamped on shore. I have been treated with great courtesy on several occasions when availing myself of this means of transit; but don't try it if you are a snob, or anything of that sort. The bargees are a rough set and won't be patronized. I advise you to wear trousers over your knickerbockers and not to part your hair in the middle if you would have them regard you as a being fit to associate with them. A supply of cigars will go far to cement friendship and secure the favor of all hands. An afternoon start will secure an arrival off Newburgh at an early hour in the morning if no serious delay occurs. C. L. N.

NEW YORK CITY.

LEAKS IN BIRCH BARK CANOES.

Editor Forest and Stream:

To stop a leak in a birch bark canoe, turn her bottom up and let her get dry. Have a mixture of pitch and lard which will be just a little soft when it cools. Heat this and plaster it over the leak. By wetting the finger and rubbing the pitch therewith, a smooth patch can be made. If the crack is a large one, a few coarse stitches should be taken through its edges with string or strip of bark before applying the pitch. If very large a patch of birch bark is sewn on, and the seams paid over with the pitch mixture. C. L. N.

Editor Forest and Stream:

In answer to "What will stop leak in birch bark canoe," will say: Have made many trips in them in the Maine waters where bottom has been broken by rocks in swift waters or by a knot hole. The guides always had a small tin cup of pitch and built a light fire, melted it, and turned canoe over and had it perfectly dry. Applied the pitch hot with flat stick and wetting the ends of their fingers rubbed the pitch smooth. It sticks like a poor relation. If the break is a long one or on the bow of canoe, or at a seam in the back, take a strip of strong cotton cloth or canvas, cover it with pitch and apply it to the spot hot, then cover it outside this patch with hot pitch and rub smooth while cooling with your thumb wet, and you have no fear it will ever come off unless coming in contact with rocks. Allow me to congratulate you upon the excellence of your FOREST AND STREAM. I have bought and read every copy. J. H. W.

CORNING, N. Y.

CANOE RIGS.

THE Snake has got her new mainsail rigged after the Stoddard-Oliver plan with some modifications. It is an endeavor to get the rapid and easy reef on or before the wind, which the lug affords, with the weatherly qualities and lightness of the lateen, and it seems to be very successful as an all-round sail, not too large or heavy for cruising, being about 50ft., nor requiring too high a mast—5ft. 10in. above deck. It has besides the sheet only a combined halliard and reefing downhaul, practically one rope. Tack and jackstay are dispensed with, and a jaw or hook on boom working between two collars on mast holds the boom in position. It is detached from the mast in five seconds, and a smart flat sail not perceptibly different from the lateen.

In fact, the Snake's sail and the Marion's are both lateens by Rushton, differently mounted. The Snake found that the 60ft. lateen with spars big enough to stand the strain of her manner of working, was too heavy to be manageable with the ring and pin arrangement at masthead. The limit for that pattern seems to be about 50ft. and then the spars must be very deftly made to be light enough without weakness. Therefore advantage was taken of Gen. Oliver's and Mr. Stoddard's experiments. The Snake will come to Newburgh with 87ft. of sail, comprising main 37ft., dandy 17ft., jib 14ft. The main reefed shows about 38ft.

AIRTIGHT BOXES FOR CANOES.

Editor Forest and Stream:

As airtight boxes seem to me the best means of securing a canoe from sinking, I venture to report the results of my recent experiment in making them. The ends of a canoe are the best places for such tanks; they occupy there space that is not very available, and that ought never to be filled with baggage, if the canoe is to carry her load easily. As my new canoe is 15ft. long she gives me room enough, after filling the stern with a box 2ft. 6in. long, 1ft. 5in. wide on top, 11in. deep at its forward end, and shaped like the end of the canoe, and putting in the bow another box 2ft. 3in. long, 11½in. wide on top, and 5in. deep at the after end. This forward box is quite shallow, to allow the spars to run forward to the stem.

These boxes are made of nickeline silver No. 3, gauge 32, the manufacture of the Holmes & Wessell Metal Co., West Twenty-fourth street, New York. This alloy is so strong that even this exceedingly thin sheet is able to withstand the pressure of the water when the tanks are submerged. The larger box weighs only 4lbs. and floats 71½lbs. above the water; the smaller one weighs 1½lbs. and floats 15lbs.

They are held in place by light, removable bulkheads, screwed or buttoned to a carline and the keelson, so that the boxes may be taken out easily for repairing the canoe without taking off the deck. They were made by a tinsmith, over frames shaped like the space they occupy, but the frames were not left in the tanks. As this nickeline silver will not rust much in one lifetime, I shall henceforth feel perfect security in the buoyancy of the Allegro.

MILTON, N. Y., April 28, 1884. C. H. FARNHAM.

A NIGHT ON A LOG JAM.

ONE bright morning in early September two ardent canoeists started on a short cruise, part of which has been more pleasant in remembrance than it was in actual experience. The trip proposed was on a small stream in Northern Wisconsin, called the Waupaca, which flows into the Wolf River, then down the Wolf to Lake Winnebago, across the corner of the lake and down the Lower Fox. As we were to pass through several small towns we went in a single canoe, with a 9ft. cockpit, and trusted to find sleeping quarters for the two or three nights we expected to be out in some farmhouse, barn or tavern.

It was about 7 o'clock when we put our heavily loaded canoe into the water at the pretty village of Waupaca. The Waupaca River offers much that is pleasant for a one or two days' cruise. It runs almost entirely through a thickly wooded country, with banks varying from one or two to fifteen or so feet in height. It is as crooked a stream as can be found in the United States.

It would be impossible to make out its general direction from cruising on it, as it never keeps any direction more than three or four rods. It doubles and turns and twists until an exact map of it would look like a row of S's tied in double bow knots. As an instance of this, K., who had been on the stream before, called my attention, as we got under way, to a barn not many yards away, and ten minutes later we whizzed passed the same barn with a five or six-mile current, having made a detour of a mile.

After an hour of easy paddling, but of great progress, owing to the swiftness of the current, we were interrupted by a portage over some accumulated driftwood. As we were pulling the canoe over a log an unlucky movement at a critical moment caused her to careen so that a capsize seemed inevitable; but as she slid into the water on the other side she righted bravely, and the only thing which went overboard was a package of crackers, which floated calmly on the surface of the water for a moment and then, caught on a rock, tore open, and for as much as half a mile, as we lazily dipped our paddles, we encountered now and then swollen and uninviting looking fragments of what we had expected would go, in company with plenty of milk, in very different channels.

On we went through apparently uninhabited country, darting around bends, passing under the branches of trees which leaned almost completely across the narrow stream, now slacking up as we passed through some little stretch of rapids, and encountering occasionally a log so fallen as to necessitate getting out and drawing the canoe over it, just enough of these to afford a pleasant variation, and none requiring us to go ashore.

Toward noon we came suddenly upon a brick yard and a dam six feet high. The canoe could not shoot this, loaded as she was, but as neither of us had ever jumped a dam, K. was anxious to try. So we unloaded, and getting a good start he went over successfully, and carrying the canoe around again I also went over without accident, much to the disappointment of the workmen at the brick yard, who left their tasks and watched us with great interest.

There was here a good illustration of the crookedness of the river. The water which furnished power for the mill escaped by a tail race only a few yards long into the river again, while from the dam to the same place, as the river ran, was more than a mile. To make up for the time spent at the dam, we portaged over this neck of land.

About noon we came to an immense pond, thickly studded with tree stumps. There was a gentle breeze in the right direction, and we let the canoe drift and ate our dinner on board, occasionally interrupted by the canoe's gently bumping against a stump.

At the end of this pond, which we reached just as we finished our meal, we had our last portage on the Waupaca. From there to the Wolf we had free water with the exception of a newly fallen tree, which occasioned some delay. Toward 3 o'clock we reached the Wolf River, having come no less than 65 or 70 miles since 7 o'clock.

Here the prospect was entirely changed. The river was larger, and the current much slower, and the channel contained a great many logs. They seemed to float much faster than the current, and we were bothered considerably by them, as sometimes they took up almost all the channel, though they were loose and we managed to pick our way among them at a pretty fair rate.

We began to feel a little anxious, however, and made inquiries of some men we met, but received indifferent answers. As we went on we found the logs getting more and more numerous, and a row of piles was driven down the middle of the channel and a boom stretching past them divided the river lengthwise. All the logs now went into one side, and we rejoiced for some time in clear water. But before long we found that every half mile or so the other side of the river would be full of logs so that we were obliged frequently to pull the canoe over the boom into the clear side.

At every turn matters became worse, and gangs of river men were seen on the booms letting the logs out. Becoming now quite anxious, we made inquiries of every one of these rivermen we overtook as to the logs ahead, chances of obtaining sleeping accommodations, etc., but from these we could only learn that the logs did not extend very far ahead, that we could find several farm houses along the river, and that at the "cut" three or four miles below, there was a riverman's cabin, where we would be welcomed. One of them shouted to us, "You had better get ahead of this jam to-night. It'll be a mile and a half long before morning."

The river now ran through an immense marsh stretching away as far as we could see, through which we pushed on as fast as possible. About 5 o'clock we ran on to a large jam of logs about 40 rods long. There was nothing to do but go over the top of it. To go through it was impossible, but thinking that our troubles would be over after passing them, we went to work vigorously and pulled the canoe over the slippery rolling logs, without any unpleasant result beyond wet feet.

Believing that we were now ahead of all the logs, we took things more easily, keeping a sharp lookout for the riverman's cabin. Just as it was getting too dusky to see distinctly further than across the river, as we rounded a bend another jam met our gaze. Getting out on the edge we strained our eyes to see the further end, but in the gathering darkness it seemed to stretch away indefinitely, and no clear water was visible. We even walked along the logs a few rods, but could see nothing.

Coming back to the canoe we found that the logs had floated in from above and inclosed us in the jam, so that advance and retreat was impossible except over the tops of the logs, which in the darkness would be attended with much danger. We were left to choose between two alternatives; either to walk on the logs till we reached the riverman's cabin, providing the jam extended that far, leaving the canoe in the marsh, and trusting to find it in the morning, or else to make a night of it on the jam, where we were.

Choosing the latter, and finding two large logs on the edge of the marsh close together, we placed the canoe between them and sat down to a cold supper. When we were ready to turn in we placed an immense shawl over the whole cockpit, to keep out the mosquitoes. Besides this we had a small wolf robe which we placed in the middle, and as it extended as far as our hips, our feet at least were comfortable. As for the rest of us, he who had in his valise the greatest number of shirts or socks, slept that night the most softly. Spreading all such things in the bottom, as K. expressed it, 12 feet of canoeists crawled into 9 feet of cockpit 28 inches wide.

The dew falling on the shawl made the cockpit so nearly airtight that now and then one or the other of us would raise up a corner to get a breath of fresh air, and then the mosquitoes would come in. As to the size of these mosquitoes silence had better be strictly preserved. In these degenerate days no one can say how large the mosquitoes were on the trip he took and be believed. At any rate, they were large and numerous, and but for them the night would not have been very unpleasant. K. said they kept him awake all night, and from an incident which occurred the next day I am inclined to believe him.

Some time in the night we were startled by a tremendous noise, which we were at first unable to explain. I thought it was a steamer, but K. declared it was another band of mosquitoes. In either case our situation was unpleasant. If it was a steamer and attempted to break the jam we would be capsized; if it was another regiment of mosquitoes we would be eaten up. But, whatever it was, it made no further demonstration.

With the first appearance of dawn we got up and surveyed the scene. Up the river the logs, which had come in during the night silently and cautiously, stretched away, thousands and thousands of them, beyond the bend, and I have no doubt for two or three miles further. Down stream, not more than thirty or forty rods away, was the end of the jam, with clear water beyond, and at its edge was the riverman's cabin on a raft of logs, furnished with mosquito bars and all that a tired canoeist could desire.

There too was the steamer whose whistle had awakened us in the night. We had come the evening before to the first of all the logs, but it had been too dark to see either the open water or the cabin. Leaving the canoe we made our way over the logs to ascertain our exact whereabouts. As we were walking along the event occurred which made me think the mosquitoes had really kept K. awake all night. I was a little ahead and heard the logs behind me bumping in a rather lively manner. Looking around I saw him executing a very animated double shuffle on some small and very slippery looking logs. When he had regained his equilibrium I asked him the cause of his unwonted gayety. With a rather sheepish air he confessed

that he feared he had fallen into a doze and nearly slipped in. But perhaps he had not yet got fully awake. It was a wonder that he did not go down between the logs.

From the riverman we learned that the "cut" was full of logs, so that we would be obliged to go around by the main channel, an additional nine or ten miles. Declining his hearty invitation to stop and take a cup of coffee we bumped the canoe over the logs and dropped her into the water, hoping to reach the lake some time in the afternoon. This we succeeded in doing, passing through two small lakes on the way, but the canoe had received such rough handling among the logs, and besides was so heavily loaded with double crew and outfit, that we concluded it would be quickest and safest to go home by rail, shipping the canoe by the next steamer.

Altogether the trip had more of fun in it than discomfort. The same trip, under more favorable circumstances, would be very pleasant. We afterward learned that the jam, which was nearly four miles long, held for three weeks, and if we had not reached the point we did that night we should have been left in a very unfortunate condition. P.

THE CHART LOCKER.

IX.—WALLKILL RIVER.

CAN any one who has made the trip or heard of it, give information about the Wallkill, from Hamburg and the "drowned lands" down to Rondout? Some larger boats propose to accompany the Marion and Fior da Lice, and although some accounts have been given they do not seem to apply to the spring condition of the Kill, and it is hoped that early in June there may be water enough for Ellards. Who knows? SNAKE.

THE GALLEY FIRE.

CANOE AND CAMP COOKERY.

III.—FISH—CONTINUED.

Planked Fish.—Shad, flounders, sunfish or any other "flat" fish may be "planked." Cut off the head and tail, split open the back, but do not cut clear through the belly, leaving the fish so that it may be opened wide like a book and tacked on a plank or piece of bark. Tack some thin slices of bacon or pork to the end of the fish that will be uppermost when before the fire, and, if you like, a few slices of raw onion sprinkled with pepper and salt. Sharpen one end of the plank and drive it into the ground, before a bed of hot coals. Catch the drippings in a tin cup or large spoon and baste the fish continually till it smells so good you can't wait another instant to eat it. It is then done.

Skewered Trout.—Sharpen a small, straight stick, and on it skewer small trout and thin slices of bacon or pork in alternation. Hold over a bed of hot coals and keep constantly turning, so that the juices will not be lost in the fire. A very few minutes will suffice to cook the trout.

Fish Chowder.—Clean the fish and cut up all except the heads and tails into small pieces, leaving out as many bones as possible. Cover the bottom of the pot with slices of fat salt pork; over that a layer of sliced raw potatoes; then a layer of chopped onions; then a layer of fish; on the fish a layer of crackers, first made tender by soaking in water or milk. Repeat the layers, except pork, till the pot is nearly full. Every layer must be seasoned with pepper and salt. Put in enough cold water to moisten the whole mass well, cover the pot closely, set over a gentle fire, and let it simmer an hour or so. Cook it till it is rather thick, then stir it gently, and it is ready to serve. Tomatoes may be added as a layer after the onions.

Clam Chowder—Is made the same as fish chowder, using clams instead of fish.

Boiled Fish Roe.—Wash and wipe the roes with a soft cloth. Wrap in a cloth and boil the same as fish; or, they may be tied inside the fish with string and boiled with it.

Fried Fish Roe.—Prepared as above, dredged in meal or flour and fried exactly as fish. SENECA.

MOHICAN C. C.—Held their regular monthly meeting Wednesday evening, 7th inst. The following gentlemen were elected members: C. Winne, W. Tipping, W. L. Palmer, H. Cushman, G. H. Thacher, R. W. DeLano, W. D. Goeway and F. L. Mix, who will all be active canoeists, and, therefore, a considerable acquisition to the club. Several new boats are arriving and expected, including a Rushton Princess for Mr. Pierson, a man of proportionate size. A Rushton Ellard has just appeared, and is a beauty and evidently a good boat all round. Lansingburg boats, by Smith, are also in demand; two more are due in a few days. The boat house and club room have been rearranged and improved to accommodate the increased number of members, and the necessity of further extension is being considered. The Newburgh meet was discussed and a large attendance promised. Some prizes for open races were also offered. The new constitution was found to be working very well on the whole, but notice was given for minor amendments with regard to the election of members and to the rates for housing canoes. The Mohicans demand only a moderate subscription and an extra rent from canoe owners. After the adjournment the Executive Committee (who control racing) were called together by the captain and asked to consider a challenge prize for sailing offered by him; the prize to be a silver badge, with the word champion, and a streamer bearing the same word. Conditions: Sail limited to 75ft. area; ballast to 75lbs.; course and other regulations as determined by committee. Prize accepted. —SNAKE.

MERRIMACK RIVER MEET.—Correct dates are Saturday, Sunday and Monday, June 14, 15 and 16. Fleet leave Lowell afternoon of first day; break camp Tuesday morning. In addition to New England canoeists, two are expected from Canada and at least one from New-York. The interest is growing.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

F. E. WASSON, Cleveland, Ohio.—Letter sent to address you gave has been returned.

SUBSCRIBER is informed that we do not know the address of party who makes portable houses.

H. B., Lancaster, Pa.—Can you tell me where I can buy a buckskin hunting suit, coat and pants? Ans. See advertising columns. The gun stores keep them.

A. G., Baltimore, Md.—Will you please inform me what course to pursue to have my collie dog registered in the *American Kennel Register?* Ans. Read the notice at the head of Kennel department on page 309.

C. F., New York.—1. The expression .40-70 applied to rifle means that the rifle is .40 in caliber and the charge is 70 grains of powder. 2. Chilled shot is shot which has been submitted to a hardening or chilling process.

J. M. E., Sinclairville, N. Y.—Can you recommend to me some work on the mammalia of North America, something that will answer the same purpose that Coues's "Key" does for the birds? Ans. There is no such work.

W. S.—Sew a piece of canvas neatly over the hole, first putting a coat of shellac varnish on its inner side, the outside being painted thoroughly to match the rest of the boat. See directions for repairing a birch canoe in another column.

B., Boston.—I have bought seasoned lancewood for making a rod, one piece of which is badly warped. Is there any way of straightening it without hurting the elasticity of the rod? Ans. It is difficult to do, but you may steam it and hold it straight in clamps for some days and try it. A cabinet maker or carriage maker may do it for you.

C. L. C., Johnstown.—Will you kindly give me the name of the following bird: Head purple, back light green, breast and belly yellow, wings green with some black feathers, tail dark green, legs black, eye black, bill thick and gray color. Bird about 5½ inches long. Ans. Perhaps a young male purple finch, though your description hardly fits.

E. A. B., Blair, Neb.—Will you please inform me through correspondents' column what is the Latin, also the common name of a goose or brant that is common here. We call them here the mountain geese or California geese. They are a fac simile of the common wild geese or Canada geese in color and marking, only smaller. Length, 27 inches; length of wing, 22½ inches; length of bill, 1½ inches. We also have the snow geese or white brant, also the speckled-breasted brant or Hutchins' geese as some call them. The goose I have tried to describe is about the size of the other two. Plenty of water fowl here this spring. Ans. The goose is *Bernicla canadensis hutchinsii*, Hutchins' goose. The speckle-breast of which you speak is the white-fronted goose, not Hutchins'. Error in local name.

G. E., Chicago, Ill.—1. What is the common English name of the small gull or tern, about the size of a turtle dove, which abounds on the sandbars of the Middle Mississippi River? It has yellow bill and legs, and is dark cream-color on the back and lighter underneath, also what is its scientific name? 2. What are the English and scientific names of the creeping or trailing plant found in the South bearing a peculiarity attractive flower called by the darkies the "Maypop?" It has large dark green leaves, and the blossom is about three inches in diameter with the petals presenting the appearance of a delicate pinky fringe. Is found around old cultivated fields. 3. Has the theory of oiling the waters in a storm to break the force of the waves ever been put to a decisive practical test? Ans. 1. Your description is so vague that we cannot tell what bird you mean. 2. The flower called Maypop in the South is the *Passiflora incarnata*, one of the passion flower family. 3. The theory has never been tested by scientific men that we know of. It is safe to regard the alleged smoothing of the sea by oil as a sea captain's tale until it has some better authority.

CANOEISTS AND CAMPERS will find in another column an advertisement of the Great American Tea Co., who put up packages of convenient size and form for use in the woods.

ABBEY & IMBRIE,

Manufacturers of Fine Fishing Tackle

48 and 50 Maiden Lane, New York City.

We beg to call attention to our new 120-page folio Illustrated Catalogue. We have spared neither labor nor expense in our effort to make this the most complete work of its kind. We will send a copy, postpaid, on receipt of 50 cents, which price does not nearly reimburse us for its cost.

FOREST AND STREAM: "The list is surprising, even to one familiar with such matters. The great merit of this catalogue is its accuracy."

AMERICAN ANGLER: "It is, without doubt, one of the most complete and elaborately illustrated catalogues that has ever been issued in the interest of a private firm. This catalogue may be classed as a *text book*, owing to its practical value to the general angler."

NEW YORK EVENING POST: "The amount of ingenuity exercised in devising means to capture fish becomes apparent only upon study of such a catalogue of fishing tackle as Abbey & Imbrie, of New York, have just published."

SCIENTIFIC AMERICAN: "The book has 92 large plates, covering almost every conceivable appliance in this line, and in such profusion of styles as would probably delight even our most expert of fishermen, President Arthur."

MAIL AND EXPRESS: "*To the practical angler the work is indispensable, as it shows him just what to get.*"

KYNOCH'S

Patent "Perfect" Brass Shells,

MANUFACTURED BY

KYNOCH & CO., Birmingham, Eng.

These shells are made of extra fine thin pliable metal, with reinforced base; are adapted to either Winchester or Wesson No. 2 primers. Can be reloaded as often as any of the thicker makes. **Cost only about half as much.** Weight less than paper shells. They shoot stronger and closer, and admit of a heavier charge, as owing to the thin metal, inside diameter is nearly two gauges larger. Load same as any brass shells, using wads say two sizes larger than gauge of shells. Or can be effectually crimped with tool and straighten out to original shape when discharged. **The crimping tool also acts as a reducer,** an advantage which will be appreciated by all experienced sportsmen. Sample shells will be mailed (without charge) to any sportsmen's club or dealer, and prices quoted to the trade only. For sale in any quantity by gun dealers generally, or shells in case lots only, (2,000), and crimpers not less than one dozen, by

HERMANN BOKER & CO., Sole American Agents,

ANSWERS TO CORRESPONDENTS.

PROPOSED NATIONAL ASSOCIATION.

OIL and water will not mix. It is just as well to remember this, and much cheaper to accept the teaching of experience than to waste good oil and water in useless and silly experiments to demonstrate an old truth.

We observe in certain quarters a foolish and ill-advised suggestion that the national association, which it is proposed to organize at Chicago next week, be made up of two elements, those who are interested in trap-shooting and those who are interested in game protection. It is suggested that the proposed association serve in a dual capacity, to encourage trap-shooting and to promote game protection.

If any of the gentlemen who are going to Chicago seriously entertain the notion that they can get up such a society with any good to themselves or the country, we beg to warn them that the project is visionary and utterly impracticable. Oil and water will not mix.

This thing has been tried once. It was undertaken after much deliberation and planning. There were influential men back of it. The initial meeting was attended with a good deal of what we nowadays call a "boom." After that it fizzled out by degrees, and was finally lost altogether in the vicinity of Wilkesbarre, Pa. The experiment cost those who made it $25,000. Such experiments are too costly to be often repeated.

A prominent official of the former association once told us that he thought the pigeon shooters were to blame for the failure of the society. Now, pigeon shooters may be (and often are) enthusiastic game protectors. But it has been proven time and again that when the attempt is made to combine these two interests, game protection goes to the wall and the trap absorbs all the attention. This was the case at the meetings of the National Association, it has been the rule at all recent State conventions. To repeat it on a national scale is simply foolishness.

Moreover, there is no call for a national association to dabble in game protection. We can conceive of no practical work for it. Game protection is just as well off without it. If any ardent game protectors are so enthusiastic on the subject that they want a national association, let them work off their enthusiasm by doing something for the game and fish at home. The country is full of men who are always ready to make a glowing speech at a sportsmen's convention, but who at home remain as mum as a dead clam shell while the waters are netted and the birds trapped all around them.

If the men who are concerned in inaugurating the new association really desire to see their project made a success, they must confine their efforts to one purpose. To establish a trap-shooting society of national scope is a much more feasible undertaking than the attempt to form a comprehensive trap and protection society. Even this can be done only by the expenditure of a generous amount of downright hard labor.

For the consideration of those who are going to Chicago, we repeat our suggestion of last week, that the success of a national trap-shooting society will be dependent wholly upon the financial strength it can show. The only way to collect club delegations from different States will be to provide generous prizes for competition. Without such inducements shooters will not be willing to spend time and money to attend the tournaments. The important question to be considered by the gentlemen at Chicago next week is the money question.

THE WORTH OF DOG FLESH.

IT is customary for the exhibitors at our bench shows to place opposite the dog's name in the catalogue a figure, which is presumed to indicate the price of the animal. Sometimes this is $25; sometimes it is $10,000. The former is what the owner would sell the dog for, if he could; the latter is only another way (and a poor way at that) of saying that the dog is not for sale. When bench shows in this country were, by eight years, more of a novelty than they are to-day, it was not unusual to see a crowd of open-mouthed visitors gathered about the stall of a $10,000 dog, mutely wondering at such a gold mine incased in dog fur. At the present day, however, the average visitor is up to snuff, and pays little attention to the fancy figures in the catalogue. It is very probable that the time will soon come when exhibitors will cease to make themselves ridiculous by affixing such prices to their exhibits.

In the catalogue of the last New York bench show, less than one-half of the dogs were priced by their owners. The values given ran from $25 to $10,000. The total sum of all the values so printed was in round numbers $318,500. It is perfectly safe to assume that the owners of the other dogs in the show thought as highly of their animals as did the exhibitors who named prices. By doubling the sum given above as the alleged value of one-half of the dogs, we find $637,000 to be the total value of all the animals exhibited. Including the puppies, there were 1,185 exhibits. The average value then would be more than $500. This is too high.

We have gone through the catalogue, and with some care have estimated the market value of each animal named in it. The owner's prices have been disregarded. One dog marked in the catalogue at $10,000 we have put at $200, another priced at $100 we have put up to $150. Here are the prices which, as dogs go, we judge to be approximately correct:

7 dogs, worth	$1,000.00 each	$7,000.00
34 dogs, worth	500.00 each	17,000.00
2 dogs, worth	400.00 each	800.00
34 dogs, worth	300.00 each	10,200.00
47 dogs, worth	250.00 each	11,750.00
46 dogs, worth	200.00 each	9,200.00
72 dogs, worth	150.00 each	10,800.00
228 dogs, worth	100.00 each	22,800.00
29 dogs, worth	75.00 each	2,175.00
266 dogs, worth	50.00 each	13,300.00
375 dogs, worth	25.00 each	9,375.00
9 dogs, worth	15.00 each	135.00
30 dogs, worth	10.00 each	300.00
5 dogs, worth	5.00 each	25.00
1 dog, worth	.25	.25
Total value		$114,860.25

This is something less than one-fifth of the sum quoted above. Nevertheless, $114,860.25 is not a total to be scoffed at. The Madison Square Garden dog exhibit, turned in as collateral at our valuation, might float a Wall street bank. The average value is only $96, a sum simply ridiculous beside the rounded $500 average claimed by the exhibitors. Still, $96 is a fair average price as dogs are bought and sold.

Figures are dry. Here is a little story to relieve the aridity of these statistics. It is, moreover, true:

One winning dog in a New York show was priced in the catalogue at $100. His owner was so elated by the unexpected decision of the judges that he at once jumped the price from $100 to $500. A customer turned up, very anxious to buy the dog; but he could not stand the inflated price, and the two began to haggle over it.

"The dog is worth it," said the owner, "every cent of it, and more too. Why, see here. He has beaten all the crack dogs in his class. They came here from all over the country to compete with him, and he just walked away from the best of them and took the prize from the whole lot. A dog that wins first is worth $500, sir, if he's worth a cent."

"Oh, well," rejoined the customer, "you ask entirely too much for him. I can buy the winner of second or third a good deal cheaper, and I guess I'll take one of them."

"Now, see here," put in the owner, "don't do it. I would advise you, as a friend, to have nothing to do with them. The dog that took second is nothing but a cross-bred duffer, anyhow; the third is worse yet. In fact there isn't a half-way decent dog in the whole class, except my own here."

The man did not buy the dog that had beaten "duffers" only.
